This was the regular routine. Up to the 23d of December one day was the exact counterpart of the other, with the exception of Sundays. On these days I devoted a few hours of the morning to collecting fuel, and in the afternoon strolled round and made the acquaintance of the Poles, Hungarians, Cornishmen, sailors, and others of the heterogeneous population of the camp, who had been brought together by hard luck, and who were doing little to redeem their condition here, for the prices of provisions were very high. At least I ate mutton and damper for two dollars a day, and the average earnings of the camp was, I learnt, not more than two and a half dollars.

On the 22d of December at noon I went to the contractor's foreman and asked for £15 on account, and as he was not to be convinced that I had earned so much in excess of my store bill of some £13 odd, we devoted the afternoon to measuring up my pile of rock, which gave a balance of £16 10s. in my favor, as I knew, for I had measured up every day and called for my store bill weekly. The foreman went over his figures again before he would pay me, for he said no other man had ever earned such wages on the road, but I got the money, and at break of day threw my blanket over my shoulder and set out to rejoin my expectant friends with a light heart.

Never did truant receive warmer welcome, and it is no reflection on human nature to say that I was the more welcome for the money I brought with me. The transfer of the £15 to the little wife's pocket relieved her of much unpleasantness, and the little balance provided the means for keeping up a merry Christmas.

In the morning I observed that the little wife was permeated by a melancholy which she could not shake off, and which I was at a loss to account for, until she beckoned me out, and calling her chickens asked in a trembling voice which should be sacrificed. I suggested one after another, but there were grave objections to each in turn, and when at last I asked "but why not have roast beef for dinner and leave the chickens alone?" her heart was relieved of its burden.

We enjoyed the day to the utmost, and were kindly and considerate, with the feeling that it was our last day together, that to-morrow we should part probably never to meet again, but we did not let the reflection damp our enjoyment of the passing hour. There was good cheer, good liquor, and on Frank's part glad forecasts of the day when his luck should turn and enable them to go back to Europe and spend their remaining years in ease and comfort.

The next morning I threw my blanket over my shoulder, embraced Frank, gave a last pressure of the hand to his little wife, who could not keep back the rising tear, and set out on my road back to my camp. For more than a quarter of a mile I was in sight of my friends' hut, and I knew by a subtle instinct that they would stand and watch as long as I was in sight. I neared the saddle of the hill. I reached its top; a few steps down the descent and I should be lost to their gaze. I felt a powerful yearning to turn round for a last salute, I knew that they too were yearning for it, but I resisted the impulse and went straight on, whispering to myself, "You have chosen your path. There must be no looking back."

* * * * * * *

Nearly three and twenty years later—that is on the 10th of August, 1878—my camp was pitched in the Himmalayas, at an elevation of ten thousand feet. I had come down four thousand feet to it in the morning, having spent a few days hunting between the forest limit and the snow line, and when I turned into my cot at night it was with the assurance that when I once fell asleep it would take a great deal to wake me before morning; but contrary to all my experience I not only awoke in the middle of the night, but out of a deep sleep I sprang up in bed as wide awake as ever I was in my life, speaking Frank's name as I arose. "Are you here Frank?" I asked again. All was still, all was dark. When I started up in bed it was with the clear conviction that my old Australian friend Frank was in my tent. I had seen nothing, heard nothing, felt nothing; but I had clearly and distinctly apprehended his presence as by the exercise of a new sense.

Years had passed and my old friends, although not obliterated from my memory, were buried deep in it, and perhaps for years had rarely come to the surface, but now the memory of the past was revived with clearness, and I recalled our struggles together, our final parting, and speculated on how Fortune had dealt with them in these later years. At length I resolved to know, if possible, and caused an advertisement to be inserted in the Melbourne *Argus*, calling for information of Frank or his wife; for something impressed me with the conviction that Frank was dead.

Months passed without a reply, but as Christmas time drew round again I received a letter from the little wifie telling me that "Poor Frank died the tenth of August last, sanguine and unfortunate to the last."

WANDERER.

THE CHARMS OF BEAUFORT.

(*Continued from page 385.*)

IT is lonesome here when one first comes. Very soon, though, this wears off. Every one seems to consider it his or her duty to make it as pleasant as possible, and summing it all up we have so enjoyed our stay that in spite of drawbacks it has been prolonged three weeks beyond our original calculations. Before leaving Aiken with friends who like myself longed for a breath of moist salt air, we were told that in Beaufort we would contract rheumatism from the dampness, fevers from the malaria, and be devoured by mosquitoes, fleas and other vermin. But we took the chance and came, and the hour in which we are to regret our temerity has yet to come. We have not seen nor heard nor felt a mosquito or flea; it is not damp here, and as for malaria, this is the one place South that I know of where people flock to avoid it. Within forty-eight hours after arrival every vestige of every cold had vanished, and up to date with no sign of return.

The city is a collection of handsome two and three-storied mansions, each with broad piazzas to every floor, all surrounded by large trees and gorgeous gardens. "Befo' the wah," when "Cotton was king" and labor was cheap, Beaufort was the summer home of the many wealthy planters, whose plantations on Port Royal, Paris, Cane, Ladies', St. Helena and other adjacent "Sea Islands" produced the famous long staple cotton. To the residents in those days, Beaufort—with its various resources of boating, sailing, crabbing, fishing, bathing, hunting and shooting; the freedom from contact with perplexing business cares and the worries of the outer world, its one mail a day and no telegraph nor telephone, its balmy, temperate climate—was a home, where luxury reigned. Malaria was unknown, typhoid, pernicious and other fevers, diphtheria and other diseases due to climate and dirt were never thought of; and consumption was the rarest of all. Many people afflicted with lung troubles came here from other places, and recovering health and strength, remained.

Situated as it is it must be healthy. Except for cisterns the old times had no fresh water in the vicinity; now several artesian wells add to the resources, their water being very wholesome. The rivers, so-called, Beaufort, Broad, Coosaw, etc., and the creeks are but arms of the sea, and the strong tides scour away all sewerage. There were a few fresh water swamps on the island, but since the earthquake these and others on adjacent islands have drained away and dried up, leaving ugly-looking dead cypress and myrtle stumps. The deadly rice field is unknown. Every day by noon there comes in a fresh seabreeze, which tempers the heat and refreshes greatly, while it drives away all miasmatic gases. Twenty miles from here, on the mainland, fever is certain, death probable, as the result of very short sojourn.

Before the war there were no strangers in Beaufort. Every one was cousin, aunt or uncle to every one else; if one came to them from the outside world, he or she was a guest; and all vying in hospitality, the properly-introduced stranger ceased at once to be a stranger. There were few stores, no hotels, no railroads. Now as the new-comer with his gripsack approaches a familiar-looking "bus" on whose sides are the legends "Madison Avenue and Wall Street," or "Fulton Ferry," the first salutation he hears is, "I say, boss, doncher wanter boy to tote yer sample case?" and his fellow passengers to the hotel are most unmistakably "commercial travelers." The cousinship still exists, but the survivors are few. In the business portion of the town the names on the signs are those of foreigners. The rush of trade at the drygoods and other stores is of colored people; the streets are filled with them, forty or fifty dark faces to one white.

Unfitted by birth and education for the struggle, the old race is dying out; their property, fine old mansions and plantations, have been lost through confiscation and sold for taxes, at most insignificant figures; the plantations cut up into little negro farms, and now owned by those who from poverty became rich through the purchase. Broad cotton fields lie abandoned weed-covered. Old mansions are tumbling through decay. Yet stricken down as they are, showing to the last their former character, the grandeur of which we can judge as we do of ancient Rome by the ruins. The people remain the same hospitable, highly cultured people. The war hit this place very hard. The appreciation of calamity is governed greatly by the laws of perspective; the stranger's

child hurt in our presence excites more sympathy than does the death, by flood or earthquake, of thousands in China. The old Southern hospitality, differing only in degree, still exists, and its recipients must feel kindly and grateful.

The history of Beaufort and this vicinity possesses many points of interest. There is the "Old French Fort," and the "Old Spanish Fort and Grove" for instance, and forts used in 1812 and during the civil war. Back of the French fort is one of the most magnificent conceivable groves of live oak; every branch is draped and festooned with pendants of moss, some twelve feet and more in length. This is the place where Beaufort picnics resort, and a most suitable one, "excusin'" the sand flies, which during my brief visits to it sadly interfered with pleasure; their season, however, lasts but a fortnight longer, then, "excusin'" the rattlesnakes, no place could be more charming. I am assured that the snakes are not so very plentiful as rumor states. As one small rattler can make a ten acre lot unhealthy, even two or three might crowd that grove, although it is a large one.

In one respect I think the grove more worth seeing than the renowned live oak avenue in Buenaventura, in the Savannah cemetery. That has been kept trimmed and in good order; the grove has been left to nature alone, and contrasts with the avenue as does the wilderness with the park. In the sun's rays toward evening the effect of the contrast between the waving banners of etherial-like moss and the sturdy masses of crooked timber of the oaks is beautiful.

We have attended service in the quaint old church and listened to most excellent service and delightful singing, while outside the voices of the sweet singers of the choir were blended with the music of the mocking birds, flying about among the trees, and visible through the many wide open doors and windows.

The floral attractions of Beaufort are wonderful, exceeding even those of California, especially in roses. My water ewer now holds two sprays of Jacqueminots, seven roses to each, and every rose larger than any I have ever before seen, some over 4in. in diameter. At least a hundred other roses, sent to us by friends, are scattered in huge boquets around our room, occupying every available vase, mug and tumbler. From two great vines in his garden, Mr. G. C. Judd cut the day before Easter, to adorn the chancel, 1,400 Reve d'ors. The day before Easter, at Aiken, the united proceeds of two hothouses were about two dozen, which were eagerly bought by the hotel guests at from ten cents to a quarter each. Until the severe cold spell of 1886, which carried the frost line, as I well remember, down to South Florida, oranges and bananas flourished here. A few oranges have ripened this season, and the new banana plants look well, but have not yet borne.

Among the luxuries of Beaufort the true diamond-back terrapin ranks high, and along the beaches are numbers of "cooter boxes," rectangular pens, through which tide ebbs and flows.

The negroes collect these animals as soon as they begin to move about and feed in the spring, and the pen owner buys them in detail as cheaply as possible, taking all offered, great and small. The little ones are secured at very reasonable prices, for they grow slowly, and are addicted to cannibalism to that extent that a bucket full of little bulls and cows may not produce a pair of "counts" (six inches long).

A lady at whose house I was guest, and had enjoyed, as none but those so favored can hope to enjoy, the perfection of terrapin soup, made perfect by the addition of one little secret ingredient, was buying some little ones. The vender was a little negro girl, attired in a comfortable but single garment, and bearing on her shoulders a bag. "Please, mum, don yer wan some cooter this mawning?" "How many have you, and how much for them?" "Please,mum, I'se dun got three, one gemman cooter and two lady cooter; the gemman he dun wuff 10 cents, mum, but the ladies dey's wuff a quarter apiece, mum." She bought them—little chaps about 4in. long—and if she is lucky in about three years she will have as many "counts." PISECO.

A CHRISTMAS ANNIVERSARY.

AS Christmas draws near each successive year I celebrate, as you might say, an anniversary, such a one as but few have experienced, and those who pass through extreme dangers look back upon them as nightmares, something they scarcely believe and hardly credit, each year widening the chasm spanned by recollection, and rendering the reality less vivid and real.

Sept. 23, 1877, I landed in Denver, a tenderfoot from Boston, not entirely green in ways of Western life, for from 1866 until 1872 I had the teaching of ward schools in Illinois, with the "gentlemanly art" administered by a succession of drubbings at the hands and feet of schoolmates and "scrubs" from the other wards. I also had the pleasure of the finest of duck and goose shooting which then abounded along the Illinois River. Opportunity was given me soon after arrival in Colorado of enjoying a winter's hunting and trapping in the Rocky Mountains. Visions of deer, elk, bear and all the dangers which ardent young sportsmen are so anxious to experience flitted before me, and to let this chance slip would have been as impossible as to kiss the prettiest girl at a church sociable with the old but jealous deacons watching.

Oct. 16, Jack, the model trapper in buckskin and big hat, driving a "spike" team, and I, me, myself, with a big hat, Winchester rifle and all the fixin's, astraddle of a genuine Ute pony, slowly pulled out of the city headed for the already white and freshly covered Snowy Range. To give all the details of that trip up to my anniversary would take too much space, besides recounting what has become almost every day life to most readers. My first vivid experience was the killing of a wild goat on the mountainside near Georgetown, packing the carcass down to old Jo Vinini's restaurant and selling it for $3 50, making a fast friend of him, and telling him my first good square lie. To acknowledge being a tenderfoot was out of the question, so to excuse my thin, emaciated condition and pallid face, "I had been laid up all summer in the Park with mountain fever."

Over the Berthoud Pass, down, down those snow-covered roads, silent and more weird in winter than ever, we went until we reached Cozzen's Ranch; then across the head of Middle Park to Hot Sulphur Springs, and then to a ranch on the Troublesome. At Tracey's I waited for Jack to bring in the provisions. I had gone ahead with a band of horses that were to be wintered in the Park. It was Thanksgiving Day when we were ready to start for Rock Creek in Egeria Park. After a three-days' trip across Gore Range, we arrived on Blacktail in a most terrific storm; the wind blew a perfect hurricane and the snow drifted in impassable mountains, but Jack knew where to go, and with two more days, during which the storm raged, and we were continually getting stuck, loading and unloading, digging out one horse after another and then the bob-sled (for we had put on runners) we finally reached the spot where we would build our cabin, two miles from the old camp ground of Colorow's band of renegade Utes, who afterward were the means of inciting the Utes into the killing of poor old man Meeker and ambushing Thornburg's command on Milk Creek. I had already killed antelope and deer, and during the trip was fortunate enough to shoot an elk. My experience as I gazed upon the dead monarch of the Rockies I shall never forget.

Our cabin was soon built, forty miles from a white man's cabin save one directly by side of Colorow's camp, eighty miles to the nearest ranch and over one hundred miles to a settlement. The Utes visited us daily, we swapped some sugar and a little coffee, they begged for powder and lead, but that was dangerous to our future welfare. One Ute offered me two fine ponies for my Winchester, but I was not in a mood for trade. Traps were set out and foxes, wolves, otter and other furs were daily added to our string on the cabin. Jack concluded about Christmas to go to Hot Sulphur Springs for mail and see if civilization still remained as we had left it. I was left alone to attend traps and kill what game I wanted. There was no time in the morning or evening that I did not see from one to fifty deer running from one side of the mountain to the other or across the sage brush flats. My trips were of an all day tramp, first in one circle then another, I had been very successful in bringing in some fine furs, one mountain lion and three immense wolf skins among the rest. Friday I remember well taking the circle to the right across the snowy divide and down the other slope to Toponis Creek, up this to Rock Creek and then to the cabin. Having previously killed three deer in one of the gulches, I concluded to go there and bring in a well "seasoned" saddle as my venison was getting low, but I went down the wrong gulch and it being late struck out for camp.

Saturday A. M. I was up earlier than usual. Leaving my rifle and buckling on a .44 Smith & Wesson I started down Rock Creek for the gulch, reversing the route of Friday. I had unusual good luck in picking up some fine cat skins and a carcajou; also on Toponis succeeded in breaking through the ice, wetting both feet. Arriving at the foot of the long gulch I found that haste must be made or I would not reach the summit of the snowy ridge in time to find our beaten trail down the dangerous north slope; half way up I came to the deer and two more fine cats. To kill them, skin them out and also to cut out a quarter of frozen venison, was a job of some time.

It was, then, the alternative either to take the chances of a broken neck in the driftwood on the creek and of breaking through the ice, or to gain the summit before dark, locate my course and trust to striking the trail toward camp; or an all night under the stars. These first thoughts of my dangerous position had just dawned upon me. To think was at once to act, and I chose the snowy ridge. Heavily loaded with skins and meat, I toiled up, up, up—it seemed as if I never could reach the summit. I did not dare to stop for breath, but panted and struggled along. For the first and only time on the trip I had put a flask of gin in my pocket. It was all we had brought. I took a long drink and again started with my load. The sun was fast nearing the tops of the western peaks, it had already dropped below the ridge I was on. Could I reach the summit before it was sunken so low that nothing but a great white field without landmarks or familiar spots could be discovered?

On and up I went, stumbling against rocks and sticks. The last patch of sunlight had disappeared, and as it faded the darkness seemed to come on at once. A mile yet before I could possibly locate my course down the north side. The deer were everywhere, but I cared nothing for them. At last I approached the open. In vain did I scan the mountainside for the trail; it all looked alike. Once more I tried to revive the sickness at heart and brace myself for the last three miles. Concluding that the safest was the quickest, I made a plunge, and as going down hill in the mountains is comparatively easy, I took on a kind of dog trot. But alas, I had scarcely commenced the descent before in I went, heels over head into a gulch filled to the top with snow. It was human nature to struggle and struggle until nature was overcome. A fainting sensation seized me and I was helpless in the snow up to the armpits. The complete exhaustion was of short duration, as a chill seemed to pass through me, and I tried to stand but could not. I listened—*hoo-o-o hoo-o-o—yip, yap, yappity yip, kii, kii, hoo-o-o*—wolves and coyotes! nice friends at that time of night, and so unceremonious.

Gaining strength, I tried to work myself out of the mass, but I was only successful in getting in still deeper. It seemed hopeless, there was no moon, the stars were clear and fairly glittered in countless millions. Again and again, this way and that way I tried it; but I could not get back, and it was impossible to go ahead; what could I do? the snow was almost above my head, I cried out in despair. A howl of derision was my only answer. I did not fear an attack of these brutes, as game was plenty, and the Rocky Mountain wolf rarely if ever attacks a human being. I was exhausted, clear played out, and a dreaminess commenced to take hold of me: I had the only consolation that probably my bones would be found in the spring. The chill that again aroused me also seemed to give me a little judgment; I would use the skins as a kind of foundation; and half rolling on them, covering as much surface of the snow as I could, I finally succeed in reaching the solid earth.

I then picked my way more carefully until the foot of the range was reached. I knew of a trail part of the way up the other slope, which led directly to the cabin, but that side was slippery from the snows that melted during the day; so stepping, sliding and falling, frantically trying to climb the icy steep slope, I had almost gained the trail, when back I slid nearly 100yds. It was all alike, and useless to try another place, so slowly crawling on my hands and knees I managed to reach the trail. Twenty minutes more and I was at the cabin. It was nearly eleven o'clock. Fred had come up from the cabin at Colorow's, and supposing I had gone to his cabin, got his own supper and went to bed. Of course he wondered where I had been. Tired and worn out, too tired to eat, I pulled or tried to pull off my boots; they stuck fast, but at last one was off. My foot struck the stone hearth. I picked it up in my hands: it was almost solid. Quickly ripping a part of my other boot with my knife, that foot was the same. It was too much for my feelings, and in giving way for a moment, in that moment all my ardent desire for adventure went out too. Of course I suffered terribly with my feet, but was so fortunate as not to break the blisters. I let nature with plenty of oil tried from cat fat do the healing.

In about six days the Utes all went to Hot Sulphur Springs. I sold out my stuff to Fred, taking ponies, etc., and followed their trail, two days after, thence to Georgetown, crossing the Berthoud Pass about Jan. 16. I gained about 30lbs. on the trip, and taken as a whole enjoyed it. TILE.

A DAY'S RIDE.

FOUR years ago I was one of a party that spent the summer in Wyoming on a ranch, and many times since then have I enjoyed myself while tiring my friends, in burnishing up the memories of Deer Creek Ranche. Here is one of them:

A still, clear August morning found seven of us in the saddle, three ladies, the Major, two gentlemen ("tenderfeet" by profession), and Smith, the guide. We were off on an exploring expedition among the rocks and down the gulches near old Fort Casper, and our commissary being trustworthy, we did not much care in what direction we went, nor how fast nor in what order. The Major carried his large Winchester as a matter of habit, as there was to be no hunting; I took along a little Remington, wanting to keep the nerves of the ladies up to the proper pitch. I may as well state here that I was one of the tenderfeet. Let me also add that while I was a good rider—thanks to horses ever since I wore breeches and could lisp "g'lang"—I was not looked upon as a remarkable shot with the rifle. In fact, it was to me that the reins of the horses were generally given to hold while the others did the shooting.

What a lark we had that morning! Climbing up over a mass of rock and coasting our bare-footed horses down the other side, galloping down beside some quarreling brook, only to plunge through it as it turns suddenly across our way. A shady bunch of cottonwoods suggesting it, the question of our luncheon is raised, it is laid on the table and carried unanimously. About 3 o'clock we started homeward. The trail we were following stumbled along, half way up a ragged range of rocks, rising a hundred feet or so on our left, and sinking as far below on the other side, their places taken by the scarred stumps and trunks of what was once a forest. Rounding a sudden corner the Major spied a brown object, motionless and almost hidden in a tangle of brushwood. Unslinging his rifle he motioned me to do the same, and told me in a breath that the brown thing down there in the shade was the back of an elk. The hopes, the fears, the ecstasy of that moment are indescribable. The emptiness of the past vivified the thought that I should again miss. An idea flashed across my mind: "Major, let's us both aim together, and when I count three we'll fire." Not waiting for his answer I up with my rifle and whisper "One, two," *whang!* went my rifle, followed by the Major's, but with a little interjection interpolating the two reports. "Why didn't you wait till you had said three?" yelled the Major, as that brown thing faded to gray in the distance. "Why, man, you not only didn't aim at the elk yourself, but you spoiled my shot."

He looked disgusted as he mounted his horse and led us on again. I deemed it better not to converse much with the ladies about that elk; in fact, I rather led the conversation in other directions, pointing out this or that view as worthy of canvas and the academy, or that mass of granite as a "find" for some street-paving company.

We followed the shadows of the sun as they rose slowly up the rocks, and had almost reached the summit when I was dumbfounded at seeing four silvertip bears, an old she, a yearling and two cubs, getting over the ground in front in great style. The Major yelled. "Chase them until we can get a good shot." He, Smith and I left the others behind, and then such a scrambling and tumbling up over the rocks! For once I felt equal to the Major, for I was in the saddle. The old bear would shamble over the rocks at a great pace, but had to stop now and then to let the youngsters catch up with her. The cubs were as fat as butter, and it was laughable to see them stretch out their fat little legs in their endeavor to keep up. The ground was so broken that we could not keep them in sight long enough to get a shot, so on we went.

Rounding a sudden turn, Smith, who was in advance, almost ran into the arms of the old bear who was standing on her hindlegs at the base of a huge rock while the cubs were clawing up behind her. Smith beat a quick retreat on his only tow willing horse, for his only weapon was a huge knife dangling from his waist. He afterward declared he felt the breath of the bear, she was so close to him. The Major and I jumped off our horses and then we were not more than 60ft. away from the bear. Raising our rifles I waited for the Major to shoot first. Snap! his gun missed fire. Wrenching down the lever to get another cartridge in, something stuck and nothing would give. His gun was useless. All this time in my excitement the end of my little Remington was describing enough airs and circles to puzzle a professor. Getting an approximate aim on the bear, I was about to fire when the Major's gun stuck. Knowing that my little bullet, even if it did hit would hardly prove fatal to such a beast, he ordered me not to fire. The cubs by this time were out of sight over the top of the rocks and the old bear seeing there was no fight in us scrambled up after them. Disappointment took the place of exhilaration and excitement. In fact I was disgusted, and I improved the opportunity of getting in a word or two at the Major for his lack of coolness in managing his gun. We were all of us sulky as we rode on toward the ranch, and the Major lost what little remaining grace he had when, being momentarily undecided which was the right trail in the dark, I decided correctly. The buffalo skin I slept on that night in the tent transformed itself in my dreams into a bear skin and reversed matters by sleeping on me, growling and tearing generally. I then realized the truth of the Major's guess, that the bear weighed a thousand pounds.

F'LIN.

BILL DAVIS'S BEAR FIGHT.

YES, I said, as the Colonel finished his story, a revolver combined with presence of mind no doubt saved your friend from death, and that reminds me of a story told to me this fall, when Mr. Wythe, Dan Harris and I went to the Big Horns elk hunting. Bill Davis still bears the marks of the terrific struggle, and the old man related the story just as I will try to give it. "One afternoon," said he, "a little while after I had come to the country, as I was busy building a log storehouse for the grub I expected would come soon by wagon, my partner yelled out to me, 'I say, Bill, there's a big silvertip down in the chokecherry bushes 'cross the creek.' Now you know bear meat is prime eating in winter, and such a chance wasn't to be lost, so I ran into the shack and catching up my Winchester started to get that bear. I had to go about half a mile, and when I got there I couldn't see anything but the bushes moving. At last I made out a brown patch just where the bushes ran out to the foot of a hill. So I climbed up, and then started down, thinking I would not let him smell me before he saw me and perhaps he'd show enough to give me a good shot, but it was no go he just stayed still and wouldn't come out.

"At last I lost patience, and said to myself I'll just plump a bullet into what I can see, though whether it's a head or tail I don't know. So I raised up my gun and let drive at that brown patch, thinking now he'll make for me, and when he gets near I'll split him open. The smoke hadn't cleared away before you'd have thought an earthquake had broken loose in them bushes. Of all the tumbling and rolling, grunting and squalling I ever heard that was the worst. Down he dropped, but was up right away; and up the hill he came, mouth wide open. I've seen and killed lots of bears, but this fellow looked about four times bigger than any I've seen before or since. When he got within about 30ft. I threw down the lever of my Winchester, and nary cartridge came up. Sick? I nearly fainted. I did have sense enough to turn and run, yelling to one of the boys who had come near to bring my belt of cartridges. But I was too late. The bear overtook me and struck me on the shoulder, taking all the shirt and some of the flesh from that side, and knocking me spinning to the ground. He was right on top in a second, and I'll never forget how big and white those teeth looked as he tried to get my head in his jaws, his hot breath came full in my face and almost sickened me. Luckily I had kept hold of my gun, and now I jammed it crosswise in his mouth, which kept him somewhat off and his jaws from shutting. One rake of his right paw took big ribbons of flesh from my side and arm, and to keep him from ripping my stomach open I doubled my legs up.

"The bear was worried by that iron gun barrel and gave back a little, so I shot out with both feet and caught him just below the paws, head over heels he went down the hill, and you can bet I didn't stay there to see if he landed all right. I ran to meet Tom with the cartridge belt, and cramming the magazine full, I started back after that bear, for I wasn't going to let him get away when he had torn me so. There he was still in the chokecherries, tearing up the bushes and raising Cain. No sooner did he see me than back he came, just spoiling for another fight, but this time I was ready for him, and as he reared I let drive. The ball struck him fair in the neck and broke the spinal cord. He gave one jump, fell, and rolled down, lying there kicking, but I wasn't taking any chances, for a dead bear ain't always as dead as he looks; so getting a little nearer I gave him one through the head that settled him, and I left Tom to skin and cut him up, while I pulled out for the house.

"You ought to have seen Mrs. Davis when she saw me. I was one big spot of blood, no shirt, and mighty little pants, but she tied me up and I went to bed, and it was a long time before I cared much about tramping around. You boys can see the scars yet, and this left hand never has got straight.

"How did I come to tackle him with only one cartridge in the gun? Well, you see my boy had been using the gun, and hadn't filled it up as I keep it, and I was in too big a hurry to look, but when I got well I just talked to him, and he ain't touched that gun since.

"No, sir! A knife ain't no good with a mad grizzly, and I've never carried a revolver, but if I'd had one that day I wouldn't have been hurt so; and if you gents intend tackling bear just strap a .45 on you, for you may find it mighty handy though it's mean to pack around."

R. H. W.

A RETROSPECT OF FORTY YEARS.

TWO or three months since, while rowing across Lake Pocatapogue, I spied a tent upon an island, which brought back like a flash to mind the first tent I ever saw, nearly forty years ago. I lived then in the little village of Windsor, upon the Susquehanna River, remote from lines of travel, and as pretty and secluded a location as one would care to see. While playing one day upon the village green with other lads, we saw a strange boat come down the river and draw up at the point of an island near the further shore. Presently something white appeared, whereat one boy, more knowing than the rest of us, shouted "Tent!" and away we ran down across the flats and over the long covered bridge at full speed; and crossing a short dam, in ten minutes were there. This was my first knowledge of such a thing as camping out. Two young men formed the party and everything was brand new—boat, tent and all. One of the party was getting the tent to rights, and the other was dressing some fish they had taken on the way down and which he put into a skillet and over the fire. The savory smell of that mess of fish lingers with me yet. It seemed as though I had never smelt anything so good before.

They were not extremely sociable, and did not seem impressed to any great degree by our visit. In answer to our boyish questions they said they had come from "up the river" and were going "down the river," and "for fun of course." I could not quite understand that, but I have thought of it a great many times since. I have also thought of and longed for the splendid fishing which was then to be had right at our very doors. Within forty rods of my father's house were the river and four ponds, or coves, as we called them then, all literally alive with fish. In those days people fished more for "meat" than because of fashion, and the waters were not fished to death. There were not over half as many people any way, and they did not fish for "count" as much as now; but, as I remember, when they had taken enough they would wind the line around the old-fashioned pole and go home. And such fish. I have never seen such perch since as we could catch there any day, and the pickerel were far larger than now, to say nothing of the pike. I went back to that country a while ago, and it gave me pain. The woods were gone where I used to play, and where I had once picked berries by the bushel the woods had grown again. The coves had been drained and changed to fine meadows; the river did not seem half so large, and the fishing—well, it was the same old story. Almost the only thing I could find to interest me was the time-table of the new railroad where it showed the departure of trains.

The village had in some way imported a live man, and had arrived at the dignity of a weekly paper, and not spelled with an "a," either. In a recent number sent to me I had read how the black bass had been planted and had increased and multiplied, and I had said to myself: "I'll try them." So I had put a rod in my trunk and come around. I called into service a nice old man who had worked around my mother's place, to get me some bait, and take his boat and set me across the mill race upon the dam. It was a likely looking place for bass, and as I put my rod together and impaled a worm upon the hook, a feeling of great peace came upon me, and rejoicing that I was once more at home and in my old haunts. If the old time fish had grown scarce and small, surely I could find much to comfort me in the thought that a new comer, the gamy bass, was here in all his glory. For a little time I enjoyed thinking over my boyhood days so much that I scarcely noticed, and cared nothing for, the want of luck. I remembered how right here Jake Marshall, who was the Izaak Walton of that town, and I had caught as many fish as I could carry one morning before breakfast.

Just below the bridge, not the old covered one where Captain Jones took toll, but the new iron one, I could see Hall's Eddy, where no one in the old days ever fished in vain. Twenty rods behind me was the "swimming hole," where all we boys learned to swim, and where we spent hours every day during the summer. Then I began to note the absence of bass, and I moved around a little, getting a nibble now and then, but nothing encouraging. After an hour or two of this I had a bite which was unmistakably bass, and in a spirit of desperation I fairly yanked him out upon the dam.

Down went my aged friend upon his marrow bones and gathered him in.

"Ah! he's a beauty," he said, and held him up for me to admire. He was about five inches long. I left. Mc.

Middletown, Conn.

MOON LAKE.

THERE is a fascination about our Eastern lakes that years of sojourn amid mountains and deserts cannot destroy. Years ago I used to troll for pickerel in Lake Hopatcong, and cast the fly on the calm waters of Greenwood Lake, and the memory of those days is like an Indian summor idyl. That was before the days of fashionable hotels and club houses. A person had to love piscatorial pleasures to endure the inconveniences of the third-class inns that were then to be found about "Brooklyn Pond," As for the thickets about "Long Pond" (Greenwood Lake), chapparel of the Sierra alone could equal them in density. And there was sport at Delaware Water Gap before the completion of the railroad along the east bank of the river. Red fox and Virginia deer tempted the hunter, nor was the bear a stranger in the wild lands of Warren and Sussex counties. I suppose that now, in the summer season, canoes and camps line the shore, and that tennis courts cover the natural lawns where erstwhile was the bark camp of the hunter who loved to dwell from other men apart. Heaven forbid that any canoeist or camper misjudge me for a misanthrope. I am merely comparing the old with the new.

Then there were long vacations in Vermont or amid the Berkshires, where I learned to beguile the wary trout, or would lazily angle for chubs. Many of these New England lakes, nestled among sombre pines, hidden among the Green Mountains, strangely resemble Donner and Weber lakes in the Sierra; but I never enjoyed fishing for lake trout in California, even with the most approved of tackle, half as much as I delighted in my experience as a novice, with the small fry of Yankeedom.

Influenced by the sacred memories of lakes that I love, I resolved in August to visit the lake region of Nebraska. In imagination I saw once more the blue laughing waters, white pebbled beach, the greensward beyond and a background of pines, noble pines, that I might know a prairie State could never produce. Moon Lake was our destination. It is still in the wilderness, but settlers are within hailing distance, and next year some hardy adventurer will build his cabin where, less than two years ago, Sioux and Crows fought for their hunting grounds. The lake is the largest of five ponds that lie in the western part of Brown county. It is only fifteen miles south of the new Fremont, Elkhorn and Missouri Valley R. R. Had I been wise I should have taken the rail to the nearest point, but instead we drove 150 miles northwest from Kearney, over sand hills and through "bad lands," thinking with the close of each day that we had almost reached a hunter's paradise. Still the trip gave us an opportunity of seeing and judging of the migrations and changes of fauna and flora that are so marked in this section. We had expected to find the "whitetail," but our first victim was a genuine *Cariacus macrotis*, although it is here called "mule deer" as well as "blacktail." It was killed near Brewster on the North Loup. From this point north and west deer were comparatively abundant. A line drawn from Brewster to Julesburg will give the eastern limit of antelope for the coming season. There were, last January, several small herds north of Julesburg and Ogalalla, but their westward drift can be traced by the mere novice, and, with the present influx of settlers, it is safe to predict that in three years there will not be an antelope left outside the most western counties of the State. Elk signs have almost disappeared about Moon Lake, but a few bunches are left in the Cherry country. The elk became extinct in central Nebraska about 1877; the antelope some five years later.

The seventh day from Kearney brought us to our destination, and, for Nebraska, the pond was all that could be expected. It is a sheet of water three miles in length by from one-half to three-fourths of a mile in width. Unlike most Nebraska ponds this is free from rushes and sedges, that choke what would otherwise be considered beautiful waters. About the banks carices flourish and grow to an unusual height, and back of these the hills were covered with verdure. Chubs, perch and catfish were the only fish, but our sport was not to be with hook and line. Prof. Aughey, in his work on the "The Physical Geography and Geology of Nebraska," says: "The mallard was formerly exceedingly common in the State during its migration, but it is now much less so, owing, no doubt, to the manner in which it was hunted down. Many formerly brought forth their young in north Nebraska." This seems to be the great breeding ground of mallards, and, to a certain degree, of the woodduck. Here are also found the least tern and the black tern with their young. In this primeval solitude we needed no blinds, no decoys. It seemed as though there were enough mallard about Moon Lake to make, in the proper season, good shooting for the whole State.

In observing signs of bird life I was surprised to find the belted kingfisher, which I thought belonged only to the river region in the southeastern portion of the State. But of songsters we saw none. We had passed their western limit, though they keep pace with fruit trees and timber claims. And here is a nut for ornithologists to crack. For several summers while camping beside some trout stream, high up in the mountains of Idaho, in Alpine valleys where wild flowers run riot, I have been wakened at dawn by the matin song of the thrushes. Nowhere in the West have I listened to such a chorus. It was as though the songsters had left the hillsides of New England, and were watching the sunrise from the ridge-pole of the continent. Brown thrushes, wood thrushes, finches, warblers all were singing. These are the birds of the East, not of the West. How do they get there? For an interval of seven hundred miles they are not observed even as a migratory species. So far as I can judge, they follow the Arkansas or Missouri to their headwaters, and then summer northward and southward among the pines and quaking aspens, staying scarce two months, then disappearing as mysteriously as they came. This is a digression, but it is the privilege of the indulger in reminiscences to ramble. So, in this glorious November weather, whether tramping over prairie, gun on shoulder, after quail or chicken, or, sitting in the twilight, beside the cheerful fire, I see the past and hold for truth that

"To him in the love of nature holds
Communion with her visible forms, she speaks
A various language.

Kearney, Neb. Shoshone.

Natural History.

THE SUPER-SENSE OF ANIMALS.

BECAUSE inferior animals have organisms less exquisite than man's, because their limbs are imperfectly developed, their articulation defective and their vocabulary limited, some metaphysicians contend that they have no rational intellect. Can this be proved? The human race, fortunately for itself, is able to declare verbally what it knows and what it can do; but as for the brutes, so designated, before the prejudiced court of human adjudication they are compelled by their physical disability to be silent. Alack! if they could only speak their thoughts what an intellectual capacity some of them might reveal!

If animals have a language of their own by which they can communicate with others of their own species, as it is obvious they have, but are unable to make it intelligible to man, does it reflect most upon their inability to impart or man's incapacity to receive? What shall determine the standard of comparative intelligence between the two? Assuredly it must try the patience of highly cultivated animals to make such stupid creatures as men comprehend what they want. A man will drown or his house burn up before his dog can make him understand that something is wrong or that assistance is needed.

Intelligence is by no means limited by the capacity to manifest and impart it. How can we manifest our intelligence if we have not the perfect organs and members? A man who has lost his palate cannot make himself understood; are we to assume, therefore, that his intellect is deficient? We estimate intelligence chiefly by vocal and written emanations of the mind; but if a man be a cripple, without limbs, as well as a mute (such have lived) how can he prove himself superior to a dumb brute which is handicapped in the same way? He may be, but how can he prove it? We cannot in justice affirm that he is a dunce and an imbecile just because he makes no sign. Balaam's ass did well enough as soon as his tongue was loosed, and yet his simple master had always sized him up for nothing more than the ass he appeared to be. How often men as egregiously misjudge their own kind! It has been the habit of even enlightened nations to call each other barbarians until their reciprocal intercourse and interchange of tongues discovered that they were in many respects equally gifted and accomplished. To every ignoramus a foreigner is always "stupid" until his language is acquired.

Any person who will quietly and unobserved watch the everyday intercourse of brutes, whether domestic or wild, will soon get to understand the sounds and the signs by which they communicate with each other, and, in the case of farm animals, signify to their owners their wants and distresses, and oftentimes their purposes; and if he can ever gain their confidences he will find them quite companionable and by no means beneath his acquaintance. Sign language as a makeshift for lingual disability has been employed for time indefinite by savages and nomadic people, as well as by mutes and brutes; but do intellectual and cultivated men, with all their superior genius and aptitude, assisted by a superior mobility of features, succeed in this method of communication any better than the brutes? are they any quicker to apprehend? Man's intellectual face helps the brute to read and interpret its purpose and meaning. The brutes, it would seem, in the absence of equally expressive features, are furnished with mobile ears and indicative tails, and even with cuticles which shrink and shiver with varying emotion—manifestly a providential interposition in behalf of the man.

The physical expressions which the animals employ to manifest their passions, requirements, distresses and

emotions, are precisely similar to man's. They caress with their lips and limbs, show resentment by facial distortion, bites and kicks, and fear by a tremor; they leap with joy, loll with thirst, lag with fatigue, and attack for revenge or reprisal. Even fishes, with their poor deficient bodies, are able to manifest many mental operations in a manner intelligible to man, as well as to each other. There is no end to authenticated instances of animal sagacity, indicating premeditation, plan, purpose, sense of duty, prudence, gratitude, method, judgment. Animals memorize. They cherish malice, they dream in their sleep, they can count, they have a sense of injustice, a consciousness of error, and notions of forgiveness and reparation. I have seen a brute of a man requite the clumsy caress of his horse by a thumping blow on the nose. His supreme intelligence did not comprehend the animal's action, forsooth. Now some men get vexed if they are not readily understood. Did the horse show temper—this noble animal whom Job represents as endued with the spirit of the tempest? Did he even resent the outrage? Not by retaliation, although he plainly indicated his keen sense of the indignity. What may we suppose his emotions to have been at treatment so regardless and unprovoked? Yet he presently forgave all. Do not say that he forgot, for at all times afterward he shrank with apprehension when his master approached. Oh! the gentleness, forbearance and long-suffering of the brutes, who oft-times grieve in silence—speechless and unable to utter protest or complaint.

Animals meditate. Dogs have been seen to sit in a fit of abstraction, so that no one could engage their attention, and presently start off with an impetus which showed there was a mental impulse behind it. That was a keen sense of finesse displayed by the Newfoundland dog at a seaside resort, when he pushed little girls off the pier so that he could jump in magnanimously to the rescue, and thereby obtain the reward of a handful of candy which he anticipated the grateful parents would bestow. He repeated the trick so often that he fell into suspicion and disgrace, but his method showed not only a conception of the efficacy of a virtuous act and its logical recompense, but the advantage of deception when successfully practiced. A crow which I knew of shammed hunger habitually, so as to obtain more food, which he invariably carried off and hid in a wall, and then came back for more. In this way he accumulated large hoards of provender. A certain Java sparrow was able to distinguish the click of its master's latch-key in the hall door from any other person's, and flew to meet him with demonstrations of joy as soon as he entered the house. He never made a mistake. A sagacious mastiff always pulled the door bell when he desired to enter. A parrot in New Orleans seemed to answer questions categorically, and recognized different persons, calling them by name. The intelligence of insects is perhaps even more wonderful. Fishes exhibit remarkable sagacity, which has been made the theme of writers for two thousand years.

Men are constantly imposed upon by their designing fellow men, but animals seldom err in their judgment of human character, or of their own. They can tell off hand whether a man be tricky, vicious, kind or cruel, brave or craven, vacillating or self-reliant. They will shun or menace some men at sight. Other men will as promptly engage their confidence. It is said that a man's first impression is usually correct, but that he afterward, allows his reason to run away with his judgment, and is thus deceived. Wherein, then, does the wisdom of experience surpass the sublime quality of intuitive perception?

Animals in herds are of the same mind. They move and act always in concert; and inasmuch as their judgment of natural phenomena is well nigh infallible, may they not be mentally qualified to judge of situations where they are not required to act? The moment a man begins to argue with himself, that is *prima facie* evidence that he is astray. It is this feeling of doubt which makes us seek counsel of others; it is the consciousness of our innate fallibility which vexes us when the opinion we seek is opposed to our own. Whenever a man gets lost he either goes aimlessly ahead, or else he attempts to reason himself into the right path, and so almost invariably chooses the wrong one. Nothing but good luck will ever extricate him. Animals never get lost, because they seldom find themselves in a false position, unless restrained of their own volition. A man will attempt to drive a horse over an open bridge in the dark, or an unseen precipice, but the horse resists. What gives the horse intuitive perception and not the man? A horse has been known to walk a stringpiece at night whose presence its rider did not even suspect, and which he could not traverse in broad daylight. A man will perish of thirst in a desert or lose his way, but his horse will take him to water or to his home. A man cannot even tell the points of the compass by the natural signs which are above and all around him, nor does he perceive the signs themselves. He will even look to the ears of his mule for intimations of proximate danger. Man is constantly apprehensive of calamities which perchance never come, but the animals have a prescience which enables them to avoid actual danger when it impends. It would seem as if all the factitious helps of human science were unequal to brute discernment.

Domestic animals are more helpless than wild ones. Whenever they place their confidence in man, or become dependent upon him, they become less able to take care of themselves; but if they revert to the wild state they presently recover their natural capabilities. They can find better shelter, if not better food, than man usually provides. We seldom hear of wild animals freezing to death or being overtaken by floods, like domestic cattle or sheep; yet we are apt to regard domestic animals as the most intelligent of the two, simply because our acquaintance with them is more intimate. We understand them better through their visible traits, and by the smattering of their language which we have acquired.

The habit of observation in animals amounts to a second sight. Is it mere instinct which directs the honey bee in his repeated flights to the same far distant spot, and even to the same individual and identical flower which blooms among the myriads around it? Having discovered it accidentally in the first place, or been guided to it by the subtle sense which he possesses, he never errs afterward. No doubt he exercises the faculties of observation and memory, and his perception is so acute, and his memory so retentive, that they never fail him. Surely the landmarks and guides for the observation of men are as numerous, conspicuous and infallible as they are for the bee. If men would only exercise their faculties of observation more they would be smarter. Such are masters of legerdemain. The significance of all these testimonies will be admitted by all who do not regard them from a plane so lofty that they cannot discern their intellectual depth. But animals do not reveal their best intelligence to men except under most favoring circumstances. Animals are imbued with a constitutional timidity and mistrust of man, implanted for their own protection, and their fear is well founded, for man's habitual attitude toward them is aggressive, his constant purpose being to kill, capture, enslave, or even to torture for his own profit or amusement. With some this fear amounts to absolute fright, their entire thoughts being engrossed with the sole idea of flight or keeping out of reach, so that there is no room for other mental operations. No wonder that their attributes don't shine out. Scare a man out of his wits and he tosses out the mirror and tenderly totes the mattress; but deer, foxes and hares, with the hounds at their heels, preserve their presence of mind sufficiently to contrive matchless expedients to baffle their pursuers. They formulate new devices on the jump and apply them on the emergency. Is not this a high order of genius? Something more than instinct? The man who contrives something after months of study is called an inventor, and he gets a patent on his process, but there are no patents on the expedients of a fox which are "fresh every hour."

The intelligence of animals is modified by their contact with man. The moment their overpowering sense of fear is banished they begin to manifest it in a hundred charming ways. It is in this mood of confidence that they become susceptible to what is called "training," but which is, in truth, a mutual interchange of intelligences through juxtaposition; for is not man a self-confessed student of nature, obtaining a moiety of his knowledge by observations of animals' habits. If sometimes a student, have they always a preceptor?

Development comes by genius through necessity. Brute wants are measured by the means to provide, but human wants increase with the means of providing; and this cumulative urgency of mankind is constantly stimulating the invention of labor-saving machines and developing the intellect. Time is no object to brutes. They have no incentive to devise what they do not need and could not use or handle if they did. Their personal endowment is all sufficient for their simple requirements in their normal state of contentment. Until a man has learned the application of mechanical contrivances they are of no more service to him than they are to the brute. Both would alike die of thirst beside a cistern fastened with a combination lock. But animals often get to know the uses of implements, and that right soon. A horse will unlock a gate, let down the bars and work a pump handle to get a drink. The ox in the shambles comprehends the deadly use of the axe and knife and bellows in terror of the blow which he cannot avert, because he is so deplorably handicapped by nature.

The chief difference between the intellectual promptings of men and brutes is that brutes as an order contemplate only the present, while man is concerned for the future, chiefly on account of the taint of sin, which inheres in him, and the penalty which he must forefend or incur; and the incomprehensible enigma is that the brutes should be helplessly involved in the pains and tribulations of a transgression in which they took no part.

The term "instinct" is a very convenient designation for men to use when they fail to explain the inscrutable operations of the animal intelligence. Like the protoplasm in the cell, which is essentially the same in all organic matter, so is the inherent energy of the spiritual intelligence wherever it exists. The intellectual germs or elements are essentially the same in angels, men and animals, but in different stages of development; and who can guess how nearly they approximate? It is impossible to analyze them or define them separately, for they all blend just where they seem most to divide. When this mundane envelope is sloughed off, the intellectual faculties will appear without handicap or hamper, and all will start fair on the new epoch of existence. Happy will those creatures be whose advanced career in the future life has not been prejudiced by the taint acquired in the primary school of earth.

The end for which mankind is created and toward which he is being carried by the drift of time, is contained, according to the Scripture, in "love, joy, peace, long-suffering, contentment, gentleness, goodness, temperance and self-control." All these the animals have inherent; and who dare say that, living in community with men, and dying as men die, they have not with men a common lot and destiny, whatever it be?

Animals were created before men; and when men came into the world, as naked and hirsute as the brutes themselves, with no higher aims than theirs, and no ambition beyond immediate subsistence and enjoyment, they regarded their predecessors with the deference natural to all latest comers. They looked to them for example and from them learned how to provide for their own daily wants. It was not until man came into possession of the knowledge and faculties which he was forbidden to acquire, that he began to have inordinate desires; that he became conscious of unsatisfied requirements; and when he commenced to assert his delegated right of dominion over the beasts, and to measure the power which had been given him to cope with and subdue them, he had to meet them with their own crude weapons, tooth, finger and claw—for the sons of Adam had no guns—and the respect which he then conceived for their might and prowess is shown in every way in primitive fable, song, statue, story and hieroglyph. And long subsequently, in the course of human advancement, men regarded the animals as gifted with a superior intelligence. They adopted their generic names for their own families and clans; they wore their effigies and skins in amulets, charms and totems; they worshipped them in symbol and in fact, even to the calling forth of the divine protest at Mt. Sinai. They venerated and held sacred the living, and they apotheosized the dead. They illustrated their homage in allegory and tradition, in the Zodiac, and in the brightest constellations of the firmament.

Ever since the commencement of the Christian era, the Holy Spirit, intellect ineffable, has been typified by a dove, and even so appeared in supernatural manifestation at the Transfiguration. The second person of the Trinity is symbolized by the figure of a lamb, and, as if to forecast the final preferment of animals under the divine economy, we have in the Apocalypse beasts appearing in various forms in the final accounting in closest intimacy with the Author of the Universe. The animals were with man in the beginning; they have kept progressive pace and place with human development, and so will continue unto the end. Then, not only typically, but in fact, "the lion will lie down with the lamb, and a little child shall lead them."

CHARLES HALLOCK.

BUFFALO DOMESTICATION.

THE domestication and successful rearing of the buffalo has at length become an accomplished fact. A dozen years ago we had something to say on this subject, which was published in FOREST AND STREAM of March 15, 1877. After speaking of the rapid destruction of the buffalo which was then taking place, and calling attention to the fact that the Yellowstone National Park was the only region of our country where the buffalo could be preserved in a state of nature, we said:

"But this is not the only means by which the buffalo may be preserved. An animal which in all essential respects agrees so closely with the domestic cattle must surely prove of vast importance to the farmer and stock raiser, if its domestication were but systematically attempted. We have at various times seen in Montana, Nebraska and Kansas young buffaloes running at large with the herds of domestic cattle, and in their actions resembling in all respects their tame companions. With the cattle they would wander off for days or weeks to distant parts of the range, returning from time to time, and being quite as gentle and docile as the other individuals of the herd. When these calves approach maturity, what more natural than that the bulls should be broken to the yoke? The owner is not slow to avail himself of their enormous strength, and teams of young bulls are by no means uncommon in the vicinity of the buffalo range. A Montana settler told us a year or two since that a yoke of these animals which he had until recently possessed could pull more than 'any two of cattle on the place.' Their power and endurance are undoubted, though their temper is not, perhaps, of the best. In fact, it is said if they desire to go in any particular direction, or not to go at all, nothing that the driver can say or do will have the slightest effect in changing their determination. Such little eccentricities as these, however, would no doubt be overcome after a generation or two of domestication, or might be more immediately modified by a cross of domestic blood.

"The experiment of cross breeding the buffalo with our domestic stock is said to have been successful in the highest degree wherever it has been attempted. The progeny seem to be very hardy; the milk of the cows is exceedingly rich, and the supply bountiful, and the flesh is in no respect inferior to the best beef. Gallatin states that ninety years ago both pure and half bred buffalo were common in Virginia, the calves being frequently captured with dogs and brought into the towns to be reared. Mr. Robt. Wickliffe, writing to Mr. Audubon in 1843, mentioned that for thirty years he had bred the pure and mixed stock with success. Ultimately, however, through lack of care, the race of the bison has in all cases been merged into that of the domestic stock. In the West the experiment is now being tried once more, and we earnestly hope it may succeed.

"It is an accepted fact that the buffalo on the plains is to become a thing of the past, but there remain these boundless prairies, their former feeding grounds, still covered with the richest of pasture. Already these are becoming immense stock farms, over which range hundreds of thousands of the broad-horned steers of Texas. The old buffalo ranges are filling up with cattle, and by the importation of blooded bulls the quality of the stock is being continually improved. From these plains a large portion of the beef for Eastern and European consumption will ultimately be derived. Before the buffalo wholly disappear some intelligent effort should be made for inter-breeding on a large scale, so that ere the last of the shaggy wild brutes has yielded up his life there shall have been infused into our Western cattle the hardy blood of their obliterated relatives.

"Thus the plains and bluffs will not be tenantless. Long after the dark, serried and resistless masses have disappeared, and the thunder of a million hoofs has died away, there will remain a new race blending the best qualities of our present stock with those of the buffalo. So may these sturdy half-breeds wander over and draw fat subsistence from the same hills which were once blackened by the dusky hordes of their untamed ancestors."

The prophecy then made seems in a fair way to be fulfilled. There are now in this country nearly 250 buffalo in a state of domestication, and while a part of them are kept in cages or so restrained of their liberty that it is impossible for them to do well, yet not far from a hundred and seventy head are in a perfectly natural state and are increasing at a very satisfactory rate, as well as interbreeding successfully with the domestic cattle.

Besides these domesticated and captive animals, there are the wild herds, of which one, that in the Yellowstone National Park, is protected by the United States Government, and the other, that on the Arctic slope, by its extreme northern habitat. The Yellowstone herd may number 300 head, and consists entirely of the so-called "mountain bison;" while the Peace River herd is the form known as the "wood buffalo," and is now very rare, though a few still exist there. The most recent advices speak of this herd as divided into two bands, one of which, numbering about 200, ranges on the east side of Peace River, between that stream and the Athabaska; while the other and larger band is on Salt River, further north, and is supposed to number about 600 head. Two small bands, one of twelve and one of eight head, were seen this summer in northern Montana in the neighborhood of the head of the Musselshell River, but besides these there are probably not fifty wild buffalo on the continent.

Mr. C. J. Jones is now the largest breeder of buffalo in the world, for by his purchase of the Bedson herd he has acquired possession of most of the buffalo under domestication. His herd numbers 127 full-blooded animals, and twenty-three cross-breeds. His pure bloods are about equally divided as to sex. This will enable him to go into the business of raising half-breed stock to an extent that is almost without limit, and at the same time will enable him to keep his herd pure. Of the other bunches of domesticated buffalo much less is known.

DOMESTICATED BUFFALO AND HALF-BREEDS.

Crossbred Heifer, ⅜ buffalo, ⅛ Galloway. Half-breed Buffalo Cow. Buffalo Bull, 6 years old. Cow. ⅜ Buffalo, ⅛ Galloway. Buffalo Bull, 3 years old. Young Buffalo Bull.

The largest one in the United States of which we have any knowledge numbers about thirty head. This belongs to Charley Alure. Mr. Goodnight has a dozen or fifteen head, and Mr. Dupree, as we are informed by Mr. Hornaday, nine pure bloods. William F. Cody has about eighteen of these animals, and last spring had no less than five calves. His cows are apparently more fertile than buffalo cows usually are in captivity, and if this is the case we believe it to be due mainly to the fact that they get more or less exercise, being daily driven several times about a large inclosure by mounted men and at a good rate of speed. All wild animals in a state of nature take a great deal of exercise; often alarmed, they run, and even when undisturbed are constantly moving about in search of food. Such exercise they cannot get in confinement, and therefore the functions of life are disturbed and the health of the animal suffers, which of course interferes with its productiveness.

The remaining buffalo are scattered about in small groups with shows or in the zoological gardens. The buffalo breeds, however, even in close captivity, and there are some calves which have never been outside their cages. Mr. Jones's herd of buffalo, living on the range, as did their ancestors, and thus leading a natural life, should do well, and, although the buffalo is not a rapid breeder, should increase.

Attempts at buffalo domestication are not altogether new, and as implied in the extract above quoted tame buffalo were known in Virginia a century ago, and in Kentucky only a little later. In 1842 the Hudson's Bay Company had a herd of tame buffalo at Ft. Edmonton, on the Saskatchewan. Like all the others it began with the capture of a few calves, gradually increasing until it numbered about thirty individuals. Although these buffalo ranged and fed with the cattle, they never interbred with them. This herd was finally lost, going off with the wild buffalo one year when the latter came close to Edmonton. Although the experiments have extended over so long a time, but little has ever been put on record concerning the breeding of the domesticated buffalo. Audubon recorded some facts furnished him by Mr. Robert Wickliffe, of Kentucky, and an occasional note on the subject has appeared in FOREST AND STREAM. Besides these, little or nothing is known of the habits of this species in domestication. We therefore turn naturally for information about buffalo breeding to Mr. Jones, who has for three years had these animals on his farm, and who has given careful attention to their habits.

Although in his first attempts at capturing calves Mr. Jones was probably only gratifying a fancy, he was shrewd enough to see very soon that if his herd could be made large enough it would produce money, and a good deal of it. As the idea took shape and grew he devoted more and more attention to the matter, purchased buffalo singly or in herds wherever they could be had, until from a bunch of four in 1885 his herd has grown to 127 in 1888, and besides the twenty-three cross-breeds which he has, he believes that he has about one hundred domestic cows in calf to buffalo bulls.

Viewed from the commercial standpoint, there seems little doubt as to the success of this experiment. No fur has yet been found which offers such protection against the cold as the buffalo robe. The buffalo coat is a necessity throughout the Northwest—east of the Mountains. Nothing else will keep out the cutting wind and the bitter cold of the terrible winter storms of that region. As we have already stated, the robe of the cross-bred stock is better, more even and handsomer than that of the pure-bred buffalo, and for such robes as these animals seem to produce there will always be a market at good prices. The hide of a three-year-old steer, three-fourths buffalo, slaughtered by Mr. Jones, brought $75. This specimen dressed 1,280lbs., and the flesh sold at 18 cents per pound, making the total product of the animal something over $300. The cross-bred cattle are said to be much heavier than the pure bloods, and when it is understood that a full-grown buffalo bull weighs more than 2,000lbs., it will be seen that the importance of these animals as beef cattle is very great. However, it will be readily conceived that it is not from this point of view that the breeder considers them at the present time. He is raising these cattle for breeding purposes, and it is in this, as will be seen by reference to our recent remarks about them, that their chief value will be found. It seems altogether probable that by judicious inter-breeding with our native range cattle, a new race, larger, stronger and far heavier than anything now known, will be produced. In the half-breed stock the hump almost disappears, as will be seen in the illustration, and we have an animal of great size and tremendous sturdiness. The hardiness of these cross-breeds is undoubted, their beef seemingly equal to the best from domestic stock, and the milk, in the cases when half-breeds have been tested, fair in quantity and very rich. The fact that the cross-bred stock are fertile among themselves and with the parent stock on either side is by far the most important point connected with these experiments, and opens up limitless possibilities looking toward the improvement of the domestic cattle.

Mr. Jones recommends the crossing of the buffalo with the Galloway and Polled Angus, two strains of domestic cattle renowned for the excellence and quantity of the beef which they produce and for their heaviness of coat. The three-quarter and seven-eighth buffalo crosses with these breeds are said to yield a robe as choice as sealskin, and of the same color. Besides its outer hair, the Galloway is known to have an under fur which is soft and mossy, and gaining in length, thickness and gloss by the buffalo cross, its robe is unequaled for warmth and beauty.

Mr. Jones' experience goes to show that the buffalo cow is seldom or never impregnated by the domestic bull, while the domestic cow breeds readily to the male buffalo. The hybrids of whatever degree are fertile to either parent. For many years a popular impression has existed in the West that the domestic cow cannot give birth to a calf by a buffalo bull, on account of the hump, or as it is sometimes put, the great size of the shoulders. This impression, to which allusion was made in our editorial of Nov. 29, on "Buffalo Breeding," we believe to be entirely erroneous. As a matter of fact the buffalo calf has at birth no hump at all. It is a large calf; nothing more. All the great development of the dorsal spines which form the hump, takes place during the growth of the animal from birth to maturity. The half-bred calf is a large animal, and small domestic cows may have difficulty in parturition, but with large loose-hipped cows, especially if they can be watched when the time for calving approaches, there is no difficulty. The domesticated buffalo are no more difficult to handle than our ordinary cattle. The bulls are sometimes cross and unruly during the breeding season, but not more so than at times are range bulls. As the strength of the buffalo is greater than that of the domestic stock, and as generations of inheritance have not yet accustomed them to confinement, they need stronger fences than cattle, if they are to be kept up close.

From information which we are able to gather on this subject it would seem that there are at present enough captive buffaloes in this country to perpetuate the race in a condition of domestication for a long time. The rearing of these animals seems to present no difficulties that cannot be overcome, and fresh blood can be had by the interchange of bulls between breeders living at a distance from one another. The use of bulls for the improvement in size and hardiness of our domestic range cattle is destined to prove an important factor in the Western cattle business, and the prophecies made in our article of twelve years ago seem likely to be fulfilled.

The illustrations which we present this week are from photographs of individuals of Mr. Jones's herd.

GAME IN TOWN.

Editor Forest and Stream:

Speaking of "game in town," about three weeks ago a resident of this city found a buck one morning caught in the fence surrounding his yard, and killed it with an axe. Last year a bear was killed within the city limits about three miles from where I am writing.

I also saw a large owl on Boston Common some years ago, and two other instances occurred near my home on Beacon Hill, near the Gilded Dome. A skunk was killed on the next street to mine; and in the house across the way a canary bird, which hung in a cage at an open window, was attacked by a large hawk. The hawk was driven away with difficulty and made a fierce fight for the possession of the bird. It is easier to account for the presence of the birds than that of the skunk. How the animal ever found his way into the heart of Boston till he met his fate in the back yard of a dwelling house I never could understand, but the fact remains.

One Sunday a short time ago a black bear went through the village of Athens, Maine, passing through the main street. He was followed and shot, and a friend of mine bought the skin. The bear had only two feet, one fore and one hind foot being *minus*, so that his visit to town was probably not his first introduction to the methods of man. He had evidently had some previous experience with civilization in the shape of steel traps. W. A. B.

BANGOR, Me., Dec. 10.

Editor Forest and Stream:

On relating to one of your subscribers an incident that happened to me on Monday of this week, he said that you would like to know of it, as it was of interest to all sportsmen. As I was about coming out of Geo. W. Russel's jeweler's store, No. 22 N. Sixth, exactly opposite Commercial street, I had just put my hand out to open the door, when there was a loud thud on the thick plate glass. I turned to him and said, "George, those boys playing there in the street are trying to give you a Christmas present by breaking your glass," but on looking down I saw a fine woodcock lying dead. It had evidently flown straight up the street from Jersey, from beyond Camden, across the river, and right up the street in a straight line, striking the glass with terrific force, killing the bird and almost breaking the glass. This happened about 12 o'clock noon. E. T. JOHNSON.

PHILADELPHIA, Pa., Dec. 12.

Editor Forest and Stream:

Regarding two items in your paper a few weeks since about a ruffed grouse and a bevy of quail having been seen in the city of Cambridge, I would suggest that that city must be a favored locality indeed, as a friend informed me that he, on Nov. 28 (day before Thanksgiving), saw a ruffed grouse within a few yards of his house in Cambridgeport, and leaving his breakfast table for two or three moments, returned with the bird, which he had in the meantime shot. I heard also of three quail being seen within a quarter of a mile of the Cambridge City Hall, and also of two owls, one of which was shot.

BOSTON, Mass., Dec. 6. HUB.

OWL AND MAN.

Editor Forest and Stream:

I have just returned from my annual outing in the Maine woods, of which I want to send you some account if I can ever get time to write it, but I will give a few bits this time which I think ought to be preserved.

The first is of a singular encounter between a man and an owl, the scene of which has often been pointed out to me by my guides. The occurrence is well known, and if I mistake not the hero of it is still living in Brownville or vicinity. A teamster, taking in a load of baled hay to a lumber camp by the way of the old "tote road" from Brownville to the Jo Merry Lakes, stopped late in the afternoon to bait his horses. His halt was under a big yellow birch, and while his horses munched their oats the teamster coiled himself up on the top of his load and pulled his blanket over him for a little nap. Whether he slept longer than he intended I do not know, but when he awoke it was nearly dusk. He with a quick movement drew his blanket from his face, when instantly his face was pierced deeply by sharp and cruel talons. This fierce onslaught had been made by a huge owl, which on seeing his white face suddenly revealed, and doubtless taking it for a rabbit or some such animal, had instantly pounced with all his energy from the tree above. The assaulted man, frenzied with pain and terror, and not in the least knowing what had seized him, grasped desperately at his enemy, and clutching the legs of the owl with one hand and its neck with the other, actually by one wrench tore its head from its body. How he extricated the talons from his face and how he made his way to the clearings and help the man hardly knew. I believe that by great good fortune his eyes were not destroyed, but for a long time the swollen condition of his face prevented him from seeing, and I have often heard a description of his appearance during that period.

Several times my guides have told me of apparently hostile swoops at their heads made by owls in the dusk, but I have never heard, save in this one instance, of actual injury so inflicted. C. H. AMES.

NESTING OF LEACH'S PETREL.

Editor Forest and Stream:

I noticed in your issue of Nov. 29 the account of the meeting of the A. O. U., which included the statements of Dr. Louis B. Bishop, giving his experience with the nidification of a species of petrel which he found at the Magdalen Islands. Dr. Bishop expressed an opinion that the petrels did make some nest at the end of their burrows and exhibited a nest, which he secured, as evidence. It seemed, however, that in the opinion of other prominent ornithologists these nests which Dr. Bishop found were the work of mice, in which the finding of the petrel eggs was a mere coincidence.

From the meagre details given I am unable to ascertain what species of petrel Dr. Bishop found at the Magdalen Islands, but the following may prove of interest with reference to the discussion.

I spent the first two weeks in June, 1887, at Grand Manan, N. B., with Mr. Simeon F. Cheney, whom doubtless many of your naturalist readers well know; and in company with him and two other gentlemen visited White House Island, a great resort for the Leach's petrel (*Oceanodroma leucorhoa*). We explored over fifty of their burrows, and in nearly all which contained eggs, I found a handful of chaff, upon which the eggs were placed. In some instances the burrows were so fresh as to admit of little probability of mice ever having inhabited them; and these also contained the usual litter at the end of the burrow.

While the arrangement of the finely cut grass, etc., did greatly resemble the usual work of mice, yet the reasoning from cause to effect was so apparent and conclusive that I readily ascribed it to the petrel. In some of the new burrows the straws were mixed with the new earth, and in such new incompleted homes I would always find a pair of petrels, while the burrows containing eggs would be occupied by single birds. Several old burrows would be occupied by lone birds, presumably a retreat for the males, and such holes contained no nests.

Should these nests be proven to be the work of mice, then we must look for an intimacy which will rival the prairie dog-owl-rattlesnake story of the Western plains.

Game Bag and Gun.

THAT CHRISTMAS HUNT.

As fresh as the crisp breezes that swept across the cheerless hilltops was I last Christmas morning when, after a brisk three-mile jaunt, I drew rein before an old-fashioned farmhouse. From the tumble-down chimney at its further end a faint wreath of smoke curled lazily upward, while across the frost-encrusted window panes little streaks of dampness crept comfortingly. The signs of warmth and a Merry Christmas within were altogether pleasing, and in mighty sharp contrast to the slashing wind and oppressive mercury without.

My former companion on many a tramp afield, A., met me at the door. He signified his intention to join me in a scramble after the grouse. From the dusty depths of an upper story the historic muzzleloader, long of barrel and straight of stock, was rescued. The process of cleaning was simple and devoid of ordinary ornamentation, consisting merely of an enormous injection of common black powder, the rust-eaten exterior of the family heirloom being rubbed briefly with a coarse cloth profusely saturated with kerosene oil. We struck for a deep, far-reaching ravine, densely timbered, something like a half mile west. I don't suppose there is anywhere a locality to hunt in more uncomfortable than in this same gulch. A good many of the terribly steep declivities are covered with a remarkably thick undergrowth that makes any sort of progress exceedingly difficult. The tedious, toilsome hours passed, and not a bird was sighted. Then, as the mellow notes of the dinner horn floated down the lane from the house, echoing from tangled copse to towering bluff, A.'s big gauge came abruptly to his shoulder and a fine bird was knocked from its perch on the topmost branch of a stately hemlock. A. doesn't profess to care a rap for the shooting ethics of the modern sportsman and never takes any chances on a wing-shot. So it came about that on this particular occasion the blunderbuss beat the breechloader.

After paying our respects to a Christmas collection of toothsome things we again adjourned to the neighboring woodland. Game signs were pretty nearly obliterated. Finally, however, I succeeded in getting up a surprisingly large partridge. The bird arose full 40yds. in advance of me, and crossing the noisy Buttermilk Creek, settled in a thicket of stunted hemlocks near its eastern bank. A. declared that to bag that bird should be our task, though it should take the entire afternoon. Thereupon a crossing was effected and a cautious beating out process began. A. had reached the center of the swaying center, when, with a roar like the rattle of musketry, the gay fellow broke cover and was marked down at or near a point of rocks projecting into the creek, the rocks being the termination of a long ridge, deeply wooded, that ran in a quartering direction from us. A. made for this point while I ascended the ridge, the top of which was surmounted by a broad plateau partly wooded. To the west of this plateau rushed the stream, the peculiar milky whiteness of whose waters, at this point and below, give to it the name "Buttermilk." Going to the very edge of the ridge, which sheered off downward a good hundred feet to the water below, I shouted to A. to flush. The next moment the dun and mottled plumage burst through a rift of green-topped pines, and following the bed of the stream disappeared around a convenient bend of rocks. Half dazed and quite entirely disgusted I waited until my companion climbed up the steep ascent.

A council of war was held and it was decided that the bird had switched off from the water and alighted on the northern side of the ridge, the summit of which we had just reached. A. then sought a spot some twenty rods ahead of where we decided our game to be resting, and I whipped around to a point where the wooded slope and waters met and carefully advanced. I had proceeded scarcely twenty steps, when with a boisterous whir, the "sly, devilishly sly" bird leaped from a brush heap almost at my feet. My chances of grassing him were not flattering, and I reluctantly awaited the report of A.'s heavy-weight. It was growing dark rapidly when I reached his position, anxious to know why he had failed to shoot. He curtly informed me that his grouse-ship had deigned to alight in a treetop, well out of gunshot, for a moment only, and then winged his swift flight to a cluster of pines on the plateau near where our last council of war had terminated.

Deciding to make one final supreme charge on the enemy, ere the mantle of dark dropped over the last faint outlines of sprightly Dame Nature's robe, we approached the cover. The darkling shadows flitted through the woods, making a still-hunt a provokingly slow task. Working with the dull gray of the western sky as a background, I was enabled to see tolerably well. Meeting with no success I was about to rejoin my companion, who, possessing a dim eyesight, had remained in the rear, when, from a gentle swaying bush a clean 30yds. in front of me, the keen-eyed bird dashed into space, and at the report of my Ithaca dropped earthward. A beautiful specimen of a most magnificent game family he proved to be. After leading a clever chase of over a mile through the roughest country a shooting man could wish for, and recording at least five flushes to his credit, the big fellow tendered to us an unconditional surrender. With that surrender came Christmas cheer and calm contentment to the conquerors.

M. CHILL.

ITHACA, N. Y.

THE SEASON IN MINNESOTA.

NEW LONDON, Minn., Dec. 8.—The shooting season has nearly closed here, though the birds have not all gone south. Severe weather has not yet set in. For several weeks we have had quiet sunny days, with just enough frosty nights to make good skating on the ponds. The large lakes are still entirely open, and daily one may see geese and various late ducks enjoying themselves. Seeing is not possessing, however, for these last few birds seem to have more cunning than all the earlier hordes combined. Day after day the geese rise high in the air, and go off to some secluded field to feed, carefully avoiding everything that looks in the least suspicious. Their motto seems to be, "Vigilance is the price of life," and they live it to the letter. Occasionally some enthusiastic and perservering hunter looks up a feeding ground, and digs a pit in the frozen earth, or makes a blind of cornstalks; but, after shivering through the early hours of the day, he is apt to discover that the geese understand the anatomy of his sheet iron decoys nearly as well as he does himself.

But little more successful is the duck hunter. All day long the ducks hang around the middle of the lake, getting their food from the bottom and seldom coming within even rifle range of the shore. If they are disturbed by a boat, they rise in circles over the open water, and go straight across the country to some other lake, paying no attention to the flyways chosen by their brethren earlier in the season, and moving so high that the shooter in the blind on the point or on the marsh cannot reach them. Still, an afternoon about the lakes is not unenjoyable, unless enjoyment be entirely measured by the amount of game killed. To the sportsman who appreciates game that is difficult to obtain, the bagging of one goose or duck now, that is fairly outwitted and shot, is more satisfactory than the killing of a dozen earlier in the season when they were numerous and comparatively tame.

It frequently happens that when going through the brush, there will be a sudden whirr and roar as a ruffed grouse goes from your feet so rapidly that there is barely time to throw the gun to your shoulder and pull the trigger. Ruffed grouse (always called partridge or pheasant here) are so strong and quick on the wing now, that the snap shots they afford are difficult enough to please the most exacting. The crop has not been up to the average this year. The broods hatched out well, but cold rainy weather came on, and many of the chicks died before they were half grown.

Prairie chickens suffered less from the wet weather, still they were not as numerous as in former years. At the commencement of the open season they were largely feeding in the grain, which was then standing. The result was light bags, and a large number of birds left for seed next year. I know of nothing much more tempting than to have a covey of these birds fly over one, now that it is the close season. Their flight is so strong and rapid that they are much better able to take care of themselves than they were in the open season, and they present a mark nearly as difficult as teal. Nevertheless the law protecting them is a good one, for it keeps them out of the market, and offers no inducement to that abomination, the trapper, to ply his trade. If any change is made in the law the time when they can be sold should be shortened, or better still, abolished altogether.

The flight of ducks has been nearly as great as in any recent year, but the birds did not stay with us long. Wild rice is their principal food here, and that was very scarce, many beds being almost entirely destroyed by the unusual high stage of water through the summer. The statement of Mr. T. A. Howe that, "I believe that if one acre of the densest of wild rice swamp were gathered and stripped there would not be a half bushel of seed" (reported by your Chicago correspondent Nov. 29), is very surprising. Indiana wild rice must yield much less than our Minnesota variety. A bed of rice, with us, that does not yield three bushels of seed per acre is light. On the first day of last September I paddled a common open canoe through a bed of rice for about four hours. I went slowly and as quiet as possible, for unless I was close to the ducks when they flushed there was not time to lay down the paddle and take up the gun before they were out of reach. When I finished shooting, and pulled the canoe up on shore, there were over six quarts of rice in it, that had fallen in or been knocked in by changing the paddle from side to side. The crops of the ten woodducks and teal that I got were full of the rice.

Geese have been more abundant here all the fall than for years. There are several causes for this. The high stage of water made numerous safe roosting places. The wheat crop, which was better here than further west, was taken off the fields very late, thus giving the birds a chance to pick up the scattered grain before the plowing was done. Another reason, and a constantly growing one, is that through Dakota, where the main flight has recently been, the country is rapidly settling up and the birds are being shot at there nearly as much as in this State. Therefore, it is with considerable hope for the shooting next fall that we will put away our guns in a few days, when the lakes freeze up for winter and the last goose goes south.

REN.

"DEER HUNTING IN NEWFOUNDLAND."

HALIFAX, N. S., Dec. 11.—*Editor Forest and Stream:* I notice with surprise in your last issue (Dec. 6) a letter from a correspondent in Harbour Grace, which brings a charge of wholesale "butchery" against me and my Halifax friends while deer stalking in Newfoundland this autumn.

This unfounded charge originated doubtless in a bogus telegram sent from the Bay of Islands to a St. John's paper. Had Mr. B. taken the trouble to verify his facts before rushing into print, he would have found the following: In the first place, Dr. Tobin was at no time shooting near Grand Pond, as he states, but in the Bonne Bay Hills, at some distance from the Humber. He had with him no "Halifax friends." His sole companion was Mr. R. Langrishe Marc, a well-known sportsman from St. John's, who has done much to preserve and improve the stock of game in the colony. Dr. Tobin and Mr. Marc killed but seven stags between them during the five weeks their party was in the country.

Secondly, as to the charge of leaving the carcasses on the ground, it was impossible to do otherwise. It was the rutting season, and at such time (as your sporting correspondent should be aware) stag's meat is uneatable. I would like him to try it. In all cases, however, the carcasses were removed from the deer paths. A few does were shot for food, but no more than the wants of the party, at one time numbering eight persons, necessitated.

Dr. Deeble, army medical staff, and his brother, accompanied me from Halifax to Deer Lake. There they branched off to shoot at Grand Pond. After six weeks' shooting and trapping they brought down nine heads and some fur to the Bay of Islands. Thus the two parties, camping some fifty miles apart, got but seventeen heads between them, which I am sure your readers, considering the time occupied and the number of guns (four), will not consider unreasonable.

This is the second excursion I have made to this same ground in Newfoundland (each time with Mr. Marc), and I must say your unreliable correspondent greatly exaggerates its attractions for sportsmen. On both occasions we failed to find the thousands of deer he describes. When last there, four years ago, we shot eight stags, and saw but forty or fifty altogether. This year, for the first three weeks we did not see the tail of a deer, but one doe which we shot for the larder. In the last two weeks we saw perhaps thirty, but there were but few old stags among them.

To accuse the few sportsmen who visit Newfoundland of "butchery" is untrue and misleading. The real slaughter of deer is done by the fishermen from the coast and other settlers. Parties of them go up from the coast and shoot deer for their winter's food. They fire into the herds with buckshot and wound (often fatally) more than they kill outright. These are the real butchers against whom the terrors of the law should be invoked. Barring the deer, whose numbers are sadly diminishing, we saw but few ducks, geese, hares or ptarmigan. In fact, this part of the island is far from being "a paradise for sportsmen."

These facts, which will be vouched for by Mr. Petrie, Bay of Islands, and Mr. Lillie, the resident magistrate for that district, will, I hope, effectually dispose of the charge of "butchery" brought against me and my "Halifax friends" by this busy "B.," your anonymous correspondent—perhaps B. F. might more appropriately describe him.

I might add that Lord Caledon, who went from the Bay of Islands to Hall's Bay, via Grand Pond, while the Deebles were there last October, shot only four heads, and in a subsequent letter which I have seen, says nothing of the evidences of slaughter described by your correspondent's informant from Little Bay.

W. TOBIN.

MAINE GAME.

THE Maine deer season is proving to be a wonderful one, and the number being taken is simply enormous, when compared with the great scarcity of that game twenty, or even ten years ago in that State. Deer are reported in most unheard of localities. The papers say that one actually ran into the city of Bangor the other day, and becoming entangled on a picket fence, was killed. The engineer and fireman on the train which runs on the branch of the Maine Central Railroad from Oakland to Anson, have recently seen three deer several trips in succession a short distance above the village of Noridgewock. A few days after a deer ran up very near to where some men were wood chopping in that section. Again a few days later a man out gunning for partridges killed a deer which weighed 150lbs. His gun was loaded with small shot only, but the deer ran up very near to him; stopped, and gave him an excellent chance for a shot. Now the advocates of dog hunting have something to think of in such cases. The deer mentioned above were all seen within a few rods of farms and farmers' dwellings, and very near to quite respectable settlements; and more singular than all, in localities where a few years ago such an animal as a deer was almost unheard of. Then packs of hounds were kept for the purpose of hunting, and if a deer had been heard of it would have been hounded to its death in a few hours. But to-day it is against the law to hunt deer with dogs, and the law is fairly enforced, except in one or two localities—one where open defiance is bid.

But the most refreshing feature to note is the point that so few deer, in spite of the fact that they are so plentiful, are reaching the Boston market. It is plain that the market hunter's business is not an easy one, if he desires to ship deer from Maine to Boston. But very few from that State have been smuggled through. Now and then a carcass is seen, with the joints of the legs cut, and if a buck, with the antlers knocked off. Why this mutilation? The question quickly solved itself the other day to a friend of fish and game protection who happened into a commission house, noted for receiving game. Two of the salesmen were rousing something from a pork barrel. It proved to be the body of a deer. The joints of the legs were cut, so that they could be doubled up in the barrel. The barrel was carefully headed. Evidently the deer came from Maine, though the men denied all knowledge of the shippers or their place of business. In another case two deer have been received through the medium of flour barrels, marked apples or potatoes. In another case a deer was seen to be taken from a poultry case.

Not a very satisfactory season on partridge closed in Maine on Dec. 1. The shooting has generally been poor on these birds in that State this fall, though it is noted that there has been an increase of birds in the remote woods, but that they have generally been scarce near the settlements. The feeling is strongly in favor of asking the coming legislature to change the beginning of the open season to Sept. 15, instead of Sept. 1. The true item is widespread that the birds are not fully grown on Sept. 1, and that they are still in flocks, making the work of destruction by far too easy. It is probable that the legislature will be petitioned to take this action by the more reasonable of the hunting elements, but that it is likely to be opposed by the farmers, in the interest of their boys. But very few Maine partridges have reached the Boston market this year.

It seems that moose horns are not greatly appreciated by the members of the Boston Chamber of Commerce. Dr. Dixwell, a West Cedar street physician and naturalist, sent word the other day to the committee on raising funds for a testimonial to the bravery of the Hull life savers in the recent storm, that he would give the finest pair of antlers in his collection for the benefit of these brave men, and they might be sold to the highest bidder at some suitable time and place. His idea was that the horns were worth $100 at the very least. It was decided that the rooms of the Chamber of Commerce would be the best place for the gift to be displayed, and for the sale to take place. Accordingly a very fine pair of moose antlers were shown to the flour, grain and produce merchants of the Hub for a week or more. The sale at auction took place at the change hour last Friday. There was a crowd of merchants present and the bidding was well enough, up to about $25, but there it lagged. At last the horns were knocked off to Mr. C. I. Goodale, the Sudbury street taxidermist, for $52.50. Mr. Goodale says that he bid off the antlers, not for himself, but for F. Gordon Dexter, a wealthy Bostonian and society man. Mr. Goodale also says that he was prepared to have bid considerably more than $100, had there been anybody to bid against. SPECIAL.

"THE ETHICS OF ELK HUNTING."

DENVER, Col., Dec. 8.—In FOREST AND STREAM of Nov. 15 (which I have not seen until recently, owing to absence), there is an account of a rather remarkable hunt by J. E. Brown, Dall De Weese and L. E. Franck. The story purports to have been written by the latter. The actors were Cañon City (this State) nimrods, and the scene of their exploits is located among and near the Flat-top Mountains north of Grand River, just above the mouth of Eagle River, in Garfield county, also in this State. Following the narrative it appears that they set out early in the morning of Sept. 3, reached Dotsero, at the junction of Grand and Eagle rivers, at noon of the same day, found saddle and pack animals waiting, and proceeded some miles into the wilderness for camp that night.

The next day they reached and camped at Sweetwater Lake, where they camped, and caught seventeen "speckled beauties" for supper.

The next day they progressed further, went into camp and in the evening made a hunt, De Weese killing a buck "that dressed 260lbs., with fat an inch and a half thick on the rump. His horns were large and very uniform and in full velvet, making a fine trophy."

The next two days they did not accomplish much, but observed a great many tracks of elk and deer.

The next day they hunted elk and wounded one in the forenoon but failed to get it. The historian notes a curious discovery, that is that elk frequent water holes to wallow in the mud and water. When they returned to camp it was discovered that their "San Juan canaries" had taken the back track for Grand River. Mr. Brown offered to go in pursuit of them. In the afternoon Mr. De Weese and Mr. Franck again went hunting, found a band of elk, fired into them and wounded the leader, "the very monarch of the hills," but failed to get him.

The next morning they were out early after the wounded elk, followed up the trail, and eventually found and killed him after firing seven shots. "He measured 15ft. 4in. from hoof to point of antlers, and girthed 9ft. just back of the shoulders.

The next day Mr. Brown returned with the "mocking birds," and felt very badly over the partiality of fate in distributing her gifts. He got only music while the other fellows killed meat.

The next day they packed up and moved camp, but soon ran into a flock of "silver-tip" bears and bowled over two with scarcely an effort. A third one was wounded, but got away.

The next day they started for the railroad, and in the evening as it was growing dusk they came upon a band of eleven elk about a salt lick and 300yds. distant. It was too dark to see which ones had horns, yet they opened fire and kept it up "until each one of us had brought down an elk." Mr. Brown got a large bull, "having a particularly fine set of antlers," probably as a slight compensation for his long pursuit of the "nightingales."

The next day our mighty hunters reached the railroad, and eventually arrived at home about midnight of Sept. 16.

According to the story they had killed and recovered one deer of 260lbs., one elk of 800lbs., three elk in the dark, one of which was very large, say 600lbs., and the other two we will guess at 450lbs. each, a total of 2,560lbs. This makes no account of the two bears, nor of the elk that were wounded and left to die.

Now what possible use could these three butchers have for a ton and a quarter of dressed meat in the ten days from the time they killed the first deer until they left the field? 256lbs. of meat per day for three men, and one of these absent half the time traveling with an opera troupe.

There is a law of this State which says: "No person shall kill or wound, ensnare or trap, any elk, deer, buffalo or bison, fawn or antelope, within this State, between the first day of January and the fifteenth day of October in each and every year." The same law provides as a penalty for its violation a fine of not less than $50 or more than $200 for the first offense, and for each subsequent offense a like fine of from $50 to $200 and imprisonment in the county jail of not less than 30 or more than 90 days. Mr. Franck confesses that he and Messrs. Brown and De Weese killed five animals and wounded one. It is probable that the eight unfortunates that escaped from the night attack at the salt lick were all wounded, also. If so the hunt scored them fourteen separate and distinct violations of the law.

But there is a grain of comfort in the thought that it may be all a fairy story. It contains certain visionary features and suspicious car marks. The attention of our Fish and Game Protective Commission has been called to the narrative, and if it proves to be anything more than spirit shadows of a waking dream, FOREST AND STREAM may hear of Messrs. Franck, Brown and De Weese again later on. W. N. B.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 13.—Frank Wood is now on the New Madrid marsh, of Missouri, with two gentlemen of Joliet, Messrs. Claflin and Sawyer. A letter received by Tim from him stated that they had killed thirty ducks on the day before; that deer were reported plentiful, and that they were going into the swamp till they got one.

In a week or so Mr. W. B. Chatfield, of this city, will start for a prolonged duck hunt in the South, accompanied by Tim Wood as pusher and assistant. They go to Galveston, Texas, and will there hire a schooner. Should they not find the ducks near Galveston, they will keep on to the Mexican coast. Mr. Chatfield is really the advance man of the party, and will be joined soon by Mr. Cox and Mr. Jesse Cummings, who will take Frank Wood along with them, as soon as he gets back from Missouri.

I. R. Long and George Halbleib, market hunters of the Lake Senachwine country, returned a week ago from the New Madrid swamp, above referred to. They took down their boats, decoys, and a load of ammunition, but found no shooting at all. The natives said the ducks had all gone on south. That seems to be the story everywhere. The New Madrid marsh is near the Arkansas line, and is about seventy-five by one hundred and twenty-five miles in extent. It is the home of countless market shooters. Non-resident shooters are charged a license under the State law, I believe.

The three-year law in Illinois on pinnated and ruffed grouse has been a success, and has been respected to a great extent even by the natives in the Illinois River country, where the destruction of game and fish has been about as ruthless as could possibly be. One Hunter, of Bureau county, was fined $125 for violation of the prairie chicken law this year. This had a salutary effect. Once in a while the way of the transgressor is hard; note the fate of the Michigan man who this fall set out a spring gun for deer and shot himself in the legs with it. He died, I believe. I am sorry for that, and also sorry he set out the gun.

In the Illinois River country prairie chickens have again become quite plentiful. There are also some few quail, and in the bluffs along Bureau Creek ruffed grouse are quite numerous. Another man and I killed eight squirrels, gray and fox, in a short hunt near Bureau. Settlers say there are more squirrels than for years past in that locality.

The disastrous scarcity of ducks this fall has left an emptiness in many an ex-market shooter's pockets, since when there are no ducks there is no need for pushers. This fact has impressed itself upon the market-hunting mind, and one can now hear a good deal of talk about a better observance of the game laws, and a less indiscriminate destruction of game. Some shooters, seeing the benefit of the three years' law on prairie chickens, are in favor of as long a close season upon wild ducks. Beyond question, this would be a good step in game preservation, though hard upon the shooters. A close term for a series of years leaves less loophole for violators, and they become better used to abstinence when abstinence is prolonged. A close term for a few months yearly does not receive much respect, but make it three or four years, and hardly a gun will be taken down. It seems to work so in this State at least.

There were a few Canada geese using on the Hennepin "goose pond" the first of this week, and a small bunch also frequented a pond across the river from that place. From the club house observatory at Swan Lake, on the morning of Dec. 11, we could by the glass see a bunch of about 300 mallards and mixed ducks in an open spot in the middle of Mud Lake. Swan Lake and the big sloughs froze tight the night before. A flock of fifty-six bluebills were using on the Illinois River, in the timber. The river was still open. "Old Man Wood," the father of the Wood boys, and a trapper on these lakes for forty years, said he had never seen ducks so scarce as they have been this fall.

Snow fell to the depth of about 3in. in this State Dec. 11 and 12. E. HOUGH.

THE KEENE BULLET.

Editor Forest and Stream:

In your issue of Dec. 6 Mr. Roosevelt asks that some of your correspondents give him, through your columns, their experience with the Keene bullet. While I regret I have not had the opportunity to test them on big game that has been afforded him, my hunting having been done in the Adirondacks, Maine and Canada, yet they have given me entire satisfaction, and are in my judgment much more deadly than the solid bullet. I began using them ten years ago, in a "Rocky Mountain" Ballard carrying the regulation Government cartridge. These I used to load myself, and at any reasonable distance they were sure death when used in this rifle. Later I bought a Winchester .45-60, model of '76, and had my cartridges made by the company, and I found them on moose and deer to be exactly what is claimed for them by the maker. My experience is that they do not act as a solid bullet; on the contrary, more like a charge of heavy buckshot, and I think it not improbable that it is because there was less powder behind them than he uses; his heavy charge giving them too much penetration. I remember but one deer that I have shot, since I commenced using them, that was not dead when I got to it, and that one was killed, when, it being so dark that I could not see where to place the bullet, and simply firing at the deer, did not strike a vital spot.

The only objection I have found to them is that if a deer is struck in the ham, the wound that they make is so large that much of the meat is spoiled. The only other large animal I have tried them on was a gray wolf, last summer; however, he did not stop long enough for me to see the result of the shot. W. F. LADD.

GALVESTON, Texas.

MEGANTIC FISH AND GAME CLUB.

Editor Forest and Stream:

A large and well-attended meeting of the directors of the Megantic Club was held in the Quincy House, Boston, on Saturday evening, Dec. 8, when it was unanimously voted to advance the price of admission (the shares in the corporation) $25 after Jan. 1, 1890.

Among the gentlemen whose application for membership was considered were Messrs. Chas. W. Sheppard of Newton, Mass.: Waldo B. Hastings of Boston; E. A. Dow of Woburn, Mass.; Walter C. Prescott, of Kidder, Peabody & Co., Boston, and Theron G. Strong of New York.

It was decided to hold the annual meeting and dinner on Tuesday, Jan. 22, the meeting at 5 P. M. and the dinner at 7 P. M. Among the guests to be invited, prominent in fish and game matters, are the fish and game commissioners of Massachusetts, Maine and Canada, the presidents of the Massachusetts Fish and Game Protective Association, Massachusette Rifle Association, Inglewood Fish and Game Club, and the Blooming Grove Park Association of New York. Mayor-elect Hart, Mayor Russell of Cambridge, Rev. Phillips Brooks and Rev. Charles F. Lee are also among the invited guests. "Adirondack" Murray, who lately joined the club, will be present.

Very encouraging reports are coming in from the game wardens upon the preserve at Lake Megantic and Dead River, they report deer never so plentiful as at the present time. Two deer passed through the door yard of the Dominion Overseer of Fisheries at Megantic last week.

Mr. Harry L. Wilbur, of Philadelphia, a member of the club, shot a fine deer at Massachusetts Bog last week, and reports the ground in the vicinity of the frozen lakes as literally covered with deer tracks. The opportunities for still-hunting are not very good now, owing to the want of fresh snow, but he succeeded in bagging one on the runways. MEGANTIC.

A BARNEGAT CLUB.—Barnegat City, N. J., Dec. 11.—The Bonnat Gunning and Fishing Association has been organized by a number of well-known New Jersey gunners. One of the objects of the association is the protection of game at Barnegat Bay. The association has plenty of capital at its back, and will stock its preserves with both game and fish. The members favor only legitimate sport, and its executive committee will vigorously prosecute all who violate the New Jersey game laws. The club house is nearly completed. It is situated on Lazy Point, opposite Bonnat Island, about fourteen miles below Barnegat City. Next spring the association will stock Manahawkin Bay with several kinds of game fish. Among the stockholders are ex-Congressman Charles Haight, Surrogate David Crater, County Clerk James H. Patterson and Sheriff Theodore Fields, of Freehold; ex-Judge Benjamin P. Morris, of Long Branch; A. Wood, Harold E. Willard and ex-Assemblyman George W. Patterson, of Asbury Park.

MASSACHUSETTS KILLDEER PLOVER. — Boston, Mass., Dec. 6.—As a result probably of the great gale of last week, in the Boston markets there has appeared quite a number of killdeer plover within the past few days. To see these birds on our coast at any time of the year is an unusual event, even to persons who make shore bird shooting a regular practice; but for them to be killed on the Shirley, Winthrop, Essex and other beaches to the north of Boston after the first of December, at once raises the question, where did they come from?—HUB.

KANSAS CITY, Mo., Dec. 10.—Our unsettled weather this fall has caused poor bags of game in this vicinity; one day cold, next day warm, game killed on the cold days will spoil on the warm ones, so there is little satisfaction shooting fur or feather, but if the weather prophets are correct these things will soon change.—E. N. W.

BETHEL, Maine.—Partridges were never more abundant than this winter. You can hardly go ten rods in any of our woods without seeing plenty of tracks in the light snows, and a great many birds have have been shot.—J. G. R.

Camp-Fire Flickerings.

"That reminds me."

247.

A COMBINATION fish and snake story is being told on August Bush, F. Stippe and W. Hess. They went to Bush Station, in Pike county, this State, to enjoy a few days' angling. The party took with them a fish box for the purpose of keeping what fish they caught alive until ready to return home. The story goes that Stippe went to the box to put in some fish which he had landed, Hess, by the way, accompanying him. Both have a mortal fear of snakes. When they came to the box, to their horror, there was a large moccasin on the box, with his head between the slats of the fish box. Stippe and Hess aver that it was fully 6ft. in length, with a fine croppie in its jaws, preventing the serpent from withdrawing, as it seemed anxious to do when Stippe attacked it with an oar. In its struggle a slat was torn off, and the snake made a sudden flop and landed right in the boat. The latter was not a very small one, but it was too small to hold those two fishers and a mad water moccasin; so Hess jumped out and swam ashore. Stippe, who could not swim, jumped on the box, which sank gradually until he was up to his neck in the water. Meantime the motion imparted to the boat by the jump sent it out of his reach. Hess went to the camp to change clothing and forgot all about his companion, who was left on the box, holding to the stake. Half an hour later others of the party returned in another boat, and after relieving Stippe found the deserted boat with his moccasinship coiled up and hugely enjoying the mellow rays of a November sun. Quite a fight was necessary, however, and it surrendered only when it had been rendered inanimate by one of the party. UNSER FRITZ.

ST. LOUIS, Nov. 8.

WASHINGTON, D. C., Aug. 24, 1888.—*The U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I have used about 10,000 of your Climax paper shells this year, and not a single bursted head. As long as you keep them up to their present high standard I will continue to use them in preference to all other makes. Very respectfully (Signed) JAMES M. GREEN, of Green & Cunningham.***

Sea and River Fishing.

AN OUTING ON THE BIG HURON.

I HAD just gone up to Marquette from my Crooked Lake camp, where I had spent five weeks catching trout in the creek and eating lotos under the shadow of the hemlocks. Mabel and Mark had gone home, while Mrs. B. and I were purposing further ramblings up and down the railroad. All our camp equipage, including my fishing and hunting outfit, was packed away ready for shipment whenever we concluded to turn our faces homeward. It was about ten A. M. of the last Tuesday in August, and I had gone to the street to make a little purchase preparatory for our journey to the Sault Rapids on the morrow, when Mr. George O. Somers, then the traveling passenger agent of the Duluth, South Shore & Atlantic Railway, ran against me and at once asked, "Don't you want to go a-fishing?" Of course I did, but a wiser man than I would doubtless have answered "No." If, however, I have one virtue more fully developed than another it is the one which allows of no lying when asked such a question. I always want to go, and promptly answered the passenger man "Yes," but added that I did not see how I could compass it. "O, yes, you can," answered he breezily, adding that "Mr. Allen is looking for you," and away he went to make ready for his journey. Less than half a square's walk brought me face to face with Mr. Allen, whom I had not seen for a year. "Don't you want to go a-fi-hing?" was his greeting. "Why, confound it all, yes," I answered, somewhat impatiently, I fear, but before I could explain he replied, "Well, then go and get ready; we are going to the mouth of the Big Huron, and the train leaves at 1:45. I have all the arrangements made. Good bye," and away he went.

I forgot my errand and started at once for my hotel to consult my wife. I thought I would go and ask her what she thought about it, but before I got there I changed my mind. It seemed to me that the better way was to tell her I was going and then hear what she had to say. I was the more inclined to this course, inasmuch as she had gotten it into her head that I had not got as much out of my Crooked Lake camping the present year as usual, on account of her own and Mabel's presence. The truth is I had done my utmost to make their outing a success, and had not failed in my efforts either. I had, nevertheless, enjoyed myself fishing as much as ever before. Still, she had been insisting that I should leave her at some good place and go a week "with a man" to even up, and now, thought I, here is the chance; and so I went in and boldly told her I was going. And "Barkis was willin'." "I'm glad of it," said she, "for I have just broken a tooth, and it will take a dentist ever so long to mend it, and besides you can have a good time with a man."

I was not long in unpacking and repacking, and at the appointed hour, armed with rod and creel, I met, on the depot platform, Mr. Allen, the assistant secretary and assistant treasurer of the D. S. S. & A. R'y, and Mr. Somers, both of whom were accoutred for an outing on the Big Huron. By rail we were to go up the country about sixty miles to Baraga, at the head of the Keweenaw Bay, on Lake Superior. Here we were to be picked up by a lumber company's steam tug, which was to carry us down to the mouth of the Big Huron, and, on the following Saturday, return for us and carry us back to Baraga. Henry, through whose veins ran three drops of Gallic blood to one of Chippewa, accompanied us as guide, cook and camp maker. He was a splendid specimen of physical manhood and well versed in woodcraft, having taken a thorough course of training as hunter, trapper and land-looker. The road from Marquette up to Baraga is full of interest to the occasional traveler. The Negaunee and Ishpeming iron mines and furnaces, the steep grades and diorite hills, the beautiful lakes and rushing trout streams that were passed, presented a panoramic series of views that were highly entertaining.

At Baraga Mr. M. J. Bourke, the agent of the lumber company, met us. He had purposed becoming a member of our party, but business engagments forbidding, he contented himself with showing such hospitality as his friendship for my two companions warranted, and which the fisherman rarely meets with, while his amiable wife, not to be outdone, turned over for our use her pleasure boat, and an elegant Racine affair it was. A little before sundown the tug A. W. Colton, commanded by Captain Chamberlin, having taken us and our impedimenta aboard, steamed out of the harbor and laid her course down the bay for a point where the North Star would appear at a later hour. The journey was one long to be remembered. We were in a region of traditions as well as of great scenic beauty. The early French explorers were drawn to the place, and here it is believed that Father Mesuard, a missionary of the seventeenth century, was murdered by those he came to succor. Certain it is, to this region, well peopled as it was and abounding in savage plenty, the early *couriers des bois* came to exchange trinkets for furs, and in the beginning of the present century they were followed by the agents of the American Fur Company, who established a post here. As we steam down the bay we see to our left the little wooden church of the Catholic Mission and the humble cabins of the converts that surround it. On the opposite shore is the chapel of the Methodist mission and their little wooden village. The sun has gone down in red splendor behind the Houghton hills, and one by one the stars come out. As we round Point Abbeye we look back and see the Portage entry light, and far above and beyond that, on the Hancock Hills, lights gleam faintly from out the delicate amethystine tints of the western sky. To the north of these, from a lofty and equal height, two electric lights mark the place of the two world famous copper mines, Calumet and Hecla, and as the night wears on and the twilight finally disappears, these lights will fairly rival in beauty and intensity those stellar twins of the sky, Castor and Pollux.

The A. W. Colton has already begun to forge round Point Abbeye, and the Huron Island light shines from over her port bow. Down the lake shore to the southeastward rises a dark wall that in the mists and gloom of the night we would take to be a rising cloud, did we not know it marked the outline of the Huron Mountains. It is through a cleft in these mountains that the Big Huron River dashes its mad way into the wooded plain that spans the few miles between their foot and the lake shore.

Bright and early Wednesday morning we set out on a voyage up stream. We found the river, for the distance of a mile or more, from 40 to 60yds. in width, and uniformly quite deep. The wind was from the north and a decided current set in from the lake up stream. At a distance of a half mile or so we passed a party of campers who told us a discouraging story anent the trout fishing in the Big Huron. We rowed up about two miles in all, in the last one of which we passed several promising looking pools. Gaining the second flood wood we saw it was true as we had been told, that we could not pass in our boat beyond, and we therefore made fast. In the deep water at the upper edge of the floodwood numerous large trout were seen and here my companions sat down and began siege. As for me I went on up the stream, finding it easy wading and a good many hiding places for trout. The stream, as far as we examined it, was clear of brush and gave free fishing. I used both flies and worms, changing frequently, and took fish with one or the other, according to the whim of the particular fish.

On our return in the afternoon we found the water making quite a current toward the lake, the north wind of the morning having given way to an afternoon breeze from the south. The day had been pleasant, and as the sun descended toward the horizon not a cloud was to be seen. On this and the two succeeding afternoons, while descending the stream, we were charmed with the great reflective beauty of the Big Huron waters. Sky and cloud, tree and branch, and weed and flower, were perfectly imaged in their mirror like surface. Time and time again did we cease rowing that we might look down into a world below, as perfect in form and color as the world above, and never did we cease to wonder at the transcendent beauty of the dual images presented to our view.

On Thursday we went up stream again, in spite of the advice of Henry, who at some former time had fished with success in the Little Huron, which debouched into the lake about two miles further down. He affected to think we ought to do much better than we had done the first day, though we felt satisfied with our work. Seeing that we were determined to stick to the Big Huron. Henry, as soon as were gone, set out for the Little Huron, and I doubt not he felt sure of surprising us on our return in the evening. A few hundred yards below the floodwood was a large and deep pool, in which we had seen, on our first journey up, several fine fish. Here we stopped on this second morning, and in a short time I hooked a good pound-and-a-half fish, which made an exceedingly lively fight. Hardly was my quarry landed when the passenger man yanked one that went a good quarter better. This put the secretary on his mettle, but in vain did he, or we, angle further that day in that pool. The first day he had been careful to keep his feet dry, but having made up his mind to catch a good trout or "bust," he plunged into the water and waded thence on till the end of our fishing.

Mr. Allen was a bass, rather than a trout, fisherman and, in spite of him, the speckled fellows got away. He wielded a 4oz. split-bamboo rod, which he prized too highly to make the scape goat of his misfortunes, but praised the rod and took the blame to himself. He and I went up the stream this second day further than I had gone the day before, but it was not until afternoon that he began to get the "hang of it," as he said. Twelve handsome trout he brought to his creel, most of them in less than an hour, and if the passenger man did have the biggest fish, and I the next, the Secretary had the most.

On our return we confounded Henry not only with the size, but the numbers of our catch. We had about thirty in all, among which were several half and three-quarter pounders, in addition to the two big ones mentioned above. Henry had been to his Little Huron, footed it all the way there and back, and caught not a single fish. But he had returned in time to re-layer our bed with browse and carry up a wagon load of wood for the night fire, and have a steaming hot supper ready for the table. Dear me how tired we all were that night! Before our blazing fire Somers and I sat down for a smoke after eating Henry's substantial supper, but before our cigars were half done, Allen tumbled over on a pile of blankets and went to sleep. Less than three months before he had been in the mountains of North Carolina in search of health, and now here he was wading and thrashing around in the cold waters of the Big Huron as if he had never known a day's sickness in his life.

Friday morning brought with it the last day of the open season for trout and the last day of our outing, and earlier than either of the days before, we ascended the river preparatory to our day's work. But the day was not fortuitous. The wind was in the east, the sun shone with a hard white light and the air was without mellowness and geniality. In vain we tried the pool where the big ones were caught on Thursday; in vain we tried all the holes in which I had been successful in both days before. We had gone beyond our utmost limit of the former days and I do not remember that any of us had taken a trout. Certainly I had not. At length we came to a spot where it looked as though a trout could hide and I made a cast over by a log but without reward. The place appeared better the more I looked at it and I made several casts next the log, but all in vain. Next I cast over the pool to one side and after suffering my bait to settle, I undertook to recover my line and found that I was fast. Presently I recovered and threw in again. This time I thought I had made fast for good, but on a steady pull I found I was hooked to a monster trout. I brought it out of deep into shallow water, where I could see it, but with a flounce it was loosed and disappeared.

At this instant the Secretary crossed the stream above on a sunken log, and, the light being favorable, he saw the trout as it dropped to its place after leaving my hook, and at once offered it his bait. I said to him as he did so, "That is useless, for he has felt the prick of my hook and will not bite again this morning;" but hardly were the words out when the fisherman struck and immediately rushed across to my side of the stream. For a brief space I never saw a livelier combat. There was no room for playing his fish, and so the Secretary held on for dear life while I rushed in with a short-handled landing net to attempt a quick capture. Once it dashed around the only snag that I could see in the pool, and I thought it would smash the leader sure; but the next moment it was free. Somehow it got the line between my legs, and somehow I got out of the way and the line was once more free. After a good many misses the fish was scooped and safely landed on the gravel.

What was Allen doing? I don't remember to have seen him between the beginning and the ending of the fight, and very likely he didn't see me. I heard his version of the story afterward, and according to that he had never been quite so busy for a stretch of fifteen minutes before in all his life, and I doubt if he was conscious of my presence at all during the whole time, save perhaps when his game ran between my legs. It didn't take fifteen minutes, however, to land that fish. My opinion is that it was hooked and landed in less than two and a half; but right here is room for great difference of opinion. I never knew a fisherman to hold his watch in his hand while bringing a fish to creel, and till something of the sort is done we must expect more or less conflict of opinion as to the time spent in each particular case. My! but wasn't it a beauty? Its markings were as perfect and bright as if it had come from some shaded mountain stream. We had no scales with us, but after it had been out of the water something over twenty-six hours it kicked the beam at 3lbs. 10oz. It measured 22in. from tip to tip, and, according to the rule in such cases, it ought to have weighed when first taken 4lbs. 5½oz. But the Secretary is modest. In a letter now before me he writes, "I think he was undoubtedly a 4-pound fish when taken from the water." I think so, too.

The passenger man was not present during the rencontre, having gone on up stream. No sooner was the fish landed and killed than we shouted so lustily that he was led to believe we had encountered a lynx or bear at the least, and with cocked revolver he came running his best to our relief. The Secretary, in his hour of triumph, felt that he had enough fishing for one day, and so set out for the boat, and we might as well have followed him, for although we went on up the stream to the foot of the hill, passing over as pretty a range of clear, swift water, interspersed with limpid pools as I ever saw, we got never a rise. Earlier in the season we would doubtless have met with excellent sport here, or perhaps had we gone still higher, as it was, we might have had better success. Henry, who knew the country well, assured us that "ten miles up the fishing was good—very good," but we shrunk from so long a tramp.

The next morning at six o'clock the long whistle of the A. W. Colton was heard and the bustle of breaking camp began in earnest. In due time we were aboard and on our return voyage. If our night journey had been pleasant, our morning one was doubly so. Whoever has seen, felt and drank in the limpid Lake Superior atmosphere of a frosty August morning, may, in fancy, catch a glimpse of the scenes around us. Looking back toward the little wreath of blue smoke marking the site of our morning camp-fire, we saw far above and beyond it the Huron Mountains' fissured and sylvan sides softened into wavy outlines in the rising mists of the morning. Close to their northern terminus and well up toward the summit Mr. Allen pointed out a level area marking the seat of Mountain Lake, a sparkling sheet of spring water abounding in choice varieties of fish. Lower down, and between Mountain Lake and Lake Superior, lies Pine Lake, and back of that to the eastward is Ives Lake. All these lakes and their inflowing and outflowing streams are filled with fish peculiar to these cold northern waters, such as pike, pike perch, bass, mascalonge, trout, and even a species of landlocked lake trout, while in the forests that cover the mountains and grow in the valleys deer and ruffed grouse are reasonably plentiful, and bear and lynx and wolves are occasionally seen. Turning from this glorious southeastern mountain prospect, we see out in the lake to the northeastward, not less than three miles away, the Huron Islands, vast and rugged blocks of granite, some of which lift their treeless and ice-carved heads more than two thousand feet above the lake's level. In the opposite quarter is Point Abbeye, a long sliver of rock, tree-covered to the water's edge, and for many miles dividing the waters of Keweenaw Bay from the waters of the great lake. It is more than three miles to the end of the point, but Henry calls our attention to its wall of perpendicular rock and tells us a story of trout fishing off the rocks at that point that sets us planning for a next year's campaign.

Our view is not exhausted. Casting our eyes westward they alight upon the red sandstone cliffs on the east shore line of the Copper Horn, or Keweenaw Point, ten miles off, and we follow up hat tshore line indented with a succession of bays and points, but steadily curving to the eastward till earth, sky and water indistinctly and tremblingly intermingle. Over all we see the heights of the Keweenaw Mountains, Mounts Houghton, Bohemia, Everest and others. Dim and shadowy they rise spectre-like far out over the dancing waters, and as we count their blue-gray summits we wonder not that the aboriginal inhabitants of Keweenaw Bay in imagination peopled that region with Manitous, malevolent and dire.

There are not many places in this world of ours where there is such an aggregation of scenic beauty as there is here to be seen, and I know of no place along the entire south shore of Lake Superior where the lover of nature could spend a more delightful summer than in this region. It was my good fortune not many years agone to sail up this lake shore from Marquette to Houghton, and at these Huron Islands to spend several days awaiting the veering of the wind to the right quarter. From the beginning Keweenaw Bay and all the adjacent waters have been celebrated not only for the quantity, but the quality of their fish. At the time of my stay on the islands I met three or four of the local fishermen who were acquainted with the lake shore from Point Abbeye to Marquette, and who at one time or another had fished the intervening streams and small lakes adjacent to the shore all the way down, and they spoke in the most glowing terms of Pine River and of Pine and Ives and Mountain lakes as fishing points, the very ones Mr. Allen had since seen, and of which he also spoke in terms of highest praise. If to the sport we add the scenery, the air, the climate, the water and the camping sites, none of which can be excelled, we have one of the most charming regions in all this northern country for a summer outing.

The Marquette fishermen do most of their fishing up the lake shore in this direction, but they seldom attain so high a point up shore as the Pine Lake region. All along this lake shore, wherever there are ledges of rock in the lake, there is excellent trout fishing, or "rock fishing," as it is called up here. Some use the fly, some the spoon and some a live minnow, and not infrequently 5lb. trout are said to be taken.

In time for the morning train down, Captain Chamber-

lain landed us at the Baraga dock, where the hospitable Mr. and Mrs. Bourke met us with a hearty welcome and greatly admired Mr. Allen's big trout. Early in the afternoon we reached Marquette, where each went his way, Mr. Allen to his ledgers and cash accounts, Mr. Somers to a new post of railroad labor in the Northwest, Henry to his land-looking, and I to my Indiana home. Wherever my fishing companions of that outing may be this cheerless night, I know they have a pleasant recollection of our outing on the Big Huron. I send them greeting.

FRANKLIN, Ind., Nov. 14. D. D. BANTA.

SALMON FISHING IN NEWFOUNDLAND.

Editor Forest and Stream:

Having had occasion to visit the Bay of Notre Dâme, in the island of Newfoundland, I embraced the opportunity when at Little Bay, to make inquiries as to salmon fishing in Indian Brook, a well-known salmon stream not far distant from that place. I was astonished to learn from a sportsman there that salmon could not be taken with the fly in that stream; my informant said that he had occasionally taken a grilse, but never a salmon. On consulting the excellent work of Capt. Kennedy, of H.M. S. Druid, the following words arrested my attention:

"To say that rod fishing in Newfoundland is a delusion and a snare would perhaps be wide of the mark, and yet I have no hesitation in saying that any one going out to that country for the purpose of fishing only, would be disappointed; as regards salmon he most certainly would. Sea trout fishing is merely a question of being in the right spot at the right time, in which case the sport is second to none; but if the fish are not running the sport is *nil*. Salmon fishing with the fly may be pronounced a failure owing to two causes; one of which may be remedied, the other not. The first is because the whole of the fine salmon rivers are ruined by barring, sweeping with nets, traps and weirs. The other reason is that the fish do not as a rule rise to the fly. I have occasionally taken grilse with the fly, but only five the first season, eight the second, and about the same number the third. However, this represented many days' hard work, wading for ten and twelve hours a day, and fishing every likely pool."

Capt. Kennedy was for three years engaged in the protection of the Newfoundland fisheries, and so speaks with much more authority than an ordinary sportsman would. It is not at all improbable that the persecution of the salmon by barring, which is the placing of nets across the mouths of the rivers of Newfoundland and from high water mark on one side to the same point on the other, as well as sweeping with nets, etc., may have had a good deal to do with the fact of the Newfoundland salmon being so shy of taking the fly.

The writer can well remember when the general opinion among sportsmen was that salmon could not be taken with the fly in the Tobique, indeed many ineffectual efforts were made by good sportsmen to capture salmon there in that way at that time, which ended unsuccessfully, spearing, sweeping with nets, etc., were being practiced very largely. Now, however, since the Tobique has been partially protected, and a stop largely put to these practices, salmon, as every one knows, are being taken in this fine river with the fly. EDWARD JACK.

FREDERICTON, Canada, Dec. 13.

TROUT FISHING IN GRAND ISLAND BAY.

WOULD any of the readers of FOREST AND STREAM like to know where speckled trout can be taken in considerable numbers, requiring no greater labor than fishing from a pier; a veritable Mecca for the veteran angler who no longer possesses the agility to traverse the ordinary trout stream as in days of yore? Such a place can be found in Grand Island Bay, Lake Superior, a magnificent bay, which is one of the many attractions for the tourist and sportsman who visits the Upper Peninsula of Michigan. The writer first discovered its allurements for the angler while passing through it in a small boat in August, 1886. As our boat was rounding Powell's Point, one of the most charming spots around the entire shore of the bay, we passed an old pier, reaching out some fifty or sixty feet from the beach, and on it were several young ladies fishing for trout, and we witnessed them take some fine ones in a few minutes' time. Stopping at the Powell residence, near by, the writer made the acquaintance of these good people, and determined that at some future time he would return to visit this place, which is so inviting on account of its natural picturesque beauty and many points of interest, and give the trout fishing in this bay a good trial.

Accordingly our party was organized to make this visit on the first part of last August, which was rather late in the season for the best trout fishing, but the writer's daughter, who is a hay fever subject, had to be one of the party, and this was her regular time for migrating to northern Michigan to escape the malady. She had invited two of her former lady school mates to accompany us, and these, with a gentleman friend and your humble servant, composed the party. On the 10th of August, after a leisurely trip up the lakes, we took a train at the Sault Ste. Marie for Munising station on the Duluth, South Shore & Atlantic Railway. The management of this road, by the way, is very painstaking in providing for the welfare and comfort of its tourist passengers. After arriving at Munising station a ride of four miles in a wagon brought us to Munising village, a quiet hamlet on the shore of Grand Island Bay, and the next morning a sail across to Powell's Point, two miles distant, brought us to our place of destination. The Powells had been waiting for us, and received us so cordially that we at once felt ourselves at home. The young ladies were delighted with the place. It was such a charming retreat for rest and recuperation, and so entirely free from the requirements of a fashionable resort. After all I had said in its praise it far excelled their expectations. A romantic description of this locality is given in an article in the *American Magazine* for September, entitled "In Hiawatha's Country." But no pen picture can do justice to the picturesque beauty and objects of interest that nature presents in this locality.

But some of your readers are already asking, "Did you catch any trout?" Well, I should say we did. During the entire three weeks of our stay with the Powells we angled for them at the old pier and at points around the shore in the vicinity every day, except Sunday, with the most satisfactory results. The weather was delightful during the entire time, which greatly contributed to our perfect happiness. A score was kept of the number and size of the trout taken every day by each member of the party, but to give this would require more space than is necessary. A good outfit of tackle had been provided for the ladies, and though neither of them had ever angled for trout before they were very apt scholars and soon became quite skillful and self-possessed in landing the fish. It did me as much good to see one of them hook a big trout and manipulate the rod, while another secured it in the landing net and brought it up in triumph on the pier, as to catch the fish myself. In size the trout taken by us ranged from ¼lb. to 3¼lbs. Anything smaller was invariably returned to the water. But several 5lbs. trout had been taken at the pier earlier in the season.

A 5lb. trout and several weighing from 3 to 4lbs. were taken by an old gentleman from New Orleans during our stay at another point on the bay. A camping party from Marquette, who were located on the south end of the bay, at the mouth of the Anna River, took a number of trout from 3 to 4lbs. A gentleman camping on another side of the bay took six trout in three casts, the total weight of which was 15lbs. Around the entire twenty-five miles of shore of this bay trout are found in great numbers, but at Powell's Point they seem to be the most abundant. The old pier there seems to be a great resort for trout, and we found it a most delightful one for the angler.

Grand Island Bay also abounds in lake trout, some of which have been taken weighing 30lbs. Had we not departed a little sooner than we intended, we would have varied our sport by devoting a few days to the capture of these larger members of the trout family. As I hope to return there next year, perhaps I can give a more definite account of them from personal experience. J. H. N.

NEWARK, O., Dec. 1.

PUBLIC TROUT IN PRIVATE WATERS.

Editor Forest and Stream:

Several article in your paper—the last an editorial in the issue of Nov. 22, (p. 342) with a reference to a paragraph on p. 348—calculated to prejudice public opinion against the Hammonasset Club, appear to have been written under a misapprehension of facts. The Hammonasset Club acquired from the riparian owners of about ten miles upon the river, and about as much more upon its tributaries, the right of fishing for a term of years, without any notice or knowledge of a claimed right of fishing on the part of the public; and stocked the stream with 50,000 fry bought from a dealer. They never asked nor used any fry from the State.

Certain Middletown gentlemen belonging to a club which has its own preserves of fish and game, then claimed to have previously put State fry into the river, how many is not stated, nor is it material. This deposit of fry is claimed to have been made with the consent of one or more land owners, name or names unknown. Upon these facts it is claimed that all owners along the stream, from it source to the sea, are estopped from asserting the ordinary right of preventing trespass upon their lands near the river.

By Connecticut law, it should be remembered, in streams of this character the title to the soil under the water, to the right of fishing and to the use of the water itself, is absolute in the riparian owners, subject only to the common law rule that each must so exercise his right as not to interfere with the rights of others. That the act of placing State fry in a stream with consent of certain owners, operates instantly and by due process of law to divest of the above-mentioned rights not only those consenting, but also all the other owners, is a proposition so absurd that it seems impossible for the Middletown gentlemen themselves seriously to believe it. As to the "consenting" owners, if they intelligently consented, with the understanding that in return for the privilege of having State fry in the stream, all their lands bordering upon it were to be made practically a public park for three months in each year, they must greatly differ from the average New England farmer.

The writer has no interest in lands on or near the Hammonasset, is not a member of the club, and has no authority to predict its policy; but it seems likely that the right to eject trespassers will be exercised in future as heretofore, even if it be necessary to use gentle physical persuasion, *molliter imponere manus*, as the lawyers say. Should such expulsion be deemed a grievance, the courts are open. J. F. H.

WASHINGTON, D. C., Dec. 11.

EFFECT OF SAWDUST ON FISH.

Editor Forest and Stream:

I am very much inclined to believe that the only injurious effect of sawdust in trout and salmon streams results from the fungus which grows from the sawdust as soon as it is put in the water. This fungus is the most destructive growth that is known—to fish eggs. No fish eggs can possibly hatch out on spawning grounds that are covered with it. It is absolutely fatal to them. It spreads with great rapidity also. Each minute piece broken from it, even every microscopic cell detached from the main stem, is a reproductive seed started on its own errand of destruction.

After the spawning grounds of a trout stream are covered with sawdust, that stream can produce no more trout. After the trout that are already living in the stream are caught out, that is the end of that stream as a trout stream. No more trout will be hatched there.

This fungus is not only destructive to the eggs of the fish, but, where there is much of it in the water, it will often get into the gills of the fish themselves, and will sometimes get rooted in the skin of the fish also, after which there is very little chance for the fish to survive. I do not think the sawdust itself injures the fish directly, by getting into their gills or otherwise, but by producing the fatal fungus. I believe that it is injurious beyond the possibility of exaggeration, and my motive in writing this paragraph is the hope that it may catch the attention of some one whose influence may help to arrest a rapidly growing and, as far as fish life is concerned, a frightful evil in this country. LIVINGSTON STONE.

BAIRD, Cal., Dec. 8.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

Fishculture.

TERRAPIN CATCHING.

Editor Forest and Stream:

In your issue of Dec. 6, under the heading "Terrapin Culture," I find an interesting article, brought out in answer to two inquiries for information concerning the culture of the diamond-backed terrapin, one writer wishing to know about their habits and the modes of capturing them. As you ask communications on the subject, I beg space to contribute my mite, which is gathered from the pages of my scrap book, in which it is my custom to paste every article I find relative to brook, river or lake and the inhabitants thereof. From one of Harper's periodicals, headed "Terrapin Fishing," I have clipped the following:

"Terrapin are caught from Savannah and Charleston up to the Patapsco River, at Baltimore; while the genuine 'diamond-back' is only to be found in the Upper Chesapeake and its tributaries. A diamond-back never measures less than 7in. in length on the under shell, a 7-inch being known as a 'count terrapin,' while anything under the length of a 'count' does not count. Ten inches long and 8lbs. in weight is reckoned a very large terrapin, the 7-inchers weighing on an average 4lbs. During the season terrapin sell for $30 to $38 per dozen; while 'sliders,' common river turtles, principally caught in the James River, sell at from $6 to $8 per dozen, are palmed off by skillful restaurateurs as genuine 'diamond-backs' on unwary but ambitious guests at a dollar and a half the dish.

"Having consigned our lives and limbs to the custody of the darkest darky my eyes ever alighted upon, and to the most rickety of crazy skiffs, were paddled up a small tributary of the Chesapeake Bay, situated about six miles from Annapolis, on a terrapin-searching expedition. Having quitted the sanctuary of the boat for the more genial atmosphere of mud, our darky, who was armed with a long, thin pole, commenced to probe the bottom—he was wading waist-deep—or, to use the technical term, 'to sound' for terrapin. His practical sense of touch tells him when he taps terrapin, and if they are numerous he marks his prey and returns to grab them with a net. Sliders are plentiful in the tributaries of the Chesapeake, as also are 'snappers.'"

Turtle are fished for in this way: The fisherman plants poles, sometimes a hundred, in the middle of the stream; to each pole he fastens a line, to which is attached a hook baited with salted eel. The snapper grabs bait and hook and is hauled up, always vicious and desperate. MAC.

GLASGOW, Ky.

FISHCULTURE IN SCOTLAND.

WE have the annual price list of eggs and fry at the Howietoun Fishery, at Stirling, Scotland, one of the largest fishcultural establishments in Europe, from which we quote the following items of general interest:

"The Howietoun Fishery, in issuing the price list for season of 1888-89, has to record one of the coldest summers experienced since the commencement of the Fishery. Yearlings are fully three weeks later than usual. The rearing season, however, has been exceptionally successful, and fully 150,000 yearlings and 25,000 two-year-olds are ready for delivery.

"A salmon hatched from ova obtained from the Forth District Board in December, 1880, and reared in the ponds, having spawned three seasons, was found in the first week of November, this year, to be clean. It weighed just under 3lbs., was very silvery, with about thirty jet black starlike spots. The flesh cut pink, and the flavor was that of a fish a week in fresh water. This salmon had been fed exclusively on clams (*pecten*), and was a fair specimen of those still alive at Howietoun of the same spawning. The smolts and grilse which have been bred from these fish are growing more rapidly than their parents, and we hope to show that although the first generation of artificially landlocked salmon are usually dwarfed, yet their progeny may attain to the size of Loch Leven trout—viz., 6 to 10lbs. weight.

"The American landlocked salmon (*S. sebago*) have not yet spawned, but a few of the rainbow trout (*S. iredeus*) spawned in April, and the fry are thriving; the largest *iredeus* weighed, when three years old, between 3 and 4lbs. The crosses between salmon and trout, and between trout and salmon, are growing at the average rate of Loch Leven trout at Howietoun. The experiments in inter-breeding these crosses will be continued this season. The success of redds in economically stocking large tracks of water has been again marked during last season. The ova is simply laid on gravel within a few hours of hatching, and if the situation be skillfully selected no further attention is required."

THE ILLINOIS FISH COMMISSION.

ST. LOUIS, Mo., Dec. 15.—*Editor Forest and Stream:* The fifth biennial report of the Illinois State Fish Commission will soon be ready for distribution. The Commission has submitted its report to the Governor and it is now in the hands of the printer. It will be a large one, finely illustrated. A great increase of native fish in all the rivers of the State is reported, and also of fish that have heretofore been thought to be extinct. In the distribution of carp during the two years, 1,800 applicants have been supplied. In speaking of whitefish the Commission gives its hearty indorsement to the proposition that the National Government establish a hatching house in Chicago. Eight fishways have been constructed in the State, and the number of plants in the streams of Illinois in 1887 was 106, aggregating 1,060,000 fish. These were placed at points where railroads cross streams. In 1888 the distribution was made by the United States Fish Commission and nothing but native fish were distributed. Twenty-six carloads were distributed in this manner where fourteen of the principal roads crossed streams, and each carload had from 5,000 to 6,000 fish. Of the appropriation of $7,500 the Commission reports an unexpended balance of a little over $5,000. Changes in the law are suggested so as to make the possession of fish, or appliances for fishing, evidence of violation; to designate authority for enforcing the law to some person or persons, and also to make liable to seizure and confiscation illegal apparatus for catching fish. UNSER FRITZ.

SHAD IN UTAH LAKE.

SOME time between the first and the middle of last June the United States Fish Commission sent one of its cars to Salt Lake City with two million shad eggs, which were hatched in jars on the way. They were sent to test the possibility of stocking the saline waters of Utah with this fish, and on consultation with Mr. A. Milton Musser, Fish Commissioner of Utah, they were placed in a stream between Battle Creek station and Pleasant Grove, on the Denver and Rio Grande Western Railroad. On the 10th of December, Mr. P. Madsen sent a six-inch shad to Mr. Musser, which was caught in Utah Lake about fifteen miles from where the fish were planted, or near the south end of the lake.

Utah Lake empties into Great Salt Lake, and the fish were planted near the outlet of the former, but this specimen had evidently worked up stream, as had some others, for Mr. Madsen had heard of three others being captured. One year before, in June 1887, a plant of a million shad was made in the Jordan River, which connects Lake Utah with Great Salt Lake, but we have not heard of any captures of this plant. From the size of the specimen sent to Mr. Musser it is evident that it was of the plant of this year, and while it

has been demonstrated that the fry can live in these fresh waters it remains to be seen if the proper conditions for reaching maturity prevail in Great Salt Lake, whose waters are so dense that but little animal life is found in them, and if the shad can breathe the waters, and find food in the brine-shrimp, it will be a grand thing for Utah.

Perhaps there may be favorable conditions for shad growth near the fresher waters, where the Jordan and other streams come in, without the necessity of going into the heavy brine of the great lake, and if so, we may look for the first run of spawning shad in 1890, although young males may be captured the year before. This experiment is a very interesting one, and if the fish thrive will prove to be a most valuable one.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6776.**

AMERICAN FIELD TRIALS CLUB.

[Special Report to Forest and Stream.]

THE DERBY.

WEST POINT, Miss., Dec. 13.—This stake had fifteen starters. The running began on Monday, Dec 10. A heavy rain fell on Sunday night. Monday forenoon was cloudy, but the weather cleared up in the afternoon. A raw wind blew from the northwest. The grounds were excellent for field trial purposes; large open plantations, with gently sloping hills and hollows, and abundant cover for the birds; in fact, the cover was too rank and abundant. The heavy fall rains had stimulated vegetation, resulting in an unusual heavy growth of sedge grass, weeds and other cover. Birds were fairly plentiful. The judges were Messrs. J. H. Gilbert, Lexington, Ky.; H. B. Duryea and R. L. McCook, New York. The winners were accorded their places in the opinions of the competitors, but there was some dissatisfaction at the decisions being rendered on light work and short heats. A great deal of local interest was manifested in the running. The grounds were magnificent and ample for all the purposes of running a large trial. The dogs were drawn to run as follows:

DAISY HOPE (R. M. Dudley), lemon and white bitch (Gath's Hope—Daisy F,),

against

BETTY (Memphis and Avent Kennels), black, white and tan bitch (Roderigo—Bo-Peep).

ZACH (I. Yearsley, Jr.), black, white and tan dog (Roy Bell III.—Fraud),

against

WEE DAISY (W. A. Wheatley), white, blue and ticked bitch (Gath's Mark—Daisy).

LOTTIE C. (J. I. Case, Jr.), orange and white bitch (King Noble—Queen Vashti),

against

DAISY FISHER (H. S. Bevan), orange and white bitch, (Gath's Hope—Daisy F.).

MARY MEADE (W. A. Wheatley), white and orange bitch (Bun Roy—Durant's Florence),

against

ORLANDO (Memphis and Avent Kennels), black, white and tan dog (Roderigo—Bo-Peep).

ROD'S GAL (W. B. Stafford), liver and white bitch (Rod—Juno),

against

COUNT PIEDMONT (Edward Dexter), black, white and tan dog (Count Noble—Belle of Piedmont).

CECIL (Memphis and Avent Kennels), black, white and tan dog (Roderigo—Bo-Peep),

against

SONNY (W. B. Stafford), liver and white dog (Rod—Belle).

FLOSSIE NOBLE (J. H. Peeble), lemon belton bitch (King Noble—Elsie Belton),

against

ROI D'OR (Memphis and Avent Kennels), black, white and tan dog (Roderigo—Bo-Peep).

TENNIE (W. B. Stafford), liver and white bitch (Rod—Nell), *a bye.*

BETTY AND DAISY HOPE.

A start was made on the Crump place, about one mile east of town. The ground was heavy under foot. The cold rain had made the birds wild and uncertain for a dog to point. The dogs were cast off in open sedge at 9.35. H. S. Bevan handled Daisy; J. M. Avent handled Betty. Daisy ranged well, having a decided advantage over Betty in this respect, taking her casts with judgment. She was very disobedient and a bit unsteady in her work on birds. Betty had the better style; she also showed more skill and precision in her work on birds, and was steadier on back and point. Each showed want of proper training. They were ordered up at 11:02 and Betty won.

ZACH AND WEE DAISY.

The former was handled by W. C. Avery; the latter by T. H. Poindexter. A bevy was marked down in sedge grass by the spectators and the dogs were worked to find it. Wee Daisy was first to point it in a plum thicket; Zach backed well. Both were steady to wing and shot. On the scattered birds Wee Daisy made a good point on a single in sedge grass. Both dogs were nicely broken and were handled quietly without scrambling. The handlers were comparatively amateurs so far as field trial handling is concerned, but many of the oldsters could take lessons in courtesy and fairness from them. Range and pace were about equal. The heat began at 11:06 and ended at 11:38. Wee Daisy won.

LOTTIE C. AND DAISY FISHER.

Lottie C. was handled by Charles Barker; Daisy Fisher by H. S. Bevan. The heat began at 11:40. There was not much difference in range, speed and style. Lottie was quicker and more accurate in her work on birds. Daisy was not so obedient as she should be to handle easily and without unnecessary noise. The heat ended at 11:58, Lottie C. the winner.

ORLANDO AND MARY MEADE.

J. M. Avent handled Orlando; T. H. Poindexter handled Mary Meade. The heat began at 12:06 and ended at 12:32. There was not much work done on birds. Mary pointed a bevy and was nicely backed by Orlando; both were steady to shot. No find could be made of the scattered birds. A bevy was flushed by the handlers and dogs, all coming on it about the same time. Orlando made a good point on a single bird in oak woods, and was steady to shot. He had the advantage in range and style; pace about equal. Orlando won. Down 26m. The party then went to lunch.

COUNT PIEDMONT AND ROD'S GAL.

The heat began at 1:38. Capt. C. E. McMurdo handled Count; W. B. Stafford handled Rod's Gal. Count was first to find and point a bevy; Gal pointed a few yards behind on the foot scent or possibly the body scent, as she had the wind from the birds. Both were steady to shot. On the scattered birds Count roaded and pointed, and Gal backed well; both were steady to shot and wing. Sent on, Gal made a false point; Count backed. At 21:03 they were ordered up and Count won. Both ranged well, Count slightly better.

CECIL AND ROD'S SON.

The former was handled by J. M. Avent; the latter by W. B. Stafford. Owing to some misunderstanding of directions or forgetfulness the wagons got separated from the judges, and quite a delay occurred in getting the next brace started. Neither did their work with accuracy. Son flushed a single bird in sedge grass. Cecil roaded and pointed a single bird; he was steady to shot. Next he flushed three or four outlying birds of a bevy, and stood to wing; the remainder of the bevy then flushed wild. Cecil secured a good point on three or four of them. Son, brought up to back, caught scent and pointed. Both made some errors on the remaining birds. Down 54m. Cecil won. He had better style, and slightly better range and speed; his work on birds was better than that of Rod's Son.

ROI D'OR AND FLOSSIE NOBLE.

The former was handled by J. M. Avent; the latter by W. B. Stafford. Flossie was slightly unsteady to wing at times. Roi found and pointed a bevy; Flossie brought up to back did not see him, although she passed close to him, and going down wind flushed the bevy. Moved on, Roi made a flush. He made a point on several birds and was steady to shot; the heat then ended. Down 49m. The heat began at 3:31 and ended at 4:24. Roi had the superior pace and style.

Tennie had the bye.

The running of the first series resulted as follows:

Betty beat Daisy Hope.
Wee Daisy beat Zach.
Lottie C. beat Daisy Fisher.
Orlando beat Mary Meade.
Count Piedmont beat Rod's Gal.
Cecil beat Rod's Son.
Roi D'Or boat Flossie Noble.
Tennie a bye.

Second Series.

BETTY AND TENNIE.

The heat began at 4:37, and the dogs were ordered up at 5:06 without any birds being found. Tennie was handled by W. B. Stafford. Tuesday morning was cloudy and damp until about 10 o'clock, when the weather cleared and the remainder of the day was pleasant. The running began at 8:58 with the unfinished heat of the previous day. Tennie, not having the wind right, flushed a bevy in sedge grass. Working on the scattered birds, Tennie drew nicely to a point on a single bird; Betty backed. Both were steady to shot. Tennie soon secured another point on a single bird and was steady to wing. Moved on. Both pointed, about 80yds. apart, in sedge grass. Several birds were flushed to Tennie's point and a bevy to Betty's. The heat ended at 9:21. Betty won. She had but slight advantage in range or speed. Her style in motion was better; both had good style on point.

ORLANDO AND WEE DAISY.

They were started at 9:26. Orlando showed a decided superority in pace, range and style. Both were steady to shot and wing, and pointed well. The heat ended at 9:37. Orlando won.

CECIL AND LOTTIE C.

The heat began at 9:42. Lottie showed a disposition to false-point at frequent intervals; she backed with an air of indifference. Both were steady to shot and wing. Lottie did not show the accuracy in pointing or quickness in locating that her competitor did. The speed and range of Cecil, although not very superior, were the better. He won. Time 10:50.

ROI D'OR AND COUNT PIEDMONT.

The heat began at 10:55. Roi showed superior capabilities in finding and locating, pointing two bevies and two single birds, and made two flushes. Count backed well and ranged in a superior manner. Roi had better speed and style. He won. Time 11:49. The party then took lunch. The second series resulted as follows:

Betty beat Tennie.
Orlando beat Wee Daisy.
Cecil beat Lottie C.
Roi D'Or beat Count Piedmont.

Third Series.

ORLANDO AND BETTY.

In this series there were but four dogs left, all owned by the Memphis and Avent Kennels. The heat began at 12:49 and ended at 1:23. Betty had better range and a trifle advantage in uniform speed. The style was about equal. Orlando showed fewer errors in his work on birds, and did more finding, and won.

ROI D'OR AND CECIL.

They were cast off at 1:36. Roi had the superiority in pace, range and style. At 1:42 Roi D'Or won. The judges could see the palpable superiority of Roi D'Or, and were satisfied as to their relative merits. The third series had the following results:

Orlando beat Betty.
Roi D'Or beat Cecil.

Final for First Place.

ORLANDO AND ROI D'OR.

They were started at 1:51. Roi pointed a bevy in a clump of plum bushes; Orlando backed well; both were steady to shot. Each made a good point on single birds. Orlando was a little unsteady to shot. Roi next made two flushes. Orlando was better in speed, range and style, and showed more accuracy in his work. He won at 2:14.

Ties for Second Place.

BETTY AND ROI D'OR.

They were started at 2:26. Both showed good work intermixed with some errors. Roi pointed a bevy in sedge, Betty pointed at the same time, a short distance away, and was a little unsteady to wing. Roi made a point on some of the remaining birds and Betty backed. On the scattered birds Betty flushed one and again was unsteady slightly. Roi flushed a single. Betty had the better style on point, some better range and greater quickness in her work on birds. The heat ended at 3 P. M. and Betty won. Roi D'Or was placed third without further running. Count Piedmont was placed fourth, Daisy Hope fifth. Summary:

First Series.

Betty beat Daisy Hope.
Wee Daisy beat Zach.
Lottie C. beat Daisy Fisher.
Orlando beat Mary Meade.
Count Piedmont beat Rod's Gal.
Cecil beat Rod's Son.
Roi D'Or beat Flossie Noble.
Tennie, a bye.

Second Series.

Betty beat Tennie.
Orlando beat Wee Daisy.
Cecil beat Lottie C.
Roi D'Or beat Count Piedmont.

Third Series.

Orlando beat Betty.
Roi D'Or beat Cecil.

Final for First Place.

Orlando beat Roi D'Or and won first.

Ties for Second Place.

Betty beat Roi D'Or and won second.

Without further running the dogs were placed: Roi D'Or third, Count Piedmont fourth, Daisy Hope fifth.

THE ALL-AGED STAKE.

The running in this stake began on Wednesday morning. The judges were J. H. Gilbert, C. W. Paris and T. L. Martin. There were ten starters. The order of running was as follows:

LEBANON (Lebanon Kennels), liver and white dog (Tim—Peg),

against

SACHEM (Mitchell Harrison), liver and white dog (Beaufort—Zuba).

ROGER WILLIAMS (C. H. Odell), lemon and white dog (Bang Bang—Lalla Rookh),

against

KING'S MARK (C. W. Barker), blue belton dog (King Noble—Belle Belton).

CONSOLATION (C. H. Odell), lemon and white dog (Bang Bang—Grace III.),

against

OLLIE S. (Memphis and Avent Kennels), black, white and tan bitch (Paul Gladstone—Lottie).

TIPTON (Poindexter and Tipton), black and white dog (Gath's Mark—Vic),

against

CASSIO (Memphis and Avent Kennels), black, white and tan dog (Count Noble—Lizzie Hopkins).

LORD GRAPHIC (J. R. Daniels), liver and white dog (Graphic—Daphne),

against

CINCH (Memphis and Avent Kennels), black, white and tan dog (Count Noble—Lizzie Hopkins).

Wednesday morning was clear. Before noon the weather clouded up and rain threatened toward night. A light wind blew from the southwest.

LEBANON AND SACHEM.

Luke White handled Lebanon; W. W. Titus handled Sachem. They were cast off at 8:41. The heat was a tiresome one. But little work done considering the opportunities. Three bevies were found; the first two by the handlers; Sachem pointed the last one. Neither showed superior finding capabilities or special merit. Lebanon had a decided advantage in speed and range; style about equal. The heat ended at 9:49. Lebanon won.

KING'S MARK AND ROGER WILLIAMS.

Charles Barker handled the former; Luke White the latter. They were started at 9:48. They roaded and pointed on the trail of a bevy; Mark roaded through the birds out in the open field on the trail of three or four; he pointed one, which Barker killed; Mark retrieved. The rest of the bevy flushed near where the dogs first pointed, the dogs failing to point them. The scattered birds were followed. Roger flushed a bird which Mark was roading. King's Mark won. Down 20m. There was not much difference in speed or range; Roger had better style on point; King's Mark dropped to his points, therefore his style was inferior.

OLLIE S. AND CONSOLATION

were cast off at 10:32. Luke White handled Consolation; J. M. Avent handled Ollie S. The brace went off at a lively pace; both ranged wide and hunted their ground well. Consolation showed much dash in his range and manner of going. Both worked with judgment. Ollie struck the trail of a bevy which had scattered about feeding. She roaded about rapidly, pointing at times, and finally located and pointed the bevy in Japanese clover. She was steady to shot. The birds were marked down in the open and followed. Ollie retrieved a bird nicely, which Avent killed to her point. When sent to retrieve she pointed another bird. Several then flushed wild. She pointed twice more on single birds. They were ordered up at 10:56, and Ollie won. Both were fast, wide rangers, and had good style.

CASSIO AND TIPTON.

Cassio was handled by J. M. Avent; Tipton by T. H. Poindexter. Tipton showed a good nose and did some very good work on scattered birds. While going across wind he flushed several birds and did not show proper steadiness to wing. Cassio made two points on single birds and retrived well. Both had good style in ranging and good speed. Their range was nearly alike. Up at 11:32. Cassio won.

CINCH AND LORD GRAPHIC.

Cinch was handled by J. M. Avent, W. W. Titus handled Lord Graphic. The heat began at 11:35. At the end of 41m. they were ordered up and the party went to lunch. Nothing was found in the meantime. The heat was resumed at 12:42. Each made a false point. A bevy was marked down in oak

woods. Lord Graphic pointed a single bird nicely; Cinch backed; Lord Graphic retrived well. Moved on, hunting for another bevy. One was found by the spectators. Cinch pointed it indifferently. Moved on; he pointed some remaining birds, which did not flush. The heat was a poor one. At 2:06 it ended. Cinch won. The first series resulted as follows:

Lebanon beat Sachem.
King's Mark beat Roger Williams.
Ollie S. beat Consolation.
Cassio beat Tipton.
Cinch beat Lord Graphic.

Second Series.

OLLIE S. AND LEBANON.

They were started at 2:10. Lebanon pointed a bevy in sedge grass. White killed and Lebanon refused to retrieve. On the single birds Ollie showed the greater accuracy. She retrieved well. She made two false points. She was the wider ranger and had the better style. Their speed was nearly equal. Ollie won. Down 35m.

KING'S MARK AND CASSIO.

They were started at 2:49. Mark pointed a bevy in the open in sedge grass; he retrieved well. On the scattered birds Cassio made a good point on a bird in oak woods. Mark made two false points. Range and speed about alike. Cassio had better style. Up at 3:38. King's Mark won. Cassio apparently was disobedient, as he was not prompt to whistle or command.

Ollie S. beat Lebanon.
King's Mark beat Cassio.
Cinch a bye.

Third Series.

There were three dogs in this series, two of which were owned by the M. & A. Kennels. There was some difference of opinion between the judges as to the correct manner of arranging this series. The rules required that if the heat for first place was run on the same day as the preceding series, the dog having the bye would run a side heat. Both Cinch and Ollie S. were owned by the same owners and handled by the same handler. Some held that King's Mark having the bye the other two should run together. Others held that no two dogs owned or handled by the same person should be forced to run together while there were dogs not so owned in the stake. The rule is very clear and explicit and reads as follows:

"Rule 10. If two dogs owned or handled by the same person should be drawn together in the first, or come together in any succeeding series, the second dog so owned or handled shall change places with the first dog not so owned or handled. * * If such separation is found to be impracticable, the running together of two such dogs may be permitted." Again: "Rule 27. If in the order of running there shall be but three dogs in a series, so that one would run a bye, then, while the competing dogs are running their heat, the third dog shall run a side heat without competition. * * * If the dog running the bye would not compete for first place the same day he would run the bye, the side heat need not be run." When two dogs are handled by the same person, and are in a series which contains but three dogs, it is plain that the bye cannot run a side heat since the handler cannot handle in two heats at the same time. In this case the running for first was postponed until the next day, which obviated the running of the side heat. The rule only makes an exception when "such separation is found to be impracticable," and even when it is not mandatory, for it reads "may be permitted," in strong contrast to the explicit "shall," used in other parts of the rules. Mr. Martin dissented from the ruling of the other two judges, and announced publicly that he wished to go on record as disagreeing from the ruling, basing his opinion on the word "impracticable." Inasmuch as it was late in the afternoon, and the running for first place arranged for the next morning, it was not "impracticable" to separate the two dogs; in short, they were separated.

KING'S MARK AND CINCH.

They were started at 3:38. Mark had the range and speed. Cinch had the better style. Both made errors in working birds, and both pointed and backed staunchly, and were steady to wing and shot. Mark had the advantage in the work done and won. Time 4:20.

Final for First Place.

OLLIE S. AND KING'S MARK.

They were started about five and one-half miles from town in the open field at 9:47. Both dogs soon after starting were found pointing a bevy in sedge grass by the edge of oak woods. Mark broke his point and Ollie then drew to the bevy and flushed a bird, then stood staunchly. Avent killed and Ollie retrieved. The birds went into the woods and were followed. On the way Ollie pointed a single bird and was steady to shot and wing. Mark flushed a single. Both pointed and roaded on the footscent of a bevy; at the edge of the woods in sedge, both standing several yards apart, pointed the birds, the bevy being divided. Both were steady to shot. In the oak woods Ollie stopped instantly to a neat point on a bird, and Mark backed steadily. Both were steady to wing. Mark was next to point and was handsomely backed by Ollie. A single bird was flushed several yards down wind and behind him, which he could not possibly have pointed. Next Ollie pointed and Mark backed; nothing was found to the point. Ollie made a good point on a single bird; Mark backed. Avent wounded the bird, which fell dead about 50yds. away. Ollie retrieved it nicely. Mark flushed a single bird in sedge grass. Ollie had a wider and more uniform range, and much better style. The speed was about equal, although Mark started a bit slow. Mark had a disagreeable habit of frequently pointing and moving on when in the vicinity of birds, consequently was not as accurate and diligent as he otherwise would have been. Ollie won. Down 22m.

Final for Second Place.

KING'S MARK AND CONSOLATION.

The heat began at 10:20. Consolation started off at a lively gait and ranged in fine form. Mark also was going better than in his last heat, the presence of birds probably stimulating him to vigorous effort. Taking a cast up on a sidehill in open sedge, he pointed a bevy; Consolation backed well. Mark abandoned his point; Consolation immediately started in and pointed the bevy staunchly. White killed, and Consolation retrieved tenderly but not sufficiently prompt. Moved on and Mark false-pointed twice. The dogs, in oak woods, took opposite casts. Consolation found and pointed several birds; White flushed them to his point and killed. Consolation retrieved the bird well. In the meantime, Mark made two excellent points on single birds and retrieved nicely. Sent on to find the scattered birds Consolation caught scent, drew straight up wind about 15yds. into the birds and made a bad flush; he stood to the flush and White flushed several more ahead of him. Consolation had the better style in ranging and on point. His range was slightly better, and in maintaining a uniform fast pace, he also excelled. Down 40m. King's Mark won.

Consolation and Cassio were placed equal third.

SUMMARY.

Annual All-Aged Stake. For setters and pointers that have never won first prize in all-aged stake in any recognized trials in America. Purse $650. First, $300; second, $200; third, $150. Forfeit $10; $20 additional for starters.

First Series.

Lebanon beat Sachem.
King's Mark beat Roger Williams.
Ollie S. beat Consolation.
Cassio beat Tipton.
Cinch beat Lord Graphic.

Second Series.

Ollie S. beat Lebanon.
King's Mark beat Cassio.
Cinch a bye.

Third Series.

King's Mark beat Cinch.
Ollie S. a bye.

Final for First Place.

Ollie S. beat King's Mark and won first prize.

Ties for Second Place.

King's Mark beat Consolation and won second.
Consolation and Cassio placed third.

PREVENTION OF GUN-SHYNESS.

Editor Forest and Stream:

My attention was forcibly attracted by an article on gun-shyness in the September number of the *A. K. R.* (Vol. VI., p. 212), and as it contains an important statement, I write of an experience of mine which is certainly suggestive and may prove of value. The statement I refer to is: "There is no characteristic, mental or physical, which is surer to be transmitted to the progeny of a gun-shy sire or dam." If this is true, I may be able to suggest a treatment to be used in the case of offspring of a sire or dam known to possess this serious fault.

Many years ago—"the down upon my lip—less man than boy"—I found located on the country place of my grandfather a mongrel pup, part hound but no "bird dog" blood, then about five months old. The family had not yet moved out from the city, and the pup had probably been left to himself by the family of the farmer, who occupied a part of the house during the winter. I had gone out to test a new shotgun, and the dog was tied at a kennel perhaps 100yds. from where I chose my position for firing. At the first discharge the dog disappeared, to my infinite amusement. I proceeded with my tests, pausing to note the weight of charge used, both as to powder and shot, and the effect. I had not been engaged more than twenty minutes before, to my great surprise, I saw the dog standing as near me as his rope would permit, and watching every movement with evident interest. I do not know how long he had been doing so before I took notice of the fact. Firing again and seeing that he was more delighted than dismayed at the flash and report, I went over and untied him. From that day he would leave a dinner to go out with a gun, and it made no difference whether I shot for birds or with a rifle at a mark. In fact I never trained him for birds, but only taught him to be silent and to walk behind me until after I fired. In rifle shooting I often made him stand on the broad sill of a window in a shed from which I practiced at targets, and when I rested the rifle on his back he never would stir a hair until after the flash, and a perceptible interval after it, too. These, however, were only a few of a hundred good traits that companionship developed in him with kindness. Poor Sancho has gone over to the majority of good though mongrel dogs; but I feel even now that I should only do justice to his memory in trying to turn it to some usefulness, that it may "live after him."

The question that suggests itself is, might not the same process be tried to advantage on the offspring of parents known to be gun-shy, by taking the puppy at a fairly advanced stage, isolating him so as to make him somewhat lonely and eager for companionship, and then teaching him that there is no harm to be expected from a noisy report by familiarizing him with it, first at a reasonable distance and not bringing him to close quarters until he desires to come closer of his own volition?

All of which is respectfully submitted for what it is worth.

TRACY GOULD.

VINELAND, N. J., December, 1888.

RICHMOND (IND.) DOG SHOW.

Editor Forest and Stream:

The third annual show of the Central Indiana Poultry and Pet Stock Association was held at the Park Rink in Richmond, Dec. 14, and was a success financially and otherwise. There were 100 entries in the dog department, and some of them were fine specimens. Mr. P. T. Madison of Indianapolis judged all classes, and his awards gave entire satisfaction. The prizes were awarded as follows:

AWARDS.

MASTIFFS.—CHAMPION—E. M. Bronson's Delph Viva.—OPEN—*Dogs:* 1st, E. E. Roney's Jim. *Puppies:* 1st, E. M. Bronson's Cæsar; 2d, J. E. Doughterty's Jess; 3d, E. E. Roney's Jim.

NEWFOUNDLANDS.—1st, Mr. Freeman's Dolly.

GREYHOUNDS.—CHAMPION—Rockwood Kennels' Snowflight.—OPEN—1st, Rockwood Kennels' Rich and Rare.

POINTERS.—1st, C. W. Law's Spang.

ENGLISH SETTERS.—*Dogs:* 1st, Devonshire Kennels' Jim Gladstone: 2d, Mr. Nelson's Discount; 3d, E. M. Star's Ramo. *Bitches:* 1st and 2d, J. B. Nickum's White Lill and Countess Rose. *Puppies:* 1st, Chas. Law's Ben Harrison.

IRISH SETTERS.—*Bitches:* 1st, James Clay's Annie Elcho. *Puppies:* 1st, James Clay's Snipe.

FOXHOUNDS.—1st, M. Schell's Lead; 2d, Wm. Laudwehr's Leader.

BEAGLES.—*Dogs:* 1st, Henry Mills's Driver. *Bitches:* 1st Fred Testing's Fanny.

FOX-TERRIERS.—1st, G. G. Ferling's Flossie. *Puppies:* 1st and 2d, Sterling's Nell and Prince.

COLLIES.—*Dogs:* 1st and 2d, J. E. Dougherty's Boss and Charley; 3d, J. H. Hodgen's unnamed. *Bitches:* 1st, J. E. Dougherty's Zella; 2d, Maggie Adams's Etta. *Puppies:* 1st, 2d and 3d, Maggie Adams's Lotta, Scotta and Zell.

BULLDOGS.—*Dogs:* 1st, J. H. Taylor's Fritz. *Bitches:* 1st, J. H. Taylor's Fanny.

TOY TERRIERS.—1st, Wm. Quigley's Topsy.

SCOTCH TERRIERS.—1st, A. Beeler's Zip; 2d, Harry Fox's Dick; 3d, E. Roney's Jack.

PUGS.—*Dogs:* 1st, E. B. Gold's Ralph; 2d, Clem Gar's Budge; 3d, A. Lange's Nip. *Puppies:* 1st, Geo. Becker's Jude.

SKYE TERRIERS.—1st, F. W. Spinning's Mary.

RICHMOND.

THE AMERICAN COURSING CLUB.

Editor Forest and Stream:

Following is the financial statement of the American Coursing Club for the year ending Oct. 31, 1888. We believe the showing to be a good one. The prospects of the club were never so bright.

RECEIPTS.		DISBURSEMENTS.	
Membership dues	$ 70.00	Approved and ordered by Executive Committee.	
Membership fees	150.00	Printing, etc	$201.40
Membership assessment	180.00	Wood cuts, electros, etc	33.65
Registration fees	3.75	Postage and expressage	38.00
Entrance fees	385.00	G. I. Royce, railroad exp.	20.00
Gate receipts, annual C. C. M.	160.15	Advertising	12.40
Donations	126.70	Sundry bills by warrants	318.82
Money advanced	300.00	Premiums	700.00
		Cash on hand	154.03
Total	$1,375.60	Total	$1,375.60

FRANK K. DOAN, Sec'y.

1210 OLIVE STREET, St. Louis, Mo.

THE CHASE OF THE HARE.

Editor Forest and Stream:

An ancient writer tells us that hunting was the exercise o the greatest heroes in antiquity, and that by this they formed themselves for war as well as for their exploits against wild beasts, which were a prelude to their future victories. From Xenophon we learn that almost all the ancient heroes, Nestor, Theseus, Castor, Pollux, Ulysses, Diomedes and Achilles were disciples of hunting and were carefully taught that art, and Pliny observes that those who were designed for great generals were made to contend with the swiftest wild beasts in speed, with the boldest in strength, and with the most cunning in craft and subtlety; and the Roman Emperors, in the monuments they erected to transmit their actions to future ages, joined the glories of the chase to their most celebrated triumphs. Both Greek and Latin poets emblazoned the beauties of the chase upon the pages of their works which will last forever, and will be read and admired by scholars and sportsmen, while the names of Oppian, Gratius, Ovid, Nemesianus and Virgil, together with that of poor old blind Homer, will ever remain fresh and green in the memory of all sportsmen. These all esteemed hunting, not only because it was a manly and warlike exercise, but because it was highly conducive to health; and the famous Galen recommended it above all others as not only exercising the body, but giving delight and entertainment to the mind, and he calls the inventors of this art "wise men, and well skilled in human nature."

Hark away,
Cast far behind the ling'ring cares of life,
Cithæron calls aloud, and in full cry
Thy hounds, Taygetus, Epidarus trains
For us the gen'rous steed; the hunter's shouts,
And cheering cries, assenting woods return.
Virgil.—Georg. III.

Of all the sports in hunting mentioned by the ancients none was more admired than that of chasing the hare, none was considered more manly, and none more fruitful of invigorating and healthful exercise. While the hare has always been noted for its timidity, it has been highly prized for its fleetness. Arrian says "the true sportsmen does not take out his dogs to destroy the hares, but for the sake of the course and the contest between the dogs and the hare, and is glad if the hare escapes, and if she flies to some brake that is too thin to hide her and tries to conceal herself and seems to decline the contest, he will call off the dogs, especially if she has run well. I, myself, often when I have followed the course on horseback and have come up time enough to save the hare alive, have taken her from the dogs and tied them up and let her go; and sometimes when I have come up too late to save her I have not been able to avoid striking the dogs on the head for killing so good an antagonist. * * * I will allow, indeed, that whoever sees this animal, either found running or pursued, may forget anything else he is most attached to; but to see it taken is neither a pleasing nor a striking sight, but rather disgusting." This is the writing and the words of the great Flavius Arrian, who was born in Bithynia, A. D. 100, who was not only a pupil but a friend of the great stoic, Epictetus. And his great deeds as well as his learned writings are fully mentioned and deferred to as authority upon all subjects which he thought fit to write about by all writers from that time to the present day.

Sir Thomas Elyot, who was Ambassador to Rome during the reign of Henry VIII., in his book named the "Governour," published in 1531, says: "Hunting of the Hare with Grehounds is a ryght good solace for men that be studiouse or thym to whome nature hath not gyven personage or courage apte for the warres, and also for gentilwomen which feare nether sonne nor wynde for appayring theyr beautie. And peradventure they shall bee therr at lasse idill than they shuld be at home in their chambers."

Hares were protected by law at this time. The Statute of 14 Henry VIII. enacted that if any person traced, destroyed or killed any hare in the snow with dog, bitch or otherwise, he forfeited 5s. 8d. for every hare.

And we find in the "Epigrams" of Martial's, written in Rome during the first century after Christ, the following epigram to Priscus: "Use more sparingly, I advise you, the galloping hunter Priscus, and ride not so furiously after the hare. The sportsman has often made atonement to the prey and fallen, never to rise again, from the spirited horse. The very plain, too, has its danger, even though there be no ditch, no mound, no rocky places, yet the level ground is apt to deceive. There will not be wanting some rider to exhibit to you a spectacle such as this, but his fall would excite less repining at fate than yours. If the excitement of danger attracts you let us spread toils for the wild boars of Tuscany. Courage in that pursuit is safer. Why do such break-neck steeds delight you? They much oftener succeed in killing the rider than the hare."

From the sculptures of Thebes and Beni-Hassan we can learn the great delight the Egyptians experienced in the chase. Wilkinson, in his "Ancient Egypt," says: "In the East indeed it was always looked upon as a manly exercise, requiring courage and dexterity, and tending to invigorate the body and instill into the mind a taste for active pursuits. It was held in such repute that the founders of empires were represented in the character of renowned hunters. The Babylonians were so fond of the chase that the walls of their rooms presented a repetition of subjects connected with it, and they even ornamented their dresses and the furniture of their houses with the animals they hunted."

The Medes and Persians were equally fond of the chase, and the Egyptians frequently coursed with dogs in the open plains.

Coursing the hare was one of the recognized sports of the ancient Greeks. They were also fond of hare's flesh, so that they had an expression, "to live on hare's flesh," which was synonomous with "living on all kinds of dainties."

The Roman epicures considered the shoulder of the hare a tidbit, while the rabbit was not known to the ancient Egyptians, the Assyrians, or the Jews, while the coney was known to all of them. These people all, with the exception of the Jews, gave chase to the hare and enjoyed the flesh. The hare falling under the Mosaic law was for that reason considered and held as unclean by the Jews.

The action of Moses in this case was certainly one of the "mistakes of Moses." Leviticus, Chapter XI., Verse 6:

"And the hare because he cheweth the cud and divideth not the hoof he is unclean unto you." Now, in truth and in fact, the hare does not chew the cud. Neither does the rabbit or the coney. Its teeth and stomach are "not built that way." Yet Moses evidently believed they were, and such is the popular opinion to the present time. Cowper in his works, speaking of his favorite pet hare, says that he "chewed the cud." They have a peculiar way of moving their jaws, even when asleep, a kind of mumbling, but this is done for the purpose of grinding their teeth and not to masticate a cud ball.

The ancient Britons coursed the hare, and during the reign of Queen Elizabeth, Thanos, Duke of Norfolk, formulated this set of rules, which were subscribed unto by the chief gentry and so held authentic: "That he that is chosen fereterer or that lets loose the greyhounds shall receive the greyhounds matched to run together into his leash as soon as he comes into the field, and follow next to the hare finder, or he that is to start the hare, until he comes unto the form, and no horsemen or footmen are to go before, or on any side, but directly behind, for the space of about forty yards. You ought not to course a hare with above a brace of greyhounds. The hare finder ought to give the hare

three soboes before he put her from her form or seat. To the end the dogs may gaze about, and attend her starting.

"They ought to have twelve score yards law before the dogs are loosed, unless there be danger of losing her. That dog that gives the first turn, and if after that there be neither cote, slip or wrench, then he wins the wager. If one dog give the first turn, and the other bears the hare, he that bears the hare shall win.

"A go-by, or bearing the hare, is reputed equivalent to two turns. If neither dog turn the hare, he that leadeth last to the covert wins. If one dog turns the hare, serves himself, and turns her again, it is as much as a cote; for a cote is esteem'd two turns.

"If all the course be equal, he that bears the hare shall win, and if he be not born, the course shall be adjudged dead.

"If a dog take a fall in a course, and yet perform his part, he may challenge the advantage of a turn more than he gave.

"If a dog turn the hare, serve himself, and give divers cotes, and yet in the end stand still in the field, the other dog, if he turns home to the covert, although he gives no turn, shall be adjudged to win the wager. If by misfortune a dog be rid over in his course, the course is void; and to say truth, he that did the mischief ought to make reparation for the damage.

"If a dog give the first and last turn, and there be no other advantage betwixt them, he that gave the odd turn shall win.

"A cote is, when the greyhound goeth endways by his fellow, and gives the hare a turn.

"A cote serves for two turns, and two trippings or jerkins for a cote; and if she turneth not quite about she only wrencheth.

"If there be no cotes given between a brace of greyhounds, but that one of them serves the other at turning, then he that gives the hare the most turns wins the wager; and if one gives as many turns as the other, then he that beareth the hare wins the wager.

"Sometimes the hare doth not turn, but wrench; for she is not properly said to turn, except she turns as it were round, and two wrenches stand for a turn.

"He that comes in first to the death of the hare takes her up, and saves her from breaking, cherisheth the dogs, and cleanseth their mouths from the wool, is adjudged to have the hare for his pains.

"Those that are judges of the leash must give their judgment presently, before they depart out of the field."

These rules were afterward substantially adopted by the Coursing Club of Swaffham, founded by Lord Orford, in 1776. From that time on, private coursing has been on the decline in England, and now it is seldom that a hare is coursed except by one of the duly organized clubs. These clubs have taken great care in breeding greyhounds for this sport. The hare is never coursed in an inclosure. That is, there is always a city of refuge for the hare to escape, as sportsmen consider it not only cruelty but unmanly to deprive an animal of what is termed its law or natural means of escape or defense. At the great coursing meet in 1885, of the Haydock Park course, only nine hares were killed out of sixty-eight courses run. And in the course of the Occidental Coursing Club of California, held last month, out of twenty-five hares coursed, seven escaped. Now we can readily see from the above that it is the excitement of the chase as well as the invigorating and healthful exercise experienced by those engaged in the sport as well as the artistic skill displayed by the sportsman that has rendered coursing popular, as well as being regarded as one of the legitimate sports in England as well as in this country.

The greyhound with his fleetness and endurance when pitted against the hare with his fleetness and cunningness surely make an interesting and exciting run. The speed of the two is about equal, the dog having the greater endurance, but which is usually overcome by the cunningness of the hare, which by dodges and turns forces the dog to give the go-by.

Rabbits and coneys are never used for coursing in England. Some of the lower classes have for years, when not prevented by the officers of the Royal Society, baited rabbits with a dog called whippet, and in the last few years the same class have used the fox-terrier for this purpose. It is a low, unmanly and disgusting sport—like rat baiting, the pleasure is in the kill. The run only lasts a few seconds at the most.

This rabbit baiting, like the rat baiting and dog fighting, always takes place in an inclosure and in some out-of-the-way place. One "sport" will give another the tip (as it is called) where tickets can be purchased, and if the Society officers are eluded, then the bait is given.

In England the rabbit baiters claim that the rabbit does not fall within the protection of the statute, as the rabbit is not a domestic animal. The magistrates have always held that when a rabbit is taken and under the control of man, he is a domestic animal, until last month, when in a case they dismissed the defendants subject to a case to be stated. So this will soon now be settled in England. I give the case as reported in the English *Stock-Keeper* of Dec. 7, 1888.

A case affecting the supporters of rabbit coursing was tried at the Birkenhead County Magistrate's Court on the 29th ult. Three persons were summoned by an inspector of the Royal Society for the Prevention of Cruelty to Animals for having, on the 29th ult., "ill-treated twenty-four rabbits by causing them to be worried by dogs." The proceedings were taken under section 2 of 12 and 13 Vic. chap. 22. This section refers to domestic animals, and though rabbits are included in the definition of wild animals, so long as they are kept wild and not under the control of man; when they are taken from the field, tended and fed by man, it is contended they become domestic animals within the meaning of the Act. This contention had previously been upheld by the magistrates.

The evidence showed that the defendants kept rabbits several days in a garret of a house where they were fed. These rabbits, it is alleged, were taken on to the field and sold for coursing. An inspector deposed that one of the officials took the animal by the skin of the back, held it before two dogs, and then, after running about sixty yards, threw the rabbit down and jumped behind it to make it run. Some of the rabbits were so tame that they refused to run, and others went toward the dogs, both of which sometimes seized the rabbit and danced about the common with it in its mouth.

The magistrates were of opinion that it had not been proved that rabbits were domestic animals within the meaning of the Act; but at the same time they regretted they had not the power to punish the defendants for their cruelty, and cautioned them. The cruelty was denied by the defense. The prosecution said they attached great importance to this matter, and asked their worships to state a case. The summonses were then dismissed, subject to a case to be afterward stated.

In New York the statute protects both the wild and the tame animals, as provided by the Penal Code, viz:

Sec. 6. Penal Code § 655.—A person who overdrives, overloads, tortures, or cruelly beats, or unjustifiably injures, maims, mutilates, or kills any animal, whether wild or tame, and whether belonging to himself or to another, or deprives any animal of necessary sustenance, food or drink, or neglects or refuses to furnish it such sustenance or drink, or causes, procures, or permits any animal to be overdriven, overloaded, tortured, cruelly beaten, or unjustifiably injured, maimed, mutilated, or killed, or to be deprived of necessary food or drink, or who willfully sets on foot, instigates, engages in, or in any way furthers any act of cruelty to any animal, or any act tending to produce such cruelty, is guilty of a misdemeanor.

Aside from the cruelty, rabbit baiting, rat baiting, dog fighting, etc., are prohibited by the following section of the Penal Code:

Section 18. Penal Code § 664.—A person who sets on foot, instigates, promotes, or carries on, or does any act as assistant, umpire or principal, or is a witness of, or in any way aids in or engages in the furtherance of any fight between cocks or other birds, or dogs, bulls, bears or other animals, premeditated by any person owning or having custody of such birds or animals, is guilty of a misdemeanor, punishable by fine not less than ten dollars, nor more than one thousand dollars, or by imprisonment not less than ten days, nor more than one year, or both.

As similar statutes exist in almost every State in the Union it is not probable that rabbit baiting will be carried on to any great extent. PESHALL.

JERSEY CITY.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream:

The gorge of the New England fox hunter rises when he reads the contemptuous comments on his favorite pastime which are so often made by those who apparently know nothing of it, or who think nothing can be sportsmanlike unless it is English. When such as your correspondent "Tallyho" will inform us wherein the shooting of a fox before hounds is more unfair than the shooting of a hare or deer under the same conditions, we may be convinced of our unsportsmanlike conduct, but we shall not be likely to give up the pastime of which we are so fond only because we are told by such as he that it is unsportsmanlike and indecent.

In our fox hunting the fox has a better chance of escape than when a fleet pack of hounds are in pursuit and the killing of the fox relegated entirely to them. As for the sportsmanship, to be a successful fox hunter in our fashion one must be a good shot and have a knowledge of woodcraft that is quite as essential to sportsmanship as is horseback riding.

AWAHSOOSE.

DOG TALK.

THE so-called coursing of rabbits at Hempstead, L. I., has created quite a flutter in certain circles of dog men, and especially in the New Jersey Kennel Club. As we understand it, the matter came up at a meeting held last Thursday night (Dec. 13), at Taylor's Hotel, Jersey City, on a resolution offered by Mr. Peshall, censuring the Hempstead Club and Mr. A. Belmont, Jr., for killing hares with terriers. The resolution was offered and passed. A well-known member then promptly wrote out his resignation. After some discussion Mr. Peshall stated that rather than have any ill-feeling in the club he would for the present withdraw his resolution, which he did, but, as has been said, after it had been passed.

At the meeting last week of the New Jersey Kennel Club Mr. Peshall, in accordance with his intention announced some months ago, resigned his position as delegate to the A. K. C., and Mr. A. C. Wilmerding was elected delegate in his stead.

At the same meeting it was determined by the club to hold a show next spring, and report has it that Mr. Peshall offered prizes to the amount of $300. These, it is said, have since been withdrawn, as the great authority on ancient history declines to back up a show held under the auspices of the A. K. C. unless it shall take a stand in opposition to rabbit baiting. This the A. K. C. is not likely to do so long as Mr. Belmont is its president.

For the year 1889 the St. Bernard Club of America provides an annual rough-coated puppy sweepstakes, for puppies born in 1888, entrance $3, to be decided at the New England show; smooth-coated puppy sweeps, to be decided at the Philadelphia show; stud-dog stakes (rough and smooth-coat); futurity stakes for puppies whelped in 1889; produce stakes for brood bitches. Forms for nominations, together with full details of each stake, will be sent, on application, by Mr. Lorenzo Daniels, Cor. Sec'y, P. O. Box 1991, New York.

Two New York dog catchers were tried last week before a jury in the court of General Sessions charged with robbery and assault, and were convicted of assault in the third degree, and on Dec. 14 they were sentenced by Judge Cowing to one year's imprisonment and to pay a fine of $500. The complainant, Miss Mary D. Brooks of No. 38 East Sixty-fifth street, testified that she was walking out with her pet dog on the 23d of November, and when near Fourth avenue she saw the prisoners, Patrick McCarthy and John Lynch, assistant dog catchers, leave their wagon and run toward her. She picked up the dog and carried him in her arms, and as McCarthy came up he seized the dog and pulled him away from her, at the same time hitting her on the shoulder, pushing her down on her knees; but she got up and ran after him, seizing him with one hand and the dog with the other, McCarthy struck her in the face with the back of his hand, and as she fell down he struck her again, whereupon she screamed and some one coming to her assistance, the dog catchers relinquished the dog and left. The prisoners denied assaulting Miss Brooks and Lynch said that the dog was given up "so as not to have any trouble." The judge in charging the jury, said that if the dog had been taken from the arms of the complainant, then the defendants had exceeded their duty, even on the assumption that they did not intend to steal the dog. Dog catchers had no right to invade the home or to enter a house to secure a dog, or take it from a private yard. Neither had the defendants any right to take it from the arms of his owner or any person who had charge of it.

VICKEY.—Linden, Mass., Dec. 14.—*Editor Forest and Stream:* It is with a feeling of deep regret and sorrow that I write you of the beagle bitch Vickey. She was run over by the cars the day before Thanksgiving and instantly killed. Beagle fanciers will remember her as the winner of first and special at Hartford in the open class at the last show held in that city. I met her owner, Mr. W. F. Rutter Jr., of Lawrence, Mass. (and a truer sportsman never lived), at the last show held by the New England Club at Boston, and he invited me to come and have a hunt with him when the season opened. It is needless to say I accepted his invitation and I had a good chance to see this little bitch work, and to say I was astonished does not half express it, as her work was simply wonderful. We arrived at the hunting grounds at 4 o'clock in the morning and she went to work at once and worked steadily all day long, till 4 o'clock in the afternoon; and when we were riding home she would be ahead of the team all the way, and frisking about seemingly as fresh as when she first started. She came the nearest to my idea of what a beagle should be of anything I have ever seen, as she was worthy of mention on the bench in the best of company, while in the field I don't think her superior lived. Her voice was beautiful, and when on a hot scent it fairly rolled from her throat, and no music I ever heard could equal it. Mr. Rutter has had unusually hard luck with his beagles, as it was only a year ago he lost Kino in the same way. He now has a 7 months old pup by Cameron's Racket out of Vickey that bids fair to make a crack in time, as now she will run a rabbit in good shape. Vickey's last run was one of her greatest she ever made. Mr. Rutter started out with a foxhound bitch to go foxing and left Vickey at home, and the hound had a fox started at 5 o'clock in the morning and Vick got away and got there a very few minutes after the hound had started and drove with her till 2 o'clock in the afternoon. Old fox hunters that saw it claim that it was the greatest piece of work for a little dog of only 13 inches high they ever saw, as this hound she run with has never been beaten on a fox hunt and she has run with hundreds of different dogs the past year. Poor little Vick. She deserved a better fate. We shall never see her like again.—W. S. CLARK.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Rowena Neville. By W. H. Ellis, Springdale, Pa., for fawn mastiff bitch, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978).

Monitor Neville. By M. B. Chaplin, Pittsburgh, Pa., for fawn mastiff dog, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978).

Juana Neville. By Chas. S. Lindsay, Pittsburgh, Pa., for fawn mastiff bitch, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978).

Psyche Neville. By P. N. Chaplin, Pittsburgh, Pa., for fawn mastiff bitch, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978).

Goldie, Patchogue and Blue Rival. By L. Gardner, Mt. Vernon, N. Y., for one white and lemon and two white and liver pointer dogs, whelped Sept. 19, 1888, by his Duke of Vernon (Glendale—Spotless) out of Cute (Duke Royal—Gala Day).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Daisy—Charleroi II. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Daisy (Clipper—Bonnie Scotland) to their Charleroi II. (Charlemagne—Sooty), Nov. 19.

Helen—Dublin Scot. J. R. Bennett's (New York) collie bitch Helen (Rex or Strephon—Mavis) to Chestnut Hill Kennels' Dublin Scot (The Colonel—Jessie), Nov. 21.

Amherst Lassie—Charleroi II. J. D. Shotwell's (New Jersey) collie bitch Amherst Lassie (Davy Lindsay—Phillis) to Chestnut Hill Kennels' Charleroi II. (Charlemagne—Sooty), Nov. 28.

Bertha—Scotilla. Pierepont Morgan's (New York) collie bitch Bertha (Staffa—Ethel) to Chestnut Hill Kennels' Scotilla (Dublin Scot—Flurry II.), Nov. 19.

Luella—Charleroi II. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Luella (Strephon or Rex—Mavis) to their Charleroi II. (Charlemagne—Sooty), Dec. 2.

Queen of Ashmont—Wacouta Nap. St. Joe Kennels' (Niles, Mich.) mastiff bitch Queen of Ashmont (King of Ashmont—Reine) to their champion Wacouta Nap (J. Morgan's Lion—R. Morgan's Bess), Nov. 23.

St. Joe Patty—Wacouta Nap. St. Joe Kennels' (Niles, Mich.) mastiff bitch St. Joe Patty (champion Ilford Caution—Juno) to their champion Wacouta Nap (J. Morgan's Lion—R. Morgan's Bess), Dec. 1.

Timferna—Brock. E. M. Crouch's (Thomaston, Conn.) pointer bitch Timferna (A.K.R. 5754) to his Brock (A.K.R. 5754), Dec. 10.

Snap—Judge. Frank Eaton's (Springfield, Mass.) pointer bitch Snap (Croxteth—Lady Beau) to Dr. W. M. Williams's Judge (A.K.R. 6390), Dec. 9.

Ruby—Judge. J. P. Swain's (Bronxville, N. Y.) pointer bitch Ruby (A.K.R. 4893) to Dr. W. M. Williams's Judge (A.K.R. 6390), Dec. 10.

Myra—Barry II. N. Myers's St. Bernard bitch Myra (Nero—Favorite) to W. J. Ehrich's Barry II. (A.K.R. 3760), Nov. 9.

Fly—Barry II. M. Phebus's St. Bernard bitch Fly (Nero—Ruth) to W. J. Ehrich's Barry II. (A.K.R. 3760), Oct. 24.

Duchess of Heathfield—St. Gothard III. C. H. Spring's (Newton Lower Falls, Mass.) rough St. Bernard bitch Duchess of Heathfield (Rip Van Winkle—Recluse) to Geo. Booth's (Hull, Eng.) St. Gothard III. (champion Valentine—Lady Nell), Dec. 3.

Black Princess—Newton Abbot Lord. H. H. Truman's (Orange, N. J.) cocker spaniel bitch Black Princess (Monk—Ethel) to E. M. Oldham's Newton Abbot Lord, Dec. 15.

Dot—Bradford Harry. R. Kelliher's (Brookline, Mass.) Yorkshire terrier bitch Dot (Spink—Dolly) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Dec. 5.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Rye. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Rye (Ringwood—Roxy), Oct. 25, three (two dogs), by his Mayo (Rustler—champion Bonnie).

Trixy. Robt. Jennings's (Tarrytown, N. Y.) beagle bitch Trixy (Laick's Rattler—Laick's Rye), Oct. 20, three, by Geo. Laick's Mayo (Rustler—champion Bonnie).

Dot. P. P. Lewis's (Tarrytown, N. Y.) beagle bitch Dot (Ringwood—Maida), Oct. 8, four (two dogs), by Geo. Laick's Mayo (Rustler—champion Bonnie).

Cora II. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Cora II. (Kintore—Duchess), Nov. 19, ten (five dogs) by their Scotilla (Dublin Scot—Flurry II.).

Madam. E. C. Johnson's (Framingham, Mass.) St. Bernard bitch Madam (A.K.R. 4767), Sept. 9, twelve (two dogs), by Geo. Walton's Scotch Bonivard (Bonivard—Mirza).

Forest Corinne. F. C. Smith's (Groton, N. Y.) Irish setter bitch Forest Corinne (champion Bruce—Little Nell), Dec. 13, eight (three dogs), by D. Rhodes's Aldershot (Chief, A.K.R. 231—Bizreena, A.K.R. 2876).

White Puss. E. A. Woodward's (Chicago, Ill.) bull-terrier bitch White Puss (A.K.R. 6428), Nov. 8, four (one dog), by Associated Fanciers' The Baron (Dutch—White Rose, A.K.R. 2906); one bitch and one dog since dead.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jeanette. White, black and tan beagle bitch, whelped March 20, 1888, by Bannerman II. out of Constance, by F. M. Bennett, Westfield, N. J., to E. L. Bryant, Johnston's Creek, N. Y.

Bannerman II. Black, white and tan beagle dog, whelped July 5, 1885, by Bannerman out of Queen, by F. M. Bennett, Westfield, N. J., to L. E. Simmons, Lexington, Ky.

Ruby. Black, white and tan beagle bitch, whelped March 10, 1886, by Brits out of Pride, by F. M. Bennett, Westfield, N. J., to John Thompson, New York.

Bannerman II.—Constance whelp. White, black and tan beagle dog, whelped March 20, 1888, by F. M. Bennett, Westfield, N. J., to G. N. Steward, Elizabeth, N. J.

Bonnie Dunkeld—Bonnie Knowe whelp. Black, white and tan collie dog, whelped July 12, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., to A. C. Harrison, same place.

Caractacus—Pitchdark whelps. Black, white and tan collie bitches, whelped July 12, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., one each to John L. Lincoln, Jr., Chicago, Ill., and Robt. McEwen, Byron, Canada.

Mac Tempest. Sable and white collie dog, age not given, by All Fours out of Winnie, by Chestnut Hill Kennels, Philadelphia, Pa., to S. T. Mercier, Gilford, Ireland.

Roslyn Brock. Black and tan collie bitch, whelped Aug. 4, 1887, by Dublin Scot out of Madge, by Chestnut Hill Kennels, Philadelphia, Pa., to A. H. Jones, Germantown, Pa.

Jennie M. Sable collie bitch, whelped April 9, 1887, by Strephon out of Jersey Beauty, by Chestnut Hill Kennels, Philadelphia, Pa., to A. P. Hazard, Richmond, Va.

Smith's Lassie. Black, tan and white collie bitch, whelped Aug. 30, 1888, by Roscoe out of Minnie (A.K.R. 6524), by F. C. Smith, Groton, N. Y., to Chas. C. Haight, East Homer, N. Y.

Minnie. Black, tan and white collie bitch, whelped July 30, 1887 (A.K.R. 6524), by F. C. Smith, Groton, N. Y., to Chas. C. Haight, East Homer, N. Y.

Queen Bess of Beech Grove. Light fawn mastiff bitch, whelped Jan. 2, 1888, by Beech Grove Toby (A.K.R. 4867) out of Beech Grove Gabrielle (A.K.R. 3371), by Beech Grove Farm Kennels, Beech Grove, Ind., to Wm. Basson, Indianapolis, Ind.

Beech Grove Protection. Light fawn mastiff dog, whelped Jan. 2, 1888, by Beech Grove Toby (A.K.R. 4867) out of Beech Grove Gabrielle (A.K.R. 3371), by Beech Grove Farm Kennels, Beech Grove, Ind., to Chas. H. Childs, Utica, N. Y.

Rowena Neville. Fawn mastiff bitch, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978), by John M. Chaplin, Neville Island, Pa., to Wm. H. Ellis, Springdale, Pa.

Juana Neville. Fawn mastiff bitch, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978), by John M. Chaplin, Neville Island, Pa., to Chas. S. Lindsay, Pittsburgh, Pa.

Monitor Neville. Fawn mastiff dog, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978), by John M. Chaplin, Neville Island, Pa., to M. B. Chaplin, Pittsburgh, Pa.

Psyche Neville. Fawn mastiff bitch, whelped Aug. 25, 1888, by Beauquesne Neville (A.K.R. 5894) out of Juanita (A.K.R. 4978), by John M. Chaplin, Neville Island, Pa., to P. N. Chaplin, Pittsburgh, Pa.

Lady Catherine. Orange, white markings, St. Bernard bitch, whelped April 28, 1887, by Duke of Lancaster out of imported Doris, by Chas. D. Cugle, Hartford, Conn., to E. B. Sears, Melrose, Mass.

Belwer. White and orange rough St. Bernard bitch, whelped June 14, 1888, by Hector (A.K.R. 3249) out of Linda (A.K.R. 2552), by C. H. Spring, Newton Lower Falls, Mass., to J. A. Morse, South Framingham, Mass.

Madam. Orange and white St. Bernard bitch, whelped Sept. 18, 1886 (A.K.R. 4767), by John H. Sutcliffe, Louisville, Ky., to C. E. Johnson, Framingham, Mass.

Van Pelt. Chestnut, white and tan English setter dog, whelped April 23, 1888, by MacD. out of Chief's Queen, by F. G. Taylor & G. G. Davis, Philadelphia, Pa., to J. J. Kerr, same place.

Dick Roy. Black, white and tan English setter dog, whelped March 13, 1888, by San Roy out of Cora, by F. G. Taylor & G. G. Davis, Philadelphia, Pa., to A. H. Moore, same place.

Don Carlos. Black, white and tan English setter dog, whelped May 3, 1888, by Rockingham out of Donna, by Rosecroft Kennels, Birmingham, Conn., to Edwin Parker, Philadelphia, Pa.

Hindoo—Rothemay whelps. Black and tan Gordon setters, whelped Aug. 26, 1888, by F. M. Bennett, Westfield, N. J., a dog to S. B. Davis, Philadelphia, Pa., and a bitch each to H. C. West, Crauford, N. J., and Jas. B. Blossom, Morrisania, N. Y.

Luray III. Red Irish setter bitch, whelped March 14, 1885, by Chief out of Leigh Doane I., by Oakview Kennels, Philadelphia, Pa., to Associated Fanciers, same place.

Creole. Red Irish setter bitch, whelped 1883, by Grafton out of Meg, by Oakview Kennels, Philadelphia, Pa., to Associated Fanciers, same place.

Rex. Black, white frill, cocker spaniel dog, whelped July 12, 1888, by Oberon (A.K.R. 3315) out of Trinket, by Chas. C. Haight, East Homer, N. Y., to F. C. Smith, Groton, N. Y.

Pete Obo. Black cocker spaniel dog, age not given, by Black Pete out of Miss Ginger, by G. F. Willard, Charlestown, Mass., to Rural Kennels, Wakefield, Mass.

Roslyn Dennis—Roslyn Eileen whelp. Red Irish terrier dog, whelped July 28, 1888, by Chestnut Hill Kennels, Philadelphia, Pa., to J. T. Pollard, Atlanta, Ga.

DEATHS.

Dom Pedro. Orange tawny and white St. Bernard dog, whelped May 28, 1886 (A.K.R. 6328), owned by Chas. D. Cugle, Hartford, Conn., Oct. 26, from pneumonia.

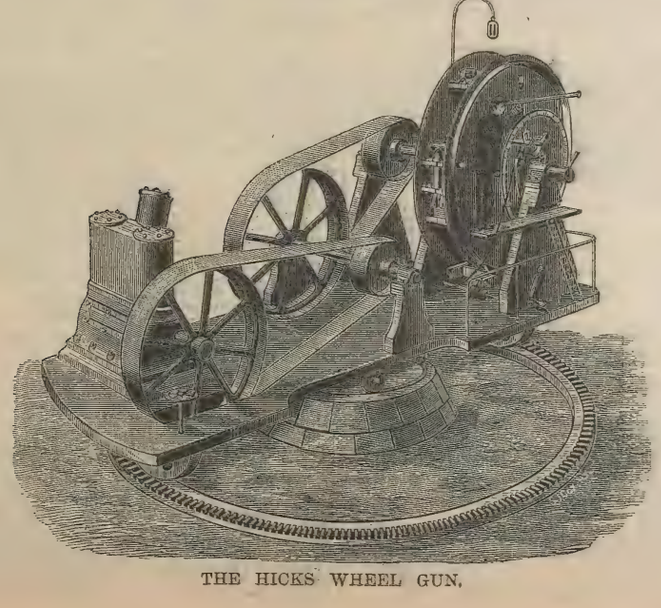
Fanchon. Orange tawny St. Bernard bitch, whelped Oct. 19, 1885 (A.K.R. 6394), owned by Chas. D. Cugle, Hartford, Conn., Nov. 27, from inflammation of the bowels.

A NEW GATEWAY.

By the completion of a new bridge across the Missouri River at Rulo, Nebraska, the Burlington Route has established, for the entire distance over its own track, a new, direct, through line from St. Louis to Kansas City, St. Joseph, Atchison and Denver. Over this line is run "The Burlington's Denver Express"—a solid train with through sleeping cars and coaches from St. Louis to St. Joseph and Denver, and a through sleeping car from St. Louis to Kansas City. The connections made by this train at the Missouri River, at Denver and at junction points en route are such that one can directly reach by it all points in Nebraska, Colorado, and all sections of the West and Southwest, as well as all Pacific coast points. This is in addition to "The Burlington's Number One" well-known solid vestibule train between Chicago and Denver and Cheyenne, with which direct connection is made by C. B. & Q. R. R. train from Peoria, by which one can make the run between Chicago and Denver without being more than one night on the road. For tickets via the Burlington route and for special excursion folder, call on any ticket agent of connecting lines, or address P. S. EUSTIS, Gen'l Pass. and Ticket Agent, C. B. & Q. R. R., Chicago, Ill.—*Adv.*

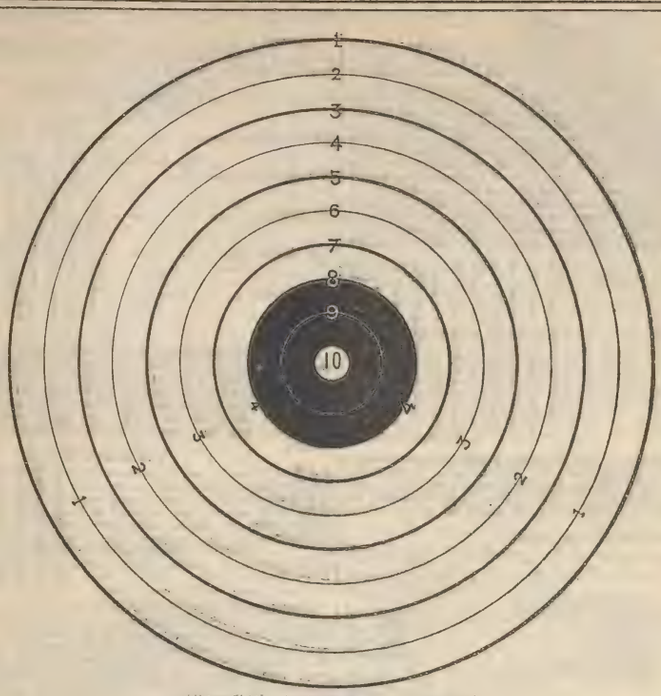
Rifle and Trap Shooting.

RANGE AND GALLERY.



A SLINGSHOT GUN.

IN a room at No. 19 Broadway is a model of a machine, which it is intended to use on a large scale in dropping batches of dynamite upon the vessels or among the forces of an enemy. The inventor is Walter E. Hicks, of Brooklyn, and the cut will give a good idea of the device.



Mr. Hicks's wheel consists of two steel disks, thin at the circumference, but quite thick at the center, standing several inches apart and firmly joined by bolts. In the spaces between the plates four clutches for holding the projectiles are placed equidistant along the circumference. Outside each disk is a double quadrant for the use of the gunner in training the "gun" at the desired elevation. Combined with each quadrant is a mechanical contrivance that, by the pulling of a lanyard, opens a clutch and releases a projectile at just the point at which the "gun" may be trained. Two shots at opposite sides of the wheel are thus fired an infinitesimal fraction of a second apart. There is a separate lanyard for each disk, each firing two of the four shots. A wheel 10ft. in diameter is required for a 6in. shot, and for every additional inch of diameter in the shot there must be 20in. more of diameter in the wheel. Underneath there is a jackscrew brake for stopping the wheel. The entire machine, including the steam engine, stands upon a single plate that may be placed upon a turntable and adjusted and trained like any marine gun carriage. It might also be placed on wheels and used for field service.

The latest Krupp guns impart to the projectile an initial velocity of 2,300ft. a second, and Mr. Hicks's calculations, as revised by army experts at West Point and Fortress Monroe, lead him to expect an initial velocity of 2,000ft. a second from his 10ft. wheel, when flying at the rate of 4,000 revolutions a minute. The proportional range would be five miles, but the revolutions of the wheel can be increased to 6,000 a minute, with corresponding gains in the velocity and range of the projectile. The motive power of the wheel is a steam engine. Calculation shows that to secure initial velocity of 2,000ft. a second would require a wheel having a diameter at the point where the shells were placed of 10ft., and revolving 4,000 times in a minute. Mr. Hicks makes the following estimate of centrifugal force and tensile strength under these conditions:

Centrifugal force exerted on each wheel at 4,000 revolutions per minute, assuming the weight at 6,441lbs.

THE HICKS WHEEL GUN.

CONLIN'S "EXPERT" TARGET.

Formula—The square of velocity (in. rev. pr. min.), multiplied by dia. of circle of center of gyration in feet, and quotient divided by constant 5,217, this × by weight of body will give total force.

Example—Velocity, 4,000 rev. pr. min.; center of gyra., 7.07ft.; dia. of wheel, 10ft.; weight, 6,441lbs.

Proof—$4{,}000^2$=16,000,000×7.07=1,1311,200,000 divided by con. 5,217=21,682 × weight of wheels, 6,441lbs.=139,653,762.

Area of 10ft. wheel 78.54ft. or 1,130,976in.; 2in. thick; 50,000lbs. tensile strength.

1,130,976×2=2,261,952×50,000 t. s.=113,097,600,000lbs. resistance.

Then centrifugal force 13,097,600,000lbs.=139,653,762lbs.=112,957,946,238lbs. to spare.

The projectile, specially designed to be used in the Hicks machine, is a long cigar-shaped shell, with heavy solid ends, the intervening space being occupied by camphorated nitro-gelatine (blasting gelatine), surrounded by guncotton, as in the Zalinski projectile. The fulminate is as usual reached and exploded by a needle running through to the pointed end of the shot.

CANADIAN RIFLE NOTES.

SARINA RIFLE CLUB, Dec. 6.—The regular monthly competition for the gold badge of the club took place to-day, and the following are the leading scores:

	200yds.	400yds.
R Glynn	55455—24	24555—21—45
W Miniely	33424—16	55444—22—38
D Turner	42545—18	45354—21—39

This being the third time Mr. Glynn has headed the score, it places him in possession of the badge. It had previously been won twice by Miniely and once by Dr. Poussette.

ALLISTON, Dec. 7.—The third shoot for the handsome silver medal was held on the Alliston Rifle Club range to-day. The medal has to be won three times by one person before becoming his property, and has been won twice in succession by Alf Graham, who lost to R. Henderson to-day. The contest was governed by the rules of the Ontario Small Bore Rifle Association, possible 50 at each range off-hand. Following is the score:

	100yds.	200yds.	Total,
John Latimer	29	27	56
H Graham	39	36	75
R Henderson	42	45	87
A R McClaren	36	32	68
J G Sutherland	36	36	72
Alf Graham	50	27	77
J P Palmer	31	22	53
E J Reid	43	37	80
J Wilson	45	31	76
J A Kinsey	40	30	70

HAMILTON, Dec. 10.—A number of gentlemen were discussing to-day the respective merits of Wayper and Granger at pistol shooting, and the result was that Mr. E. Spencer matched Wayper against Granger. The terms of the match are that each shall fire five shots at a target with a ¼in. bullseye at 50yds., for $50 a side, the match to take place in this city before the 1st of February, 1889.

LONDON, Eng.—Ira Paine is filling a long engagement at the Paragon Music Hall. His revolver shooting is creating much talk.

THE NEW EXPERT TARGET.

RIFLE shooting at Conlin's gallery is now being cultivated as a fine art. In the days when only the long squirrel rifle was known, when a few grains of powder was used and a small round ball was hammered into the deep-cut rifles with violent twists, a marksman who could with a dead rest hit a squirrel in the head 90 to 100ft. distant was considered a crack shot, and to wound a turkey at 100yds. three times out of five shots, was something that very few shooters could accomplish. But things have changed since those early days, and skill in rifle shooting has kept up with the advance in science and mechanism. Instead of measuring by the yard, foot and inch, as in the olden times, it is now necessary to decide contests by the hundredth part of an inch, and even hair breadths, nothing but the calipers and dividers of the mathematician can determine results. This "expert target" was invented by the veteran rifleman James S. Conlin, the man who has done so much to bring rifle and pistol shooting to its present almost perfection. The "expert's target" consists of ten rings or circles, the outside diameter of which is 4in., and it is intended to measure the shots of $^{22}_{100}$ and $^{44}_{100}$ caliber arms. The circles are numbered from 1 to 10 for $^{22}_{100}$-cal., and from 1 to 5 for the $^{44}_{100}$-cal. There is in the center of the bullseye a carton which is $^{22}_{100}$in. diameter, all the shots to count corresponding with the number of the circle or ring, must be clear inside of the ring or number, or will be counted one less, and take its place in the next outside ring or number. For example, if a shot simply touches the bullseye (which counts 9), it cannot be counted as 10 unless it touches the carton inside of the bull. It is contended that this simplifies the reckoning of the shots, so that any person of ordinary intellect or the least knowledge of shooting can understand the method. It also keeps up the method of string measure, or averaging all the shots made by the shooter, which is the only true way of determining the skill and performance of the shooter. The improvements made in firearms of all kinds of late years has been marveleus, greater than was ever dreamed of by the older riflemen. The new target bids fair to become quite popular among the crack shots of the city. It is this target which is being used in the experts' contest now going on. The match opened on Dec. 6 to run through the month. The leading score made thus far is by Major D. Crocker on Dec. 7, and is shown in full below; the score running 9, 7, 8, 7, 9, 7, 10, 10, 10, 10—87.

TARGET MADE BY MAJOR D. CROCKER.

SPRINGFIELD, Mass., Dec. 8.—This score was made on the Broad Brook rifle range to-day on a standard American target at 200yds. off-hand:

Cooley, of Springfield	10	6	9	8	9	7	6	8	6	9—	78
Allen, of Broad Brook	7	6	8	4	10	10	6	9	10	5—	75
Derby, of Broad Brook	6	9	7	6	10	6	8	8	5	9—	71
Gibbins, of Broad Brook	7	6	7	7	6	6	9	8	7	5—	68
Semple, of Broad Brook	5	8	10	7	6	5	7	6	4	8—	66
Hirsh, of Broad Brook	9	6	6	8	3	6	8	4	7	4—	61

DOLAN—WALTHER.—New York, Dec. 15.—Match at Wissel's Cypress Hill rifle range, Saturday, 15th inst., between Mr. T. J. Dolan, of the New York Rifle Club, and Mr. B. Walther, of the Zettler Rifle Club, Dolan shooting with a Hepburn .40, 370grs. patched bullets, and Walther a Ballard .38, 255grs. grooved bullets, the barrel recut by the Zettler Brothers; 200yds. off-hand, standard American target:

T J Dolan	74 78 80 82 86 87 75 76 67 85— 790.	Av. 79
B Walther	84 82 83 92 86 89 84 87 83 89—850.	Av. 85

—F. MCKERNON, Scorer.

WINTER PRACTICE.—On the Hartranft rifle range in Pennsylvania a club has been formed to indulge in rifle practice during the winter. The 200yds. range will be used and the shooting done from a house. Standard targets will be used and shooting done each Thursday. The practice on Thursday last was:

J S Montjoy (mil)	9	8	9	9	7	7	5	7	7	6—74	4—78
Ed Travis	9	9	8	5	5	8	10	7	6	10—	76
Jas Lardiner (mil)	6	7	9	7	7	5	5	2	6	6—60	4—64
E Stees, Jr	7	9	10	5	4	8	9	6	3	9—	59
Wm Wurfflein	8	6	10	6	3	5	3	4	6	6—	57
J H Buehler	6	3	0	3	8	6	6	3	4	2—	35
J M Oliver	3	4	0	3	6	6	2	0	7	0—	31

CHRISTMAS DAY SHOOT.—The North End Gun Club, of Philadelphia, will have a Christmas Day shoot for 8 or 10 merchandise prizes, such as a shell case, gunning coat, gun case, leather leggings, gunning hat, and other articles of like description. All members to shoot free of charge; visitors to be charged *pro rata* of cost of goods; birds to be 2 cents each. All the members of the different gun clubs of the city and vicinity are invited to shoot. All shooting to be class shooting. Sweepstake shooting all day.

ST. LOUIS, Mo., Dec. 15.—The St. Louis Pistol Club has begun its new tournament. Last Wednesday evening's shoot was the starter, and a good crowd of the members were present to indulge in the sport. Good average scores were the rule, even though no remarkable ones were made. One thing is very noticeable in the club's work, and that is, that the general average taken as a club is continually showing a very marked improvement, and all those who have been given a handicap have expressed themselves satisfied, and are going to make a great effort to down the scratch men for the prize if they don't for the medal, which is to be won on the general straight average. Only five of the members shoot from the scratch, or more plainly speaking, do not get any points given to them. The balance all received from 1 to 18 added to each score. Mr. Billmeyer scored 84 on the initial shoot, and will hold the honors until next Wednesday evening. All the shooting is done at a 20yds. standard American target. The following are the scores:

M C Billmeyer	9	6	7	8	10	10	7	7	10	10—84
M J Lord	10	7	7	8	9	7	8	10	9	7—82
E C Mohrstadt	10	8	9	10	9	8	8	6	7	7—82
L V D Perret	7	7	7	8	8	9	8	10	9	8—81
L H Race	7	8	5	10	9	7	8	8	9	9—80
W Bauer	9	6	10	5	8	6	10	10	8	7—79
F A Fodde	8	6	8	8	6	8	7	7	9	10—77
M Summerfield	7	8	6	10	10	10	7	7	6	6—77
W H Hettel	9	5	8	9	7	8	10	7	7	3—76
W C Mackwitz	8	7	9	8	7	7	9	7	7	7—76
W Larned	7	6	5	7	7	7	8	8	10	10—76
H C Griesedieck	10	9	9	6	5	4	4	4	7	10—68
A E Bengel	4	0	8	6	9	5	6	7	8	4—57

UNSER FRITZ.

BOSTON, Dec. 15.—Only a few shooters were present to-day, and they were unable to put up any very high scores. Next week there will be a grand trap-shooting tournament, when a challenge match will be shot by Messrs. O. K. Dickey and G. H. Wheeler, at 100 birds each, at 1:30 P. M. Following are the best scores of to-day:

Victory Medal Match.

J A Frye	10	9	5	9	9	7	7	7	8	7—78
A Law	10	6	4	7	7	10	7	6	9	5—71

O T Moore	5	10	10	10	7	10	6	9	7	10—84

SAN FRANCISCO, Dec. 10.—The target grounds at Shell Mound Park were well patronized to-day. The rain which prevailed during the afternoon prevented many of the ambitious marksmen from making big scores. The San Francisco Schuetzen Verein were on hand, and their friendly rivalry for the valuable medals which they compete for shows no sign of abating. The principal event in their club to-day was the final contest for the third class medal. To become permanent owner of the medal it is necessary to win it three times against the whole class, and as the classes are usually numerous and consist of good marksmen it is often years before any one is able to obtain permanent possession. The third class medal was won to-day for the third and last time by C. Nobman, by the good score of 370 rings. In all classes there were twenty-six competitors, and the medals won by the different classes were: Championship class, K. Weyheimer, 424 rings; second class, J. C. Waller, 375 rings; third class, C. Nobman, 370 rings; fourth class, Andrew Merker, 340 rings.

The Swiss Rifle Club, of Oakland, held their monthly medal shoot with the following result: Public target for all members. First prize, P. O. Moresi, 24; second prize, M. Martignoni, 22. First section, first and second class medals, G. Gilardi 22, N. Martignoni 21; second section, first and second class medals, P. Poliunder 20, C. Baguth 20. R. J. Loughrey and H. L. Pendleton, the crack shots of Company F, First Regiment, shot 100 shots each with the following result:

R J Loughrey	36	41	36	34	40	38	38	40	39	37—379
H L Pendleton	41	42	43	43	42	43	45	45	40	43—427

Several private pool matches took place during the day among the marksmen, but they finally dwindled down to A. H. Brod and A. Johnson, with scores of 44 and 43 respectively.

CHICAGO, Dec. 4.—A revolver club has recently been started with headquarters at No. 128 South Clark street. The following are the scores made to-night in a match between H. Fuerman and Will J. Meyers with Smith & Wesson's .44cal. revolver at 12yds.:

H Fuerman		W J Meyers.	
12	10	10	11
12	12	12	9
12	10	12	12
12	12	11	11

11	10	11	11	10	—67
11	9	9	11	10	—64
260					

SAN FRANCISCO, Dec. 2.—Capt. L. Siebe, the proprietor of Shell Mound Shooting Range, was somewhat surprised this afternoon when told by Anthony Johnson and A. Brown that they were going to try and beat the record of 471 out of a possible 500 points on a 25-ring target that was made by J. A. Robinson, with a rest, two years ago, on the same range. The Captain has had an offer standing ever since of $15 to the marksman who could equal it. A large crowd had heard of what they called "an absurd thing," and it was found necessary to employ a policeman to keep the crowd back. Johnson shot first, and as the wheel slowly pointed to the 24-slot the crowd sent up a whoop and a yell. Brown did not start off as well, but nevertheless made 21 rings. Both gentlemen took a long time to shoot each shot, but this did not seem to disturb the crowd, who awaited patiently the result. The shooting progressed slowly, but when it became evident that Mr. Brown could win the money and honor by making 24 rings the enthusiasm knew no bounds. Mr. Johnson, by making a 19-shot early on his second string, was thought to be out of the race. Brown came up to the box, and, after a long and careful aim, fired. The crowd forced itself into the adjacent boxes and around the shooting stands to get a glimpse of the white disk when it would come up. It came, and was placed by the marker boy on the 22-ring line. All was silence—he had lost. But no; the dial was already past the 22 and near the end of the 23-ring when it stopped, and showed that Mr. Brown had tied the greatest record ever made. Following is the score:

Brown	22	25	24	23	22	25	24	24	25	22	—236
	21	25	22	23	23	25	25	24	24	23	—235—471
Johnson	24	24	25	25	25	22	22	25	23	25	—240
	19	23	23	23	24	24	23	24	23	24	—230—470

Mr. Johnson shot with a .35cal. and Mr. Brown with a .32-40 Winchester.

CAMBRIDGE, Mass., Dec. 15.—A very interesting rifle contest took place at the Cedar Mill Pond range at Cambridge this afternoon, between Company B, Fifth Regiment, and Company B, First Regiment. The shooting was for the Cambridge *Tribune* trophy, and was witnessed by a large number of invited guests, among others members of the City Council. The trophy was won by Company B, the following being the score, 7 shots per man, at 200yds.:

Company B, Fifth.		Company B, First.	
Pvt J F Fitzgerald	29	Pvt A B Osburn	30
Pvt F S Lounsbury	29	Pvt Cooley	29
Capt S T Sinclair	25	Corp F T Meyers	28

G. E. M.

WILMINGTON, Del., Dec. 10.—Owing to the threatening weather there was a smaller attendance than usual at the Healdmoor Rifle Range, Wilmington, Del., this afternoon. The shooting lasted during the entire afternoon, and although a strong wind was blowing, some good scores were made. The beginners' class was on hand as usual and made some creditable scores. Following are the scores at 200yds. off-hand, standard American target:

Continuous Match.

S J Newman	9	9	8	5	8	10	7	10	5	9—80
J E Seeds	7	8	6	5	7	4	8	8	8	10—71
C Heinel, Sr	5	7	10	5	6	7	6	8	8	7—70
S Jackson	6	5	9	5	6	6	10	6	6	5—64
J Edwards	6	6	4	7	7	9	5	4	6	5—59
H Simpson	5	5	4	7	6	6	5	5	4	6—54

Revolver Match, 30yds, 100-30 S. A. Target.

E Jackson	6	6	7	8	5	5	6	6	8	8—65
E Williams	5	7	4	9	7	2	5	8	5	10—62
E J Lee	6	6	6	6	4	6	7	6	4	6—55

THE SCHULHOF ARMS CO.—The visit of Herr Schulhof to this country in September last, of which notice was made in the FOREST AND STREAM report of the Creedmoor fall meeting, has resulted in the formation of a company in this country to push the Schulhof patents. By a declaration filed at Albany during the past week Joseph K. McCammon of Washington, Benjamin F. Dos Passos, Charles C. Shelton, William G. Davis and Joseph J. Schmidt of New York, are named as trustees of the Schulhof Arms Manufacturing Co., incorporated under the laws of this State, with a capital of $750,000. Operations it is said are to be carried on in Washington, Bridgeport and Hartford, Conn., and elsewhere in the United States, and in London and elsewhere in Europe, with the principal office in New York city. The company is to manufacture arms, guns, cannon, magazines, ammunition, etc., and especially the Schulhof gun. The incorporators of the company were extremely reticent when asked yesterday about their plans and intentions. John R. Dos Passos, the president of the company, has sailed for Europe on business of the company. The Lebel rifle, recently adopted by the French Government, is claimed to be an infringement upon the Schulhof patents still extant in all the nations of Europe.

A NEW RIFLE.—Invention has seemingly run riot in the matter of new rifles in Europe. The desire of each nation to go one better in the way of small arms over its neighboring powers, has stimulated ordnance makers, and the secrecy observed all around has allowed the writers free swing for their imagination in painting pen pictures of what the new rifles may and can do. The following comes from a good authority, the *Shooting Times*, but illustrations would help muchly. Our contemporary says: "A new French rifle. Great things are expected of it. The present rifle has, it appears, been invented by an armorer at St. Etienne. It is, according to a Paris correspondent, of simple construction. The barrel is similar to that of the Lebel rifle. The cartridges can be carried in the stock, and they fall into the breech as required. The rifle is loaded, fired and immediately reloaded by the pressure of a button with the right hand while the weapon is at the shoulder. The cartridges in the stock are for close action, and are only to be used when the soldier has emptied his pouch, from which he is able to load in the ordinary manner. For naval warfare special arrangements are made by which each sailor firing from the 'tops' of a vessel will have over his head a zinc ammunition box, from which the cartridges will fall into the receptacle in the stock of his weapon, thus enabling him to continue firing without being obliged to remove the gun from the shoulder. In this manner from 300 to 500 shots may be discharged in succession."

BUFFALO, Dec. 10.—A shooting club was recently organized with the following officers: President, Fred Beilman; Vice-President, Phillip Traum; Treasurer, Fred Schwartz; Secretery, Fank Engel.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SHOOTING CLAY BIRDS IN A GALE.

WALNUT HILL, Dec. 12.—As the close of the gold coin match competitions draw near an increased interest is manifested by those who stand any chance of figuring in the prize list at the finish, and each one is putting forth his best efforts to better his standing in the match, or at least maintain the one he already has. To-day the Climax diamond badge and the gold coin matches were shot and the contestants who entered them did remarkably good work, considering that the weather conditions were the worst that have prevailed this year, the raw cold wind blowing a gale, nearly the entire day, causing the birds to sail away at a terrific rate of speed, making it extremely difficult for the most expert shots to know where to hold for them, and the scores appended are really good ones under the circumstances. Mr. Stanton's score 20 straight clay birds in the Climax badge match is worthy of special mention. The summary follows:

Climax Diamond Badge match.—10 clay-pigeons from 5 traps, and 20 standard targets from 3 traps:

	Clays.	Standards.
Stanton	1111111111111111111—20	00011011010111001110—11—31

Rule	0101110011—6	1110010001—5—11
Merdie	1010111100—6	1101001000—4—10
Burt	1001010001—4	0000010001—2— 6

The prize winners in the sweepstake events were as follows:

First—5 clays, from 5 traps: Scott first with 3, Nichols second with 2.

Second—5 clays, from 5 traps: Rule first with 5, Perham second with 4, Bowker third with 3.

Third—6 standard targets, 3 traps: Rule and Knowles first with 6, Perham second with 5, Chase third with 3.

Fourth—6 standards, 3 traps: Bowker first with 5, Nichols second with 4, Chase third with 3.

Fifth—5 clays, from 5 traps: Knowles and Nichols first with 5, Swift second with 4, Rule third with 3.

Sixth—6 standards, from 3 traps: Nichols and Scott first with 6, Rule and Chase second with 5, Bowker third with 4.

Seventh—5 clays, from 5 traps: Scott first with 4, Bowker second with 4, Perham third with 3.

Eighth—6 standards, from 3 traps: Knowles and Swift first with 6, Perham second with 5, Stanton third with 4.

Ninth—5 clays, 5 traps: Perham, Scott and Swift first with 5, Knowles second with 4, Bowker and Rule third with 3.

Tenth—6 standards, from 3 traps: Knowles first with 3, Rule and Stanton second with 5, Bowker third with 4.

Eleventh—5 clays, from 5 traps: Chase and Knowles first with 5, Scott and Wheeler second with 4, Mudie and Swift third with 3, Rule and Nichols fourth with 2.

Twelfth—5 clays, 5 traps: Mudie first with 5, Scott second with 4, Bowker third with 3, Nichols fourth with 2.

Thirteenth—10 clays from 5 traps: Bowker, Knowles and Nichols first with 9, Perham and Wheeler second with 8, Chase third with 7, Scott fourth with 6.

Fourteenth—10 standards from 3 traps: Bowker and Scott first with 8, Perham and Stanton second with 7, Swift and Wheeler third with 6, Rule fourth with 5.

Fifteenth—20 clay-birds from 5 traps: Stanton first with 20, Scott second with 18, Rule third with 17.

Sixteenth—20 standard targets from 3 traps: Wheeler and Bowker first with 15, Nichols second with 14, Swift third with 13.

Seventeenth—5 clays from 5 traps: Swift first with 5, Perham, Wheeler and Rule second with 4, Scott and Savage third with 3, Chase fourth with 2.

Eighteenth—6 standards, 3 traps: Wheeler first with 6, Stanton and Scott second with 5, Rule and Mudie third with 4.

The final shoot in the Gold Coin match will be held on Wednesday, Dec. 26, when the standing of competitors to date will be posted.

CANADIAN TRAP NOTES.

MONTREAL, Dec. 8.—The third open shoot for the Greener gun, under the auspices of the Montreal Gun Club, took place to-day, and the shooting in some cases was much above the average, especially for the Montreal grounds, where the background is a considerable hindrance to straight strings. The first two open competitions had been won by C. Aubin, but he was not up to his usual form, and, at all events, would hardly have been able to beat Cameron's score of 19. The shooting up to the last was decidedly exciting, but the winner was the only one who did not go to pieces more or less. The conditions were 20 birds, 5 traps, 18yds. rise:

W L Cameron	19	R Redman	13
W Bergusson	17	M Pariseau	12
G Brault	16	C Jones	12
C Aubin	14	J Smith	11
E Octave	14	E A Cowley	10
N Parker	13	A Alexander	9
R James	13	F Williams	6
L Shackwell	13	L Sharp	4

OTTAWA, Dec. 8.—The St. Hubert Gun Club have now started their regular season's work, and to-day had a good shoot for the monthly club prizes. The first shoot was at 15 Ligowskis, 18yds., 5 traps:

W J Johnson	13	G White	11
J Deslauriers	11	P Trudeau	11
R G Dalton	11	A Lett	11
A Throop	9	E White	9
E King	9		

Second sweep, 10 birds, same conditions:

A Lett	10	R Dalton	9
E White	9	P Thomson	9
W Johnson	8	G White	7
J Deslauriers	6	A Throop	5
P Trudeau	4	E King	2

Third sweep, 10 birds, same conditions:

P Trudeau	9	J Deslauriers	8
A Throop	8	J Thompson	8
W Johnston	8	G White	7
E White	6	R Dalton	5
E King	4		

W. J. Johnston having made the best aggregate in the three matches—29 out of 35—won the prize presented by Mr. George White.

HESPELER, Ont., Dec. 13.—Yesterday and to-day the Hespeler Gun Club held their annual shoot. It was, as expected, a great success, every event taking place. Crack shots were present from Toronto, Hamilton, Guelph, Port Colborne, Niagara, Buffalo, La Salle, N. Y., Indianapolis, Ind., and other places. The Messrs. Waypers' efforts to entertain the visitors were fully appreciated, all present expressing themselves as having thoroughly enjoyed their visit to this prosperous and enterprising place. The scores:

Match No. 1, 12 live birds:

Josh Wayper	12	B Thomas	9
G Briggs, Toronto	10	H Miller	9
J Townsend	9		

Match No. 2, 7 live birds:

G Margetts	6	G Briggs	5
J Townsend	6	H Miller	5
E Rice	5	J White	5

The fives and sixes divided.

Match No. 3, 20 Hamilton blackbirds:

J Wayper	18	C Campbell	15
H Miller	16	Eugene Smith	15

The fifteens divided.

Match No. 4, 10 Hamilton blackbirds:

J Wayper, Sr	5	H Miller	5
G Margetts	5		

Match No. 5, 5 live birds:

Josh Wayper	5	B. Thomas	4
J Townsend	4		

Match No. 6, 7 live birds:

J Townsend	6	Eugene Smith	5
G Briggs	5	J H Smith	5

Match No. 7, 10 Hamilton blackbirds:

G Margetts	9	Brown	8
White	8	C Campbell	8

The eights divided.

Match No. 8, 10 Hamilton blackbirds:

Wayper	8	White	8
Griffith	8	C Campbell	6

The eights divided.

Match No. 9, 7 live birds:

J Johnston	6	J Wayper, Sr	4
Griffith	4		

The fours divided.

MONTREAL, Dec. 15.—The fourth shoot of the Montreal Gun Club for the "Club" Greener gun came off to-day with a fair attendance, Mr. N. Parker getting a lien on the gun this time; it has been won by a different competitor at each competition. The first 15 birds shot at were counted as third and final score for the Presidents handsome prize, a valuable bronze ornament. The winner of this prize was Mr. Lumsden with 36 points, E. A. Cowley second with 24 and R. James third with 21 points. The next shoot for the club gun is fixed for Dec. 29. The open shoot fixed for Dec. 22 will be postponed until Saturday, Jan. 5, on account of the shoot between the Lachine and Dominion gun clubs for the challenge cup, Dec. 22. Following is the score: Fourth shoot of the series for the club Greener gun; 20 Peoria blackbirds, 18yds. rise. Winner of first shoot, W. Mack; winner of second shoot, A. Lockhart; winner of third shoot, E. A. Cowley. Referee, Mr. A. G. Costen.

W Lumsden	11110111110101111000	—14	
N Parker	11011111111001000111	+2	—17
E A Cowley	00111110101111000011	+4	—16
W Henry	00010030010010000100	+8	—12
F Orr	01101110101000010111	+3	—15
J Patton	10101111111010001100	+2	—14
W Mack	11101000000110100101	+4	—13
L Sharp	00010001001010000111	+4	—11
R James	01010011101110100010	+2	—13

First sweep, at 5 birds:

Alexander	01111—4	W Mack	01011—3
Parker	11101—4	B Jim	01101—3
Orr	01011—3		

Alexander and Parker divided first, Mack took second and Cowley third in shooting off ties.

Second sweep at 5 birds:

Alexander	01010—2	Mack	11110—4
Parker	10101—3	Juives	10100—2
Cowley	01111—4	Cleghorn	01001—2
Orr	01011—3		

Mack first, second divided, Juives third.

MONTREAL, Dec. 15.—The sixth competion for the Horsley gun, shot on the Dominion Gun Club's grounds to-day, proved very interesting, and the winning score was, as usual, a good one. The entries were not quite as large as usual. On taking entries the secretary announced that Mr. Cameron, M. G. C., would be allowed to shoot his score in the gun match whenever he should arrive on the grounds, as Mr. Cameron was competing as "Lumsden" on the M. G. C. grounds for the Greener gun, and having won the Horsley gun once, the committee thought, under the circumstances, an extension of time should be allowed him. The match commenced with Dr. Tolly to the score; the doctor looked business and retired with 3 out of his first string of 5. Mr. Boa

of St. Laurent, followed with 1. A first-class wing shot, Mr. Boa cannot get on to the Peoria; perhaps his gun does not pattern close enough for this style of shooting. "Next man," and Mr. Horsley steps to the score, his first bird escaped untouched, the next 4 are pulverized. Ferguson only succeeds in breaking 3, followed by Thackwell 3, Pariseau 4 and Brault 3. Just as the match concluded Mr. Cameron arrived on the ground, and a sweep at 10 birds having been got up, Mr. Cameron shot his gun score in the sweep and succeeded in breaking 16, leaving Horsley the winner of the gun for the second time. The following are the scores. 20

Peorias, 18yds. rise, Mr. Doig referee and scorer:	
Dr Tolly...10110111110101110010—13	Thackw'l1101100110101011111111—14

Horsley second.	

OTTAWA, Dec. 15.—The St. Hubert's Gun Club have now got fairly to work for their season's shooting, and on the 26th propose holding a big field day at the clays, when extra prizes will be offered. To-day they shot two sweepstakes with the following results. Sweep at 10 Ligowsky clay pigeons, 18yds. rise, 5 traps:

J Deslauriers.....9	G Trudeau.....6
A Throop.....8	E King.....5
W J Johnstone.....7	Scott.....5
E White.....6	Mulrooney.....4

Sweep at 10 Ligowsky clays, same conditions:

J Deslauriers.....9	A Lett.....5
W Johnstone.....8	E White.....5
A Throop.....7	King.....5
G Mulrooney.....7	G Trudeau.....5
B Thomson.....6	

ATLANTA, Ga., Dec. 8.—Dr. Crenshaw won the gun shot for at Athletic Park to-day. The contest was one of the closest and most exciting ever witnessed in Atlanta. The shooting began at 10:30 o'clock with a day favorable for shooting. The gun shot for was won by the Atlanta team at Columbus several days ago, and the members of the winning team were the contestants in to-day's match. Dr. Crenshaw won by one bird. The contestants were Dr. Crenshaw, W. A. Hemphill, Dr. Holland, Mr. Lyons, Mr. Harper, Mr. Alston and W. A. Hemphill, Jr. Mr. Alston was taken sick after he had shot at 25 birds and was compelled to give up. Number ten guns were used by all of the contestants except Mr. Harper, who used a No. 12. Dr. Crensbaw used his 10½lb. Lefevre gun, which he has called "Anarchist." A memorable feature of the shooting was the uniformity. The lowest score, as will be seen, was within 6 of the highest. The score was as follows:

Lyons.....	...0010100001111001111111101111011111010111110101 1101010111101111101101111111010100010011110—70

WELLINGTON, Dec. 15.—Good scores were made to-day in the merchandise and badge matches. The scores were:

Merchandise match: Snow 16, Melcher 14, Baxter 11, Perry 19, Chase 16, Moore 16, Bent 18, Schaefer 13, Herrick 12, Savage 10, Scott 18, Bradstreet 14, Edwards 16, Stanton 15, Bond 18, Swift 19, Grimes 11, Sanborn 18, Chapin 17, Conant 11.

Badge match: Snow 18, Melcher 13, Baxter 11, Perry 18, Chase 13, Moore 14, Bert 18, Schaefer 16, Herrick 9, Bradstreet 12, Edwards 16, Stanton 11, Bond 13, Swift 13, Grimes 10, Sanborn 16, Savage 16, Scot 16, Chapin 16, Conant 12, Nichols 12.

The winners in the several sweepstake matches were: 10 clay-pigeons, Bert and Scott; 10 bluerocks, Swift and Chase; 6 bluerocks, Perry; 6 clay-pigeons, Schaefer and Baxter; 6 clay-pigeons, Bert and Perry; 6 bluerocks, Snow and Schaefer; 6 bluerocks, Swift, Snow, Perry and Schaefer; 3 pairs clay-pigeons, Schaefer; 10 clay-pigeons, Perry, Bert and Schaefer; 3 pairs clay-pigeons, Scott and Perry; 6 bluerocks, Stanton; 6 bluerocks, Stanton; 10 bluerocks, Edwards, Chapin and Stanton; 3 pairs bluerocks, Edwards and Perry.

An all-day shoot will be held next Thursday, when the challenge individual amateur clay-pigeon badge will be contested for, and also the challenge amateur team badge will be shot for by the Jamaica Plain Club, the Wellington and other clubs.

Dickey leads by one point for the individual badge, with Wheeler second.

During the afternoon a match was shot between Bert and Chase, the former at 25 doubles and the latter at 50 singles. Bert won, 38 to 34.

H. G. Wheeler, of Marlboro, and John Congdon, of New Bedford, will shoot a match at Fall River, Dec. 25, at 150 clay-pigeons, for a purse of $200.

BROOKLYN, Dec. 12.—Although a very high wind was blowing to-day at Woodlawn Park, Gravesend, L. I., the members of the Coney Island Rod and Gun Club did some good shooting. The birds furnished by Blattmacher were good strong ones and, aided by the wind, went from the traps very fast. During the shoot some additional excitement was caused by a large chicken hawk hovering over the grounds. The hawk did not seem to be at all scared by the number of shots fired at it. At last Mr. J. J. O'Brien with a long shot broke its wing, causing the hawk to tumble. The bird fought hard when down and had to be hit on the head before he could be captured. He measured 4ft. 6in. from tip to tip of the wings and will be stuffed and added to the collection of club trophies. Sixteen members went to the traps to shoot for the Blattmacher medal and extra prizes. Conditions, 7 birds each, club handicap; Dr. Shields, 30yds.; W. F. Quimby, 28yds., and P. Daly, Jr., 28yds., killed 7 each, tying for the medal and first prize. Shields and Quimby shot off for it, Daly not being eligible. Quimby won, killing 3 out of 3 more birds. W. A. Stewart, 26yds., R. Monsees, 26yds., Dr. Schwartz, 29yds., and H. Blattmacher, 25yds., killed 6 each for second prize. Monsees and Schwartz killed 3 each and divided. C. Duncan, 26yds., outshot four others for the third prize, killing 11 out of 13 shot at. Messrs. Ayers and Plate divided fourth, killing 4 each, and J. J. O'Brien took fifth, with 3 killed out of 7.

CLEVELAND, O., Dec. 12.—The Kirtland Shooting Club held its regular shoot on the club grounds, near the Brooklyn bridge, this afternoon. The conditions were 20 single targets at 18yds. rise. Three visitors, Messrs. Paul North, of the East Ends, Weaver and George, of the West Ends, took part in the regular badge shoot and the four sweepstake events which followed. Prechtel again won the badge, his score being 19. The scores:

Prechtel..11111111111101111110—19	Upson.....10111101111111111101—17
Bennett..11101111111101110111—16	Forrester.00101010111111111111—15

Weaver...11111011100100111110—14	Bell.....11101111111010111111—17
George....10160000110101001001— 8	Closse.....01001111111001111110—14
Roof.....01010111110101101001—12	North.....01111111111101111111—18

Dec. 13.—The attendance at the Cleveland Gun Club was smaller than usual to-day, owing to the weather, but the competition was as strong as usual. The conditions were 15 single bluerocks and 5 pairs, 5 traps, usual rises for the distances. The following scores were made:

Upson.....	...011111111111111	10 01 10 11 01—20	
Wheal.....	...111000001110101	10 11 11 11 11—17	
Calhoun.....	...111111110111111	11 10 11 11 11—23	
Wall.....	...111011110100001	11 11 00 10 01—15	
Allyn.....	...111001001101010	10 10 10 10 00—14	
Bassett.....	...011111111111111	11 11 11 11 10—23	
Caryell.....	...111111100010111	01 11 10 11 11—19	

Bassett and Calhoun tied for the first badge, and in the shoot-off the latter won, breaking 5 straight to Bassetts' 4. Upson retains the second badge. After the club shoot one sweepstake event was arranged. The conditions were 5 single bluerocks and 2 pairs at the usual distances. The score:

Bassett.....	...11111	11 11—9	Wheal..... ....11111 11 10—8
Caryell.....	11111	10 10—7	Calhoun.....11111 11 11—9
Upson.....	...11111	10 10—7	

The shoot-off also resulted in Calhoun's favor. The members of the Cleveland Club are determined that the East Enders shall not boast that they cannot get a match, and have practically given notice that there will be a contest for the birds, or for more.

NEWARK, N. J.—The Woodside Gun Club will hold a tournament on Christmas Day, beginning at 9 A. M.

JERSEY CITY HEIGHTS.—The regular annual meeting of the Jersey City Heights Gun Club was held at their club rooms, Newark avenue, Jersey City Heights, on Wednesday, the 12th inst., and the following officers were elected for the ensuing year: Fred W. Quimby, Pres.; M. Lindsley, Vice-Pres.; A. Heritage (Old South Paw), Sec. and Treas.; Dr. S. Burdett, F. W. Mitchell and Geo. B. Eaton, Executive Committee; Wm. D. Reynolds, Official Scorer. Reports were made by the executive committee and treasurer, showing the club to be in a flourishing condition financially, but a lack of enthusiasm of late at the traps. Measures were proposed to promote enthusing the members, regular weekly meetings, prizes, etc., and a different manner of handicapping. As heretofore the amateurs and medium shooters have had little shows at the traps against such old veterans as Siegler, Quinlan, Lindsley and a host of others; they have therefore staid away. They are now promised an opportunity. The grounds of the club are now occupied monthly by the Essex Club of Newark, a fine lot of fellows and crack shots. Application has been made by three other clubs, two German clubs from New York city. There is room for more. The club grounds are easy of access to the city and from Newark, and are amply equipped with all the traps and appliances of artificial targets. The Jersey City Heights Gun Club members congratulate themselves, that after the ups and downs and various vicisitudes of a club existence of nearly twelve years, they find themselves with an enviable reputatation, being champion of all clubs with whom they have contested, a membership of nearly one hundred, free of debt, money in the treasury, a well and comfortably furnished club room, where they are glad to welcome sociably all visiting sportsmen, a commodious club house in inclosed grounds, and almost every conceivably-known trap for sending off the inanimate birds—and all paid for. We prophecy under the management of its present able officers, with their well-known vim and courtesy, a renewed and permanent success.—JACOBSTAFF.

THE NEW YORK SUBURBAN.—New York, Dec. 15.—*Editor Forest and Stream:* The bright sunny afternoon brought about 15 sportsmen over to the weekly shoot of the New York Suburban Shooting Grounds Association, at Claremont, Jersey City, whose grounds are rapidly reaching a completed condition. The following are the principal scores. Quite a little interest was manifested in the 50 bluerock contest between Messrs. Albee and Sanford as one team against Messrs. Quimby and Mort, the losing side to pay for the bluerocks:

Quimby.....	...11101111111100011111011—20 11111101001100000111011—16—36
Mort.....	...11111111101110010110111—17 10111111111011111101101—21—38—74
Albee.....	...10100101111111001011111—18 11100101111111111011101—20—38

All matches at three traps. Three additional traps were devoted to private practice. The grounds will be open all day Christmas and New Years. Sportsmen are invited with their friends. Special provision for amateurs. Sweeps and practice. A warm club house and fine restaurant. All makes of shotgun ammunition for sale.—ARDON.

SPRINGFIELD, N. J., Dec. 15.—Miller and Johnson of the Union Gun Club shot their third match for the Atlantic Ammunition Co.'s trophy here this afternoon and it resulted in a victory for Miller by a score of 98 to Johnson's 93. The shooting of Miller was superb from the start, he only missing his 60th and 89th bird. His run of 59 straight is the largest ever made on these grounds and was received with great applause. Johnson, although defeated, is still game. Another match will probably be arranged for the first Saturday in January or very near that time. Following is the score:

W. C. A. EXECUTITE COMMITTEE.

Editor Forest and Stream:

The executive committee meeting of the W. C. A. will be held on Jan. 5, 1889, at the Stillman, Cleveland, O. Meeting will be called at 2 P. M. Any members wishing to attend the same will please notify the secretary-treasurer of their intention to do so.

O. H. ROOT, Sec.-Treas. W. C. A.

CLEVELAND, O., Dec. 14.

TUCKUPS, DUCKERS AND HIKERS.—*Editor Forest and Stream:* Could you spare space in your paper for a description of the small craft known as tuckups, duckers and hikers. I have looked high and low for information respecting these classes of small sailboats, but can find nothing to enlighten me. I think a description of these classes of boats would interest all of your readers who have given attention to the subject of small cruisers, a class of boats that seems to be on the increase in these waters. —F. B. J. [These boats have been described and their merits and demerits discussed at length in the FOREST AND STREAM during the last two years. Our correspondent will find full information concerning them in volumes XXVIII., XXIX. and XXX. The lines of a ducker were published on April 12, 1887, and a tuckup May 3, 1888.

KEYSTONE C. C.—A meeting of the Keystone C. C. was held on Dec. 7, at which the following officers were elected: Com., George Haag; Vice-Com., W. Norgrave; Sec'y-Treas., Fred W. Noyes.

A. C. A. MEMBERSHIP.—Atlantic Division: Jerome W. Simpson, Theodore S. Oxholm, Edgar Henriques, Yonkers, N. Y.

Yachting.

A CHALLENGE FROM KATRINA.

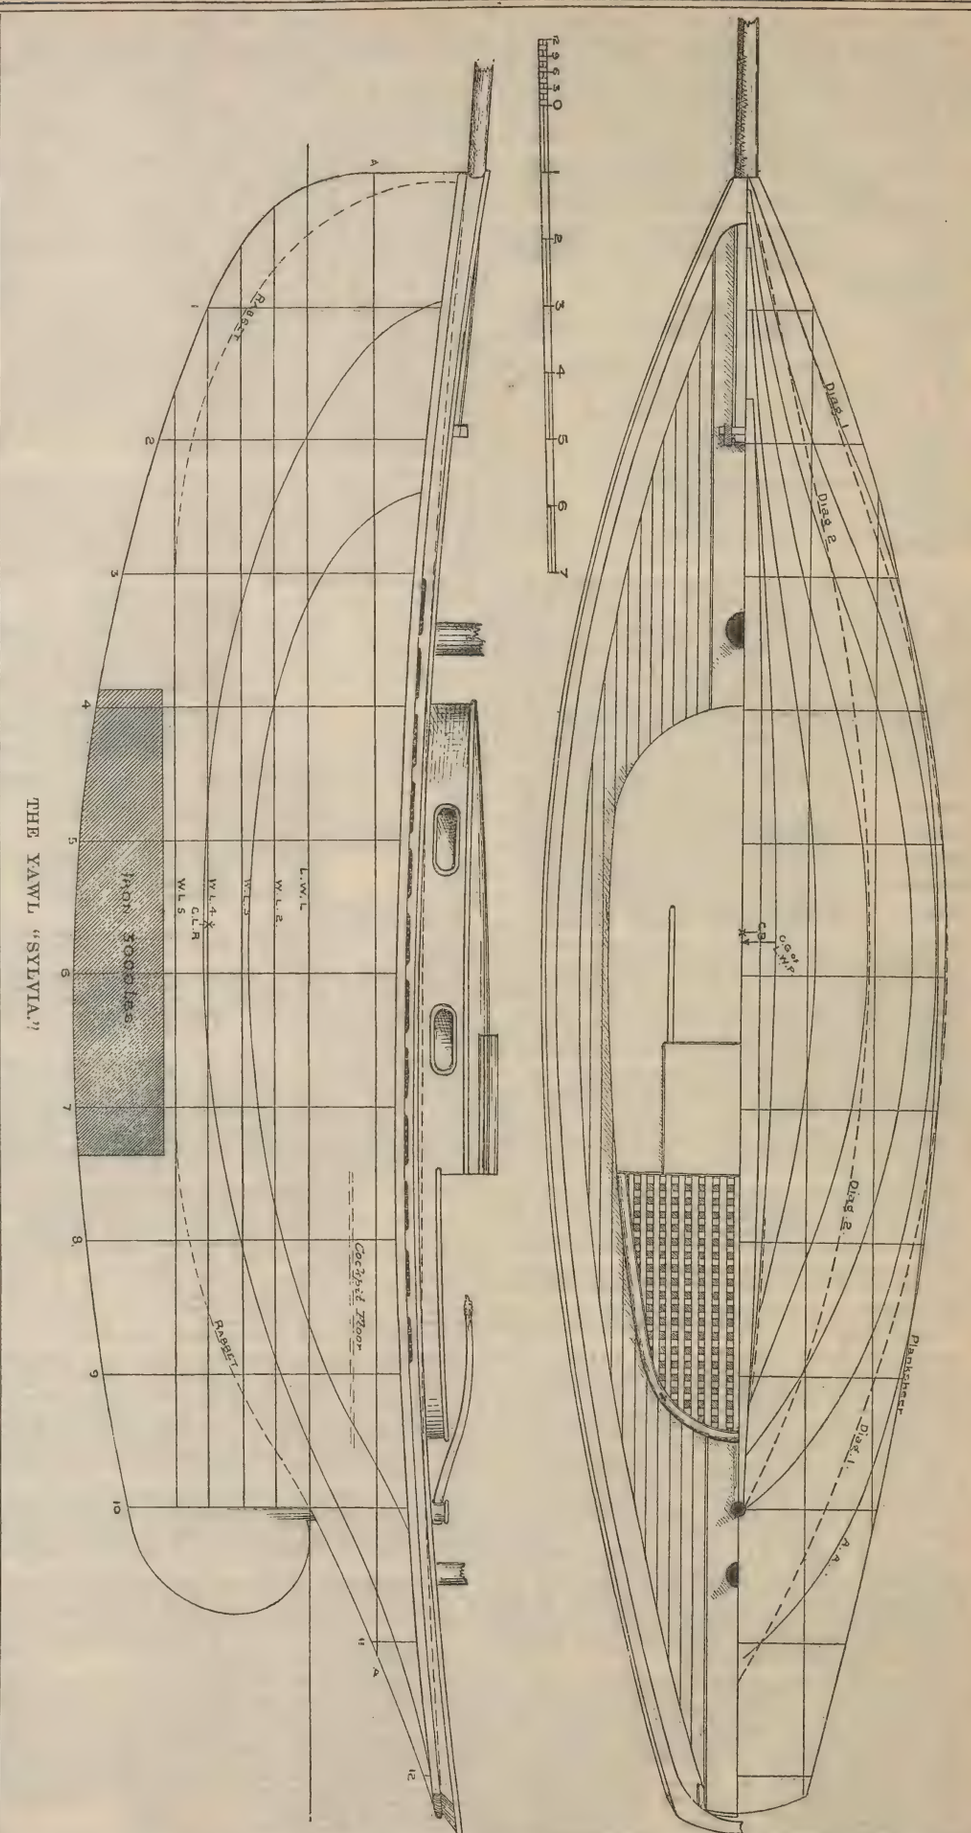
THE best news that American yachtsmen have heard for some time is that the question of supremacy in the most interesting and important racing class is likely to be finally settled next season. In spite of all the talking of last winter, there was not a single race of the many sailed last summer in which the class was well represented in point of numbers, not more than two of the leading four, Bedouin, Shamrock, Titania and Katrina, being in any one race. Worse still, there have not yet been any final and decisive victories, each of the three in commision the past year comes out with flying colors, having won about as many races as any of her rivals, while as Titania was not in commission there is a wide scope for conjecture as to what she would have done if she had been. This very unsatisfactory state of affairs, so very like that which exists just now among the various would-be champions of the P. R., who are engaged in deadly newspaper encounters, is likely to be terminated by the action of Katrina's owners in throwing down a challenge to the entire class, as stated in our columns last week.

After the fall regatta of the New York Y. C., the owners of the Katrina challenged both Bedouin and Shamrock to race at once, but both challenges were declined. In order to be in time for next season, copies of the following letter were sent nearly a month ago by Mr. A. Cary Smith, representing Messrs. E. D. and H. S. Auchincloss, to the owners of Bedouin, Shamrock and Titania:

DEAR SIR—As there is a diversity of opinion as to the speed of the sloop yachts Shamrock and Katrina, and to insure a satisfactory and decisive trial of their respective merits, I am instructed by Messrs. Auchincloss Brothers to arrange with you a series of three races, over the course and under the rules of the New York Yacht Club, for a cup of nominal value, say $150 for each race. The races to take place before the June regatta of the coming year, and to be in charge of the regatta committee of the above-named club, and one day to intervene between each race. In case of an accident to either yacht during a race reasonable time to be allowed for repairs before sailing the next race. The expense of a tug to be shared equally between the owners or paid by the loser, as may be agreed upon. Hoping to hear from you at your earliest convenience, I am truly yours, A. CARY SMITH (New York, Nov. 23, 1888).

The challenge is for a series of three races in each case, the full number to be sailed, not the best two out of three. One race is to be over the New York course, one over a triangular course outside Sandy Hook, and one of 12 miles to windward and return, also outside. The challenge thus covers twelve races, if all the challenged yachts accept, and will make a most novel and interesting series of matches between crack boats. To be sure somebody must be beaten and some one else must be acknowledged as the victor, and the present roseate state of affairs, in which each can claim to head the class, will be terminated for a time; but though this may not be pleasant to the losers it will be a decided gain to the yachting world to know which is really the best yacht. Already Mr. J. R. Maxwell has accepted on behalf of Shamrock, and Mr. C. Oliver Iselin has been in negotiation with Mr. Smith in regard to Titania. Bedouin has not yet accepted Katrina's challenge. The dates for the Katrina-Shamrock matches have been set for June 3, 5 and 7, 1889.

This action of Katrina's owners is apt to force the fighting, and will insure lively work in all the races next season, unless these early matches should prove one boat to be considerably faster than any of her rivals. This is hardly likely to be the case, and the probable result will be that with the racing well started in this manner, it will be kept up in the various club regattas that follow. In the face of such a challenge there are only two courses, to race or resign all claims to supremacy, and in either event a conclusive result will be reached as far as the 70ft. class is concerned. In the 40ft. class there is the promise of plenty of good racing, and also in the 90ft. schooner class. It would be a matter of gratification to yachtsmen to know that there was a certainty of an international race for the Cup, that the 53ft. class would be revived and that there were prospects of full entries in all the leading classes; but in default of all these they will have to be content with the racing afforded by the three classes mentioned, the schooners, the 70-footers and the 40-footers, and if the present indications are realized there is a lively and entertaining season of racing in store.



YACHT BUILDING IN GREAT BRITAIN.

UNDER the third deed of gift the time for challenging for next year has closed, and without the slightest indication of a disposition to challenge on the part of British yachtsmen. Under the resolution of the club passed this summer to accept a challenge under the second deed of gift, the time by which a challenge must be received is extended to the middle of April, as a six months' notice then would still permit a series of races before Nov. 1. The English and Scotch papers are silent in respect to international racing, and all the rumors that have appeared of late have originated in America. Some of the daily papers are trying to make out a prospect of a race this year or next from the vague rumors that have been floating around for some time, but without much success, and it now seems very unlikely that the America's Cup will be raced for next year. The reported alterations in Thistle have never been confirmed, and there is no reason to suppo e that anything is being done to her, while so far as we can learn she is still in the possession of the syndicate which built her. As for Mr. Jameson's plans it has been reported that he will build a 90ft. cutter, but this seems very improbable. He is little likely to come after the Cup in any case. He has not taken any steps toward challenging for next year; there would be no sport for so large a cutter at home, and if he proposes to challenge for the cup he is too shrewd a yachtsman to give Boston an entire season in which to build a boat to beat him. The racing days of Irex are over, and she is pretty certain to have a successor next year, but the new boat is far more likely to be of 60 rating than 90ft. There is more sport for this class at present than for any other, and Mr. Jameson is not one to build a cruiser yet.

There is a certainty of one new yacht of large size, a yawl of 150 rating, or about 90ft. l.w.l. The new yacht is designed for cruising and occasional racing, the purpose for which Wendur, now fitting out for the Mediterranean, is used. As she would be about Wendur's size, there would be sport for both. At the same time she could be within the limit of 90ft., and so eligible to challenge for the Cup at any time, if changed to cutter rig. There is a probability of several new sixties this winter; in fact one curious craft in that class is already announced, a yacht under 70ft. l.w.l., with lead keel and centerboard, and rigged as a lugger. She will be owned by Mr. F. W. L. Popham, and designed by Mr. W. C. Storey, for both cruising and racing. The hull will be diagonal built, with double skin.

There promises to be some racing this year in the 20 rating class, as well as the 10 and 5. The new 20, Vreda, with some of the old boats, will be in the racing, and in the hands of her new skipper, Gomes, she will give the others plenty of work. There will also be a new Watson boat, and two by Fife in the same class and probably a 10 by each of these designers. Mr. Fife is also busy with a 6 rater for Mr. W. G. Jameson, and several smaller boats and open luggers similar to the very successful boats he turned out last year in the 17ft. class.

THE YAWL "SYLVIA."

SYLVIA.

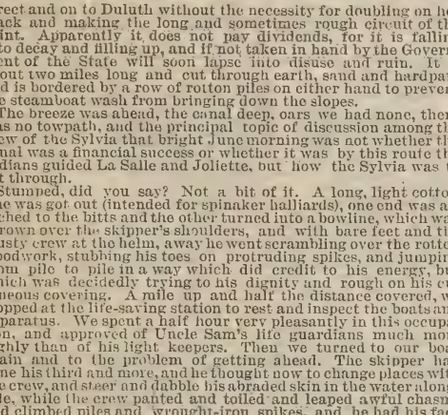
THE little cruiser whose lines are given herewith was designed by her owner, Mr. Henry K. Wicksteed, of Port Arthur, Canada, an amateur sailor and designer, and built by Mr. R. W. Anderson of the same place, another amateur. It was in her that the cruise which appears in the present and preceding number of the FOREST AND STREAM was made. At the time of this cruise she was yawl rigged, as shown in the accompanying sail plan, but since then she has been changed to cutter rig. Her new rig has a bowsprit just long enough to take the forestay, the jib being set on a jibboom, fitted to house. The accommodations are very good and the yacht has proved a very satisfactory cruiser. Her principal dimensions are:

Length, on deck	25ft. 8in.
L.W.L.	19ft. 8in.
Beam	6ft.
Draft	3ft. 6in.
Keel, iron	3000lbs.

A CRUISE IN THE SYLVIA.

[*Concluded from page 423.*]

FIVE o'clock, the sun is shining brightly and we lazily roll out of our blankets to breakfast and morning ablutions, and to drink in the fresh morning air and the new scene—new to all of us but the crew, who has been through the canal in a steamboat, and who now assumes the air of a continental guide and cicerone. Just ahead of us are the great wooden piers forming the beginning of the lighthouse. On either hand are low, desolate-looking sandhills, one of which is surmounted by the straight white shaft of the lighthouse. The canal was made on the site of an old Indian portage, connecting a chain of lakes and sluggish streams discharging into the great bay to the south of Keewenaw Point, with the open lake to the north of it; and as completed converts the point into an island. On this chain of lakes are situated immediately opposite to one another the twin towns of Houghton and Hancock, which in days gone by, and to a certain extent yet, were the shipping points for the vast output of the Calumet and Hecla and other famous copper mines. And on the great bay to the south is situated Marquette (please pronounce this Markwette), which is similarly placed with regard to the iron deposits of Ispeming and that neighborhood. The canal renders it possible for a regular liner to coast from Sault St. Marie to Marquette, then go on to Houghton and Hancock by devious but sheltered ways, and thence rejoicing out into the main lake



YAWL "SYLVIA"—SAIL PLAN.

direct and on to Duluth without the necessity for doubling on her track and making the long and sometimes rough circuit of the point. Apparently it does not pay dividends, for it is falling into decay and filling up, and if not taken in hand by the Government of the State will soon lapse into disuse and ruin. It is about two miles long and cut through earth, sand and hardpan, and is bordered by a row of rotten piles on either hand to prevent the steamboat wash from bringing down the slopes.

The breeze was ahead, the canal deep, oars we had none, there was no towpath, and the principal topic of discussion among the crew of the Sylvia that bright June morning was not whether the canal was a financial success or whether it was by this route the Indians guided La Salle and Joliette, but how the Sylvia was to get through.

Stumped, did you say? Not a bit of it. A long, light cotton line was got out (intended for spinaker halliards), one end was attached to the bitts and the other turned into a bowline, which was thrown over the skipper's shoulders, and with bare feet and the trusty crew at the helm, away he went scrambling over the rotten woodwork, stubbing his toes on protruding spikes, and jumping from pile to pile in a way which did credit to his energy, but which was decidedly trying to his dignity and rough on his cutaneous covering. A mile up and half the distance covered, we stopped at the life-saving station to rest and inspect the boats and apparatus. We spent a half hour very pleasantly in this occupation, and approved of Uncle Sam's life guardians much more highly than of his light keepers. Then we turned to our boat again and to the problem of getting ahead. The skipper had done his third and more, and he thought now to change places with the crew, and steer and dabble his abraded skin in the water alongside, while the crew panted and toiled and leaped awful chasms and climbed piles and wrought-iron spikes, and he had his face already set and a smile at full-cock ready to go off the first time the crew stubbed his toe and swore. But the latter had lived too long for him; he is good-natured, but as I said before, stout and more addicted to Bass's ale and repose than violent exercise.

YAWL "SYLVIA"—MIDSHIP SECTION.

His face is round and jovial and innocent looking, but way down somewhere in his hold there is stowed away guile enough to run Bret Harte's "Heathen Chinee" and "Truthful James" a match for him besides. Absorbed in the study of a rocket apparatus, the skipper had not noticed him draw one of the coast guardians aside, nor heard the clink of a trade dollar, and when he took his seat at the tiller and laid his finger on the trigger of the above-mentioned smile, it was the coastguardsman who took the bowline of the cotton line, and the crew who, with his 185lbs. avoirdupois, careened the ship to port as he leaped lightly but firmly upon the fore deck and proceeded to pay out the line. Perfidious wretch! But soft, we will get even with him yet.

The end of the canal reached, a fine breeze was found blowing on Portage Lake. A short beat, with some pretty severe knockdowns (for the hills on either side were high), and we came to an abrupt turn, and with the wind well aft and the main boom away out to port we tore down upon the twin towns of Houghton and Hancock in a way which evidently astonished the small boys bathing along the shore, whose naked bodies stood white and statuesque on the beach and wharves as they watched us pass, and the solitary locomotive at the railway station gave a dismal yell as we rounded to; but whether it was through fright lest we should carry away the drawbridge we were both bearing down upon, or as a mere matter of business, we could not ascertain.

I am writing for your yachting columns, and for yachtsmen finished and in embryo, so I will not stop to give you a description of the sleepy little town of Houghton, the most anomalous little American town I ever saw; nor an account of our trip to the great copper mines under the guidance of the most hospitable and open-handed host I ever met; nor, as we were on shore and the ship's discipline in abeyance, will I keep tally of the amount of lager beer absorbed by the crew and steward; suffice it to say that we enjoyed ourselves, and saw many things, including the crew's best girl (at the time, he is married to another now), and returned well satisfied to the hotel at Hancock. The skipper preferred his bunk on the boat to any shore beds, but gave the rest of his company shore leave, and retired to sleep the sleep of the just, until awakened late next day by a hail from the parcel-laden steward.

Preparations were at once made for departure; we laid alongside the drawbridge to reeve the gafftopsail and spinaker halliards, and then dipping our ensign to our genial host of the day before, started to beat out the narrow channel to the lighthouse. A big Ward line steamer ranged up alongside, going in the same direction, the passengers leaned over the rail to admire the pretty boat, and we ran up the stars and strips in their honor, but instead of being gratified the captain gruffly shouted from his lofty perch by the wheelhouse, "Take the other down," alluding to the blood-red ensign at the peak. We did not "take the other down."

Arrived at the bend we got a start and bowled over to the canal mouth in very good shape. Then we sailed, drifted and poled to the mouth, eating a leisurely lunch the while; and about 3 P. M. the open lake was before us, ruffled by a fine breeze, which would be on our quarter when we got out. The "white horses" were chasing one another down the lake and the Sylvia danced gaily along with her planksheer to, and in a few minutes we were constrained to take in jib and mizen and reef bowsprit, but set them again shortly afterward. A mile or two out we ran into a dense fog, and the wind immediately slackened. About dark we judged we must be in the track of steamboats and set our foghorn going, and sure enough we soon heard, and for an hour or more afterward, the booming of steam whistles around us. The steward and crew applied their mouths to the horn even more frequently than they had the day before, and it was singular to observe that the effect of the foghorn in making their faces red and their heads giddy, was precisely the same as that of the lager beer horn. "See anything?" we could scarcely see the end of the jibboom, and as hour after hour went by and the alternate watches reported to one another exactly the same thing, "a light, steady air abeam and a drenching, dripping fog," we began to think we should bump on the "Rock of Ages" or on the north shore beyond it before we saw either, but as day broke the crew suddenly cried out from the cockpit, "Why! I can see the whole bloomin' island," and sure enough, we had run out of the fog as suddenly as we ran into it, and Isle Royale lay stretched in front of us, and apparently close aboard.

The skipper pulled off his dripping overcoat (the light breeze almost simultaneously dropped) and turned in for a nap, not awaking until a sharp list nearly threw him on the cabin floor a couple of hours afterward. A puff from the shore had struck the yacht, followed by another and another; but with a ton and a half of lead and iron under the cabin floor we feared them not, and the crew and steward humored her back and forth and gradually drew her ahead, until we lay becalmed over the extreme point of the island. Oh! the panorama of limpid water, wooded height and gravelly beach which stretched itself out beside us. The water was so clear that we could see the boulders, 20 and 30ft. under our keel, and the air so pure that it was a pleasure to inhale it. See that white speck away in the bay yonder? That is a fishing boat, and under the impulse of oar and an occasional catspaw she soon gets out to where we lie becalmed. "Going out to lift your nets?" "Yes." "Good luck this season?" "Not bad." And she gets beyond earshot.

"Hello, boys! see that blue line out there? Get your spinaker boom out. Look alive now." And scarcely is the spinaker set when the breeze is upon us, light at first, but gradually freshening to half a gale; and away we go, with the the gafftopsail pulling at its sheet like a cart horse, the spinaker boom bent into an arc of a circle, and the rising sea roaring on either bow and astern as if angry that it cannot leap over the narrow taffrail.

The sixteen miles to Jarvis Island is covered in a little over two hours and as we tear through the gap between it and Victoria Island the surf is dashing high on the jagged rocks, the ensign is dipped and the genial manager and the "boys" wave their hands and their caps, and the steam whistle at the main toots cheerfully and encouraging. We can't stop; the breeze is too fair and fresh for that and on we bowl in more sheltered water now past Jarvis and Spar Islands, Mink and the Majestic Pie, into the broad expanse of Thunder Bay. Another hour and we pass the Welcomes and the white blur on the hillside ahead resolves itself into component white houses and churches. We fly past the lighthouse and breakwater into the harbor, spinaker and gafftopsail are taken in, and with a last lazy tired roll and heave the Sylvia rounds up to her moorings in the inner basin and our cruise is ended. If any one of your readers has made a trip half as enjoyable, with companions or a boat half as genial and trusty, I want him to get down his experiences as I have now done but in better style and to all such I say—"Shake, old man."

THE SKIPPER.

THE NEW MORGAN SCHOONER.—The new schooner for Rear-Com. E. D. Morgan, N. Y. Y. C., on which Mr. Burgess is now at work, will be built of steel, with a centerboard beneath the floor, as in Marguerite. Her dimensions are 137ft. over all, 106ft. l.w.l., 21ft. 9in. beam, 12ft. 1in. draft. The stem has an overhang of 11ft. and the stern 20ft. The outline of her keel and forefoot is similar to Volunteer. The design is described as follows by the Boston *Globe*: "The midship section is the best which Mr. Burgess has yet drawn. The topside shows a slight tumble home, perhaps 2in. on a side. The line curves gently at the waterline, and thence outs rather boldly down, giving plenty of power close to the surface of the water. The bilge, while powerful, shows no hard spot, but turns neatly into the almost straight line which makes up the greater portion of the new schooner's deadrise. The garboards are quite widely separated to admit the great mass of lead which will constitute the ballast, and below the line of the section curves quickly into the keel proper. The waterlines indicate plenty of power, though the great length of the yacht gives ease to the curves. Mr. Morgan's yacht will have a slightly hollow bow, and a powerful harpin. The run is clean, but not too fine. Altogether the vessel gives one an impression of great power gained at little sacrifice of ease."

"THE YACHTSMAN'S SOUVENIR."—Mr. N. L. Stebbins, the photographer, whose excellent work is familiar to all yachtsmen, has just published a most beautiful volume under the title of "The Yachtsman's Souvenir." The book, which is an oblong octavo, contains the portraits of nearly 250 American yachts of all kinds and classes, from the largest steamers down to open catboats. Each photo is about 4×2½in., arranged four on a page. In the front of the book is a list of the yachts, with their dimensions and the names of owners, designers and builders. The plates are printed from gelatine by the Lilliotype Co., of Gardner, Mass. While not equal in size or finish to the large and elegant volume of reproductions of Mr. Stebbins's work published last year, the new book will prove a most valuable supplement to the yacht list, being in fact an illustrated yacht list, including all the leading yachts, down to the new vessels of last year. Apart from its artistic value it will be found indispensable as a work of reference, and as a means of identifying the yachts met with in racing or cruising.

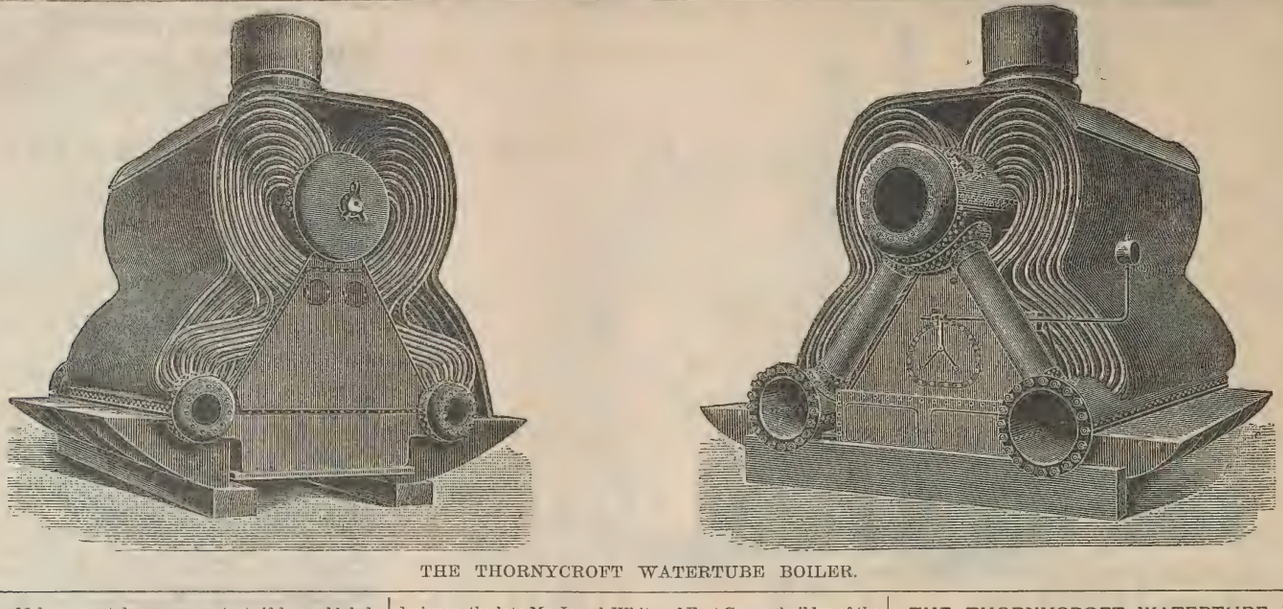
THE WHITE SQUALL'S 1887 CRUISE.

THE summer of '86 was one of work and worry, and the canoe hung idle in her slings. The spring of '87 opened in much the same manner till one day, about June 1, I received a letter from Horace, asking if either Jim (a younger scion of my father's family) or myself could join him about a month later on a canoe cruise on the St. John or some of its tributaries. I replied that one of us would go, and I hoped it would be the writer. Forthwith I got down the canoe, scoured her well within and without, and treated her to a fresh coat of paint. H. arrived July 7, and it took us all of the 8th with the best work we could put in to get ready. In order to get the right trim we considered it necessary to carry about 60lbs. of sand ballast in two tight canvas bags, and in lieu of watertight compartments we stowed a lot of large, square tightly corked empty varnish cans under fore and aft and battened them in. On Saturday, the 9th, we should have started, but changing an old French proverb slightly without detracting from its truth, "One proposes and other people dispose." We had discarded our old board, which gave us a surface of 216sq.in. and replaced it with one with 384sq.in. Horace thought the board the chief factor in our former defeat by the Narrows boat, arguing that as we beat them off the wind we possessed the requisite form to beat them close-hauled, provided our boat had the right grip to hold her to windward. He very much desired a trial with some other boat to put the theory to the test.

On the evening of the 8th we received word that two Boston gentlemen, who owned places six miles down the lake, would open the season at 1 P. M. the next day with a friendly brush between their boats over a six-mile quadrilateral course and would be pleased to have us join them. H. jumped at the offer, and I was nothing loth. The next morning we manufactured a spinaker and practiced setting it quickly. We experimented to get the right trim, and a little before noon set out under paddle determined to make the race no picnic, so far as we were concerned. But we were disappointed. The paint on one of the boats was not dry enough to allow her to be launched, and the other boat had gone away. So we went ashore and lounged until about 6 o'clock, when we rendered able assistance in the destruction of sundry viands, and at sundown we hoisted sail and set out for home with a light fair wind. We set the spinaker, which we had christened "Boston's Surprise," but which turned out no surprise at all, and had what we will always remember as a lazy easy run home. We had selected the lake right at our door—the Washademoak, as our cruising ground, and though the wind was fair we lay still all day Sunday.

Monday opened with half a gale of N.E. wind (dead in our teeth). Father had attached my services to assist to get a load of produce ready to go to market by the morning boat, for though all of us are "scratching for ourselves," and some are on the wrong side of thirty, when we are around the home ranch and father says to one of the boys, "Stay," he stayeth. At 12 o'clock the wind was unabated and there was a cold, driving mist; but when I announced myself as at the disposal of my friend, he voted for an immediate start. I will not attempt to describe the work of that afternoon, as with the paddle we urged the canoe in the face of the gale. Any person who would have patience to read a narrative like this has either been there himself or will be sometime. If the first he knows all about it; if the second he will know soon enough.

Before starting we took the precaution to set our reefed mainsail ready for hoisting, and when we had paddled five miles we set in for a two mile beat for Picket's Cove, where we expected to camp. We made nearly as much weather as under paddle. Picket's Cove is about a fourth of a mile wide at its mouth, and one mile long, terminating in two branches, each fed by a stream which flows in one from the north and the other from the west. We explored the northern branch to rapid waters, and dropped down about four hundred yards to the spot we selected for camp. If there is anything I dislike it is camping in a man's door yard, and the canoeist will readily understand why we strained a point to reach this place, when I state that, say a farm on each side of the cove's mouth there is an unbroken wood all around it. At a point where the creek bank was 10ft. high, under a spreading beech tree with a little glade in front, we pitched our oiled cotton tent, which H. had constructed hastily out of a lot of his father's hay caps. We had chosen a position parallel with the creek, and inside and on the down-hill side of the A-shaped tent, we drove two crotches. Into the forks we placed a good stiff pole, and then lay slats across, pressing one end into the soft earth for the uphill side, and letting the other rest on the pole. On this we made our bed of fir boughs, and over all spread a buffalo robe and we had "a good enough bed for the Joneses." The high freshet of the previous spring had thrown up plenty of dry spruce wood in 4ft. lengths, and we kept up a good fire until late in the evening. Before retiring for the night we dried plenty of kindlings and took them in the tent. When cooking supper we undertook to make tea in a lard pail and quickly melted off the ears. We then put some water in the frying-pan, and setting the pail of tea in it placed it on the fire, and the result was so satisfactory that when in camp we have made tea on that principle ever since.



We awoke at daybreak to find that the mist had during the night changed to a heavy rain, and that our arrangement for a tent floor had served a better purpose than the mere leveling of the ground; for a stream of water had made a free course under us. My youngest brother had been one of a picnic party that had visited the head of Picket's Cove two weeks previous, and before we left home he had confided to us the location of a place where we could get trout enough for breakfast. In his description he used as a base line the place where the stream crossed an old road. We struck through the woods to the point indicated, but no pool could we find. Going back, we missed our way in a labyrinth of old lumber roads, and did some tall swimming around among the wet bushes before we found camp. At once we set about drying our clothes and cooking breakfast, in the meantime passing several resolutions that we would never again look for a secret trout pool on the word of any person, except he made his statement in the form of a duly attested and witnessed affidavit. You can faintly imagine our feelings when we afterward found that the pool was on the western branch.

At last everything was dried before the big log fire and packed in the canoe, and as before a fitful N.E. wind we dashed around the bend of the creek through the gray mist of the yet cloudy morning, and looked back at the thick column of smoke from the camp-fire, now coursing across the glade in an undulating stream that seemed to lose its free end in the woods in as compact a mass as when it started, then quickly flinging it skyward and appearing to entangle it for a moment in the branches of the spreading beech, we thought not of the quiet beauty of the spot, of the elm hand that was reaching out from among the roots of the old beech to "wave us a farewell with a blue gauze scarf," but upon the one element that thrust itself upon us during every moment of our stay; and we gave it the very unpoetic name of Camp Moisture. When we sighted the lake and saw a sailboat a mile away going in the same direction as our intended course, H. once more bewailed our fate that we were not ten minutes earlier. Two miles from camp she rounded a bend of the river (for as it narrows here to one-quarter of a mile it can no longer be called a lake), known as the Narrow Piece, and again getting the wind dead ahead, we started on our long beat. I steered and H. handled the main sheet, as, in fact, we did during the entire cruise.

H. and I differed then and do yet (though not quite so much as then) on some points connected with boats and sailing. On the Kennebeccasis, where he spent his early life, Mr. Logan, a boat-builder, is a recognized authority. The favorite theory of this gentleman is, that in windward work you should not sail as near the wind as possible, but starting your sheet a little and keeping off a point or two you will make up in increased speed what you lose in pointing. If I have a good boat I am what they call a "wind jammer." On July 1, 1886, I sailed with Mr. Logan in a race where, with a brand new jib and mainsail boat, he beat a catboat, owned by Mr. Fowler, of New York, in a five-mile beat to windward and a run home; and with the narrowest watching I could not discover the slightest symptoms of his use of his own theory. But it was no use to tell his disciples this; they merely placed it to the credit of prejudice. H. is a believer in the board, a tolerator of the keel and was a firm believer in the Loganian theory. I am as near the converse as possible.

On the morning of which I write we had not made two tacks to windward before we saw a sail go up about two miles above, and a little later the boat came down the wind with successive semi-circular jets of water flying over the lee gunwale, which showed that the occupants were serving a writ of ejectment on some of the water that had rained in during the night, while on the weather side sat four boys. I recognized her by her green topsides as the property of a genial steamboat man who lived near. H., noting the number of passengers remarked carlessly: "I guess there is a load on their way to celebrate the glorious twelfth." "Now," said I, "I scarcely agree with you; that is the best sailing boat in this region, and they are coming down here for no other purpose than to inspect the strange craft and see what she is made of." "All right," he replied, "they will find at least one person glad to meet them; there is a double pleasure in defeating the best—a defeat by any less carries a double sting."

The boat veered, crossed the river, jibed and went on the same tack with us, about 60yds. to windward. Query: Did any one

THE THORNYCROFT WATERTUBE BOILER.

ever see a would-be racer take an even start, if he could help it? When I was a boy learning to skate I somehow got it worked into my small head that I could go like a locomotive: but one day a bigger boy came along, and I did not think so any more. And we appeared to be sailing well till that boat commenced to sail away from us—then we appeared to stand still. You would have thought from Horace's countenance that he had just heard of the commitment of one of his godsons for burglary and arson; and I don't know how I looked, but I felt cheap. But every one of the five faces turned toward us resembled the cut with which almanac makers were wont to depict a full moon. "H.," said I "if you'd trim that sheet closer she'd go better." He turned on me a sickly look and replied: "She is doing about all there is in her." Our competitors seeing that if they held their course they would get no nearer view of us, and thinking they could well afford to make the experiment of sailing around us, paid off and took up a position on the same tack with us, and 20yds. to leeward. The third stretch thereafter, they were some distance astern and directly in our wake. We were just gathering way after going on our starboard tack when by a gross breach of the rules of the road, they stayed and lay their bow right across our course. I was going too near the wind to luff by, and I was determined not to lose my "pull," so we shot by her lee side before she got way on. "Now," said I, "H., flatten that sheet, I'm going to take my place," and I crossed her bow and took my position a little on her weather. H. kept the sheet in, and at the end of the tack we were still ahead. On the next we increased our lead. To say they were astonished is to put it mildly. The five full moons contracted as you have seen the pupil of a cat's eye upon her transition from a dark corner to bright sunlight. They glanced right and left, and then aloft to see what was wrong with their boat. Everything was as before; and yet unmistakably we were leaving them. Perhaps they mistook the altered expression of our countenance for guile, anyhow they addressed us. "The wind was falling," they said, "their boat would not work well in a falling wind." We informed them that we were just piping for a little more of that same article, for, what with two heavy men, their camp dunnage, and 60lbs. of ballast, there was a good deal of weight to be driven by our small sail area. They asked a few questions about our boat and then bore away through the marsh for the opposite shore. Our elation was not lessened by the fact that we were sure they would think we had played it "foxy" on them, by purposely allowing them to beat us at first. Partly on account of the reputation hitherto borne by their boat, and partly because of a fancied likeness to a certain green pea of that name, which crowds a good deal of pea in one pod, we ever after spoke of them as "the champions of England."

Just opposite Armstrong's Point, and about four miles from our former camp, we came to a hard stony shore, and, with an eye to fuel supply, we made our noon halt at a place where some one had hewn a stick of timber. In the early days of the country, this had been the site of a considerable Melicete village. A son of the man who first settled on the farm we were camping on had told me many stories of the early experiences of the settlers. Once the Indians formed a plot to drive the whites from their farm and plant corn on it; but it was divulged to my informant in a boasting way by one of the Indian children with whom he played. They fortified their cabin and stood off all Indians till the government sent an agent to treat with them. At another time, when the white men were all away at St. John after supplies, a rascally whisky trader came in and traded rum for all the beaver skins the Indians had. Their revels were frightful. The white women and their children took refuge in the fortified cabin, and prepared to shoot down any Indians who attempted to enter. My friend, who was then a boy eight years of age, insisted on having a gun, and being allowed to watch at a loop-hole. They gave him a long fusee, which the men had left unloaded; and the boy loaded it, and sat at his post all night. When the men came back the next day and examined the gun, with which he played sentry, they found he had loaded it with ten buckshot, and put the shot down first. Luckily the Indians did not take it into their drunken heads to make an attack. As I lay there on the ground I could easily imagine the actors of those scenes as again present. What fleets of canoes then must have occupied the place of our one little lapstreak! And what had become of them all? And for that matter where were the owners of the flotillas of twenty and thirty canoes, which I had myself seen passing up and down, in the spring and fall twenty-five years ago? It scarcely seems possible that so many people could disappear in so short a time. It seemed eminently proper that the crew of the first modern sailing canoe that visited this place should spend some time in thinking of the fate of some of the pioneers in the canoeing business, and, as my partner is not one of the men whose thoughts are such poor company that he wants to talk all the time, I had plenty of opportunity. L. I. F.

ANCIENT CUTTERS AND SLOOPS.

THE sale of the famous old schooner Alarm for the purpose of breaking up, has lately brought out some facts in connection with her early history, and directed attention to other yachts of her time. The *Field* gives the following account of some of the earliest cutters, from which the modern cutter yacht was derived. The old distinction between cutter and sloop is quite interesting, as showing that originally the model had nothing to do with the name, but that it depended entirely on the difference of rig:

"The very interesting letter written by Mr. Charles Ratsey concerning a forgotten match between the Alarm and the Louisa, brings to mind the one time existence of a whole fleet of 200-ton cutters belonging to the Royal Navy, for the service of the customs in suppressing smuggling. The smugglers in turn were mostly cutters, and some of them were as large as those which were dubbed 'revenue cutters.' In 'Falconer's Marine Dictionary,' published a century ago, we find the following definition of a cutter: 'A small vessel commonly navigated in the channel of England, furnished with one mast and a straight running bowsprit, which can be run in on the deck occasionally; except which and the largeness of the sails they are rigged much like sloops. Many of these vessels are used in an illicit trade, and others employed by the Government to seize them; the latter of which are either under the direction of the Admiralty or Custom House.'

The Government cutters were not only associated with smugglers in the manner described in the foregoing extract, but were sometimes actually built alongside of them; indeed, we believe it is a fact that Mr. C. White, of Broadstairs, often sold to the Government, for a premium, a large cutter he had built for 'an illicit trade,' much to the disgust of many an honest 'Will Watch.' Thomas White, a son of Mr. C. White, settled at Cowes about the commencement of the present century, and died in 1859 in his eighty-sixth year. He was the father of the noted yacht and ship designer, the late Mr. Joseph White, of East Cowes (builder of the Louisa cutter and Waterwitch and Daring brigs), and of Mr. John White of the Medina Dock, West Cowes.

"But to return to these big cutters, we find from Charnock's 'History of Marine Architecture,' that in 1802 there were fifty-eight cutters in H.M.S., and these ranged from 52 tons to 218 tons O. M. Some of the largest were of the following dimensions:

Name.	L'gth.	Br'th	D'pt.	Tons.	Men.	How acquired.
	Ft.	Ft.	Ft.			
Kite.....	77·5	27·1	10·5	218	75	Bought in 1778.
Flying Fish.	75·0	25·9	10·5	190	60	Ditto.
Busy.....	75·0	25·9	10·5	190	60	Ditto at Folkstone.
Pigmy	80·3	26·1	13·2	201	70	Ditto.
Alert.....	78.9	25·2	11·5	205	80	Built in 1779.
Mutine.....	79·9	26·1	10·1	215	70	Taken from French.
Pilate.....	78 5	26·1	10·2	218	70	Ditto.
Ranger.....	80·3	26·1	—	201	70	Bought.
Seaflower...	72·5	26·0	10·7	203	70	Bought.
Lapwing....	47·8	21·1	8·1	82	30	Bought of C. White, Broadstairs, 1764.

"The length given is on the gun deck, which, according to Peake, was measured between the perpendiculars from the aft side of the rabbet of the stem to the foreside of the rabbet of the sternpost. The length used in computing the 'tons' as given in the table, was measured along the keel from the rabbet in sternpost to a perpendicular dropped from the foreside of the stem head.

The spars for a 200 ton cutter of the Royal Navy were as follows:

	Length.	Diameter.
Mainmast.....	88ft.	22in.
Topgallant mast.....	44ft.	6¾in.
Bowsprit extreme.....	64ft.	20in.
Main boom.....	66ft.	14¾in.

"In Falconer's Dictionary we are told that 'mast and topmast are in one,' and in length are once and a quarter the length of gun deck; to the rigging hounds three-fourths the whole length of spar, gaff three-fifths the length of boom. Diameter of mast, quarter of an inch to every foot of length. Diameter of boom, three-sixteenths of an inch to every foot of length.

"There is no doubt that the 'competitions' between the big revenue cutters and the smugglers on the south coast did much to make naval architects study the lines of vessels, and Charnock is a witness to this. We can also understand that the reputed speed of these craft induced those men of means, who made yachting a pastime in the Waterloo era, to make their vessels excel in speed, and so began the sport of yacht racing. The commanders of the revenue cutters had, however, another kind of sport, and a bas-relief on an old tombstone in Binstead churchyard, near Ryde, graphically depicts how a smuggler was occasionally brought up. The inscription on the stone is as follows: 'To the memory of Thomas Sivell, who was cruelly shot on board his sloop by some officers of the Customs of the Port of Portsmouth on the 15th of June, 1785, at the age of 61 years, leaving a disconsolate widow and family.' The remainder of the inscription could not be deciphered, as the stone had sank into the ground, but probably it would be 'to mourn their loss.' We believe that the last of these 200-ton cutters was the Stag, of Portsmouth; but there are some large yawls in the service of about 200 tons at the present time."

THE GREAT EASTERN.—In the sale of the Great Eastern the outer iron plates fetched £12,503. According to a statement made at the time when the huge vessel was building by Mr. Scott Russell, these iron plates were 300 in number and weighed 10,000 tons, and were fastened by 3,000,000 rivets. According to this, the iron plates fetched over £1 per ton, but, as it will cost at least 10s. per ton to get possession of them, the price per ton can be put at 35s. As the iron is of the highest quality, this will, no doubt, leave a very fair margin for profit. The inner plating, frames, etc., fetched £12,20), and the copper, gun metal, brass and lead £15,000—the total from all sourses being £43,000. The dimensions of the Great Eastern are: On deck, 692ft.; stem to sternpost, 680ft.; breadth, 83ft.; depth, 58ft.; draft, light, 20ft.; loaded, 30ft. Probably the launching of this monster created more interest than even her building, as it was an operation which extended over three months. She was to have been launched sideways into the water on Nov. 3, 1857, but she stuck fast, and, after various attempts to coax her off by hydraulic jacks, some very large hydraulic rams had to be made for the purpose; and then she was only moved inch by inch, and the daily papers described each small movement as a matter of the profoundest public interest; if it happened that one end moved further than the other, the interest in the launching was largely increased. The vessel was finally got into the water on Jan. 31, 1858. It was said at the time that the launch from first to last cost £120,000, or more than enough to have constructed a basin to build her in, and subsequently to dock her. As it was, no basin existed which would take her, and when her bottom was cleaned she had to be beached. The total realized by the sale of the Great Eastern was £58,000, and, so far as we can judge, nothing more than fair or very moderate prices were paid, and we are left to wonder how the vendors came to part with such a valuable property for £16,000. No doubt in another year or two we shall have Atlantic liners quite as long as the Great Eastern, if not longer, but very different in form, and of much less depth. Probably, if the Great Eastern had been less round in the bilge, and not so deep by about 15ft., she would not now have been sold for breaking up, as fitting her with modern machinery would have been a very ordinary undertaking."—*Field.*

CLUB ELECTIONS.—Within the next four weeks a number of yacht clubs will hold their annual elections of officers for 1889. Secretaries will confer a favor by sending us as soon as possible a correct list of the new officers. We will be glad also to receive copies of club books.

ANOTHER 40-FOOTER.—Mr. Burgess will design a 40-footer for Mr. A. J. Beebe, of Boston, a centerboard boat 54ft. over all, 39ft. 6in. l.w.l., and 14ft. 6in. beam, about the dimensions of Nymph. The Smith 40-footer mentioned last week will be a centerboard craft.

CHANGES OF OWNERSHIP.—Anita, steam yacht, has been sold by Jacob Lorillard to S. Austin, Jr., of Philadelphia, for $22,500.

THE THORNYCROFT WATERTUBE BOILER.

THE boiler shown in the accompanying illustrations, for which we are indebted to the *Shipping World*, was devised by Mr. Thornycroft, the famous builder of torpedo boats and fast launches, as a substitute for the locomotive boiler generally used in this type of vessel. In addition to its size and weight, the locomotive boiler possessed the serious disadvantages of priming and of liability to leakage of the tubes. It is claimed for the new boiler that it is smaller and lighter than the new type, it gives no trouble from priming, and the great trouble of leaky tubes is entirely removed. The boiler consists of three large cylindrical flues, one being placed on each side of the fire-box and the third directly over the fire. The lower tubes are each connected to the upper one by a large welded flue, shown in the front view, while in addition there are altogether over a thousand very small tubes, each having considerable curvature, joining the lower to the upper cylinder. The upper cylinder is provided with a separator for the steam and water which comes from the small tubes, and also with feedwater valves, stop valve, safety valve and pressure gauge, the ordinary water level being about the height of the axis of this cylinder. The cylinders and tubes are inclosed in a light casing of sheet iron. The fire space is between the two lower cylinders, the flames and gases passing between the small tubes and around the upper cylinder. As the joints of the small tubes are not exposed to the direct action of the fire, there is little danger of breakage, while ample provision for expansion is given by the great curvature of the tubes. The water in the lower cylinders rises through the small tubes, the temperature being very high, then in the upper cylinder the two pass through the separator, the water descending through the two large flues. The separator is so complete that no trouble is experienced from priming. Steam can be raised in fifteen minutes, while the pressure is under perfect control. One of these boilers has lately been placed in a new steam lifeboat lately constructed in England to be propelled by water jets. A new Thornycraft torpedo boat fitted with one of these boilers was also tried on the Thames last month with excellent results, making a speed of 23¼ knots, the contract speed being 22 knots. This boat was also fitted with another Thornycroft invention, a rudder on each side of the screw, the two, in connection with a crossbar below the screw, making a very efficient protection for the latter, while the maneuvering powers of the vessel, under both hand and steam gear, were particularly good, the vessel turning within her own length when going ahead, and within a still smaller circle when going astern.

Answers to Correspondents.

☞No Notice Taken of Anonymous Correspondents.

L. W.—You should have no trouble with the large shot.

P. G.—We will have an article on the subject in an early issue.

C. W., City.—Go to Eldred, Sullivan county, or to Lackawaxen, Pa.

A. J. F., Wilmington, N. C.—You can obtain the cartridges from any of the large dealers.

J. J. B., Elizabeth, N. J.—The squirrel shooting season in Morris and Essex counties, New Jersey, closed Dec. 15.

J. P. P.—Mr. Kirk Munroe's address is Coccanut Grove, Fla., the other person you inquire about is now cruising about the West Indies.

JERRY, Buffalo, N. Y.—We cannot answer your question specifically, for you give no particulars, perhaps you will find in "Training or Breaking," the right treatment for your stubborn dog.

SUBSCRIBER, Seymour, Conn.—Are beagle hounds for hunting rabbits or foxes? Ans. They are used mostly for hunting rabbits, although they are often used for foxes, but are considered by many to be too slow for the latter.

H. E., South River.—We had a sweepstake shoot here to-day for first and second money. Six of us killed 2 out of 3; we shot off at 3 more birds, and in the second event four killed 1 apiece, and two did not kill any; are these two entitled to second money? Ans. According to the rules of class shooting, no.

W. H. E., Pottstown, Pa.—What shall I do to break my dog, 16mo. old, of mouthing birds? I have worked with him in many ways to remedy this trouble, but he seems to get worse. Ans. Do not let him retrieve a bird until it is dead and you have first handled it. Follow instructions in "Training vs. Breaking," and with care he will come out all right.

STANSTEAD AND A. R., Montreal.—If those who tied in the match, when the allowance given contestants was of birds instead of distance cannot agree to shoot off at 3's or miss and out, let them shoot new scores of 20 birds each, with same allowance as before. This will be perfectly fair, and as it preserves the original conditions no objection can be urged to it. Recourse could be had to any other mode of settlement only by common consent.

OHIO.—Through the direction of your paper I visited the North Woods of the Adirondacks last summer, and was thoroughly repaid by the pleasant climate, the rarity and wildness of the scenery. While there it occurred to me it would be a good thing to turn loose a number of our tame turkeys into the woods in order to stock the woods with game of that kind. I will contribute to the enterprise if it is possible. Are the winters too severe? Have a few acres of large natural forest about my suburban home in the city and would like to get some squirrels to make their home there. Where can I buy them? Ans. The turkeys would in all probability perish. For the squirrels write to E. B. Woodward, 174 Chambers street, New York.

"As for me," said Senator Frye, just before he went to Washington, "I would ask nothing better than to be able to take a small library of books, a gun and a dog and my fishing kit, make a comfortable camp in the woods about 10 miles above Parmacheenee and spend the winter there. But the people who are 10 miles in the woods would give all their old traps if they could spend the winter in Washington. And so wags the world.—*Lewiston (Me.) Journal.*

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction. Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By Hon. J. D. Caton, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Small Yachts,

Their Design and Construction, by C. P. Kunhardt. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

For Amateurs. By W. P. Stephens. A manual for boat building by the canoeing editor of Forest and Stream. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Our New Alaska.

By Chas. Hallock. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Charley's Wonderful Journeys.

By C. F. Amery. Profusely illustrated. Inimitable fun and most delightful fancies Cloth, handsome gold stamp. Price $1.50. See advertisement.

Training vs. Breaking.

By S. T. Hammond, kennel editor of Forest and Stream. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "Seneca." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "Nessmuk." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Woodcraft.

By "Nessmuk." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. See advertisement elsewhere.

Yachts, Boats and Canoes.

By C. Stansfield-Hicks. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Wild Fowl Shooting.

By W. B. Leffingwell. The contents and illustrations of this volume are detailed elsewhere. Next to a gun this is something to please one whose fancy lightly turns to thoughts of ducks. See advertisement. Price $2.50 and $3.50.

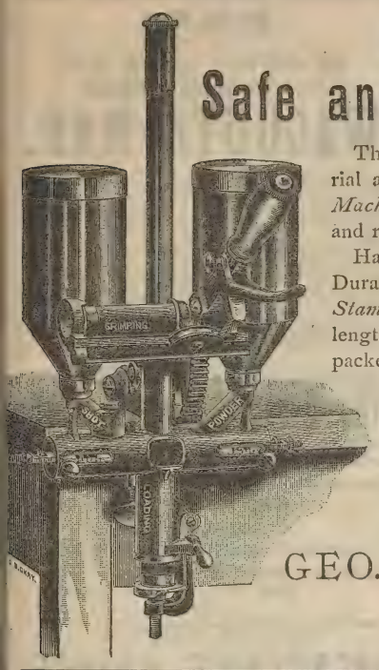
Bird Portraits for the Young.

By W. Van Fleet, M.D. Fourteen photogravure illustrations of familiar birds, with charming text. A magnificent gift book. Price $3.00. See advertisement.

Names and Portraits of Birds

Which Interest Gunners. By Gurdon Trumbull. New edition now ready. Price $2.50.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.



SMALL YACHTS.

By C. P. KUNHARDT.

500 Pages, 73 Plates. Price, postpaid, $7.00

SEND FOR DESCRIPTIVE CIRCULAR.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

For prices and full description, address,

GEO. D. HUNTER,

78 EXCHANGE BUILDING,

CHICAGO, ILL.

YACHTS, BOATS AND CANOES,

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM."

NUMEROUS ILLUSTRATIONS AND DIAGRAMS AND *WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.*

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

FOREST AND STREAM PUBLISHING CO.

318 Broadway, New York.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.

Book Publishing.

Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

NESSMUK'S POEMS.

FOREST RUNES, By Geo. W. Sears, {Nessmuk}.

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with a portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the Fort Benton Fur Market. The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of The Dun Horse will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting. Under the title,

A Breath from the Maine Woods,

will be described the angling experiences of a Boston party at Moosehead, by "W. A. B.," whose sketches of a fisherman's life in Maine have been received with so much favor.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora.

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *ferœ naturæ*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our Shooting and Fishing columns will be our

Special Correspondence from the West,

keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters, all of which will make the FOREST AND STREAM

A Journal for Western Sportsmen.

The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity. There will be a series of papers from the pen of Mr. J. E. Gunckel, of Toledo, O., entitled,

The Sunset Club,

A continuation of the witty reports of that famous club already known to fame.

The Trap Forest and Stream Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

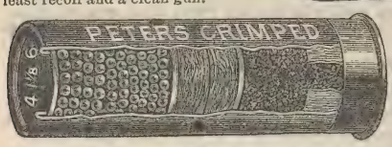
Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

A FULL LINE OF CARTRIDGES.

10-Ga., 12-Ga., 14-Ga., 16-Ga., 20-Ga.

INDENTED – CRIMPED – BLANKS.



The Peters Cartridge Co. is induced by the success achieved the past season to greatly increase its line of manufacture. It now offers the above most complete list of Shotgun Ammunition.

THE

"Indented" Cartridges

Are the most successful ever produced for Trap and fine Wing Shooting. They give wonderful pattern and penetration, with the least recoil and a clean gun.

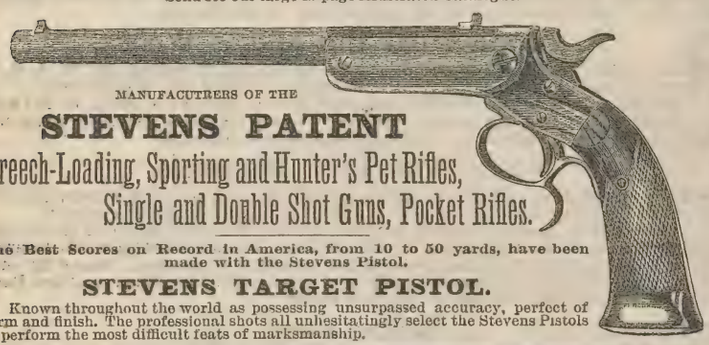
Peters Crimped Cartridges

Are loaded by the same machinery and with the same materials (including the lubricated elastic felt wads) as the "Indented." The crimp is the best produced by machinery and diminishes the recoil. They shoot strong and leave the gun clean. Price same as for "Indented."

Peters Blank Shotgun Cartridges

(Trade Mark and Patents applied for) are especially appreciated by the "far off" trade, the hunter, farmer, etc. They save freight and the danger of handling bulk ammunition. By their use cartridges for all varieties of game may be quickly produced without the necessity of carrying a full and expensive line of the goods.

ASK YOUR DEALER FOR THEM. LIBERAL DISCOUNTS TO THE TRADE.



The PETERS CARTRIDGE CO.

CINCINNATI, O.

J. Stevens Arms and Tool Co.

P. O. Box 4100, Chicopee Falls, Mass.

Send for our large 52-page Illustrated Catalogue.

MANUFACTURERS OF THE

STEVENS PATENT

Breech-Loading, Sporting and Hunter's Pet Rifles, Single and Double Shot Guns, Pocket Rifles.

The Best Scores on Record in America, from 10 to 50 yards, have been made with the Stevens Pistol.

STEVENS TARGET PISTOL.

Known throughout the world as possessing unsurpassed accuracy, perfect of form and finish. The professional shots all unhesitatingly select the Stevens Pistols to perform the most difficult feats of marksmanship.

AUDUBON'S

Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Audubon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

ANSWERS TO CORRESPONDENTS.

RESTOCKING WITH FOREIGN GAME.

YEARS ago "Nessmuk" said "the game must go." He was right. It is going, and much more rapidly than most people appreciate.

It has long been apparent that the day is not so very far distant when there will be nothing left alive for the gunner to shoot at. Our feathered game has lasted longer than might have been expected, when we consider the number of those who pursue it, and the utter contempt felt by a considerable proportion of these gunners for the laws looking to the perpetuation of our game supply. Each year the destruction exceeds the annual increase.

The failure to enforce the game laws increases the destruction and lessens the game supply. The gunner who does not respect the law nor use his influence to have it enforced suffers from the lessened supply of game, but with him suffers also that large and ever increasing class who are themselves law-abiding and who do their best to make the law respected and to have it observed. The lawbreakers deserve to suffer, but it seems hard that those who respect the law should be punished for the wrongdoings of other.

Until a public sentiment compelling a more general observance of our game laws can be awakened there seems little prospect that there can be any great increase in the number of our native game birds. It is possible, however, to greatly improve the shooting in many localities, though to do so will take time and money and require a certain amount of self-restraint on the part of the shooting public. The introduction of exotic game birds is a slow and expensive method of restocking our depleted covers, but it has met with such remarkable success in certain localities on this continent as to make it worth while for all sportsmen to seriously consider whether it shall not be generally tried. Arguments to show that foreign birds will do well in certain parts of North America have been often advanced, and it is scarcely necessary to repeat them. Instead of arguments a few facts may be given.

Some years ago the English partridge was introduced into New Jersey. The birds turned out did well, bred, and the young grew to maturity, but as no effort was made to protect those outside of the preserves during the shooting season, they disappeared, probably all finding their way into the gunners' bag, and have not recently been heard of.

The so-called English pheasant has been introduced in many sections of the country, and in some localities it has done extremely well and has furnished grand sport. In the year 1881 nineteen of these birds were turned out on the outskirts of the City of Victoria, on Vancouver Island, B. C. For five years they were protected by law, and this law was quite generally respected. The first season the law was off it was estimated that 1,000 birds—almost all cocks, for it is still forbidden to destroy the hens—were killed, and the second season the score was about as great. Toward the end of the shooting season the birds become so cunning that it is almost impossible to get a shot at them.

The importation of a number of Chinese pheasants by Mr. Denny, and their liberation on an island in Puget Sound is still fresh in the minds of the public. These birds were protected for a term of years and they are said to have thriven and increased wonderfully. In fact the farmers on the mainland, whose lands they have invaded, have come to look upon them as a curse on account of the damage which they cause to the crops.

Attempts to introduce the English pheasant on the coast have been less successful, mainly because the birds, though well cared for in their preserves, have not received general protection. Those birds which have escaped from the private lands where they were originally turned out have most of them been destroyed by gunners, and the species has never been able to acquire a foothold as a wild bird. In New Jersey and in Maryland there is little that is encouraging to report about these birds outside of preserves. In Georgia, however, on Jekyll Island, where they can be protected from outside shooting by the club which owns the island, the pheasants at last accounts were doing well, and there were more than 600 wild birds at liberty, besides a number that are kept up for breeding purposes.

We understand that in Maine a lot of pinnated grouse were turned out a few years ago and protected by a three or four years close season. Contrary to the predictions expressed by many people these birds flourished and increased, and this autumn, we are told, one gentleman killed thirty or forty of them. There seems to be no doubt that the pinnated grouse might do almost as well anywhere on the Atlantic coast. But they must be protected for a while.

On the island of Newfoundland two years ago a lot of black-game were turned out by Mr. Robert Langrishe-Mare. About forty birds were liberated in two places. The Legislature protected them by a five years' law, which is respected on all hands. These superb birds appear to have done extremely well, and are thought to have greatly increased, for they have been seen on the other side of the island as if they had made their way across it.

The migratory quail was imported to this country, turned loose without protection, and has disappeared. The same is true of the English pheasant, and of the English partridge where not preserved. On the other hand the English pheasant, certain species of Chinese pheasants, the pinnated grouse and the European black-game have been introduced in various parts of the country, and wherever protected have thriven and greatly increased.

With these facts before them, those interested can draw their own conclusions as to the possibilities of increasing our present game supply.

SNAP SHOTS.

ONE thing to be said of private game preserves, in behalf of the public benefit accruing from them, is that they foster a game supply which often overspreads the preserve boundaries, and thus furnishes sport for outsiders. A case in point is that of the Country Club of Westchester county, New York, who some time ago posted an extensive tract of land, and turned out quail in it. The birds have stocked all the country round about, and gunners report better shooting in the vicinity than for many years previous. No sensible person will ever object to posted land, provided there is a free range near by. Fences cannot be built so high that the birds will not fly over them; nor has any genius yet devised a scheme to clip the wings and restrain the flight of grouse and quail. Thus outsiders come in for a share even of the expensive European pheasants and partridges put out in American preserves.

The bond of sympathy which unites the followers of shooting and fishing is so strong that it would seem as if anglers and gunners as a class would be admirably fitted to unite in social clubs. The good fellowship is one potent element of strength in associations organized ostensibly and primarily for game protection effort; and as has more than once been suggested clubs purely social might be formed, the requisite of admission to which should be the quality of sportsmanship. This was a favorite plan of Col. Thomas Picton, who, it will be remembered, is one of the survivors of that circle of which Frank Forester was the light. Colonel Picton's notion was that if a club room were provided where members could exchange their hunting and fishing stories, the membership roll would soon be filled and the list of applicants constantly overflowing. It is easily seen that, rightly conducted, such a club might be prosperous; but there are many qualities, other than those pertaining to a taste for field sports, to be considered in determining an individual's fitness for club companionship. There are men who are royal good fellows and most entertaining story tellers, the first time you hear their stories; but who after a while, as with certain companions in camp, become nothing more nor less than bores with their same old stories told over and over again. No more acute torture could be devised than that of being hemmed in in a club room corner and compelled for the forty-ninth time to hear the tale of how A caught his monster bass or B "downed" his deer.

A question of construction of law has been raised. In certain waters, where it is permitted to shoot ducks from a battery, it is forbidden to "sail for" them. Certain gunners have hit upon the plan of secreting themselves in batteries and then engaging boats to sail down on the fowl and drive them to the batteries. It is a mooted point whether this is legitimate battery shooting or illegitimate "sailing for" ducks. On the one side it is contended that the law against sailing for ducks strictly construed means to forbid their being killed from sailing craft; and on the other hand it is urged that the combination of battery and sailing craft is not the usual battery shooting, and violates in spirit if not in letter the prohibition of sailing. The point is one of those which are to be settled only by the courts.

Since our notes on game introduction were in type comes a report from Mr. Otto Plock's pig preserve in the Neversink Valley. Some time ago Mr. Plock brought over from the Black Forest a litter of five wild hogs, and put them out in the fastnesses near Guymard, where it is said they have grown in cunning and ferocity until now they show a formidable front to man and dog. It is said that Mr. Plock's chief purpose in stocking up with boars was to reduce the surplus of rattlesnakes on his domain.

It has been left for Buffalo Bill to project a combination of music, marksmanship and patriotism such as never was witnessed or heard before. He has devised a set of targets, each one connected with a piano key, whereby, standing at 100yds., the marksman may put his shots into the bullseyes and play Yankee Doodle.

A number of extremely interesting expressions of opinion on the Long Island fox-terrier rabbit business have been received and will be published in our next issue, together with some further communications respecting the ethics of fox hunting as practiced in New England.

The series of papers descriptive of the shooting clubs of Chicago, which is begun in this issue, will prove very interesting reading. We have in store a number of wild-fowl shooting sketches, for early publication.

There is much complaint among Ohio sportsmen at the want of a law to forbid the use of ferrets in rabbit killing. The ferreters are booming things all their own way, and the deadly practice is rapidly clearing out the rabbits.

Our next issue will contain a full page portrait of the FOREST AND STREAM'S grizzly now in the bear pit in Central Park. The drawing is by Ernest E. Thompson.

The Sportsman Tourist.

NOTES ON WESTERN FLORIDA.

VIII.—IN THE SWAMPS.

WE spent five days in the camp described in my last paper, and extended our excursions in all directions and exploring the country very thoroughly. One night we were joined by an old negro, known as Uncle Adam, a famous hunter of that country who has passed his entire life amid its swamps and forests, gaining a subsistence by selling the game that falls to his rifle. He must be seventy years of age, but though his form is bent, no sign of feebleness exists; and his long swinging walk, has in it the spring of a youth of twenty. He spent several days in our camp, hunting with us and giving us the advantage of his perfect knowledge of the surrounding country; every swamp brought to his mind some tale of adventure, how he killed a deer here, and how a bear had been shot in that palmetto thicket. Then he gave to us an account of how a few days before he had lost his hound, the faithful companion of years. He had been trailing a deer some miles below our camp, and his dog had been bitten by a rattlesnake and died in a few moments. The old fellow's voice had a touching waver and his eyes were very moist when he talked over the numerous virtues of his lost companion of the chase. One morning he bade us good-by, shouldered the long Ballard rifle, and disappeared in the pines, as silently and as unexpectedly as he had come to us.

On the last day of our stay I started out in the morning somewhat sore over my bad luck in never having had a fair chance; and for a couple of hours I slipped stealthily, using all the caution and woodcraft that was in me, and keeping eyes and ears open for chances. At last I spied, away off in the forest, three head of deer quietly grazing in a glade; they were about 400yds. off; but I began to stalk with the set determination of getting one of them or dying in the attempt, for it somewhat nettled me to be the only one of our party that had not brought in any game up to date. A deer, when feeding, is unable to see for any distance on account of the position of the eyes in its head, but every moment or so it will wag its white stumpy tail and look around for danger. The wagging of the tail may always be relied upon as a sure preface to this raising of the head. Taking advantage of this fact, whenever the tails of any one of those three deer wagged I would stop short and stand motionless, no matter whether concealed from the game or not. It was tedious work. I never saw animals so suspicious, and it seemed that they must certainly wag their confounded tails off. However, I finally got to within 150yds. and knelt cautiously down behind a pine tree to recover breath and steady my nerves, for a deer is a very small object at that distance and requires good shooting. After a moment's rest I aimed for the shoulder of the buck of the bunch and fired, striking, as afterward proved, rather high and too far back. He tumbled over, and before he could recover I had run up to within 75yds., and as he was about to make off gave him another shot, which striking in the neck killed my game as dead as a stone.

The fishing in the creek was excellent, white perch, "brim" (sun perch) and trout being very abundant, while catfish of the most enormous size could have been caught by the boatload. Bondclipper, whose galled heel prevented much walking, turned his attention to the rod and supplied our camp with fish. Catching "brim" is excellent sport; they are a gamy little fish and bite well at almost any bait. The most sporty way to land them is by casting from a bateau with a 6ft. bamboo rod and a 20ft. line. They love to lie in shady nooks close to the bank or behind logs, and it requires considerable skill to drop one's hook into just the right spot without fouling, while the dash made immediately after striking is apt to tangle one's line hopelessly unless great care is used.

Our return down creek was very much like the up trip, except for a circumstance that goes to show what a large amount of badly aimed lead an alligator can stand with impunity. We were steaming along quietly, some miles below our abandoned camp, when the captain called attention to an enormous alligator lying asleep on a sandbar and with its huge mouth wide open. Before we could fire, the headway had carried us around the bend and out of sight of the monster, but reversing engine we carefully backed to within 20ft. without disturbing it, and the entire crowd opened a promiscuous fusilade that made the woods ring. To our surprise and mortification the object aimed at calmly awoke, stretched its great mouth a little wider, as though yawning, and then plunged leisurely into the water and dived out of sight. Any one of us, had we taken time, could have put a ball in the beast's eye that would have instantly settled it, but so short was the distance that we relied on chance, and lost what was about the largest specimen of its kind that I have ever seen in Florida. How long it was, I cannot say, but at least 9ft.

Not far from the apiary a good mark was offered by a water turkey (*Anhinga*), that kept diving along in front of us for a mile or so, and only exposing the long snake-like neck above water; we kept the water splashing from our rifle balls in a very lively manner, until by luck I happened to cut the neck, and our movable target rose no more.

We crossed Lake Wimlico, this time quite calm, and about dark regained the main Apalachee River, up which we steamed at full speed for an hour in search of a suitable landing; but everywhere was the swamp, and it began to look as if we should have to keep on all night, when about 8 o'clock a light was spied on the right bank, and going ashore we found ourselves in the lumber camp of a party of negroes. There was probably no other dry spot for miles, and we were all very tired; so, in spite of the dirtiness of the place, our blankets and provisions were thrown ashore, and we prepared to make the best of the situation. The camp was on a small island of not over an acre in extent, that rose above the surrounding swamps like an oasis in the desert. A rude, rough-hewn plank shed, raised upon four 10-foot piles, served as a house for the five wild-looking negroes who lived there. After supper we sat around the fire, while the owners of the camp squatted like a lot of hounds, to themselves. A more repulsive, brutish-looking lot of men I never saw; and as they crouched in stupid silence, seeming more like animals than men. I could not help recalling to mind many of the tales of Du Chaillu. The scene was so wild and weird, that it needed but the roar of a lion or the light of the Southern Cross to make it thoroughly African.

Here in these great swamps, left entirely to themselves, and away from the civilizing influces of the Caucasian race, the negro may be even in a state not very far removed from true savagery, and tales are not wanting of wild black men that have been seen in certain unfrequented swamps of the lower river. We declined an offer of the use of their shed for the night, preferring to risk exposure to dew rather than sleep, open to the attacks of a certain insect, most probably to have been met with under the shelter. The next morning our blankets were ringing wet, though none of our party suffered any ill effects.

After breakfast we got under way once more, and after a short run reached the Three Brothers. Here we left the main stream and steered up the most westerly of the three rivers. A fine water course of 200yds. in width and very deep; high walls of forest rose on both sides and confined our view to the swamps. About noon we entered a little creek not over 25yds. wide, the mouth of which was almost choked up with the lumber raft of some logmen, who were waiting for higher water to begin their float down the river. We poled this obstruction to one side, and entered what is, I think, one of the most beautiful little creeks in Florida. On either side—there were no banks—tall column-like cypresses grew directly out of the water, their curiously gnarled roots rising above the surface in a thousand strange shapes, while their feathery bright green branches arching overhead kept out the sunlight and made everything lie in a shadow. Long moss hung down in festoons from the boughs, and waved and swayed in the breeze as though animated by life. On either hand stretched away the great swamp with its hundred varieties of flowers and strange trees. Meander could not have been more irregular in its course than was this nameless stream. We followed its bewildering course for half an hour, and at the end of that period found ourselves at a point separated from the West Brother by only a narrow neck of land, not over 10yds. wide, while the mouth, by which we had entered, lay scarcely 300yds. away. We saw absolutely no game, for creeks of this nature in Florida are singularly destitute of animal life. No birds of any kind flit through the gloomy aisles of the forest, and of animals none are visible, though perhaps eyes sharper than ours blinked at us from the heads of the concealed panthers or wildcats among the trees. Even alligators are scarce, seeming to prefer the larger rivers; and, save for the dragonfly that hovers over the black waters or the butterfly that delights perhaps in its own reflection in the mirror-like depths, animation there is none in this stillest picture of still life.

About four in the afternoon we came to a place where the dry land extended down to the water's edge, no common occurrence in that land of swamps; so we took advantage of the natural landing and pitched camp within a rod or two of the creek. Back a couple of hundred yards was the home of a settler, H—. A good-sized field in cultivation, the substantial house and a general air of thrift, made it one of the most attractive-looking farms that I have seen in that part of the State. During the evening our camp-fire circle was added to by two sons of the settler, who joined us. They were clean fellows, and much more hospitable in manner than the generality of the people of that country, entertaining us with tales of their hunting adventures, and very kindly offering to accompany us in our expedition after deer. They had quite a pack of hounds, in which they seemed to take a great pride, and these would be a great help in beating the country, so we lost no time, but arranged for a hunt the following morning, and bidding our new friends good night went to bed to dream of branching antlers and shaking white tails.

Day had scarcely made its advent known by a reddish tinge in the eastern sky, when we were awakened by our guide, who bade us "git up and hustle if ye want to kill deer." With a chorus of yawns and groans all hands scrambled out of warm blankets into the cold morning air. A fire was started by some one, and soon each man was drinking a huge panikin of hot coffee and devouring his bread and meat in silence; then shouldering our rifles we filed out into the gray pine woods with a pack of eight hounds sulkily following in our footsteps.

For an hour H. kept us going at a tremendous pace; how these long, gaunt Floridians can walk when they once take a notion to do so! The way they annihilate distance when on a hunt is perfectly terrific, and not at all in accord with the popular idea of the lethargic southerner. The country through which we passed that morning was very much the same as on Depot Creek—endless pine woods with small jungle swamps—only here the trees were larger and the swamps more extensive; in fact, this stretch of pine barren is one of the most promising localities that I have seen in that part of Florida, some of the land being quite fertile, and the general lay of the country much higher and better watered than is usually the case. About four miles from camp we took stands overlooking the most promising runways of deer from a certain large swamp, while H. and Joe started off with the hounds on a drive.

I was placed to guard a narrow neck of land not over a hundred yards, on either side of which were impassable marshes; it was a likely place, and I examined the charges of my Winchester and sat down with my back to a pine stump, feeling confident of giving a good account of any game that might try to run over me. Deer hunting from stands is a lazy man's method, the only exertion necessary being to keep awake until the beaters get down to their work; then, if game be plenty and the huntsman a huntsman indeed, all drowsiness will vanish in the excitement of expectancy. It is about as glorious a moment as a hunter can enjoy this side of the happy hunting grounds, to hear a pack of hounds in full cry coming toward him, crashing through the bushes, baying more and more rapidly and deeply, until the chorus of quick eager yelps announces the increasing heat of the scent. I sat quietly for half an hour, during which time my attention was pretty evenly divided between a woodpecker in a tree near by and in keeping the members of a colony of gigantic ants from making too close an acquaintance with my person; then at last, away off in the distance, came the noise of the hunt, at times growing nearer, then receding until nearly out of hearing. Finally the hounds struck a trail leading in my direction, and came toward me very rapidly, at first with long, deep bays and then with quicker, jerky barks, until I began to look every minute for a deer to come bounding from around a corner of the swamp. Then I wondered if my chances would be as good if I shot from a sitting position, and I decided to stand up. Unlucky moment! I had hardly gained my feet when a splendid buck that had been making straight for me, wheeled, retraced his steps for a short distance, then turned at right angles to his former course, and dashed away. He was a long distance off, two hundred and fifty yards at least, but in despair I fired four shots with no effect, and he disappeared among the pines, leaving me on very bad terms with myself for having moved at so inopportune a moment. No more deer passed by me that morning, though I heard several shots in the direction of the dogs, and it was with a sad heart that I heard the blasts of the horn announcing that the drive was over and calling us together.

I found our rendezvous about half a mile away, where the party had all gathered and were awaiting me with the great expectations born of hearing my four shots at the retreating buck. In shame and humility I owned up, and received qualified absolution for my misses. H. had killed a doe as she got up before the hounds, and that was the only blood spilt during the morning. We tramped four miles further, crossing a swamp several hundred yards wide by stepping from one bush to another. It was pretty hard work holding on to the branches, hampered as we were by our guns, but all accomplished the feat in safety with the exception of Rusticus, who slipped and fell up to his waist in the slimy ooze and water of the bog. He emerged a most revolting looking object, and a halt was necessary to curry him off with a stick. Then we took stands again, and H. and Joe began another drive. It was an unsuccessful one, however, and we retraced our steps late in the afternoon with nothing added to the solitary doe killed in the morning.

We spent four days in this camp, hunting and fishing to our hearts' content. Joe and Bondclipper each killed a deer, but that was all the large game brought to bag, as, on account of the low stage of water, deer were very scarce in the barrens, having taken to the swamps in search of spring cane. Quite a lot of squirrels and quail were shot, and enough fish caught from the creek to supply our hearty appetites. The farmers were very kind, showing the country and doing everything in their power to make us have a good time. One of them, a boy of eighteen, was a very fine rifle shot and a famous nimrod. One morning, some time before our visit, he had killed fourteen deer during a freshet. In time of high water, when the overcharged channels of the streams refuse to carry the increased volume of water, it overflows the swamps and even encroaches upon the sandy land, very greatly reducing, in places, the area of dry ground. During such times the deer congregate on the higher places, and the number to be found in such localities is often surprising; for, although deer are excellent swimmers when driven to it, they very much prefer *terra firma*, and will always remain thereon as long as possible. It was under such circumstances that H. made his famous score of fourteen head. Mind! ye gun clubs, I do not justify the slaughter, but only state facts. H. probably never heard of game laws in his life, and the man who would attempt to restrict the killing of deer in that country would indeed have his hands full.

From this hospitable camp we returned to the Brother and spent a week with a lumberman by the name of F. He lived in a log camp typical of the country. It was situated on a bit of dry ground of not over an acre in extent, and surrounded on all sides by swamps and the river. The shelter consisted of a rough-hewn plank shed, perched upon the invariable piles and reached by means of a log having pieces of wood nailed crosswise, like the perch leading to a chicken house, while the kitchen was represented by the skillet and frying-pan that lay at the foot of a tree, whose blackened roots showed that many a fire had there been kindled. To this humble abode we were made welcome by the rough but hospitable owner.

The lumbermen of the Apalachee swamps have a bad reputation. Many of them are refugees from the justice of other States, who have sought safety in these morasses. Here they are indeed secure, for once let a man that knows anything of woodcraft get into such a labyrinth of swamps and forest, and nothing can dislodge him; a regiment of soldiers and a battery of artillery would be powerless in the silent, unknown ways of those vast wilds. And so it is that these woods are full of outlaws, or rather men that have been outlaws; for in their new homes most of them lead honest, hard-working lives, seldom leaving the woods, one or two visits a year to town being about all that they see of civilization. They are, as a rule, hospitable and peaceable men, unless under the influence of drink, then some of them are dangerous in the extreme, for it is "fighting whisky" that they generally get when on a "tear," and the invariable result of a visit to town is a series of fracases among themselves. Of course, one sees some very desperate characters, men who would not hesitate at any crime, but misdoings may be traced to liquor. F. was a short, thick-set man of about thirty-five, with a red face and very red hair; he was a nervous, excitable fellow, whose quick, restless eye seemed always on the lookout for an imaginary pursuer. It was said that he had been obliged to fly from Georgia on account of a killing scrape in which he had been implicated, and he bore a very bad name among his companions, as being a reckless, desperate fellow. Such, however, we did not find him, for during our stay of a week this hitherto total stranger entertained us to the very best of his power, dropping work to guide us to the best shooting grounds, paddling our canoes, and refusing upon our departure to accept of any remuneration for his services.

Illustrative of the character of these men, their immunity from the consequences of hardships and exposure, and their semi-alligator nature, I will relate a circumstance that occurred during our stay. One morning as F. and I were paddling up the river in a bateau, my hunting knife slipped out of its sheath and fell overboard. I made some remark of regret at the loss, when to my surprise down went my companion after it, without even waiting to take off his shoes and scarcely his hat. The water was 10ft. deep and very cold, but after diving several times my lost blade was finally brought up. Notwithstanding the fact that he was soaking wet and exposed to a chilling wind, F. would not hear of going back to camp, but kept on with the hunt for several hours, during which time he was obliged to sit cramped in the canoe; yet he suffered no bad effects from his wetting and laughed when we spoke of his catching cold.

A few months after our visit this same man who gave up his house to us and did everything in his power for our pleasure, killed in pure wickedness four defenseless negroes. It seems that he had been to town and was returning home in his bateau with a new Winchester rifle that he had just purchased. On nearing camp he saw six negroes sitting on the bank, and to use his own words, "wishing to see if the gun was any account," he popped away at the poor devils, who tried to make their escape as best they could, but left four of their number dead on the ground. He afterward told a steamboat man of my acquaintance that "the gun was good enough, for he killed four out of six, and it was not a good day for killing niggers either." Efforts were made to bring him to justice for this outrage, but he shouldered the gun that had done such murderous work and took to the swamps, where no one could or would follow, and since then it is reported that he has left the country.

Not very far from camp there was a small island, in the midst of the swamp, that was an impenetrable thicket of cane and palmetto, through which one could with difficulty force his way or even see for more than a few yards; long vines hung from the trees, adding to the tangle, and the dead leaf accumulations of years made a carpet of soft mould in which the feet sank for several inches. This place was literally overrun with game of all kinds; deer, bear, wildcat, turkey, coons and, in fact, every variety of animal to be found in Florida, had left its track in the soft ooze close to the water. We used to beat this thicket every day with our two hounds, but it was only a matter of chance with the odds strongly against us, on account of the bushes, which were so thick that though deer were frequently heard galloping a short distance away, they were completely hidden from our view. I killed an old doe by firing rapidly with my Winchester at her retreating form, of which I barely had a glimpse ere she was out of sight, and though my game fell dead within 25yds., it was some moments before I knew whether I had made a hit or miss. F., who was as dead a shot as I saw among the backwoodsmen, killed two bucks, and they, with my doe, completed the bag for the week. It was near this jungle that I saw for the first time a flock of the beautiful Carolina paroquets, but I understood from the natives that they are quite abundant in the woods at all seasons of the year.

We had opportunities during our stay with F. of seeing something of the lumber industry as well as of the logmen. It is a hard life that they lead—a damp, cheerless struggle for a mere subsistence—nine months the men are wracked with ague, and during the balance of the year, cold winds from the gulf make the climate anything but an agreeable one. Most die violent deaths, either by drowning or being caught in log jams, and the constant exposure makes consumption very prevalent. The work is badly paid, the sawmills at Apalachicola having reduced the price of logs to a mere song, but there is no other market at hand and the men are obliged to submit with the best grace possible. Yet with all these drawbacks, many like the life, and I know well educated, intelligent men who prefer the wild existence of a lumber camp to any easier business; there seems to be a peculiar fascination about the swamps in their lonely grandeur, and a feeling of strength and manliness in felling the great forest giants that rear their heads aloft in all their glory.

Most of the land upon which the timber grows belongs to railroad corporations, it is utterly worthless save for the lumber, and is generally under water for the greater part of the year. Efforts are made to compel the logmen to pay a certain amount for each tree felled, but it is rather up-hill work in spite of the level nature of the country, and the collector of such tolls is not very apt to fare well in the pursuit of his duty, as it is impossible to keep up with the quantity cut, and many of the men refuse to pay the price asked, so that not much stumpage enriches the coffers of the railroads. Cypress is by far the most valuable of the trees, it grows best in water several feet deep, and the labor of cutting down and hauling out the ponderous logs is very severe, the men having frequently to stand all day knee-deep in the mud and water of the bogs. Owing to its weight cypress will not float when green, but has to be killed by "knicking" when the sap is down; then the trees are felled and sawn into logs, after which they remain where they are until the first freshet makes the water in the swamps sufficiently deep to float them into the main stream. Here they are made into long rafts and, together with some pine timber to add to the buoyancy of the whole, are floated in the current to Apalachicola. Pine lumbering is not so severe; the trees generally grow upon comparatively high and dry ground, and the logs are much easier handled owing to their being lighter than cypress. When cut some distance from a stream they are transported by ox wagons to the water, and there made into rafts essentially the same as in the case of the heavier cypress. Of course cypress is very much more valuable than pine, and commands a higher price at the mills.

From the camp of our desperado host we made a quick run down the Brother to the main river and thence to Apalachicola, the trip of twenty-four miles being made in three hours, including a stop for wood. Once more in town we made a beeline for Uncle Bill Fuller's hotel, where we reveled in clean sheets and comfortably made beds. Camping is all very well, and none enjoy it more than I do, but it must be confessed that after one has been sleeping on the ground for a couple of weeks a civilized bed is relished and appreciated.

Our trip was voted a success. We had not made a very brilliant score on game, nor had our fishing achievements been phenomenal, but we had seen something of a curious country, and gotten to know a strange race of men, and it was with feelings of genuine regret that we bade the captain and Joe good-by, and watched the little Ellen steam up the river and out of sight.

A. M. REYNOLDS.

John Patterson, West Goshen, says he witnessed an incident in fox hunting on Saturday that he never before heard of. The hunters were giving reynard a good chase, but the animal was a good distance ahead. Mr. Patterson saw the fox approach his house through the cornfield and he could hear the sound of the dogs as they sped in that direction. But the fox did not seem one bit alarmed and, strange to say, he was even composed enough to stop and secure one of Mr. Patterson's chickens before going further. The chicken he took and went on over the brow of an adjacent hill, and at the same moment the hounds hove in sight.—*West Chester Local News.*

Natural History.

THE LITTLE CHIEF HARE.

Editor Forest and Stream:

Not a number of the FOREST AND STREAM but starts a half dozen topics I wish to hear discussed by the brethren or to which I wish I could add a word myself. In your issue of Dec. 6 I rejoice to see again the handiwork of "Yo.," and I hope it is but the beginning of another series of his delightful papers. A trip over the Northern Pacific Railroad last summer—flying one though it was—carried me near enough to the Walled-in Lakes to excite me with the wish to explore them, and the sight of Indian tepees and colloquies at stations and on reservations with Crows, Blackfeet, Piegans and Stonies, increased the interest.

I must beg space for one more word. In a recent number Dr. Shufeldt briefly describes the little chief hare, but says that he has never seen it, though he has heard its cry among the mountains of Wyoming. If he wishes to secure specimens for study I am sure I can make it easy for him, as I can put him in communication with a gentleman whose home is in their haunts and by whose kindness I secured a specimen last summer.

Two years before, on making the ascent of George's Peak in Colorado, I noted the Rocky Mountain marmot so well described by Dr. Shufeldt, and also a little animal called cony by the mountaineers, but with which I was entirely unfamiliar. It was, as I afterward learned, the little chief hare. It was very abundant on the rocky upper slopes of the peak, running swiftly in and out of the rock heaps, and uttering its shrill, clear, but thin cry, which had something almost plaintive in it, a mountain cry, just suited to the high altitude and thin air. I had no firearms with me then, but studied the little creature as well as I could with my glass and marvelled much what means of sustenance it found where almost every trace of vegetation had disappeared. The marmots do not as a rule, I judge, go so high, though their large size and greater needs would seem to the uninitiated to indicate a rather slim pasturage where we found them.

There is something queer about the marmots, too, for in Switzerland I have certainly heard the vigorous whistle of the Alpine marmot hundreds of feet higher than I could trace any vegetation whatever, mere desolation of rock and snow, and separated by a broad and deeply crevassed glacier from any bare ground or rock which did produce plant life. Who knows but the animals have Alpine clubs and that the marmot I heard was a brave explorer, and carried for provision a little wad of grass in his pouch, nibbled from the slopes far below. But to return to the little chief hare. On ascending Gray's Peak again last July I again heard the animal all about me, and the son of my host and guide shot for me a specimen, which interested me not a little. I had always supposed that the little chief was a genuine hare and found further to the south, but here he was in great numbers, and having to my eyes more points and resemblance to a rat, though thicker set and a much more respectable looking animal every way. It had no tail at all, and its fur was a soft gray without the long hairs of the rat. I had no means of preserving my specimen, though much I wished it, and so I gave it to the seller of natural history specimens at Rawlings on the U. P. R. R., who promised to preserve it.

C. H. AMES.

AN INTERESTING HYBRID.

IN another column will be found some remarks on the introduction in America of foreign game birds, and below we give an account of what is believed to be a hybrid between two grouse, the ptarmigan of Newfoundland and the black-game of Europe, whose introduction into Newfoundland was recorded in these columns. Such a hybrid would hardly be expected, for though different species of pheasants often breed together, different species of grouse do so but seldom. The *Evening Mercury* (St. Johns, N. F.) says: "It will be remembered by most of our readers that, in the fall of 1886, the introduction of black-game into Newfoundland was carried out by Mr. Robert Langrishe-Mare, one of our keenest sportsmen and most successful deer slayers. The experiment was watched with great interest, not only by the lovers of field sports, but by the public generally. If this noble bird should thrive here, and extend over the island, a valuable addition would be made to our stock of game, and the country would become much more attractive to sportsmen from other lands.

"The first shipment of these birds arrived here on the 21st of October, 1886, from Scotland; and a second on the 3d of December. In all something like twenty brace was brought, three birds only dying on the passage. They were at once conveyed by Mr. Mare to a suitable locality, about six miles in from 'the half-way house,' between Holyrood and Salmonier. The second lot were taken to a place a few miles nearer Salmonier. On being liberated they at once took wing, flying vigorously. Our Legislature wisely passed a law to protect the new importation for five years.

"Since the foregoing arrangement was carried into effect accounts have been repeatedly received, showing that the birds were thriving well and rapidly increasing in numbers. Already they are reported to have been seen in Bay St. George, so that they have actually made they way across the island in that short time. They were also seen at Trepassey, on the southern shore of the island.

"All this is very gratifying, showing that the black-game have taken kindly to our soil and climate, and are likely to find a congenial home here. Mr. Mare has the satisfaction of seeing his praiseworthy efforts crowned with success.

"But 'it is the unexpected that happens.' A day or two ago a bird was brought from Trepassey which was supposed to be one of our common ptarmigan. It attracted the attention of Mr. Mare and others, and on examination it was found to be a cross between the recently imported black-game and our ptarmigan, having the characteristics of both intermingled. It has the forked and crested tail of the black cock, with two black feathers tipped with white in the fork. Its beak is the curved short beak of the black-game, quite different from that of the ptarmigan, and its claws are also those of the black cock. The plumage on the back is an intermixture of the feathers of both species, and the color is brown with black spots or bars. At this time of the year our ptarmigan have turned completely white, but in this specimen the belly only is white, and some of the feathers on the wings; and these are the same as the ptarmigan in appearance. The back is brown. It is evidently a bird hatched this season, but it is nearly twice the weight of a ptarmigan of one season.

"It is a very handsome bird, and all our sportsmen who have examined it pronounce it to be a cross between the black-game and the ptarmigan. We believe that this is the first known instance in which such a crossing has taken place; and certainly no one ever anticipitated such an intermixture. Much interest in it has been awakened here, and Mr. Mare's office was quite thronged yesterday with persons anxious to see the strange bird.

"It is too soon to speculate from this single specimen as to the possible effect of the crossing of these two species, should it prove to be common. This much is certain—that the black-game have been repeatedly seen in company with the ptarmigan, the coveys being mixed. Whether the hybrid will prove to be fertile, and whether the crossing will result in an improvement on the ptarmigan, only time will tell. The male bird of the black-game is twice the size of the male ptarmigan, and the female is also much larger. Should the hybrid prove to be capable of breeding, variations would go on indefinitely, resulting possibly in the distant future in a new game bird. Meantime much interest attaches to the singular specimen we have described."

GRASSHOPPERS AND HAWKS.

BY DR. C. HART MERRIAM.

DURING the evening of Aug. 20, 1888, Mr. H. W. Henshaw and I drove from Pendleton to the Umatilla Indian Agency in northeastern Oregon, about fifty miles east of the Great Bend of the Columbia. It had been so hot during the day, the thermometer standing at 104° in the shade, that we were unable to go out. Driving along the crest of the plateau just south of the Umatilla River, at about sundown, we were astonished to see a very large number of large hawks hopping about on the ground, catching grasshoppers. We counted about 150 of these hawks, and there must have been at least 200 in the immediate neighborhood. At first we took them to be rough-legs, but later ascertained that nearly if not all were Swainson's hawks (*Buteo swainsoni*). The period between sundown and dark in that region is so short that the birds were still catching grasshoppers when overtaken by darkness.

About 6 o'clock the next morning I visited the same place and was gratified to find the hawks engaged in making their breakfast of grasshoppers. They were scattered over a larger area than when we saw them the previous evening. Before 8 o'clock most of them had left the hills and settled down for the day in the poplar trees along the river bottom. Here I found the trees literally full of hawks, and counted as many as thirteen in one tree. Two of the three whose stomachs were examined contained grasshoppers and no other food. The third contained, in addition to grasshoppers, the head of a meadow mouse of the genus *Arvicola* (sub-genus *Chilotus*). One contained 88 grasshoppers, another 96, and the third 106. Most of the grasshoppers were a large species of *Œdipoda*, though a few belonged to the genus *Caloptenus*.

Assuming that each hawk captured 200 grasshoppers a day, and that there were 200 hawks, the daily catch would be 40,000 grasshoppers. At this rate these hawks would destroy 280,000 grasshoppers in a week, and 1,200,000 in a month. I have no means of knowing how long the hawks remained in the neighborhood of Pendleton, but was told that they had been there before our visit. When in southern California about a month later I was told by Mr. Edward Merriam that on three occasions he had noticed similar gatherings of hawks in San Diego county. Once he saw a flock of several hundred large hawks catching crickets in cracked adobe soil in the San Marcos Valley. At night the hawks came into the live oaks at the head of the valley to rest. He shot one and found its stomach packed full of large black crickets. On two other occasions he saw large flocks of these hawks similarly engaged in catching the same species of crickets. The time was during the latter part of September.

Mr. Angel, of San Luis Obispo, Cal., told me that he once saw a large number of large dark-colored hawks flying about over the edge of a prairie fire near Chico, in the Sacramento Valley. The air was full of grasshoppers, driven out of the grass by the fire, and the hawks were catching and feeding upon them.

Mr. T. S. Palmer, of Berkeley, Cal., has kindly furnished me with the following interesting communication on a flock of hawks observed by him at Pomona, Cal.:

"While spending the summer of 1887 at Pomona, Los Angeles county, Cal., I was much interested in a 'flock' of hawks which remained in the vicinity during the month of August. The fact of their congregating in such numbers may be attributed to two causes: (1) exceptional abundance of food in a particular spot; and (2) the fact that most of the birds were buteos (*B. swainsoni* predominating) which were migrating slowly southward.

"Their favorite resort was a sandy spot a mile east of the town, well out in the middle of the valley, and quite a distance from the neighboring mountains. A single irrigating ditch supplied the only water to be had, and to it all the birds in the vicinity were accustomed to resort to drink. Rocky and dry as the spot was, it was sparsely wooded with sycamores and live oaks, and overgrown with white sage, cacti, elderberry bushes, etc. About the first of the month the hawks become common, and although at times scarcely any could be seen, a day or two after they would be present in greater numbers than every before. On the 22d of August I succeeded in getting quite close to the flock, and counted fourteen hawks circling about together, much in the manner of turkey buzzards, and not more than 50 or 75yds. from the ground. Nearly all seemed to be young birds, chiefly *Buteo b. calurus* and *Buteo swainsoni*, although there were several which I was unable to identify. All were intently engaged in hunting, and I have little doubt that they were feeding on grasshoppers.

"During the month I secured but two specimens. The first taken on the 4th of August, and proved to be a ♀ *Buteo swainsoni* in very dark plumage. Upon dissection the gizzard was found to be tightly packed with grasshoppers, and the bird had no doubt gorged herself, for when

I approached the tree in which she was sitting she made no attempt to fly, even when I was almost under her. My second specimen, a typical ♂ *Buteo swainsoni*, was taken on the morning of August 31. Both the gizzard and œsophagus were filled with grasshoppers, and out of curiosity I undertook to ascertain their number. I found 110 pairs of the large hindlegs, while an assistant counted 133 heads. It is safe to say that this hawk had captured 125 grasshoppers before 9 A. M. If this can be considered as the average number killed per day by each bird, the total number killed by the flock during their stay in the vicinity must have been something incredible.

"About the 1st of September the hawks disappeared, and although I visited the place several times during December and January, as well as during the summer of 1888, I never saw more than two or three at one time circling about in search of food."

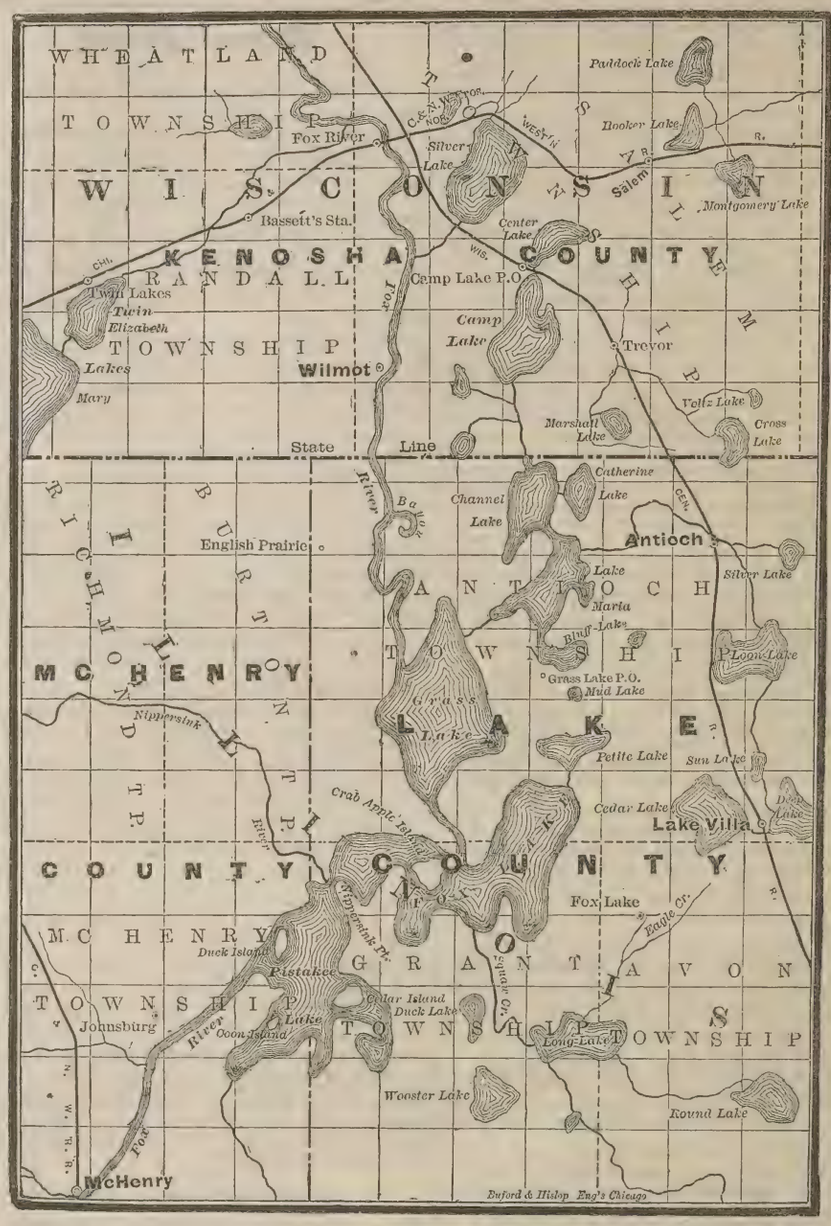
Perhaps some of your Western readers may record similar occurrences.

Game Bag and Gun.

SHOOTING CLUBS OF CHICAGO.—NO. 1.

THE FOX LAKE DISTRICT.

WHEN Abraham Lincoln was a young man there were muskrat houses where the Chicago City Hall now stands. All about Chicago and to the west and southwest especially, stretched unbroken miles of what was then thought to be worthless prairie land. The cooncapped settlers of Illinois clung to the timbered districts of the Kankakee, the Illinois and other streams, and ventured not forth upon a wind-swept plain whose soil, since it appeared too poor to grow trees, seemed to their eyes unfit for a crop of any life-supporting grain. Chicago, situated fairly in the middle of one of those vast marshes which at intervals threaded this worthless tract, was in her first struggle at growth sneered at as a wildcat town, and the Boston men who—as Boston men have ever since devotedly done in the development of the improved West—sunk their money in such risky securities as those of such a wildcut town, were pitied or derided by even the rough deer hunters of the Kankakee. The Boston man is easy victimized, even to-day. He could never, nor has he learned to resist the fascinations of a well-colored town map. For that Boston man, however, who braved the long and dangerous voyage by lake boat and stage coach, and found finally the spot where his money had vanished among the rat paths of what is now Chicago, there remained but the one course of despair. Chicago was built on a foundation of sunken wealth. We dig it up to-day, and often it has been returned to some foolish investor, or to his children, and returned increased a hundred thousand fold.



Counting what is part of Chicago, she is the second city of America. Counting what Chicago is and can do, she is the first city of the earth. Of her wonderful growth, almost superhuman in its phenomena, it was not possible for human mind to reckon. Of the wonderful changes which have occurred in that growth it is not possible for the human mind to more than faintly reason. They tell you that there was until lately very good canvasback shooting where a certain rolling mill now stands; you hear it, but do not understand it. My friend tells me that a few years ago he shot ducks on the exact spot where Potter Palmer's Northside winter mansion stands; my friend could not lie, but how could he shoot through those massive walls?

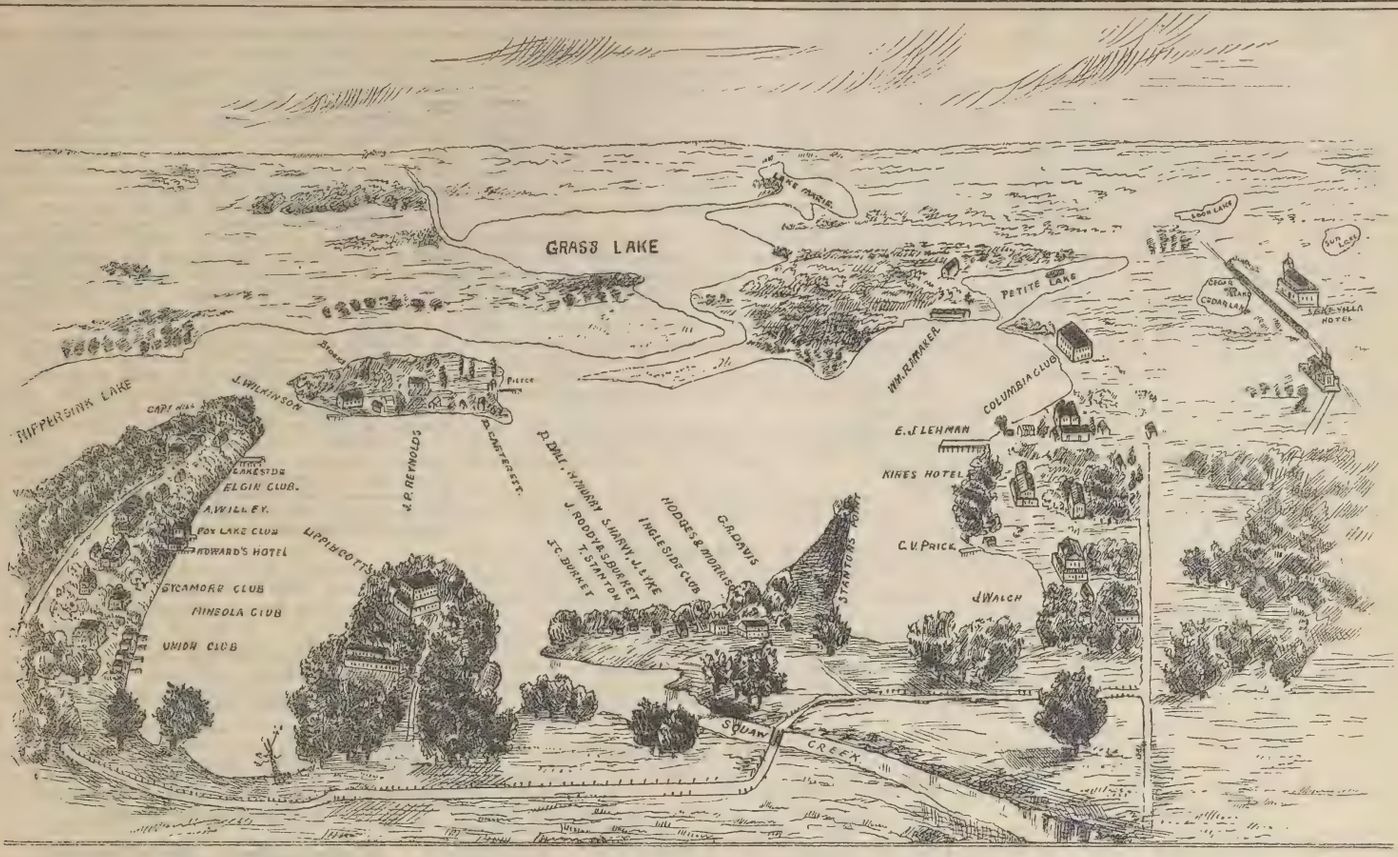
Clearly the Chicago man is a being of his own kind. Chicago cares nothing for the methods of another city; she has methods of her own. The only way you can appeal to a Chicago man is through the medium of ideas and of enterprise. If you have not been there, stay away from Chicago. Go to Boston or New York, or some other quiet and sleepy neighborhood.

It might have been supposed, though it has not been supposed, that Chicago men would know how to play as well as they know how to work. The conventional picture of the Chicago business man as being a careworn, overworked individual, with no soul above a dollar and no nose above a grindstone, is an altogether inaccurate and erroneous one. Quite to the contrary, the Chicago man knows how to take generous recreation as well and better than any other kind of a man. Chicago theaters are as good as any. Chicago city club houses are models of taste and luxury. More than all that, the Chicago man has due appreciation of the fact that only the outer air is good; and into the sports of the outer air he has gone with a thoroughness, a comprehensiveness and an intelligence which cannot be claimed by any other city. It shall appear later on in these articles that this is true not only of what is called the natural sporting class, but of none so much as our very best business men and most prominent citizens.

It is a common saying that Chicago has anything you want. Singularly enough, this is true even for the sportsman. Many a Western man has been surprised to learn that within fifty miles of Chicago there was better duck shooting than he ever saw, and bass fishing such as he hadn't had a legitimate chance to dream of; and he has been surprised at the ease with which regions could be reached near at hand to the city, abounding in deer, in trout, in ruffed grouse, and almost every kind of small game. The fact is the city lies in the middle of what is naturally a magnificent game country, and not even these continuous years of settlement and not the hiving here of countless swarms of motley humanity has served to frighten the wild game from its territory or clear the wild fish from their accustomed waters. Upon the north lie the unexhausted woods of the two peninsulas; nearer yet are the woods and streams of Wisconsin; below are the marshy bottom lands of the Kankakee and Illinois, the finest duck grounds out of doors; while any way you look there are pretty little lakes offering comfort and pleasure for a summer day. It is not fiction to say that in matters of sport also Chicago has all things in her hands. That Chicago would wisely foster her best interests in the matter of sport, as in all else, and that the characteristic ideas and enterprise would be shown in her method of doing this is, I say, a matter which might better have been expected, since it is really so plain a fact.

It was known in a general way that Chicago men had bought shooting grounds not far from the city; that they had preserved tracts of duck marsh; that they had in some instances erected club houses; but just the extent of what that means, and just the completeness and thoroughness implied in carrying that out, was left, I believe, for FOREST AND STREAM to learn. Certainly no other newspaper, so far as I know, has ever investigated this, certainly an interesting field.

MAP OF THE FOX LAKE DISTRICT.—BY COURTESY OF THE JOHN WILKINSON CO.



A glance at the accompanying map—prepared, by the way, as a matter of enterprise, by a firm which sells great quantities of fishing tackle to frequenters of that region—will show the general features of the best known sporting ground near Chicago, the Fox Lake district, famed for redheads, canvasbacks, big bass and pickerel.

The Indian whose canoe first parted the wild rice along these shores never lacked game or fish for his fire; the trapper of the past generation found his traps always full of fur along these waters, and the market shooter reveled in unstinted slaughter. Even to-day there is part of the old abundance left, and quite enough to warrant the general occupancy of the larger lakes with the club houses and cottages of Chicago's men of means. How general this occupancy has been is best seen by an examination of the appended birdseye map of Fox Lake and the immediately adjacent waters.

Fox Lake, the largest and deepest lake of the system, is an irregular sheet of water, about three by one and a half miles in dimensions, and is possessed of features of some picturesque interest, its banks being in great part heavily wooded and of not unpleasant outline. In depth the lake runs from shoals to eighty feet it is said. It has always been a great fishing ground for bass, pickerel, croppies, sunfish and other sorts, and the angler who understands his art can still be sure of a good creel there. The reedy shallows of the lake afford fine breeding grounds for the fish, and its deeper waters protect the big fellows from a too greedy persecution. A still better breeding bed exists in Grass Lake, which lies directly north of Fox Lake, connected by a long and winding channel. Grass Lake is a vast and shallow sea of rice, reeds and rushes, filled with numerous spots of deeper water. For the greater part of the year it is altogether impenetrable to the hunter or fisher, and cannot be troubled with line, spear or net. Camp Lake, Silver Lake, the Twin Lakes and Lake Maria are other lakes of the system which show good strings in the fishing season, and so does Pistaqua or Pistakee Lake, which is also one of the duck-shooting lakes. It is with Fox Lake, Grass Lake and Pistaqua Lake that the greater portion of our present interest centers.

In Lake county alone there are said to be over forty lakes. In two townships over one-half the superficial area is water, and good duck and fish water at that. The system offers for duck feed, wild celery, wild rice, the "marsh potato," spiral grass, smart weed, and many aquatic plants to which wildfowl resort less willingly. The deep-water ducks, canvasbacks, redheads, bluebills and ringbills have always made a heavy flight to the Fox Lake celery beds, the first this side of Koshkenong Lake, some distance to the north. Grass Lake, shallow, full of wild rice and other feed, is patronized by the mallards and teal more especially. Both classes of ducks trade along the river or cross the bluffs to Pistaqua Lake. Besides the varieties named there are found in less numbers the widgeon, ruddy duck, ringneck, goldeneye and bufflehead, with the sheldrakes, mergansers and that ilk, and some geese and brant. Swans are once in a while noticed, but none has been killed of late. Among the marsh ducks also are the "black mallard" (dusky duck), pintail, spoonbill, gadwall and woodduck. There is some good snipe ground about the lakes, and very decent bags are made in season. The spring flight of deep-water ducks is usually very heavy, as might be expected along so extended a chain of big waters holding feed, and until this lamentable fall there has generally been abundance of shooting for the many shooters. Only a portion of the territory is owned by the Chicago clubs, and the hotels can accommodate the visiting sportsman and supply him with boat and pusher. When one considers this, and when he further considers the crowded appearance of the lake shores, which look more like a village than a shooting locality, he will be surprised to hear that almost any one of the numerous bays affords good shooting. The ducks do not appear to mind the houses, but feed out in the open water in full view. It is rather an anomalous state of affairs, and shows nothing more clearly than the persuasive powers of wild celery. About as good fishing as any the lake affords is directly in front of the Howard House stairs. A Mr. Anderson, of this city, once took a 35½lb. muscallonge there. Two other gentlemen once caught an 18lb. muscallonge near Crab Apple Island. A 14-year-old boy with a common cane pole caught one of 32lbs. Dr. Bell, of Chicago, landed one of 31lbs. Yet another weighed 42½lbs. Large pike are also taken in the deep channel leading out of Grass Lake. The channel is clear, running over a sandy bed, and the banks of rushes and lilies on each side afford good lurking places for the big ones.

Among the good flyway points on Fox Lake are the little channel between Petite Lake and Fox Lake, the river bays between Nippersink and Fox Lakes, and the top of the wooded hill between Fox Lake and Pistaqua Lake. The latter stand lies just above the building marked "Union Club." (There is no Union Club now, that body having been absorbed by the Mineola Club).

There is a high narrow ridge between the two big lakes here, and an open spot in the timber on this high, dry, ridge, a most unlikely-looking spot, sometimes yields a good bag to a shooter who can hit a small body of lubricated electricity. There is a little round pond visible from this ridge, not shown on the maps, in which two guns last fall bagged 180 bluebills. This, however, was with decoys.

The art of shooting over decoys is highly perfected on Fox Lake. The cover on the main water is very poor, and artificial blinds must be used. These are sometimes constructed of oak boughs or rushes, tied to a frame whose supports are thrust into the bottom of the lake. The shooting is done from the boat, which is anchored in the blind. The canvas blind, described in detail in a late article as a gunny-sack cover spread on a stretching frame to a height of about 3ft. above the boat, is rapidly coming into favor and general use. I should think some of the blinds mentioned as used by some of the river clubs could be introduced with good results on Fox Lake, and perhaps some shooters there may use them, although I do not know of any such.

The method of shooting is to go out in the morning and find some bay where a bank of birds are feeding, whereupon they are quietly driven out, the blind arranged and the decoys put out. The ducks come back to feed, and come in usually in twos and threes, or in small bunches, in the best way for shooting. This, at least, is the theoretical way they come in, and the actual way when the birds are "new." They soon become wary and decoy very little except in the dim light or unusual changes of the weather. Last spring, on one day between the hours of 9 A. M. and 12 M., Dr. Baxter bagged 14 bluebills and ran out of shells. Two thousand ducks once went down the lake as one steamer load, the product of two days on the lake. This is a sample of what the decoy shooting sometimes is. Of course, the shooting is best in the spring, as ducks then decoy more readily. Among the favorite localities on Fox Lake are Willow Point blind, across the lake from the bluff, Indian Point, Ingleside Bay, Willard's Cove and the bays at the head of the lake. Along Pistaqua Lake are Slough Bay, Redhead Bay, Eagle Bay, Meyer's Bay, Drury's Bay and the point which runs out below the old Cedar Island Club.

The favorite boat on Fox Lake is not over 12ft. long, double-ended, flat-bottomed, decked and combed. These boats ride a very heavy sea, provided you don't attempt to run them end on. Wallowing in the trough, they seem never to take any water. This was a new style of boating to me, but it seemed to work. There are, of course, many sailing craft, and two or three beastly little nuisances of pleasure steamers, whose skippers take a wild delight in cruising through the center of the lake and keeping the ducks stirred up from their only resting ground.

There are some matters which should receive the strong attention of those interested in the continuance of Fox Lake as a pleasure ground. One of these is fishing through the ice during the winter; it is destroying the fish at a terrible rate. Another is the continual harrying of the ducks in the open water, and the incessant "coasting" them up along the shores in the morning. Not a boat ought to go out on the lake before full daybreak, and each boat ought to go directly to its own stand, and leave the edges of the lake alone. Shooting on the middle of the lake should be stopped entirely. Thus the ducks would have given them a chance to feed and a chance to rest, and would not be so apt to entirely desert the region, as they may soon do unless a change is made. To try to row up on a bunch of ducks in the open lake, and by repeated firing of heavy charges to perhaps scratch down one out of fifty shots, is not sportsmanlike, and sportsmen should endeavor to have it stopped. Let each shooter keep to his blind or flyway, and the total result will be very much greater. The ducks must have some chance, or they cannot be expected to stay.

The birds-eye map gives a fair idea of the general lay of the lake, and is accurate in its essential features. To the left, along Nippersink, there lie a few landmarks which are not shown, among others Harry Dunnell's house and the residences of Rob. Stanley and Capt. Hill, the commander of the steamers Mamie and Mary Griswold. The visitor to the lakes can take a steamer across from the east shore, or if he wishes to go to one of the larger club houses or hotels or the bluff, can follow a winding and not very good road, six miles around the lake.

This district can be reached via Northwestern Railway to McHenry, where a journey by stage or steamer of six or eight miles is necessary, or by the more generally convenient route of the Wisconsin Central, which runs on up to the Wisconsin Lakes of the system. The usual point where the club men disembark is Lake Villa. The schedule rate for a round trip ticket from Chicago on Lake Villa is $2.45, on Camp Lake $2.90, on Silver Lake $3. A twenty-five-ride commutation ticket on Lake Villa can be purchased for $12.45. The distance is only about fifty miles, and a shooter leaves the city at 3 P. M., arriving at the club house for supper in the evening, and in time to make all preparations for the morning shoot.

From the above preliminary and necessarily rather guide-bookish description some little idea can be gained of this, the most general playground of Chicago. In the summer time it comes as near as anything to being Chicago's Coney Island; but in the shooting season it has a sterner aspect, and you may meet here nearly every well-known shooter of the city, including many members of the clubs below town. If there are ducks anywhere, there are ducks at Fox Lake, and many duck hunters who have strayed away after other idols are glad to come back to the Fox Lake country when they hear the flight is on.

There are a number of clubs and private citizens owning property on the shores of Fox Lake. Several neat cottages adorn the little island known as Crabapple Island, as shown in the birdseye map. The more important club houses lie along the picturesque west shore, whose wooded bluffs reach back to a considerable height. The sites of these club houses are picturesque in the extreme, and a sojourn in one of those abodes is enough to rest a tired man, whether he gets any ducks or not.

The club intended for specific mention on the following week is the Mineola Club, a very strong and thoroughly representative body of Chicago sportsmen, a complete list of whose names will be given. E. HOUGH.

175 MONROE STREET.

DUCKS BY THE BARRELFUL.

Editor Forest and Stream:

You are often asked, "Where have the ducks gone?" Let me tell you where some have gone. Two weeks ago I was on my way to Arkansas, when our train stropped at Paw Paw Junction. This is just at the edge of the "Sunk Lands" of the St. Francis River, Arkansas. On the platform were twelve barrels and two sacks of mallards for a produce house in St. Louis. On the night before nineteen barrels were shipped from the same place to the same house. Here were thirty-one barrels and two sacks sent out in two days. The smallest barrel was marked "sixty-four mallards."

Now, let the gentleman sportsman figure up, and let him add a fair number of cripples and ducks lost in the weeds, and he will get some idea of what these market-shooters are doing. These fellows own nothing but their guns and dinghy boats, and follow the ducks to their bedding waters werever they go; yet, with infinite gall, they have posted up notices warning outsiders against coming there to hunt. It is probable that not one of the gang ever saw a tax receipt (of his own) in his life; yet men who do something to keep this country going must stay away that they may kill and sell. Every little time I see some crank who defends the "poor market-hunter." I wish men of this stamp could have seen this pile of slaughtered ducks. I know you are doing all you can, but why in the name of heaven can't we get up some laws to stop the sale of game. That is the only thing to do. Must the tens of thousand of true sportsmen all over this land give up their sport in order that a few market-hunters and a few produce houses may make money? Year by year we go further and get less; and it will be only a question of time till all American game will go just as the buffaloes have gone. EARNEST.

ADIRONDACK DEER.

NUMBER FOUR, N. Y., Dec. 10.—*Editor Forest and Stream:* I am in favor of anything that will tend to save the deer. A law to prohibit the killing of does would be an excellent measure of protection. Something needs to be done to protect both the does and bucks if we would have deer long in the Adirondacks.

The extension of the open season for hounding was the best possible thing for the destruction of Adirondack deer that could be devised. More than twice as many deer were killed during the last fifteen days as during all the rest of the open season. Deer take to water much quicker as the season gets later. During September, especially the first half, deer do not like to swim, and will throw the hound off the track by running into small streams or skirting along the shores of lakes. Besides, in October farmers and most people living around the borders of the woods have their work done and are ready for a hunt, and every dog that will follow a deer is brought into requisition. The three deer and one deer transportation law does does not apply to the hounders; they jerk all the surplus, and it is brought out of the woods in that way. I know of parties that went into the woods last October and numbered more than twenty hunters with nearly as many hounds. If they killed three deer each it amounts to nearly one hundred deer. I agree with E. S. W. that if there must be any hounding at all let it be in September. But why have any hounding at all, if destructive, which every one knows it is? For, like crusting, it brings the easy killing of deer within the reach of all. Will some one explain the difference in the principle of driving them into the water where there is no chance of escape and catching them in the deep snow. I think that of the two modes crusting is more to be commended as it does require long tramps on snowshoes, and a good deal of labor. I believe the time is not far distant, when whoever taking advantage of its instinct by driving a deer into the water with a dog, and it is while there deprived of all means of escape, sets upon him with his boat, repeating rifle or club, whichever weapon best suits his fancy, and murders him, will be rated with the cruster. It requires no more skill nor experience, and I believe is no more honorable nor sportsmanlike.

I do not see any objection to having the open season extended to Dec. 1, so long as one is restricted to three deer. Not one in a hundred can exceed that number were he to hunt the whole of November. There seems to be a growing tendency among sportsmen to try still-hunting deer in the woods. They begin to appreciate that there is more pleasure in following the wary deer in its native haunts and learning its habits, and where one is constantly coming in contact with fresh objects of interest to the student of nature, than there is in sleepily waiting in his boat for the frightened deer to carry out the warnings of its instinct for safety by plunging into the water, only to be more horrified by the sight of the hunter there awaiting its destruction.

I know of some sportsmen who abhor hounding and jacking and are foremost in protecting the deer in the Adirondacks, and who only enjoy still-hunting in November, and think it unfair that they are denied the privilege of killing their three deer when they are in their prime and when the weather is cold enough so that their families and friends can share with them the spoils of the hunt. MUSSET.

A DEER'S TENACITY OF LIFE.

Editor Forest and Stream:

One of the incidents related to me on my Maine woods trip this year was told by Mr. Wm. H. McCrellis, of Bangor, as I journeyed homeward on the train. Mr. McCrellis is now an elderly man and one of the wealthiest and best known in the State of Maine. He told me the story with permission to print it, and gave me the name of a gentleman now resident in Boston, who was with him a witness to the event, which was the disemboweling of a deer by its own act and an astonishing display of vitality thereafter. The gentleman named, with a guide, and, I think, one or two others, were years ago on a prospecting trip up the West Branch, and were near Nickatous—or Nickatow as it is often called—when they discovered several deer feeding in a grassy meadow near the stream. By advice of the guide they governed their movements so that the deer when alarmed would run in a certain direction. If I mistake not one of the party was sent with the canoe to make a detour and drive the deer past the others.

Be this as it may, one of the deer was seen to run swiftly past, leaping over a large log as it went. On following on in the direction of its flight what was the surprise of Mr. McCrellis and his companions to find the deer lying in the grass stone dead and disemboweled as completely as if done by a butcher. Following backward on the trail they found the entrails in a mass where they fell—"a fan would have covered them," said Mr. McCrellis—and just in the rear the instrument which had performed this surgery, viz., a sharp-pointed stub projecting up from the log and almost unnoticeable in the tall grass, but so placed that the deer in its flight had caught upon it and ripped itself completely open. The astonished men then carefully paced the distance from the entrails to where the deer fell dead, and found it 102yds. This they determined with all possible exactness under the circumstances, and Mr. McCrellis told the story with apparently complete memory of every detail, adding that so far as he knew he and his companion were the only persons who ever saw a deer so effect its own destruction.

I have heard of the Southern negroes setting scythes in the runways of deer in such a manner that in leaping a log or gap in a fence a deer would now and then kill itself and furnish venison for the cabin, a method most repulsive as it has always seemed to me.

The long run of the deer after the accident described by Mr. McCrellis will not, I think, be doubted by hunters, most of whom have at some time seen instances of great tenacity of life in the case of mortally wounded animals.

I remember seeing once on the Fox River in Illinois a woodcock, through whose eye and brain a shot had passed, fly an eighth of a mile before the automatic action of the wings ceased. It seemed to have alighted naturally in the long grass of a meadow where I marked it down, and I supposed it unwounded till, in quartering the ground to put it up again, I discovered it lying gently on the grass with wings full spread, without a feather ruffled, but stone dead. C. H. AMES.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 19.—I notice last week's FOREST AND STREAM contains an editorial on the question of the failure of the duck supply in this section. The grounds taken are quite similar to those of a note or so sent in by myself just before I had seen last week's paper, and which may perhaps appear this week. The duck question this fall has been rather a puzzler, even for our old duck shooters here. At this writing, I am not so sure but what some of the apprehension expressed is ill-founded. A couple of weeks or so ago I had a short note about a Kankakee hunter, who declared that the ducks were still north of us. To-day I was talking with Mr. Henry A. Sloan, a very well known game dealer of this city, and he tells me that even at this late date ducks are still going south, and that the shooting below here is at some points better than its has been this season. Mr. Sloan says he has all fall had reports of exceptionally good feed to the north of us, and although the feed in some localities near here was very fair indeed, the ducks have lingered where they were, the low waters of this region being no inducement to them to come on down. I know on the Skunk River, in Iowa, where my boyhood shooting was done, we always had plenty of ducks when we had high water, spring or fall.

Abe Kleinman, as noted a market hunter as this city has, is now at Pawpaw, Mo., on the line of the New Madrid swamp. He has been gone eight days, and yesterday sent in his first bag of ducks. He says the flight is just getting down. The Swan Lake boys, who went down to the New Madrid country got back too soon, it seems.

Last Monday night as Mr. Sloan was going home after business, he heard a big gang of honkers going over. There were over one hundred in the flock. They went down into Lake Michigan, just beyond Mr. Sloan's house, which is on Prairie avenue, a street that runs parallel to the lake front and near to it. These geese probably just dropped into the lake to rest, on their flight south.

Mr. Sloan told me that ducks appear to get thin and poor very soon after they get south of here. Those coming in consignments from the south now are in full plumage, but are light in weight.

"I wish that I never had to sell a duck in the spring," said this same liberal-minded sportsman; "ducks are then lean and poor, and there is no satisfaction in handling them, quite aside from the moral wrong of killing them at that season. I would emphatically do all I could to assist a movement for prohibiting spring shooting. We need such prohibition and ought to have it."

The other day Mr. Peter Mack, of Hammond, Ind., killed on the Little Calumet a milk-white teal duck. It was shipped to Mr. Sloan, who presented it to a brother game dealer, Mr. Mauprine, to add to his very choice collection of mounted specimens. Last year, standing at nearly precisely the same spot where he killed this duck, Mr. Mack killed a perfect specimen of an albino blackbird. The occurrence is singular.

The Chicago game markets are a sight for a sportsman now, and there is hardly any sort of game in the United States which is not now on display at South Water street. Two elk were shipped in last week. They came from the Indian Territory, and were accompanied with a blacktail deer and several antelope. The game must have come from the very extreme west of the Indian Territory, I should think. I thought all the elk were killed off, even in the black-jack country of the western end of the Nations. A number of black bears are shown. I am told that these bears are shipped in earlier, in the fall, and are kept in refrigerator rooms for the holiday trade, as bears by that time have holed up, over the greater part of the country. A few are sent in during the winter from the Indian Territory. I know from experience that they are all in the ground in that country in January and February, if the winter is a severe one.

A lot of sharptail grouse had just got in from Kansas when I was down on the street. They looked almost white and were beautiful birds. I never saw them looking so much like ptarmigans.

Abundance of jack rabbits and great Northern hares are seen among the cottontails, marsh rabbits, etc., which festoon the markets now, and gray and fox squirrels fairly litter the sidewalks. Pinnated grouse, ruffed grouse, quails, and all sorts of feathered game are coming in rapidly to the markets. Dealers say, however, that their observation teaches them that the three-years prairie chicken law has been very well respected in Illinois.

The opossum is growing in favor as a game bird. Numbers of them are in our markets, with a great many raccoons also.

The supply of wild turkeys does not seem scant. Most of these come from the Indian Territory. There are few wild geese in the markets, and almost no canvasback ducks.

While we were looking at the antelope Mr. Sloan told me of a little incident which occurred during his hunt last fall:

"We were down in the Chickasaw nation," said he, "not far from Henrietta, Texas, and while we were at a ranch a little round-up was made near the home camp. We didn't know there were any antelope near there, and not one of us had a gun along; but when it came to cutting out the beef cattle, we found twenty-one antelope in among the herd of cattle. The guns were all at the house, and we didn't get an antelope. They had been driven in by the boys from the flats, but had kept so close among the cattle that nobody knew they were there."

E. HOUGH.

THE WOODCOCK SUPPLY.

MANCHESTER, N. H.—*Editor Forest and Stream:* The experience of sportsmen in this vicinity in woodcock hunting last fall differs but little from that of others in other sections. It is the general feeling here that there was an unusual scarcity of birds; whether the flight went by unobserved during the heavy rains of early October is a matter of opinion; some of our most experienced bird hunters think it did. At any rate, fewer birds were killed about Manchester last fall than for many seasons before. Here, as elsewhere in New England, fall birds were found upon their summer feeding places; it was a rare exception when a cock was started on high ground. I have talked with some of the best woodcock hunters in this vicinity, and they all agree in rating the season of 1888 as one of the most unsatisfactory they ever knew of. Not over fifty birds were killed by any party here, and many failed to get one-half this number. It is within easy remembrance when a two or three days' hunt would bring to bag better results.

Partridge shooting was better through November and December than in any other part of the season, and more birds were killed; but at no time was the sport up to the mark. Bird hunters hereabout are talking strongly of using their efforts in favor of the passage of a law by the next Legislature placing a bounty on foxes, which have not been so numerous for years as they are at the present time. It is a well-known fact that foxes are most destructive to young partridges, and by some the scarcity of the crop in this locality the past season is largely attributed to their numbers. Bird hunters have also been multiplying here within a few years, but the wily grouse manages to hold his own pretty well with most of them. The following, taken from the Manchester *Mirror and Farmer* of a recent date, is an interrsting incident of the woodcock season:

"Simon E. Young, the well-known Massachusetts bird hunter, and one of the finest brush shots in New England, had an experience with woodcock this season that he says will never happen again in his lifetime. It was the last week in October that he met with it, and the story can best be told in 'Sim's' own words: 'I started out that afternoon,' said he, 'to look for woodcock. I looked into several covers and found a few scattering birds. Just toward night I dropped into another cover and there I started one cock which got up wild and flew across a stone wall into another patch. I followed after. My dog Prince jumped over the wall and when he landed he was 'froze stiff.' I then got over as carefully as I could, but when I landed up jumped a woodcock right under my feet. I killed the bird, but the old dog didn't budge an inch. I told him to go on and repeated the command, but he clung to his point. Then I moved forward a little and a bird got up. I killed her and began to wonder what kind of a place I had got into. I hadn't much time to decide, for it was then too dark to see a bird unless one got well up into the air, and it was not long before it became too dark for even that. I got one more bird and then left. How many birds were in there? I don't know, but more than I ever saw before in a single cover. The piece was not over an acre in size and it was white with plasterings. Prince couldn't move a rod without getting on to a bird, and finally I had to take him by the collar and drag him out of the cover. In going out I started from a dozen to fifteen birds. They got up all around me and flew, but it was too dark to shoot and I had to leave them. I honestly believe there were close to fifty woodcock in that piceg of round and it was as nice shooting there as a man ever need to wish for. I went home and the next morning entered the cover bright and early. The chalkings were all there, but every bird had left. They got out during the night. It was a chance that I shall never have again, and what wouldn't I have given for a few hours more of daylight.' 'Sim' doesn't tell where that acre patch is located, but rest assured he will watch it closely in the future."

A MAINE GAME SEIZURE.—One of the Bangor papers last week reported: "The largest haul of game, being transported in violation of law, made in this State was accomplished yesterday by Game Warden Allen, on a through car from Ellsworth to Boston at the Maine Central depot in this city. Warden Allen has a sharp eye upon all attempts to evade or violate the game laws and regularly visits trains arriving in this city from the north and east. While engaged in this duty on the Ellsworth train which arrived yesterday afternoon, his attention was attracted to a way-bill which contained the following entry: '13 barrels and 13 cases M. T. bottles,' addressed to Hamilton Campbell, wholesale liquor dealer, 216 Commercial street, Boston. It struck him as peculiar that so many 'M. T.' liquor bottles should be shipped from the law-abiding precinct of Hancock county, and he at once made an investigation which resulted in the discovery that instead of empty bottles the packages were filled with saddles of venison, packed in hay, and surrounded by a few bottles to add to the deceit by their clinking while being handled. The weight of the seized venison was over two tons. Game Warden Allen and Fish and Game Commissioner Stilwell are highly elated over the successful capture of so much 'contraband' deer meat, and the more so that they have information which will fix the guilt upon the parties who shipped it and who will be made an example of to the extent of the law. It is an illustration on a large scale of the great amount of poaching which is being carried on in the eastern counties and which is made possible by the repeal of the law giving a moiety of the fines to the wardens, the whole now going into the treasury of the counties where the seizures are made. The meat is frozen and in fine condition, and we understand will be sold by order of the Commissioners to private parties, who will thus be enabled to lay by a nice saddle for use as wanted. We congratulate Warden Allen on his magnificent capture."

HALLOCK, Minn., Dec. 17.—Benson brothers returned to town to-day with four moose, eleven elk and nine deer, results of a ten days' hunt to the eastward. They will spend the next thirty days in capturing wolves, which are said to be very plenty where they have been. Their hunt has certainly been a success this season. Game is nearer Hallock than before. The Roseau shooting has not been a success this season for some reason. October and part of November were very stormy and disagreeable months, with much rain and some snow. The last part of November clear and bright, no snow and best of skating on glare ice. The past four weeks convince us that we beat the Eastern climate. We have a grand country, grand climate and grand atmosphere.—E. H. L.

Camp-Fire Flickerings.

"That reminds me."

249.

"SPECIAL'S" account in your last issue of the singular moose hunt on Moluncus Lake in Maine "reminds me" of a story which I have often in boyhood heard my father tell, and the truth of which I never heard questioned. "Special" seems to think it very funny that the guide who told the moose story to the Messrs. Moore believed it. I for one think it not at all incredible, and perhaps the following may make it appear less so to "Special."

I have forgotten details, but the gist of it was that during one of those periods of deep winter snow in New Hampshire, when, as many of us can attest, there sometimes come some hours of rain and sleet and then a freeze, leaving a crust of glare ice over everything strong enough to hold up an ox team, some young fellows conceived the idea of having some coasting extraordinary. They dragged from a dooryard and with much effort and pains a large lumber sled and took it far up a slope beyond the house. They mounted the sled in high spirits and "let her go," intending to bring up in the dooryard from which they had started. So great was the weight of the sled and its load and so slippery the surface that they attained a terrific speed in a few moments, and not only dashed through the dooryard but clean through an open barn and down a long slope beyond, finally bringing up in a meadow many rods away, not, however, without remarkable adventure *en route*.

There happened at this time to be an old white horse standing in the barn and quietly munching hay. Quick as a flash the darting sled knocked his legs from under him and landed him on to the sled, half killing the astonished and helpless boys, and carrying them all to the foot of the hill. Nor was this the end of it. Up that hill on the icy crust no horse could come, and for nearly a week he had to be supported on hay carried to the meadow by the boys.

The account of the sled knocking the legs of the moose from under him and landing him on to the sled, the sharp stakes of which pierced his side, does not really seem to me so impossible an occurrence.

250.

While I am about it let me also tell a moose story, of the truth of which I think there can be no doubt. I have several times heard it from the lips of the hero of it, who was no other than Mr. Sylvester Abby, of Brownville, Me., well known throughout all that region as Uncle Vet Abby, a man of somewhat remarkable character, a great reader and talker, and one who had in his day killed a great amount of game. My favorite guide, Billings, and Uncle Vet were comrades on many a hunting and trapping expedition, and it was from Billings that I first heard the following story. On my recent trip to the Maine woods I learned that Uncle Vet died only a few months ago, and I remembered how lying in camp one snowy First near to Merry Lake he told me how narrowly he once escaped death years before.

He had started with one companion on a moose hunt. They dragged a light moose sled by which to bring home the meat, for meat they were very sure of in those days. They killed a bull moose and the other man started back with the sled and a load of meat, while Uncle Vet pushed forward on the trail of the mate of the first one. She was an enormous beast and he was particularly anxious to secure her, and as he had succeeded in wounding her, his prospects seemed good. He followed fast and far on his snowshoes, and found that going down hill the moose gained on him, but going up hill he gained on her. Becoming greatly heated and thinking to rush in and finish the moose, he discarded his coat, but the chase led him on and on, and it was almost sunset, when, in going up the northern slope of a mountain, he brought his game to bay, and firing quickly, put out one of the eyes of the

creature, but did not kill it. Trying to reload he found to his consternation that all his bullets, which he carried loose in a pocket, were gone. The moose was facing him and showing fight, when he hastily slipped into his smooth-bore a small pocket knife and fired the fatal shot. Cutting the throat of the moose he then began to realize his predicament. He was bathed in perspiration, without a coat, an icy wind was blowing fiercely up the slope and he was instantly chilled through, and in a few moments it would be quite dark.

There was but one thing to do, and with all possible speed he did it. He stripped off the hide of the moose, and turning the hair side next his body, wrapped himself in its great folds and lay down in the snow to await the morning.

Amply protected in this way he slept till daylight, when he awoke—and to the awful consciousness that he could stir neither hand nor foot, but was held as if encased in boiler plate. The hide was frozen hard as iron.

Any one can see that this must naturally have occurred, but I have never heard of another case of it in actual fact. Uncle Vet struggled with all the fierce energy of despair, realizing what a horrible and lingering death was assuredly before him if he could not free himself. It was all in vain. The folds of the thick hide were like iron. Again he tried to move. The veins stood out on his forehead, as he could plainly feel, and a fever was in all his frame. Finally he found that under his hip, where the greatest weight of his body had come, the hide seemed a little flexible. After a while he managed to bend it a little here and to be able to slightly move one arm. In the end he was enabled to secure a little leverage and then a little more, till finally he emerged from the deadly embrace of the frozen hide, an exhausted and thankful man. EBEMEE.

Sea and River Fishing.

CHARLOTTE HARBOR.

THIRD PAPER—1888.

IT was with glad anticipations that, at Philadelphia, I took my place in the West India Mail on the morning of the 10th of March, on my way to Charlotte Harbor. I should leave behind me the "fatal month of March," with its cutting winds and awful changes of temperature, and in three days, clad in summer clothing, filch from astonished Nature a fortnight of fishing—the best in the world. But I little thought my dread of what I should leave behind would be more than justified by the reality; for the next day, and while I was enjoying the sunshine and flowers of Jacksonville, my own home was isolated from intercourse with the world by the phenomenal blizzard which then overwhelmed the Middle States. I knew nothing of this fearful storm until its effects—except as to the health of individuals—were past; but the storm affected the fishing to some extent by the "northers" which followed it, chilling the waters in the South, and causing the saltatory mullet to abandon his gambols and the great tarpon to scatter and decline the bait.

A collision, at which I "assisted," within a hundred miles of Punta Gorda, disarranged the Florida Southern Railway system for twenty-four hours, so that I missed the boat for Pine Island. The collision, which pulverized two locomotives and killed our engineer, had the effect to introduce me to an agreeable fellow traveler, by the novel method of projecting my forehead against his, giving him a black eye, but doing neither of us further damage. This gentleman was my companion in many fishing trips after our arrival at St. James.

At Punto Gorda, where there is a really first-class hotel, we found that the boat for Pine Island did not start until the second day after our arrival, but we were able, fortunately, to secure a small steamer, commanded by an old acquaintance of mine, to take us onward the next morning. We inquired the probable chance of securing accommodations at St. James, but were told by every one about the Punta Gorda Hotel that there were no rooms to be had; that the place was crowded, and that the visitor would be put to all manner of hardships. There seemed almost a conspiracy to keep people from going further. I found the leader of a party of ladies and gentlemen who had come down on the same train with myself, with the intention of going to St. James, buttonholed by two new arrivals, retrograding from the lower end of the harbor—whether from St. James or Punta Rassa I do not recall—who were inveighing with bitterness against the place they had left. "Dem beastly hole, you know! Awful table; breakfast at 7 o'clock; hear nothin' but talk about blawsted tarpon, y' know!" and so on. "We didn't unpack our tackle, y' know; just came away by first boat."

I have heard complaints of the table at St. James from people who ought to make allowance for the great obstacles there are to the keeping of a hotel at a spot so remote. But I never heard a complaint from a true fisherman. The name is not to be applied to him who strolls out after a *déjeuner à la fourchette* to take a fingerling with sewing silk and a wand, but to him who matches his strength, endurance and skill against a powerful, frenzied and beautiful fish; be it the salmon or striped bass of the North, or the tarpon of the South, and to gain his object he will seek almost inaccessible wilds, and submit to all kinds of discomforts. First-class hotels and the best of fishing are rarely found together. The San Carlos, at St. James, however, is a really good hotel, and the fishing is unequalled anywhere—in the United States, at least. The house was clean, the manager and his aid eager to please and untiring in their efforts, and no fault could be found with the sleeping accommodations. There was not much variety in the bill of fare (which seemed to be a ground of complaint with some), but everything was well cooked and well served by neat New England girls. The orders of the guests as to their meals are promptly and cheerfully attended to.

Complaints of bad living at a resort where sport is good, do not always impress one with the superior refinement of the complainant. There is one class of travelers who live delicately at home, yet, if the sport is good, never complain of inferior accommodation abroad, and munch the hard-boiled egg provided for luncheon and sleep the sleep of the just on the *ter quaterque duratus* of the tavern mattress. The other class, through inefficient housekeepers or from other causes, live a sordid and scrambling life at their own homes, so that the first-class restaurant becomes their idea of table comfort. To live at a hotel is to them the apotheosis of good living. When they do not get the best (restaurant) cookery and variety on their travels, the hotel is condemned, and no matter how excellent the sport with rod or gun may be, the disappointment at table eclipses all pleasure in anything else. To the latter class, from their appearance and manners, the grumblers at Punta Gorda, and others of their kind met with here and there in Florida, doubtless belonged.

For myself, the table at Pine Island was quite as good as any I have ever seen where superior game fish could be taken in abundance—much better than elsewhere in Florida under similar conditions—and for cleanliness and comfort of rooms and prompt attention to the wishes of guests, there could be no cavil or criticism.

An improvement over last year's arrangements was that breakfast could be had as early as 5:30 in the morning, so that the fisherman could be in his boat and on his way to the tarpon grounds by 7:30. I say the "tarpon grounds," for there was little pursuit of any other kind of fish. Last year's history had gone abroad, and there were collected at both St. James and Punta Rassa fishermen from all over the United States, from Canada, and even from England and France. One gentleman had journeyed all the way from his San Francisco home to take a tarpon, and after three weeks without a fish was still in good spirits and confident that he would secure at least one. The tarpon talk at the hotel was incessant. The house was deserted by all but the ladies during the day, but at night all the fishermen had to compare notes as to the day's experience, and relate the thrilling strikes they had had, or congratulate the one or two of their number who had secured a fish. Mr. Hecksher had just taken his 184lbs. fish—the only tarpon to the credit of the Reva's company, I was told—and that achievement had to be talked over and wondered at. Over at Punta Rassa, where there was a company of the genuine old mossback "lone fishermen," Hecksher's achievement created a sensation and, to excel the Pine Islanders, they were compelled to count Col. Quay's big fish of 187½lbs., thereby violating their solemn rule to count no fish taken with a handline. The Pennsylvania statesman is an experienced and skillful fisherman, and he has the courage to avow and practice his preference for the unpopular handline.

Some of the guides tell queer stories of their patrons. They relate that certain of those whose names appear as captors of tarpon "with rod and reel," first played, or had the guide play, the fish with the despised handline until nearly ready for the gaff, and then when the fish, exhausted, was near the boat, a hasty tie of the handline was made to a line on a rod, the handline cut, and the performance finished in short order with the rod. The tender conscience of the fisherman was thus appeased, and he was able to enter into the fishing record at the hotel his fish was taken in the approved method.

The month of March was not kind to the fisherman the present year. The climatic disturbances of the North had their echoes and effects even on the far Gulf coast; not making the temperature of the air disagreeable to man, but lowering that of the water so that fish did not take the bait with avidity. While the aggregate number of tarpon taken at St. James and Punta Rassa was greater than ever before, yet, owing to the largely increased number of their pursuers, the individual scores were not so high as last year's. The majority secured at least one fish, but for many it required great perseverance. A Massachusetts gentleman fished continuously through five weeks, every day, before he was rewarded with his first tarpon, and as soon as his prize was secured and lodged with John Smith to be preserved and shipped North, his errand being fully accomplished, he returned home by the most direct way. The other extreme was represented by a railroad president from Maine, who arrived at St. James at 2 o'clock, found all the boatmen gone, obtained Capt. John Smith's services by special favor, and a single ill-savored mullet for bait, anchored his boat among the fleet of fishermen, and in less than three hours was back at the wharf with the only tarpon of the day.

My own experience was not remarkable. I killed my fish on the tenth day, averaging about two hours each day of the ten tarpon fishing. The fish was below the average in size—weighing 88lbs.—and was brought to gaff in 35 minutes, making only nine leaps clear of the water. He was a sullen and powerful fish, but did not give the excitement and pleasing terror which my captive of last year afforded. After his capture, I gladly devoted the remainder of my stay to the swarms of minor fishes with which the harbor and its passes teem. While fishing for tarpon, we would sometimes be visited by a school of "ocean turbot," a very odd-looking fish; a savage biter and fierce puller, and by many highly esteemed as food. Then the omnipresent spotted trout, or Southern weakfish, make good sport either trolling or still-fishing. A very beautiful and interesting fish is the lady-fish, or seven-pounder, a miniature tarpon, with large silvery scales and big yellow eye, like his mighty counterpart. Like the tarpon, too, this fish, when hooked, spends a good part of the time out of water, indulging in a succession of leaps, summersaults and cartwheels, very often freeing itself. It is absolutely worthless for the table. The heavy black groupers, of from 8 to 15lbs. weight, play havoc with a weak line, and the same may be said of the red snapper, a very good ground for which species is found near Sanibel wharf.

Fishing for sheepshead—that splendid and rare fish of our Northern waters—becomes very monotonous here, where they can be taken at the rate of one a minute. By trolling, besides trout, bluefish and Spanish mackerel are taken. The pompano, which, with the last named fish, divides the honors at table, is rarely taken with the hook; and not many are taken with the nets. The cavalli, a fierce fighter, but worthless for food, and the mangrove snapper, a beautiful and gamy fish, are abundant. For those who wish to try their strength and skill against monsters, there are the great leopard sharks, and the enormous devilfish, a gigantic ray, with no malice in its disposition, but with strength enough to pull the bow of a sailboat under in deep water. Sawfish of every size, from a foot in length to the monster of 1,000lbs., are found everywhere, and occasionally a shark line, set near a wharf or overhanging bank, secures a jewfish, a gigantic perch of from 100 to 500lbs. weight.

The fish which interests me most of all the denizens of this well-stocked aquarium is the channel bass. He is beautiful; he is gamy and powerful, and he can be seen and selected before casting the bait.

A recital of a single day's experience will give to the Northerner some notion of life at Charlotte Harbor. March 25 I was on the sloop Ada (belonging to Capt. John Smith), anchored in the Matalacha (pronounced Matla Shay) Pass, with my friend Z., who had for guide Robert Fulton, a stalwart mulatto, upon whose breast a Grand Army badge was proudly exposed; and I had Frank Smith—no better guides than these two men can be found. Z. had taken his tarpon the day before—a very fine fish—and the skin had been carefully removed by Frank, for preservation, during the night.

It was a lovely morning when the two skiffs left the yacht for the day's pursuit of tarpon. The first duty was to procure bait, so Fulton and Frank took the lead in one boat, and Z. and I followed leisurely up the shore in the other, skirting the mangroves and watching the shoals of mullet which flashed across the yellow sandy bottom. The carcass of Z.'s tarpon had been previously towed ashore and landed on the beach, for these fishermen have a superstition that the submerged fish frighten away for miles his surviving brethren. In the clear sky—just now tenantless—a half dozen lazy vultures were already circling, attracted by some wondrous instinct. When we returned in the evening the great fish was entirely consumed by these scavengers.

Slowly moving up the shore our boatmen made an occasional cast with the net, with sufficient results, for when we arrived at the fishing ground we had enough mullets to supply bait for the day.

Here, at "Tarpon Point," we anchored in about 9ft. of water, and prepared for work. The bottom was plainly visible, so that the fish offal with which we chummed could be seen, but not a sign of life, not even a catfish—that pest of these waters—was to be seen. After an hour of fruitless waiting, I suggested that we explore, and that happy impulse gave me a most interesting day.

Moving across the channel we approached a little mangrove island. From out of the twisted mangrove roots, as we drew near, rushed a mass of thousands of mullet which had taken shelter there. On our right, a half mile off, was a great pelican rookery, with its mangroves covered to their tops with pelicans, cormorants and silver cranes. An incessent clamor—louder than a negro quarterly meeting—went up from a myriad of throats.

Rounding this little island we came upon a flat of yellow sand, upon which numerous fish could be easily distinguished through the clear water. Suddenly Frank, who stood in the bow, was ablaze with excitement, and hissed, "Here come a couple of tarpon!" dropping his anchor over the side. I gave him my rod; he made a long cast and handed it back to me. I could not see the fish, but seeing the line run out, struck with the effect of a swift run of at least 100yds. against my heaviest pressure on the reel guard. "It is a channel bass, Frank." "I'm afraid it is; he doesn't show. But here comes his mate!" and Frank cast his handline just as I reeled my prize up to the boat. Frank turns, strikes the gaff through my fish's head, jerks him into the boat, then gives a tremendous yank on his handline which breaks the hook. My captive is a channel bass 46in. long, weight unknown.

We coast along up the shore, disturbing large rays, and sawfish of all sizes, at which Frank makes thrusts with his oar, and now and then taking a channel bass, until we reach a point which juts into the open waters of Matalacha. Just before reaching it six rifle shots in quick succession, on the other side of the island, announce Z.'s proximity, and Frank declares that they signify deer. We afterward find that it is a salute to a very large sawfish. As we approach the little point—the water here is barely three feet in depth—Frank is again excited. "There's a tarpon! He's a big one! Don't you see him?" But I don't see him, and hand the rod to Frank, who skillfully casts the bait and gives me the rod. "He has it! Now, strike!" The line is slowly and steadily running off the spool, until a full hundred yards, or half the line, are gone. Then, knowing that the fish had not gorged the bait, but fearing that he would run to deep water before doing so, and thus take all my line, I threw my full weight backward. Instantly out of the water rose an enormous tarpon, reminding me of a burnished silver door, and fell with a splash which made an echo from the shores. Out he came again and again, twisting and writhing with frenzy. "You've got him!" shouted Frank, and he let off an unearthly war whoop. After a contest in which the water was tinged with blood, and the fish was sensibly growing weaker, he succeeded in freeing himself. Z., who witnessed the performance, said that the time occupied was thirteen minutes, and the leaps clear of the surface twelve.

Along the shore we coasted, without incident, except the capture of an occasional channel bass, the mistaking of the dorsal fin of a large black drum for the lance of a tarpon, and a shot now and then at willets and tattlers, until we reached a broad flat of dazzling sand, surrounded by islands. There must have been ten acres of this expanse glittering in the sunlight under its limpid covering of pure water. As soon as we glided over its edge, Frank, for the third time, became an amiable maniac. "There he is! Be quiet! Get down!" I subsided in the bottom of the boat as Frank softly dropped the grapnel over the side. I could see the fish. Not 15ft. away was a great tarpon lazily oaring himself about, with his dorsal lance just above the surface. He seemed to be the only occupant of the flat. He turned toward the boat and came close to it, investigating. Frank and I were motionless. His burnished silver sides and brilliant dark green back shone brightly through the clear water, and his great yellow eye—within 6ft. of my hand—was turned up toward us, fearless, but inquisitive. He evidently concluded that we were some kind of log—with branches—and unalarmed, moved slowly away. Frank made a cast of the bait, which he ignored; then some "chum" was thrown, which he took; then the bait again; this time he saw it, and his manner of appropriating it was interesting. The mouth of the tarpon is on the top of the snout, so that he must be under the bait to swallow it. The water being not more than 2ft. deep he could not up-end himself and bore down for it, so in the most leisurely way, after touching the bait with his nose, he made a slow circle, gave a great sweep with his tail, causing the bait, by the disturbance of the water, momentarily to float, and then reversing himself took it

in before it could sink to the bottom. Then he slowly moved toward deep water, but in our hurry to take up slack line he became alarmed and ejected the hook before a strike could be made and went off the flat with his head high in the air, apparently walking on his tail, and with a most ludicrous expression of terror on his very open countenance.

The great flat of white sand was deserted, and I infer that our friend had driven off all the other fish; there was a flock of a hundred or more willets on a sandbar, of which I took toll.

Then followed an interesting afternoon. We cruised along the islands, seeing no more tarpon, but selecting and taking the biggest channel bass out of the numerous schools, and winding up our fishing at the pelican rookery, where we secured a large pelican for Z. to take home with him. We all arrived at the yacht early, and before sunset had discussed fried grouper, biscuits and cigars, and had gone over the various incidents of a day which had been delightful to all. F. S. J. C.

THE SUNSET CLUB.

An association devoted to the interests of fish and fishing; game and hunting; yachting, and for the encouragement and advancement of outdoor recreation.

THE autumn meetings are always well attended; anglers, hunters and yachtsmen are anxious to relate their experiences and exchange views of the closing season. At early candle light a dozen members were seated around the old stove, against which their feet were firmly braced, patiently waiting the appearance of the president. Men who seek outdoor recreation are generally a good-natured class, who always have some interesting story to tell. It was not long before they drifted into exchanging fish stories, Capt. J. B. Battelle, the famous Muskoka, light-rod angler, leading. He said: "Many of you recall the days when fishing at the Maumee Rapids was considered very fine, in fact it was the North to many people. Gentlemen, I had a reminder of those log cabin days. This fall I was fishing at the foot of the rapids, wading in the water to my waist and using a light elastic rod, single gut leader and a No. 2 Carlisle hook. I made a cast near some reeds, in which the shore abounds, and the line had hardly straightened when I felt a very heavy strike, followed by a rapid movement toward the center of the river. I at once recognized an old resident, and knew I had a hard fight before me. I hooked him, and gentlemen, I blush to say it, but I was never so scared in all my life. Now up stream, across, then with the current at lightning speed, and in the language of our esteemed angler, Dr. Henshall, 'he had the arrowy rush of the trout, the untiring strength and bold leap of the salmon, while his system of fighting tactics was peculiarly his own;' finally I was tired out, and

> He turned up his breastplate, snowy white,
> A vanquished, conquered knight.

At my feet lay a three-pound bass."

"I have the most profound respect for the man who will speak in words of praise of the black bass," said Hon. Wm. H. McLyman, whose island reputation for angling is second to none, we might except Hon. Charles Foster or Hon. W. D. Bickham, of the Dayton (Ohio) *Journal*, but would hesitate to compare the catch of the past season with Hon. James Dority, ex-Fish Commissioner. However, it is a conceded fact that Senator McLyman has, to date, never been caught deviating from his motto, "A bite, a fish." With that characteristic look of assurance, carrying truthfulness with every word, he continued: "You may talk about the newly discovered fishing grounds in Canadian waters, or your Maumee 'flyers,' but give me the reefs and shoals at the islands of Lake Erie. An instance. While fishing one afternoon in sight of Middle Bass, I had an experience I probably shall never again have. I used three leaders; bait, ordinary sized shiners. I had made several casts when I felt a heavy strike. I soon hooked a fish by giving a retaliation strike. I found I had three bass. They at once began their antics, each inclined to go in opposite directions. To land them with an 8oz. bethabara rod required more agility and sprightliness than is usually credited to men of my size, but I landed them. They were beauties."

Maj. Wm. R. Leflet, editor of the *Railway Service Gazette*, and the champion pike angler of the Northwest, was an attentive listener to the distinguished gentlemen; finally he said, with an air of perfect truth which he had acquired from his early pike angling companion: "I presume you relate those experiences as remarkable catches. I have hooked and landed four large fish with three hooks."

"Four fish?" cried a half dozen voices.

"Four. Listen. In Ottawa River, a tributary to Maumee Bay. You who have seen me fish know how I use bamboo poles in their natural state. At this time I was fishing with a pole I call 'Jumbo,' about 20ft. in length, and weighing as many pounds. I was experimenting with baits, using horsehair leaders. Upon my lower hook I had a 4in. minnow; a frog upon the second; the first, angle worms. Presently Jumbo had a call, the rapid spinning of the reel was sufficient warning that I had a big fish. He turned up stream, and I saw another fish take the frog. I was patient and gave them all the line they called for until at the proper time I gave an experienced pike jerk, and I found it required all the strength I could bring to bear. You know what a thrilling sensation runs through the system when you hook a large fish and he shows fight. My anchor chain trembled as they started for the lake with that limited number four speed. When I had them pretty well tired out, and was gradually bringing them toward the boat, I saw I had three fish, a pike, a bass and a perch. When they were almost within reach of the landing net, and I stood trembling in the balance, there was a sudden flash and I saw the perch seized by a monster voracious pike and this started for deep water, at once putting new life into the school. I weighed anchor and gave chase, until they gave up the fight. I was fully an hour in landing them. Their combined weight was 29¾lbs."

The members glanced at each other, no reply, no look of surprise, a self-evident expression being visible upon each countenance. They are all truthful anglers, of one brotherhood and bound by the same obligation to tell the truth. Hon. E. S. Dodd, with his peculiar wave of the hand, signaled his intention of relating his late fishing experience at St. Clair Flats, when the president entered the hall.

A heavy rap with the mallet called the club to order, and the officers and members were seated in their respective places.

"The Keeper of the Keys will see that the blinds are closed, all doors and by-ways securely fastened, close the upper damper in the stove, and notify the sentinel to tyle, and not to permit any person to enter without the proper signs and passwords. The club is now open for such business as may be brought before it. Are all true sportsmen entered from the North, South, East and West?"

A nod of the head from a high official so assured the chair. Several tardy members entered the hall as the Keeper of the Books read the minutes.

"Brethren, give the secret signs of brotherhood that we may open our hearts, so each may know the other. 'Tis well."

"Mr. President," said the chairman of the enlargement committee, "we are ready to make a favorable report. We find our financial condition good, and our reputation throughout the land for truth and veracity unquestionably fair. We have concluded to yield to the many requests from our sporting friends and make the club a National one, and any person of good sociable standing in the outside world, and who will furnish evidence that he has never told a willful fish lie, by paying the initiation fee shall become a member of the Sunset Club. There shall be fishing, hunting and yachting degrees."

The report was unanimously accepted, the committee discharged. The club was then opened under the head of applications for membership. The name of Hon. Charles Foster, ex-Gov. of Ohio, was proposed as candidate for honorary member.

The club at once went into secret session, where the elegibility of the candidate will be thoroughly discussed, and the history of his Put-in-Bay angling will be presented to the club at its next meeting.

Club adjourned. JOHN E. GUNCKEL.

DEEP-SEA FISHING AND HUNTING.

NOT a week has passed for many months in which I have not opened with joy my FOREST AND STREAM to wander in sylvan scenes with that equal of our own sesquipedalian Evarts, "A. N. C.," with rod and reel after that lively denizen of fresh water, the *Salvelinus namaycush*. Phœbus what a name; and I would fain have lingered with the inimitable "Kingfisher," who alas! somewhere has stowed away his gray goose quill, and stands apart from the busy haunts of men who read FOREST AND STREAM, curtained from the gaze of the gross world.

Let "Kingfisher" come again, for we miss him, and "Nessmuk," who warbles woodnotes wild! There is a never-failing charm in that graceful old nimrod even if he is only describing a load of "duffle" in an antique canoe. My eye runs down the clear inviting type of your columns, and the first name I seek is "Nessmuk," and today as I was sitting by an open wood fire at the Hotel Sturmer after a day among the ducks, I found to my delight among the letters loose in my overcoat pocket a warm-hearted letter from the graceful poet, who so often makes his home where

> "The melancholy pine trees moan,
> And where the cedars make reply."

His quaint rhymes speak for themselves, worthy of our genial, gracious old Norse king of sportsmen, who is at home alike among the trout streams of Pennsylvania, in the dense woods of the Adirondacks, or among the hills of the historic Saguenay, "rock-ribbed and ancient as the sun," or lazily lying in a Florida hammock eating oranges at Palatka.

But a hypercritical reader may say, what has Palatka to do with Anglesea? This, you know, is my old summer paradise for rod and reel, nor does it change save for the better. This year the mackerel fishing was unsurpassed. We no longer catch the ten or fifteen-pound mackerel, but we did catch in September bushels of them weighing from two to three pounds. Strange to say the toothsome flounder has almost disappeared from these waters, as well as from the inlet and adjacent fishing grounds near Atlantic City. But this fall has been a famous one for red drum, or channel bass, almost as game a fish as the bounding salmon, as many a fisherman can testify who has spent an hour with rod and reel trying to bring a fifty-pound red drum in out of the wet, near the bell buoy. Capt. Christopher Ludlam, who has just been presented by Congress with a gold medal for bravery in saving the lives of the crew of the bark Ingram, went out with me to the second buoy the middle of last September, and we caught sixteen red drum in one morning. Mr. Christensen, of Philadelphia, who was with us, looked on in wonder to see these great red fish come in over the sides of the skiff.

"Well, well," exclaimed the amazed landsman, "this is what I call heroic fishing." So it was. We lost half a dozen lines and innumerable hooks, but we had a red-letter day after red drum, and beat the record, eleven being the highest number caught hitherto in one day. We had drum steak galore all the way to Holly Beach and at the now famous hostelry of Mr. Peek-Weeks, mine host of the Hereford House, Anglesea, whose patronymic is Alfred Shakespeare Weeks (for short Mr. Pickwick), who is a lineal descendant of the Bard of Avon, who sat "pensive and alone above the hundred-handed play of his own imagination," and who really resembles the divine William in facial expression. On one occasion Mr. Weeks accompanied Capt. Joe Ludlam, and the obese Boniface hooked a 60-pound drum.

Weeks was sitting in the stern of the schooner, and the beer was abundant, so were the waves. Weeks held on to his drum like death to Scipio Africanus. But, as his adipose tissue is enormous—he weighs 302lbs.—and the vessel rolled, he could not get up. The big fish was playing wild pranks with Peek-Weeks's 100ft. of line, and the rest of the piscatorial crowd laughed consumedly as Mr. "Pickwick" roared out, "Skipper, come 'ere quick; don't you see I've 'ooked 'im, but I can't 'aul 'im in?" When the skipper got the ponderous drum aboard it was "Pickwick's" turn to laugh, for nobody else caught a scale that day only saving and reserving the immortal Peek-Weeks himself.

It was my good luck to be down here the worst day of the great storm. By reason of the elevated location of Anglesea, and the magnificent inlet in front of Anglesea, the sea, like an angry god, could only vent its fury by throwing up waves higher than the Anglesea hotel and then pouring its "surplus" over the meadows for two miles back from the Hereford Inlet. The water was so deep that a three-masted schooner sailed over the meadows. The debris, gathered from the marsh and floating landward from the sea, was covered with mudhens, which, to my surprise, still remain in the marshes. The ponds among the holly trees between here and Holly Beach, two miles, were full of ducks, and one adventurous hunter (it took some courage to brave that northeast storm) bagged seven wild geese, thirty ducks, and mudhens innumerable one day. The taste may be acquired, but to one surfeited with the uneatable quail on toast, or served up in New York *à la* Irish stew, I infinitely prefer a broiled mudhen, which now loses its semi-fishy taste and is as fat as a butterball duck. The island of Anglesea is four miles long. The wild cattle are all killed off, but the island is overrun with wild rabbits. Hunting ducks by moonlight is just now the latest fad or fancy of city sportsmen. Will tell you about it in my next. I wish some of your correspondents would tell more about wild turkey hunting. I would rather kill a turkey than a buck.

ANGLESEA, N. J., Dec. 10. J. M. S.

TROUT POACHING IN MAINE.

WE learn that there has been a great deal of illegal trout fishing with net and gaff in Swan Lake, Waldo county, Maine. The lake is protected by warden Joseph A. Marden, of Swanville, who was recently appointed, who found constable O. B. Patterson and others about the lake one night under what was thought to be suspicious circumstances, a net being found on shore. A quarrel ensued and the warden says that the constable struck him and pushed him into the water, whereon the warden broke the constable's jaw with a stick. The constable claims that he was there to prevent poaching. Mr. Marden found also a large hook lashed to a pole for gaffing fish where they were crowded on the spawning beds, and laid the matter before Commissioner Stilwell. Marden has been arrested for an assault on the constable and last week all the parties went to Belfast for trial but settled the matter among themselves. All connected are related by family ties, and the Belfast *Journal* says: "If the people of Swanville want their fish protected they must stand by their warden, without regard to family relations. If the fish are protected for a few years they will become so plentiful that people can catch all they want in a legitimate manner, and at the proper season. We are informed that when the lake is frozen over holes are cut through the ice and the fish gaffed out. We hope now that the matter has attracted such attention poaching will be stopped."

THE ROD AND REEL ASSOCIATION.

THE annual meeting of the Association was held at Mr. Blackford's laboratory, at Fulton Market, on Saturday, Dec. 22. The minutes of the last meeting were read and approved. Secretary Poey read a list of receipts and expenditures for the year. Treasurer Vallotton read his report to 1888, showing a balance of $158.48 in the treasury.

The election of officers for the coming year was next in order, and President Wells intimated that he had served the Association to the best of his ability for several years and would prefer that a new president be chosen. Capt. Dunning offered a motion that the secretary cast one vote for the election of the old officers, which was carried. They are: Henry P. Wells, President. Vice-Presidents: H. P. McGown, J. A. Roosevelt, Wm. Dunning, D. W. Cross, D. B. Fearing, C. Van Brunt and L. B. Wright. Treasurer, James L. Vallotton. Secretary, Gonzalo Poey.

Mr. Wells suggested that in future only medals be offered as prizes in the amateur classes, and money prizes in the expert classes, and that the Association should bear the whole expense, and not solicit prizes from tackle dealers. Messrs. Poey and Levison were appointed a committee to report at the next meeting on the cost of such medals and prizes. The meeting then adjourned to call of chair.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

Fisheulture.

EFFECT OF SAWDUST ON FISH.

Editor Forest and Stream:

Your correspondent "Sportsman," who writes on the evils of sawdust, seems to me like most others who hold the same views, to take for granted the thing to be proven. The *onus probandi* being with him who affirms, I dispute the statement that "sawdust kills fish" by fastening itself in their gills. "Sportsman" says: "After sawing pine in a mill I have gone along the stream and picked up dead trout, and upon examination found their gills to be full of pine sawdust, which, without a doubt, kills them. I can name several persons who have witnessed the same thing." But finding a dead trout or two with sawdust in their gills is no proof that the sawdust did the killing. Those who are familiar with rivers and river fish know that when a fish dies, from whatever cause, its gills will open, and if sawdust is running plentiful in the water some of it is likely to lodge in the gill openings of a dead fish. I have seen one or two such cases, but evidence was there also plain and clear to an experienced eye, that the fish had died from other causes. Morever, fish don't allow anything to get into its gills which is likely to kill it, except by accident. It is provided with the necessary instincts and means for protecting them from all or any such foreign substances as sawdust, if not, we should long since have lost about all the anadromous fishes in our streams, and at certain seasons, and in certain places, large numbers of dead, struggling and dying fish would be seen in, upon and about the surface and shores of rivers. But such is not the case, no such sights are seen.

In order to sustain his views "Sportsman" should produce some stream where the fish have either been wholly destroyed, or largely decreased, where plenty of sawdust exists, while dams have been opened so that the fish have had ready access to their spawning beds above. Such a case, I think, cannot be found on this continent, unless indiscriminate fishing has been allowed at all seasons of the year. I herewith produce tables showing the catch of fish on two, out of a dozen or more, similar cases in Canada. Sawdust has been running into these two small streams for six to nine months of the years for over half a century. Impassable mill dams at the head of salt water had completely

depopulated the Clyde, and nearly did so on the Medway, which fared better because the dams were further up the river. The dams on the former were opened in 1879, and on the latter a few years earlier, but in both cases the sawdust continued to run freely, as it does still.

Sawdust in large quantities has not killed the fish here.

I have never yet been able to obtain any such facts to sustain the opposite view. This is an age of investigation, and few things are taken for granted in the absence of facts or evidence to sustain them; and we have a right to ask of those who claim that sawdust is ruinous to fish to produce their proof.

"Sportsman" is also in error when he says that sawdust covers up the spawning beds. I have never been able to discover such, and I have examined many rivers for that purpose. The fact is the current is too strong where a salmon or trout would spawn to allow it to remain, hence such spawning beds are as clean to-day as ever they were, no matter how much sawdust has been coming down the river. But even if it should lodge in such places, he must prove by actual facts how and why it would injure them.

Sawdust does not rot under water, nor does wood of any sort, where it mingles with sand or mud in coves along the shores or about the heads of estuaries where the water settles away from it by the ebbing of the tide, or in fresh water. When it is left dry in summer, it will of course rot and soon disappear, and by far the greater portion of what falls into the streams from mills driven by water power disappears in that way. So far as I have been able to ascertain, the fish-killing effects of sawdust in any way or place has yet to be proven, and until such indubitable proof is produced, I, for one, shall continue to disbelieve it. I have had considerable experience in this matter, but am always willing to bow to well-authenticated facts. The matter is an important one and calls for intelligent settlement, and, in my humble opinion, it is not difficult to settle right

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Dreventstedt, Secretary, Washingtonville, N. Y.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6850.**

ROBINS ISLAND CLUB.

SEVENTH ANNUAL FIELD TRIALS.

PECONIC, L. I.—*Editor Forest and Stream:* Another year having passed, it is again my pleasant duty to report for the FOREST AND STREAM the running of the dogs at the seventh annual meeting of the Robins Island Club. The trials of this year of 1888 in reality should be the eighth, but the unfortunate burning of the club house last season on the day before that named for the trials made a postponement necessary, so that this becomes the seventh.

The Long Island Railroad manages to get up more dust in winter than any other running to your city. As a sequence those members and guests who traveled to New Suffolk on Saturday and Sunday last presented the appearance of having lately visited a flouring mill, the dust on them was so white and so thick. The weather was of the most charming character, and all concerned were in the highest spirits over the prospects of a successful meeting. The island being in due time reached, the noble proportions of the new club house struck the eye at once. Indeed it was the cynosure of all eyes as the yacht drew close to the shore of the island. The last time your correspondent was on the island was the morning after the fire, and so clean was the destruction and so depressed were the members and officers on that eventful day that the visit has been one of no pleasing kind to dwell upon. This year all is changed. Out of ruin has grown beauty. As a matter of fact the loss has proved a benefit. The old club house was a thing of patches. An addition had been built here, an L added there, so that the effect upon one looking from the outside was anything but pleasing. There was a lack of harmony, an appearance of incongruity in the parts that made the whole. I grant that once within the doors everything was homelike and comfortable. It answered, no doubt, the purposes of the members who loved the shooting of the preserved grounds, but to the others who preferred a visit with their familes during the heat of summer it was at the best a makeshift. While comfortable, it lacked all these little elegancies that adding so much to looks at the same time are so necessary to meet in full manner the needs of the present day.

In this connection, before proceeding to a description of the trials, it may be as well to mention the appearance of their new building. To premise, it has been placed some two hundred feet northeast of the old house, and has been put on the crown of a little knoll, from the top of which the ground slopes in most gradual manner in every direction. Unless told, no one would believe that the altitude is just twenty feet above that of the old site. Having been placed so much higher and somewhat nearer the shore, it has given views of land and water, on three sides, which are simply incomparable in beauty to anything I know of. The general style of the edifice is what is known generally as modified Queen. A style which admits of all sorts of departure from a more rigid manner of architecture; a stricter adherence to any close copy of a single style. On the west is the reception room, irregular in shape, but most pleasing in effect. It is 33ft. long by 21ft. at one end and 17ft. at the other. The lessening of width is owing to the north end being carried around the segment of a circle, this circle being a gradual one from the grand old fireplace to the hall on the far side. The "round" of this room is but a succession of windows, giving a view of many miles in extent over the bay and its northern shores. Two doors open from this apartment to a piazza which encircles the house on this side. The fireplace deserves mention. The chimney is some 12ft. in width, and this width is carried full, but with a backward slope to the ceiling. The fireplace is nearly 7ft. across and 3ft. in depth. Its crown is an oval arch of brick, surmounted with a front of large rough boulders, gathered from the island, on top of which follows stained brick to the full height of the room. It is as massive as it is handsome. Wrought iron andirons, ornate in style, fill almost the chimney's front; over them a wrought iron grating, upon which rests the cordwood, which is here burned without a second cutting. Across the front of this great chimney hang suspended, over and around, the antlers of a moose, firearms of varied dates of manufacture, as well as ancient weapons of warfare—pikes, swords, etc. From this large reception room one passes through a wide doorway to the main hall. This hall boasts of an open fireplace, but not furnished in as ornamental style as the first-mentioned. The shape of the hall is that of the letter T, the top crossing the house from north to south, the long part of the letter representing the hall leading to the dining room. On either side of this hall is a room; on the right the smoking room of the gentlemen, on the left the ladies' reception room. The dining room is another one of large dimensions, 34ft. in length by 15 in width. At the south end it opens to a large butler's pantry, which in turn opens to the kitchen, 20x20ft. in size. Outside of the kitchen is an addition inclosed with glass. The views from the dining room windows are as beautiful as those seen from the windows of the general sitting room on the other side. Each room of those on this floor have open fireplaces of greater or less size and of different appearance. On the second floor are no less than nine sleeping apartments, the majority of them having the open fireplace.

The third story has not as yet been finished, but the space admits of as many more bedrooms as are now on the floor below. A cellar is under the whole building, in which is the brick-inclosed furnace. A peculiar feature of this cellar is a small room known as the drying room. It is a room say 7x7ft., built up with brick partitions. Through this room runs the foot-in-diameter hot-air flue leading to the floor above. When the door of this room is closed the air is extremely hot and dry in character. Around the walls and in the ceiling are hooks. When a shooter comes in wet from head to foot, his foot gear and clothing are placed in this drying room, and the dry air sucks the moisture from clothing and leather like a sponge. It is a feature of the house. The furnishing of the house has been of such a character that speaks volumes as to the taste of the secretary of the club, S. B. Duryea. Everything is in harmony with the room of which it is a part. Indeed, so delicate are some of the effects that I feel assured no one but a lady could so have chosen and then grouped in such a manner the various purchases. The club should be proud of its club house, and more than proud in having such a secretary to care for its interests. Taste and money have combined to make a most charming edifice, both without and within. When the two are united an excellent effect is gained, while the possession of one without the other renders failure more than possible.

MONDAY MORNING.

This, the day appointed for the opening of the trials, began with a stiff wind blowing from the southeast, bringing with it a mist so heavy and dense as to threaten the stoppage of the running and make a postponement necessary. After breakfast those interested met in the reception room to make their entries and discuss the chances as to a day of rain or a partial clearing up, enough so, at any rate, to enable a commencement of the work. Those entering in this discussion were Messrs. S. Fleet Speir, S. B. Duryea, W. M. Van Anden, William Stanley, W. Hester, and the judges invited to attend the trials, Judge C. E. Pratt and Jacob Pentz. Many regrets were expressed at the enforced absence of many of the shooting members of the club, especially so as to those whose interest in the year's field trials has always been of the warmest kind. The absence of Messrs. Chauncey Marshall, Harry Polhemus, Alden S. Swan, E. Wellington, and others equally interested, was indeed a matter of regret.

The entries to the Derby were few in number but rich in quality. Distemper has played havoc among the youngsters belonging to the different members. The best and most promising had, as usual, been carried off, so that instead of a dozen or more but three came to the front. These were S. B. Duryea's Guy, a handsome blue belton of large size, and in breeding by owner's Ned out of Midwout Linda; W. M. Van Anden's Rheuma, a medium-sized red and white (Dietrich's Tip—Spower's Grace). This pup showed a strong infusion of Irish blood, and possessed all the deviltry and high courage of that blood. Dr. S. Fleet Speir's Belle; this bitch was a blue belton in color, of medium size. She was sired by Count Rapier ex Dell.

It will be recalled by the readers of the FOREST AND STREAM that the judging of the work done by the competing animals at the trials of the Robins Island Club is made by comparing their work with a tabulated statement of points, as will be found further on, and which table explains itself. For convenience sake two dogs are run together, not in light of making one work against the other, but to save time and insure the arriving at a correct judgment in regard to each animal's "backing," disposition when in company, etc.

BELLE AND RHEUMA

were started at 8:35 in a rolling field to west of club house, the former handled by Dr. Speir, the latter by W. M. Van Anden. The weather was so dismal in kind that birds lay like stones, and withholding scent by lying in compact shape in endeavor to evade the beastly storm, great difficulty was experienced in finding and then in locating them correctly. A long tramp was had backward and forward. Walking south Belle got a point near what is now known as Cedar Mead. Stopping for a few seconds, she roaded on, and after a few yards stopped again. Rheuma was called up for a back, but with the impetuosity of his breed he went in an opposite direction. The quail got up wild. Dr. Speir fired and missed; Belle was steady to wing and dropped to shot. This was a pretty piece of work. Rheuma having been found by her handler was brought back so that both could run together. A long walk here followed. Steps were retraced northward, and the rolling hills hunted and quartered in a most thorough manner. Not a bird was found, save a single quail, which got up in front of Captain King, of the club's yacht, who almost stepped on it before it flushed. A turn was made to Cedar Mead again (due south) and after passing the clump of cedars, from which this part of the island is named, Rheuma drew to a stiff point, which was well backed by Belle. After a half minute, as if not sure of the scent, the dog roaded on and stopped again with his head pointing due west to a little bit of cover. As he moved forward, so did Belle; when he stopped she also stopped. After this had been done two or three times Belle turned her head to the left while following the red dog and instantly came to a solid point, which Dr. Speir claimed. Birds were ordered up and were flushed not a dozen yards in front of Belle's nose. The dog was evidently off in scenting power, for he was following the back track and was moving in directly opposite directions from where the birds were located by the bitch.

The woods in the center of the island were entered and gone through, the party entering the open fields east of the kennels. A hare was jumped by the red dog, who made a run to follow but was checked to command after a rod or so had been covered. The rain, which had been falling steadily since 10 o'clock, now came down fast and furiously. It beat through rubber coats as if they had been made of gossamer, while feet and legs were—well, wet? A postponement of the work for the day was absolutely necessary. My note book was about ruined, while what was saved was so much blotted and blurred that the memoranda made looked like unto the sides of an Egyptian obelisk—covered with hieroglyphics. The first brace of pups had been run close to four hours, under the most discouraging conditions, and the outlook was anything but a promising one. The club house reached, clothing changed, a general cleaning followed. The comforts of the house soon dispersed the gloomy feeling all had, the brightly burning fires in the huge hearths doing much to dispel the disappointment felt at the want of success that had been meted out to the contestants.

TUESDAY'S WORK.

During the night the weather clerk had again changed his programme. A wind sprang up from the southwest, veering gradually to the southeast. Blowing at first hardly strong enough to carry off the masses of fog, it steadily increased in strength until at 9 o'clock in the morning it was a howling gale, accompanied by occasional "spitting" of snow from passing clouds. It grew steadily colder, the secluded spots, shaded from what sun there was, freezing fast and solidly. If Monday was bad, this day was worse. A start was made at 8:40, the direction through the big home pasture easterly along the woods. The dogs went off better than on the day before. Bowling along over the field and quartering nicely, a bevy of thirty birds flushed themselves 20yds. ahead. Marked down and hunted for without result. Then still east to Quail Run, where Belle found and pointed what proved to be a single bird. The red, called up for a back, did so in very indifferent fashion. A long tramp followed with but little result, Belle stopping once to a stiff point. Judge Pratt moved up to shoot and bitch ordered on. No bird was found. Dogs ordered up at quarter past 10, after having been run nearly six hours in the two days.

According to the rules of the club the animal having a bye must run—for the purpose of trying action in company and backing—with a dog previously selected for making comparison. Thus Jock was selected to run the bye with the puppy Guy. Moving south from Spinmount (the hill at upper or north end of the long East bluff) Guy jumped into a point in elegant style. The bird ran; Guy roaded along rapidly and soon stopped again. This time the bird flushed itself some distance ahead of him. Moving forward Jock pointed nicely: Guy, called in for a back, did it most gracefully. Bird put up and shot by Mr. Stanley over Jock's point. Guy, sent to retrieve, did so, but not in good form, mouthing his bird considerably. Belle and Guy both tried for a retrieve on this quail, which was thrown for them. Both did so, Belle much the better of the two, but neither in high degree. Puppies taken up at 10:45. Summary of the event is herewith given. The birds were in goodly number, but a good point was seldom arrived at. They had been shot at so much since the commencement of the season, that they seemed to know instinctively that to lie to the dogs meant destruction, so flush of both bird and bevy was continually happening, and these flushes were not the fault of the dogs in any way.

ALL-AGED STAKES.

GOUT (W. M. Van Anden), red and white dog (Duke—Dora).

JOCK (W. Stanley), black and tan dog (Jock, Jr.—Betsy).

BANG (W. Stanley), black dog (Smith's Jack—Belle).

STEVE (W. Stanley), blue belton dog (—— ——).

GENERAL ARTHUR (S. Fleet Speir), blue belton dog (Emperor Fred—Wanda).

NED (S. B. Duryea), blue belton dog (Blunder—Fannie).

ARGUS (S. B. Duryea), Gordon dog (Blossom—Moll).

BOB (W. Hester), blue belton dog (Roybell—Native bitch).

DORIS (H. Polhemus), liver and white bitch (Diplomat—Ruby).

FORCE (L. Waterbury), lemon and white dog (Vandevort's Don—Bessie).

The last two were the only pointers entered in the stake. In drawing for places the dogs were paired as follows:

Bang against Gout.

Jock against Ned,
Argus against General Arthur.
Steve against Bob.
Force against Doris.

BANG AND GOUT

were put down at 10:55 at east side of island and hunted southerly to South Point. Bang stopped in the high sedge grass at the point in undecided fashion. Gout ranging wide came up and seeing Bang backed nicely. The former roaded along slowly and finally wheeled away from the scent and galloped off. Fortunately handler did not claim a point during the time the dog stopped. A move to west along south side of island. Both dogs worked nicely quartering the ground systematically and well. Now and then a bird or two would flush, but at such a distance off that no fault could be found with either dog. Halfway across Gout pointed. Bang, called for a back, refused it, roading along until past Gout. No bird found. Then followed quite a tramp, across High Top, to Short Cut, then a turn to Ceder Mead and past Rock Oak. Gout here refused a point of Bang, roading in and passing the black dog, the bird flushing wild some distance ahead of him. Through Cedar Mead to the old clay pit, now fast growing up to a mass of canes and weeds. Here Gout made a stiff point and was backed by Bang. After a few seconds Gout moved along, Bang followed fast and got close up, when both dogs stopped together on staunch point. The birds rose wild. There were two bevies, the first a lot of 20, whose noise in rising started the other bevy, the latter numbering as many if not more birds than the first. Both dogs did excellent work on these birds. Quail were followed to what in old Eastern Field Trial days was known as the Devil's Kitchen, a spot of some two acres in extent grown to the thickest of cover by the matting together of vines, grasses and shrubs. It is even yet in some degree impassable to man or dog. Many paths have, however, been cut through it, these leading in every direction. Here Gout got two capital points, Bang backing elegantly. On the last bird being put up, shot and killed, Gout was ordered to retrieve, he did so in indifferent fashion. Bang retrieved the bird afterward in magnificent style. Brace ordered up at 1:10 P.M. and a move made for lunch at club house. Promptly at half-past-two the second brace

NED AND JOCK

were cast off to west of club house and hunted over the hills in that direction, and toward North Point, now known as Unlicensed Bar. Nothing found. A turn made south toward Cedar Mead. Here Ned found a bird and got a point. Jock called up for a back, refused it, but ranged up to and alongside of Ned. Ned then roaded along a few yards, but going slowly and cautiously. As soon as he moved Jock took a short swirl, and coming back again, took position with Ned, but facing him. Bird rose wild before the dogs. To expedite matters, Bob was ordered to run with the other dogs, he being one of the next brace. A long weary tramp followed through the woods, over hills and down hollows. Birds in any number could be heard as they rose, but at such distance as to preclude all idea of getting their direction. At last Jock secured a point. Bob called in and backed nicely. Birds ran from under Jock's nose, Mr. Stanley seeing them running ahead of the dogs. Both dogs now roaded along, stopping and roading alternately. Ned, who had been ranging wide, now came up and took position alongside the others, not backing. Ned finally roaded along faster than the others and passed them, moving so rapidly as to flush three birds. He was somewhat unsteady to wing, but stopped to order. A move was made across woods eastward. In the middle of these woods occurred one of those episodes which are continually happening to shooting men when dogs and men forget all about the matter in hand, and go in for a jolly time regardless of all rules, the judges being as much rattled as the competing men and quadrupeds. Jock, moving along in his steady way, pointed with nose down over a heap of brush. "Rabbit," sang out every one. Bob and Ned both backed for a single moment, when Mr. Stanley shoved his foot in the brush to start the supposed hare. Instead of a hare out dashed two gray squirrels—immense, lusty fellows they were, too. Bob and Ned dashed after one, the other finding it extremely hot with Jock's jaws so close to his hindquarters, turned quickly and sought the protection of the brush. Jock was close on him and shoved under the brush after him, grabbing him and shaking the squirrel as a dog does a rat. At the squals of the squirrel and the threshing of the leaves, out burst six more. Bang! went one gun, then another; back came Ned and Bob, and for a little while pandemonium reigned. It was a bark and a bite, a shot and a shout, until three squirrels were had and the rest scattered no one knew where. Judges and members roared with laughter, the dogs came back looking foolish. Bob, worst of all, had struck some colored material in his mad race, his head looking as if he had just pulled it from out a pot of yellow paint. His comical appearance as he shook his head and snuffed started everybody on the roar again. Result, one kill for Jock and another for Stanley; Hester lost one hard hit, while all the others had nothing to their credit but powder smoke and noise. The dogs were now taken up and three others put down. Time 4:10.

GENERAL ARTHUR—STEVE—ARGUS.

Hunting through the woods to Black Snake Trail, through that open lot to East Bluff, along the bluff north, through the woods; Arthur here did some excellent work. He secured a point, stopped, roaded, stopped again, roaded on to his final stop; it was all of 200yds. Two birds flushed themselves wild a long way ahead. Arthur somewhat unsteady, but stopped at once to order. The dog soon got another point, followed it up well, for the birds were running fast. Arthur would road along, then take a turn to right or left, or both, to see whether they were trying to flank him, then resume his roading again. This was repeated several times in a run of say 200yds. At last the birds, tired of such a chase, rose wild. Arthur dropped to wing. Doctor Speir and Judge Pentz walked on, but Arthur refused to follow, remaining crouched close to the ground. The Doctor called but he refused to move. Turning to go to him the Doctor flushed four birds which had been lying close, the dog steady to wing. All this took close to half an hour, and was as lovely, as clean a bit of work as is often seen. Moving on through woods and fields Arthur scored point after point, until it was too dark to work longer. This was the best work of any done at this season's trials. Unfortunately, Judge Pratt had followed another lot of birds with the handlers of Argus and Steve. So there was no opportunity to try Arthur's manner of backing or retrieving, as no bird had been killed over his dozen or more points; it was decided to try his qualifications in these regards the next morning. Time, 5:10. All day the weather had been of the most disagreeable character, intensely so. The wind had blown a half gale the whole time. It was cold, extremely so, and added to these unpleasant features, there was a constant succession of heavy snow squalls. Arriving at the club house we found the other division already there. Judge Pratt reported but few birds found. Steve found all these, was extremely stylish in way of going and on point, and was obedient and pleasant in disposition. Argus did not appear to advantage; he was short of work, and therefore did not show up as well as he should have done.

WEDNESDAY—THIRD DAY.

FORCE AND DORIS.

These were the last of the All-Aged entries. Force worked nicely, quartering his ground in a workmanlike manner. Doris, while possessed of more speed and full as much style, was very like a puppy in action, running hither and thither without apparent aim or purpose. Across the big pasture, along edge of wood to Quail Run. In the briers that grew so luxuriantly there Force pointed. Arthur, called for a back, came up, but instead of backing roaded up alongside of Force. Ordered to flush, no bird was found. A turn to north along East bluff and Force stood again, this time in good fashion. Judge Pratt, who was handling him, put up the birds, a big bevy. Judge shot and missed. Force was steady to both shot and wing. As time was rapidly passing and some of those present had to leave on the early afternoon train for your city, it was decided to run the first two of the Brace Stakes.

BRACE STAKES, 1888.

Dr. S. Fleet Spier's black and white setter dog St. Elmo and blue belton dog General Arthur.

W. Stanley's black setter dog Bang and Gordon setter Jock.

S. B. Duryea's blue belton dogs Ned and Guy.

W. M. Van Anden's Irish setter dogs Gout and Rheuma.

Thus St. Elmo and General Arthur were turned off at 9:15. The hunting was done in the direction which the flushed bevy had taken. In woods at end of East Bluff the Saint scored the first credit, pointing nicely and well. Arthur got one almost simultaneously. Force coming up failed to back, taking the scent himself. Bird flushed wild, both dogs steady to wing, Saint dropping to charge position at sound. Another turn up in woods, when Force got a good point. Both setters called up for a back, both refused, roading up alongside of the pointer took a point themselves. Out of woods in open lot to west. Saint found the game and got an elegant point. Arthur called for a back refused again, and ranged quickly but quietly alongside of Saint. Both stood well and in grand style. Steve now called up to back failed utterly, ran in, passed both dogs and flushed the birds. Shot at and one killed. Force without order went in and brought back the dead quail in capital fashion. He had previously backed Arthur and the Saint in first-rate form. Steve then tried for a retrieve, he made a muss of it, although he located the bird cleverly. Arthur then tried and fetched in capital manner—both these opportunities made upon a bird already killed and hidden in high grass some distance away. This finishing the running of the All-Aged Stake, I give scores as made:

ALL-AGED STAKES, 1888.

Doris	†	..	..	..	..	..	..	..	..	..						

* Not being able to win, was not tried for a retrieve.
† Withdrawn before making full scores.

GOUT AND RHEUMA.

This brace was cast off at 9:45, immediately after the work just described. Both dogs ran magnificently, so far as speed, style and range were concerned. In these respects they outscored most of the others, and would have won hands down, but for the hard-headedness and self-will so inherent in dogs of Irish blood.

The Doctor's brace had in the meantime been taken in the direction of the flushed bevy. Saint drew to a point, which was gotten by Arthur almost at the same moment. Gout and Rheuma came dashing up; Gout ranged in alongside of the English setters and stopped. Rheuma dashed off in another direction. Walking in to flush, no bird was found. St. Elmo and Arthur ordered up, and Mr. Stanley's brace,

BANG AND JOCK,

cast off at 10:55. The ground hunted to the north shore at Black Oak Point. Nothing found, and then a start south along the bluff and through the blackberry briers of Quail Run. On the way Rheuma pointed stiffly. Nothing was found on trying to flush, save a hare which ran like a scared dog for safer quarters. Moving along still southerly and up the steep hills which form the high bluff at this part of the Island. At the crest of the hill Jock pointed stiffly, being backed in awkward fashion by Bang. Bird was flushed to order, shot at and killed by Stanley, both dogs steady as clocks to both wing and shot. Jock sent to retrieve, which he did in good form. As he was coming in with the quail Bang drew himself to a stiff point. Stanley spoke to Jock to fetch quicker. As the dog stepped forward, out flushed from almost under Stanley's feet, Bang's bird. Stanley fired and missed. Course of quail followed. On the way Gout got a good point. Rheuma called in to back, failed to do so, but ranging up, ran in ahead of Gout and away the birds flew. Both dogs very unsteady to wing. Red dogs ordered up, and

NED AND GUY

cast off at once; time, 11:10 A. M. Steps retraced. The hill was left and the woods which bound it entered in southerly direction. Scarce in when Bang got a good point. The quail flushed wild some distance ahead of the dog. Stanley shot and killed. Bang ordered to fetch the dead bird. Guy, however, rushed in ahead, grabbing the quail and bringing it in in very bad fashion. A few yards further on, on the side of a knoll, Bang secured another point. Stanley ran around a clump of trees to get sight for a shot. He started on the way a hare, which ran across Bang's nose between the dog and his point. Bunny flushed the bird, which got clean away; Bang steady to both wing and fur. Moving south into woods, Jock picked up a point, Bang backing him capitally. Ned and Guy called in for a back, both did so in good style. Ned, however, broke his stand, rushed in ahead of and across the black dogs, routing out the birds which were shot at and missed. At the reports Guy and Ned both broke shot and dashed in mad races after the flying quail. Ned came back to order. Bang and Jock steady to both shot and bird and chase. Dogs ordered up at 12:10 and the trials declared finished. Despite the horrid character of the weather, despite the enforced absence of so many of the members, the trials were as good as any that have ever been run on the island. The quality of the dogs was high, although in obedience and disposition many were inferior, yet in natural ability I fancy the work of the year has never been beaten.

The most killing brace was without doubt Jock and Bang of W. Stanley. While lacking in the more showy qualities of style, speed and range, they proved themselves marvels of obedience, behaving well under the most trying circumstances. They possessed nose in uncommon degree, united to hunting intelligence, a combination hard to beat.

The brace of S. B. Duryea, Ned and Guy, are simply dog wonders. For speed, range, style and nose your correspondent has never met their superior. In those qualities due to training they were sadly amiss, being under but little control, and in retrieving, well, they did not retrieve at all. As a whole I look upon them as having such quality that when properly broken I know of nothing that can approach them, let alone surpassing them.

Scores as made in the Brace Stakes are given below:

BRACE STAKES, 1888.

NAME OF DOG.	POINTS OF MERIT.									DEMERITS.

NEW ENGLAND FOX HUNTIN

Editor Forest and Stream:

In your issue of Dec. 13, "Tallyho" attacks the W[illegible] Massachusetts Fox Club for the manner in which it kill foxes. Now, I do not know the lay of the country where they hunt foxes, and will therefore let them defend their own case, but further on he says, "to my mind the shooting of foxes before hounds is a murderous, unsportsmanlike amusement," and again he says, "the only fox hunting worthy of honorable mention is where the hounds kill, and where the fox has a clear chance of escape. Anything less than this is not legitimate, because fair play is barred out." Now, "Tallyho" hits us a hard rap. It is the first time that we in Vermont have heard that we did not hunt foxes in a sportsmanlike and legitimate way. How are we to kill our foxes if we may not shoot them before hounds? Has "Tallyho" a few hounds that can kill foxes over our Vermont mountains? If so he would confer a favor on the fox hunters of this section if he will let us have just one. To any one who has not made a practice of fox hunting "Tallyho's" article would seem to be all right, and perhaps it is for some parts of the country. But to one who has seen fox hunting in northern Vermont, for instance, it is the silliest nonsense, and calls forth nothing but ridicule for the writer of it. I have been one of a party, on three different days within a week, who were fox hunting, and we got none. But the hounds run them all the same, but we had no chance to shoot. Did the hounds kill them? some one might ask, but no one up here would ask such a question. Of course they did not kill them, and I never saw a hound that could catch an unwounded fox over our hills, through the swamps and among the rocks in which this section abounds. We holed one after running all day, besides putting a fresh dog on the track in the afternoon and in sight of the fox. I have known a fox to lead a hound off sixteen miles and come back to where he started and not get shot, and the hounds could not catch him either. Will "Tallyho" say that those foxes had no chance? Why is it not just as sportsmanlike to try to kill foxes before the hounds as it is to get a fox in some level country and run him down and kill him with hounds? Not more than one fox in five that is run here is shot; the rest escape. Is that murderous? Don't it give the foxes any chance?

I think that such as "Tallyho" ought to stop to think before they write such bosh as he wrote. It may be that what is right and sportsmanlike in one place cannot be practical in another. And it is just so with fox hunting. We cannot kill foxes here with hounds; it is an impossibility. Your hounds that can do it in a level country can't do it here. There are good foxhounds here and fast runners too, but the "lay of the land" is against them.

I would like to hear what the Worcester (Massachusetts) Club think about the idea that they do not hunt foxes as sportsmen should. If I could write here all that has been said by the readers of his article, "Tallyho" would be surprised at the things said about him and his way of fox hunting. If "Tallyho" will come up here and stop awhile he will be welcome, and we will show him whether our way is sportsmanlike or not. H. B. LOVERIN.

EAST BERKSHIRE, Vt.

THE HEMPSTEAD RABBIT BAITING.

Editor Forest and Stream:

The Hempstead mode of killing rabbits I should judge very unsportsmanlike and cruel, brutally so. A true sportsman allows his quarry a fair chance. Even a school boy, proverbially the most cruel (unthinkingly so) of all animals, would blush to be caught indulging in this particular "sport."

I would suggest the mount for the judge would be a Spanish jack, for then three of the interested parties would have long ears, for, of course, the dogs are clipped. As I understand, this particular "sport" (?) is one imported from the north of England, practiced there by miners, the most brutal of the human race. No gentleman would countenance it for a moment, much less be present at a "run." I think it should be discouraged. REIGNOLDS.

BOSTON, Mass.

Editor Forest and Stream:

Fair play should be part of one's religion. We claim it as American sentiment. In coursing rabbits according to the Hempstead mode there is not a semblance of fair play. It is cruel and brutal. JEROME BURNETT.

WASHINGTON, D. C.

DOG TALK.

DR. CYRUS EDSON, in his report to the President of the Health Department on the subject of killing dogs at the dog pound, states that he made an experiment a few days ago with common illuminating gas which was a complete success. Fifty-three dogs were placed in the apparatus, and in three minutes they were insensible and in five minutes they were dead. The Doctor states that there was no evidence that the animals suffered pain.

We understand that Mr. C. J. Peshall has recently had offered to him upon reasonable terms, a team of fox-terriers, the owner stipulating that they shall be used for rabbit baiting. Of course the offer was declined.

The English Pointer Club will hold their annual field trials next year at Wrexham on May 8 and 9.

MASTIFF PUPPY WEIGHTS.—Glens Falls, N. Y., Dec. 20.—Our Plinlimmon—Lady Wellington puppy Princelimmon was three months old yesterday and weighed exactly 50lbs. This we consider an extra good weight, and have yet to hear of one to beat it.—HALFWAY BROOK KENNELS.

WESTMINSTER KENNEL CLUB.

THE premium list of the Westminster Kennel Club's show next February provides a generous list of prizes for the several classes. For mastiffs, St. Bernards, pointers, English setters, Irish setters, black and tan or Gordon setters, rough collies and fox-terriers the prizes are $20 and $10 in the challenge classes, $20, $10, $5 and medal in open classes, $10, $5 and medal for dog puppies and same for bitch puppies. Deerhounds, greyhounds, cockers, bulldogs, bull-terriers, beagles and pugs $10 and $5 in challenge, $10, $5 and medal in open, $10, $5, and medal for puppies, dogs and bitches. Newfoundlands, bloodhounds, Great Danes, foxhounds (English), foxhounds (American), Chesapeake Bays, Clumbers, black poodles, dachshunde, Bedlingtons and Skyes, open dogs, $10, $5 and medal; bitches same. Yorkshires, King Charles, Blenheims, challenge, dogs and bitches, $10 and $5; open dogs, $10, $5 and medal; bitches same. English retrievers, Irish water spaniels, smooth collies, bobtailed sheepdogs, poodles other than black, Airedales, basset hounds, Welsh terriers, Scotch terriers, Dandie Dinmonts, Clydesdale terriers, black and tans over 7lbs., white English and toy terriers, Prince Charles and ruby spaniels, Japanese spaniels, toy spaniels any variety, Italian greyhounds, Mexican hairless, miscellaneous, dogs and bitches, $10, $5 and medal.

Specials include: Mastiffs, cups valued at $300, $150, two at $100 each, a medal valued at $50, and others, sweepstakes, and $25 for best kennel of four. Two St. Bernard cups of $25 value, six [illegible] for best kennel. Bloodhound, deerhound [illegible] a foxhound, field or cocker spaniel [illegible] four, $25 each. Pointers, $25 ke[illegible] for best dog placed in field trials [illegible]ach same, and $25 for best pointer [illegible]ers, $25 best kennel, medal for best dog [illegible]ame for bitch, and $25 for best setter shown. [illegible], $25 for kennel, medal for best dog placed in [illegible]ne for bitch. Black and tan or Gordon setters, $25 [illegible]st kennel, medal for best placed in field trial. Best [illegible]esapeake Bay dog or bitch, $100. Collies, the Collie Club's futurity and produce stakes, open to members only, also $25 for best kennel, and $25 for best collie. Best bulldog, $25; bull-terrier, $25. Fox-terriers, best dog, bitch, dog puppy, bitch puppy, brace of puppies, brace over 12mos., $10, club's $300 cup, stud dog stakes, produce stakes, $25 best kennel, cup presented by judge.

DISEASE OF LIVER IN DOGS—JAUNDICE.

IN all animals disturbance of the biliary functions is associated with a symptom which is easily recognized and well understood—a yellow tinge of the skin and and mucous membrane. This sign of disease is most noticeable in animals with light-colored skins; but the tinge is still to be seen even when the surface is black, and the color can always be observed in a most distinct form in the eyes and inside the mouth.

Pathologists touch lightly as a rule on the question of the precise cause of the yellow tint of the tissues in cases of disease of the liver. Two modes of explaining the occurrence present themselves for consideration, and it is not easy to determine which is the correct one. The non-separation of the elements of bile from the blood by the liver in its torpid state, or the absorption of the fluid from the intestines, would account for the color; and considering that in many instances there is evidence of excessive secretion of bile of an altered character, it is probable that the fluid is taken up by the capillaries of the intestines, and becomes mixed with the blood. On the other hand, there is nothing unphysiological in the presumption that when the diseased liver fails in its office, the skin, kidneys and mucous membranes do duty for it. In such case, the elements of bile, being eliminated by these organs, would produce the yellow tint of the skin, mucous membrane, and the urine. Possibly both causes may act in producing the same result under different conditions of the bile-secreting organ.

It may be concluded that the presence of the elements of the bile in the blood will seriously interfere with the nutritive functions; in fact, it is not too much to say that the blood under such circumstances is really poisoned by the presence of effete matter, which in a healthy state of organism should be constantly excreted.

In addition to the poisonous action of bile in the blood, which is a positive evil, there are to be taken into account the negative effects of the absence of the secretion, in proper quantity and of normal character, in the intestinal canal. However objectionable the constituents of bile may be when retained in the blood, they are very essential for the proper performance of the function of digestion. Bile in the intestinal canal promotes the absorption of fat by its action on the mucous membrane. It also assists in the solution of the large mass of epithelial scales which are thrown off the surface of the membrane; and it is further useful from its slightly purgative and antiseptic properties. All these valuable qualities are lost when the bile becomes deteriorated.

Acute inflammation of the liver is not common in the dog, but chronic derangement frequently occurs in animals which are kept in an artificial condition. Youatt refers to the common existence of the disease in sporting dogs, greyhounds in particular, and considers that over-exertion, chills, and immersion in water are causes of disordered liver, which induce jaundice. Constipation is also described as a cause; but, as Steel remarks, it would be more correct to consider both the constipation and the yellowness of the skin and mucous membranes as consequences of torpidity of the liver. Excessive use of emetics and purgatives tends to cause disease of the liver, and it is hardly necessary to observe that the system of feeding pet dogs on stimulating and rich food is almost certain to cause disorders of the organ.

Jaundice as a sequel of distemper is a well-known and dangerous complication in that disease, from which the recoveries are few.

SYMPTOMS OF JAUNDICE.

Writers are in the habit of describing, among the indications of all forms of disease, many which are common, and a few which are actually diagnostic, viz., specially significant of a particular affection. Steel, in "The Diseases of the Dog," describes first a dull, sleepy state, thirst, disinclination for food and vomiting, diarrhœa or constipation, and then yellowness of the skin and mucous membranes, some colic pains, with tenderness on pressure to the right side. In the latter stages of the disease the skin is harsh and dry. The evacuations are light-colored. Wasting occurs, and in long-continued or chronic cases the belly is pendulous as in dropsy, but the examination of the swollen part indicates that it is not the result of effusion. Youatt and Blaine describe the same symptons, noting that the yellow tinge of the skin and mucous membranes is the principal one.

Fatty degeneration of the liver often occurs in pet dogs, as the natural result of the system of feeding to which we have referred.

TREATMENT OF JAUNDICE.

The means of combating disorders of the liver have not been materially developed since the time of Blaine and Youatt. Calomel was then, and is now, the popular liver medicine; aloes was given in conjunction, and is now given by some practitioners; while others prefer to regulate the bowels by means of sulphate of soda or Epsom salts.

Purgatives are not proper, especially at the commencement of the attack, and it is sufficient if a moderate laxative effect is obtained by the use of salines. Friction to the sides with mercurial ointment is advocated by Blaine, and some modern practitioners attach great value to this treatment. Bleeding used to be adopted in the beginning of the attack, and when fever was indicated by dryness of the mouth, thirst and quick pulse, but it is seldom resorted to in the present day.

Diarrhœa is to be checked by starch enemas with a few drops of laudanum. Diet is an all-important matter in the management of disorders of the liver. Abstinence from fatty food must be insisted on, and mucilaginous fluids are advised as a means of sheathing the intestinal membrane, and thus preventing the irritative effects of the diseased bile; mutton broth or chicken broth slightly thickened with arrowroot will be very useful, and no kind of solid food should be given until the dog has got well on the road to recovery. A return of the ordinary appetite will be a fair indication that a more liberal diet may be permitted.

Chronic disease of the liver is often associated with eruption on the skin, with loss of the coat. If neglected, the skin becomes covered with scabs.

No special treatment of the skin disease which arises from biliary disorder is necessary, as the irritation is only a sympathetic consequence of the generally deranged digestive function. Careful dieting, strict cleanliness, and regular exercise are important aids to recovery. Small doses of calomel with aloes, just enough to keep the bowels in order, may be given, and, as a tonic, iodide of potassium is worth trying. One to four grains of the agent may be given in the form of a pill; and when calomel is not given, five to ten grains of the solid extract of taraxacum may be used with the iodide of potassium.

In the treatment of the diseases of dogs, the practitioner always has to expect slow progress, and therefore a change of medicine is sometimes beneficial. The iodide of potassium may be changed for mineral acids. Two to ten drops of dilute hydrochloric acid (according to the age and size of the dog) may be conveniently given in sufficient water to make the mixture pleasantly acid.—*London Field.*

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the December number of the *American Kennel Register:*

BEAGLES.

6777. Thom, J. W. Stribling.

COLLIES.

6778. Ben Harrison, I. S. Johnson
6779. Clan Belle, C. H. Crandall.
6780. Donald IX., M. C. Howe.
6781. Fordhook Ben, W. Atlee Burpee & Co.
6782. Fordhook Bruce, W. Atlee Burpee & Co.
6783. Fordhook Flossie, W. Atlee Burpee & Co.
6784. Fordhook Wonder, W. Atlee Burpee & Co.
6785. Hera, J. Watson.
6786. Juga, J Watson.
6787. Matrona, J. Watson.
6788. Regina, J. Watson.
6789. The Bard of Fordhook, W. Atlee Burpee & Co.

GREAT DANES.

6790. Protector, Chas. E. Raible.

MASTIFFS.

6791. Beech Grove Jackson, Mrs. Kate Rankin.
6792. Bruno II., W. T. McMullin.
6793. Diana, Cameron Bros.
6794. Eureka Chief, W. H. McMullin.
6795. Greenwood Beauty, W. A. Power.
6796. Greenwood Duke, G. F. Whitney.
6797. Greenwood Dora, W. A. Power.
6798. Greenwood Princess, W. A. Power.
6799. Grover Cleveland, Edwin R. Smith.
6800. Max, Jr., C. S. Hichborn.
6801. Monarch Boy, Forest Kennels.
6802. Moses II., Jas. H. Day.
6803. Wacouta Sultan, James A. Parsons.

POINTERS.

6804. Beaufort II., H. S. Eustis.
6805. Don Graphic, E. T. Wilson.
6806. Duke of Vernon, L. Gardner.
6807. Mikado II., John M. Barton.
6808. Taipo, Miss A. W. Thayer.

PUGS.

6809. Ben Harrison, Warner & Hamilton.

ST. BERNARS—ROUGH-COATED.

6810. Abdallah, G. J. Rupprecht.
6811. Alpine, Dr. G. B. Sawtelle.
6812. Bayard III., G. B. Sawtelle.
6813. Black Lock, W. S. Gray.
6814. Buff, Patrick J. Shane.
6815. Cæsar III., Dr. Geo. B. Sawtelle.
6816. Clytie, Dr. G. B. Sawtelle.
6817. Confidence, W. S. Gray.
6818. Leo III., N. E. Beasley.
6819. Le Roi, Mrs. E. A. Housman.
6820. Marcus, Dr. G. B. Sawtelle.
6821. Meta, Phelps Smith.
6822. Nep, F. Henshaw.
6823. Plato, Frank L. Usher.
6824. Princess Alma, Dr. Geo. B. Sawtelle.
6825. Princess Gilda, Dr. Geo. B. Sawtelle.
6826. Rex Bernard, C. C. Chambers.
6827. Rollo III., H. M. Carpenter.
6828. Tasso, Dr. Geo. B. Sawtelle.
6829. Una, Dr. Geo. B. Sawtelle.
6830. Ursula II., W. Halsey Peck.
6831. Zulina, Geo. J. Rupprecht.

SETTERS—ENGLISH SETTERS.

6832. Blue Bessie, H. S. Peach.

GORDON SETTERS.

6833. Count, D. S. Moore.
6834. Joe, C. L. Farrington.
6835. Nellie Gordon II., John T. Paintin.
6836. Sears's Fan, H. G. Sears.

IRISH SETTERS.

6837. Dan, H. O. Leachey.
6838. Forest Corinne, F. C. Smith.
6839. Laura, Miss A. W. Thayer.

SPANIELS—CLUMBER SPANIELS.

6840. Johnny III., S. W. Langmaid.

COCKER SPANIELS.

6841. Dandy Obo, I. Richards, Jr.
6842. Irma, Mrs. Arnold.
6843. Newton Abbot Laddie Chief, W. F. Morse.
6844. Sappho, I. M. Shepherd.
6845. Snowball, James O'Hara.

IRISH WATER SPANIELS.

6846. Fanny Lee, F. A. Ruff.

TERRIERS—BULL-TERRIERS.

6847. Garry, Bart J. Doran.

DANDIE DINMONT TERRIERS.

6848. Sheila, M. H. M. Wood.

FOX-TERRIERS.

6849. Tessa, M. H. M. Wood.

SKYE TERRIERS.

6850. Scotty, Miss Colket.

COLLIE STAKES.—Rahway, N. J., Dec. 22.—*Editor Forest and Stream:* All the Collie Club Stakes as published are fixtures, and renew themselves from year to year. Owners of bitches that will whelp in January, 1889, should at once enter them for the Produce Stake of 1890. The third annual Collie Sweepstakes, for collies born in the United States or Canada between Jan. 1 and June 30, 1888, will be decided at the show of the Philadelphia Kennel Club, April 16 to 19, 1889. A subscription of $5 for each collie entered, to be paid to the secretary of the Collie Club at the time of entry. Fifty per cent. to the best dog or bitch, 25 per cent to the second, 15 per cent. to the third and 10 per cent. to the fourth. Dogs to compete for this sweepstake must be registered in the K.C.S.B. and also be entered in the regular classes of the bench show. Entries will close March 1, 1889. Blank forms can be obtained by addressing J. D. SHOTWELL, Sec'y, Box 18, Rahway, N. J.

COLUMBUS SHOW.—Columbus, O., Dec. 19.—The Columbus Fanciers' Club, Columbus, O., having been admitted as a member of the American Kennel Club, the bench show to be held Feb. 5, 6, 8 and 7, 1889, will be given under their rules. The dogs will be benched and fed by Spratts Patent. —GEORGE H. HILL, Supt.

"WHY IS THIS THUS?"—*Editor Forest and Stream:* It is presumed that a specialist club exists for the encouragement of a breed and that its prizes are offered to determine which is the best animal of the breed, but there must be a qualification as to this in New York. Note the recent announcement of the American Mastiff Club, and you will see that one prize is for dogs under three years old, and the next for dogs under two years old. This is peculiar. Why are these particular ages selected? There certainly is no reason known to mastiff men why a dog of four years should not compete on terms of equality with one of 22 months. However, the American Mastiff Club is not composed of mastiff men, so this knowledge could not be expected of them. Does anybody want to know the reason? I suggest —like Mr. Chucks, I would beg to observe, just to hint in the most delicate manner in the world, that Minting is over three years old, and that Moses, Sears' Monarch, Ilford Coroner, etc., are over two years. Truly the clique club should take a more covered path than this when they wish to win perfunctory prizes for the dogs the bosses own.—W. WADE.

AMERICAN PET DOG CLUB.—*Editor Forest and Stream:* A meeting of the American Pet Dog Club was held Friday, Dec. 14, at 129 East Sixteenth street, New York, with the president, Mrs. Wheatleigh, in the chair. After the roll call, the minutes of the preceding meeting were read and approved. The treasurer's report was accepted and ordered placed on file. A discussion of the new constitution and by-laws, presented by the committee appointed at last meeting to draft the same, resulted in their adoption, as presented by said committee, by an unanimous vote. A copy is annexed to these minutes. The meeting then adjourned on regular motion.—MARION E. BANNISTER, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Daylight. By McEwen & Gibson, Byron, Ont., for black, white and tan collie bitch, whelped Sept. 12, by Caractacus (Cremorne——) out of Pitchdark (Eclipse—Midnight).

Corric. By McEwen & Gibson, Byron, Ont., for black and tan collie bitch, whelped April 18, 1888, by Dublin Scot (The Colonel—Jessie) out of Madge (Highlander—Hasty).

Silver Nettle. By David Lewis, Cannonsburg, Pa., for lemon and white fox-terrier bitch, whelped June 22, 1888, by Dusky Trap (Dusky Splinter—Spider) out of Lady Belmont (Earl Leicester—Coquette).

Dusky Diamond. By David Lewis, Cannonsburg, Pa., for black, white and tan fox-terrier dog, whelped July 16, 1888, by Dusky Trap (Dusky Splinter—Spider) out of Coquette (Bacchanal—Trifle).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Cassandra—Balkis. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch Cassandra (A.K.R. 5883) to his Balkis (A.K.R. 5881), Dec. 18.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Colleen Bawn II. O. S. Kelsey's (Hartford, Conn.) Irish setter bitch Colleen Bawn II. (A.K.R. 4796), Dec. 14, ten (five dogs), by Timmey (Brush—Young Lill).

Bradford Lill. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Bradford Lill (A.K.R. 4121), Dec. 4, three (two dogs), by his Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Guelph. Black and tan collie dog, whelped Oct. 16, 1887, by Gilderoy out of Jess, by McEwen & Gibson, Byron, Ont., to J. L. Lincoln, Jr., Chicago, Ill.

Corric. Black and tan collie bitch, whelped April 18, 1888, by Dublin Scot out of Madge, by McEwen & Gibson, Byron, Ont., to Frank G. Walker, Great Falls, Mont.

Nellie McGregor. Black, white and tan collie bitch, whelped November, 1885, by champion Rex out of Juno, by Warner & Hamilton, Canaan Four Corners, N. Y., by Edward Powell, Ghent, N. Y.

Dr. Clyde. Brindle deerhound dog, whelped Dec. 24, 1885, by champion Oscar out of Lady Dare, by Associated Fanciers, Philadelphia, Pa., to J. T. Stobbs, Lincoln, Neb.

Ilford Comedy. Fawn, jet black points, mastiff bitch, whelped May 15, 1888, by champion Oriando out of Idalia, by Wacouta Kennels, Omaha, Neb., to Dr. Geo. B. Ayres, same place.

Nydia. Fawn, black points, mastiff bitch, whelped July 5, 1887, by Clement out of Ashmont Queen, by Dr. Geo. B. Ayres, Omaha, Neb., to Hamilton & Shugart, Council Bluffs, Ia.

Boss Bismark. Mastiff dog, whelped Jan. 7, 1888, by Count Bismark (A.K.R. 4871) out of Isabella (A.K.R. 2015), by C. C. Richardson, Sufheid, to N. Hucker, Jr., Buffalo, N. Y.

Kinglimmon, Princelimmon and Ladylimmon. Two orange, white markings, black shadings, rough St. Bernard dogs and one bitch, whelped Sept. 19, 1888, by champion Plinlimmon out of Lady Wellington, by E. B. Sears, Melrose, Mass., to Halfway Brook Kennels, Glens Falls, N. Y.

Zara. Orange and white rough St. Bernard bitch, whelped Sept. 19, 1888, by champion Plinlimmon out of Lady Wellington, by E. B. Sears, Melrose, Mass., to C. W. Bickford, Rochester, N. Y.

Wyoming Colin. Orange, white markings, black shadings, rough St. Bernard dog, whelped Sept. 19, 1888, by champion Plinlimmon out of Lady Wellington, by E. B. Sears, Melrose, Mass., to H. R. C. Watson, West Farms, N. Y.

Major. Orange, white markings, black facings, smooth St. Bernard dog, whelped Sept. 30, 1888, by Winchester (A.K.R. 5179) out of Topsy (A.K.R. 6752), by G. P. Wiggin, Lawrence, Mass., to Mrs. John Reardon, Brookline, Mass.

Jack. Orange and white rough St. Bernard dog, whelped Sept. 30, 1888, by Winchester (A.K.R. 5179) out of Topsy (A.K.R. 6752), by G. P. Wiggin, Lawrence, Mass., to Mrs. M. T. Stevens, North Andover, Mass.

Pemberton. Orange and white smooth St. Bernard dog, whelped Sept. 30, 1888, by Winchester (A.K.R. 5179) out of Topsy (A.K.R. 6752), by G. P. Wiggin, Lawrence, Mass., to J. J. Crippen, Salina, Kan.

Monarch. Orange and white St. Bernard dog, whelped Oct. 4, 1886, by Filibuster (A.K.R. 1071) out of Teresa (A.K.R. 5572), by Associated Fanciers, Philadelphia, Pa., to H. B. Olin, Rochester, N. Y.

Count Blue and Leah III. English setter dog and bitch, whelped Nov. 12, 1887, by Blue Prince out of Ada Gladstone, by Associated Fanciers, Philadelphia, Pa., to H. M. Cutting, New York.

Creole. Red Irish setter bitch, whelped 1883, by Grafton out of Silsby's Meg, by Associated Fanciers, Philadelphia, Pa., to H. M. Cutting, New York.

Ben. Red Irish setter dog, whelped July 28, 1886, by Elcho, Jr., out of Pequot Jess, by Associated Fanciers, Philadelphia, Pa., to H. M. Cutting, New York.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

O. R. R., Sonoma City, Cal.—My bloodhound dog has a running sore on his hindleg; can anything be done for it? Ans. Wash night and morning with warm water and castile soap and apply ointment made of 1dr. of balsam of Peru to 1oz. of vaseline. Try to keep a piece of lint with a little ointment tied on the leg all the time.

G. C. C., Rochester, N. Y.—A small black and tan terrier, nine months old, has for two weeks been losing the hair from his back and over the eyes; the parts seem to itch a great deal and in one place he has scratched himself raw; the skin seems to be very dry and scaly. The dog has the run of the house and is a great pet. I do not think he is fed anything but scraps from the table, so it does not seem likely that his blood is out of order; he is very lively and playful. Ans. Give the pup 4 drops of Fowler's solution of arsenic morning and evening in the food for three weeks. Rub into skin gently a little zinc oxide ointment morning and evening. The trouble is scaly mange or eczema. Keep bowels open.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Dec. 22.—But few scores were finished to-day at the range, on account of the unfavorable weather conditions, though a good number of shooters were present. Below are the scores made to-day:

Victory Medal Match.

B G Warren	7	8	10	10	9	10	7	7	6	6—80
O T Moore	7	10	10	5	8	5	6	5	9	7—72

All-Comers' Match—200yds.

D L Chase	10	7	7	10	8	7	9	5	10	7—80
W W Bennett	9	6	7	7	8	6	9	9	9	9—79
O T Moore	10	3	7	5	8	10	6	8	7	10—75
F Martin	9	8	6	8	5	9	8	6	7	6—72
C Clarke	6	8	7	10	5	5	6	6	7	9—69
W Chester (mil)	5	6	6	7	10	7	7	7	8	3—66

State Militia Match.

W P Dickson	55454—39	34444—19	35444—20	

Rest Match—200yds.

J Robinson	11	9	11	9	10	9	9	11	10	7—96
A Ballard	9	8	10	9	9	9	8	12	8	5—87
C Towne	7	8	9	6	7	8	7	9	10	12—83
W Chester	11	6	12	5	8	10	6	9	8	7—82

PHILADELPHIA, Pa., Dec. 23.—The Hartranft Rifle Club indulged in the weekly practice at the Hartranft House to-day, at 200yds., American standard target, 10 shots each. The day was bright and clear, and a steady breeze from the southwest was gently blowing; air was chilly and raw. The following scores were made during the afternoon:

Ed Travis	8	9	10	6	9	10	7	8	8	4—79
J J Mountjoy	8	7	8	7	5	6	6	9	7	8—72
J Lardner (mil.)	6	7	6	6	8	5	9	9	7	4—71
E Stees	6	5	8	8	8	3	6	4	5	8—59
C H Beehler, Jr	5	7	3	5	6	9	6	6	2	5—54
J H Beehler	2	4	7	5	5	8	3	5	4	5—48
Wm Wurfflein	2	7	4	7	6	9	7	0	3	3—48
H Steinbeisser	2	2	3	4	8	3	4	3	2	2—33
J M Oliver, Jr	3	2	7	4	2	0	3	2	3	2—28

LAWRENCE, Mass., Dec. 22.—The following scores were made by the Lawrence Rifle Club to-day at 200yds.:

E F Richardson	9	9	10	8	10	8	10	7	8	7—85
O M Jewell	10	8	10	3	6	8	8	8	10	10—86
W Fisher	10	9	10	8	5	7	10	6	10	9—84
C M Hill	10	10	8	8	6	8	8	10	6	7—81
A A Philbrick	7	9	9	10	5	10	8	8	8	5—77
A D Elliot	6	9	5	6	9	8	5	9	9	5—71

ZETTLER RIFLE CLUB.—New York, Dec. 18.—Score for the champion medal, 12-ring target, reduced to gallery distance. 10 shots per man: G. Zimmerman 117, H. Holges 115, J. Coppersmith 115, M. Dorrler 114, C. G. Zettler 114, L. Flack 114, J. H. Brown 114, M. B. Engle 111, B. Zettler 106, H. Witte 108, F. Lindkloster 107, C. Rein 106, M. Tropp 105, T. C. Noone 105, A. Stahl 105, F. Arnold 104, A. P. Hunt 103, G. W. Downs 102, B. Busse 101, J. Kanzler 97.—N. D. WARD, Sec.

SAN FRANCISCO, Dec. 15.—There was a very big attendance of the lovers of target shooting at Harbor View to-day, and considerable enthusiasm was manifested during the afternoon. A majority of those present were members of the California Schuetzen Club and the San Francisco Turners' Schuetzen Club. It was the closing day's trial of the year in the former club, and only those members who had entered in seven of the twelve monthly contests of 1888 were allowed to compete in the contest for the prizes in the five classes. For each of these classes a trophy of the value of $25 was offered. The result was as follows, the names given being the winner in each class: Champion class—A. Johnson, 429 rings; first class—J. E. Klein, 410; second class, C. Thierbach, 382; third class—H. Guembel, 356; fourth class—A. Utschig, 374. The San Francisco Turners' Schuetzen Club was represented by some 40 members who competed for medals and money prizes. The club medal for December was won by R. Finking, Sr. The shooting for the money prizes resulted as follows: H. Brown 59 rings, J. Utschig 57, R. Finking, Sr., 51, A. Utschig 48, C. Sagehorn 47, O. Burmeister 46, L. Thierback 46, F. Utinger 44, H. Enge 44, F. Acker 43, R. Finking, Jr., 42, F. Miller 38, L. Brune 33, H. Turk 22.

There was a good day's sport at the Shell Mound rifle range to-day, and some fairly good scores were made. The shooting began at 9 A. M. and lasted the entire day. The most interesting thing of the day was a match between Capt. R. J. Loughery and Corp. H. L. Pendleton, the latter allowing the Captain 25 points in 50 shots. The score was as follows:

Loughery	4443344345—38	Pendleton	4534354444—40
	4444544444—41		5444444444—41
	5454454433—41		4544444445—42
	4544444445—42		4543554444—43
	5544454451—44—206		5544444544—43—209

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE DECORATION DAY TROPHY.

IN order to afford a general test of shooting and assist on the growing sport of trap shooting, the FOREST AND STREAM offered a $100 cup to be shot for on Decoration Day, 1887. Ample and timely notice was given of the conditions, and a number of clubs made scores, a tie for first place resulted, and after several attempts at shooting it off, the FOREST AND STREAM secured consent from the leading clubs for a division of the value of the cup, and checks were sent accordingly. This left the cup in the hands of FOREST AND STREAM, and with the opening of the year a new offer of the cup was determined upon. It was put up as before to be shot for by small teams from any regular rifle club, and the terms were made as easy as possible. Instead of concentrating the shooting on one day or week, the whole season was thrown open to the shooters, and in place of one test and to prevent a fluke from giving prominence to a team of perhaps secondary merit, the best three in five scores was to determine the winner. The detailed conditions were printed and scattered. There were many inquiries and at first it looked as though the list of entries was to be a large one. Some clubs sent the entry fee of $10 per team only to withdraw it before the date for the first shoot. The opening shooting day arrived with four entries on the match list. Two of the entries came from one club, but the club men failed to get together to shoot within the time specified, and the entry fee was of course forfeited. This left $40 in the pot for money prizes, with the cup to go to the leading team.

The teams remaining in the contest under these conditions were the Parkersburg (West Va.) Gun Club and the Delhi Gun Club, of Cleves, Ohio. The report from the several shoots of the Parkersburg Club were as follows:

PARKERSBURG, Va., July 28.—The following is score of the Parkersburg Gun Club team in FOREST AND STREAM match July 27, 1888:

	Straight-away.	Right.	Left.	Total.
A W West	11112	11111	11111	—15
L Stephens	11111	11111	21211	—15
C E Verges	11112	11110	11111	—14—44

All shot 10-gauge guns. The undersigned certify the above score, made in their presence, to be correct.

J. T. ADAIR,
A. CHARNOCK, } Judges.
G. M. FOUGHT, Referee.

PARKERSBURG, W. Va., Aug. 24.—We, the undersigned, testify that the following scores were made to-day in Trophy shoot by members of Parkersburg Gun Club, according to FOREST AND STREAM rules:

A W West	11111	11111	11111	—15
L Stephens	11101	11111	22111	—14
C E Verges	11111	11111	12121	—15—44

Second match, same day, same conditions:

A W West	11111	12111	11111	—15
L Stephens	11111	10211	11111	—14
C E Verges	21111	11111	01111	—14—43

GEO. I. HAMMOND, Judge and Scorer.
E. JACOBS, Judge.
G. M. FOUGHT, Referee.

PARKERSBURG, W. Va., Sept. 1.—The undersigned do hereby certify that the following score was made by members of the Parkersburg Gun Club entered in FOREST AND STREAM Trophy shoot under the conditions and rules governing, the days hereinafter named:

Aug. 31.

A W West	11211	21112	21121—15
L Stephens	11211	11121	11211—15
C E Verges	12111	12111	12111—15—45

Sept. 1.

A W West	11211	11111	12111—15
L Stephens	12112	11111	12112—15
C E Verges	11111	12111	11112—15—45

D. RUCKMAN,
E. E. SCIERMER, } Judges.
C. W. BUTCHER, Referee and Scorer.

The Delhi Club shot its scores at various days during this season and had a capital team at work. The scores were returned as follows, using the Cleveland Target Co.'s birds and traps:

CLEVELAND, O., Aug. 24.—Shoot for the Decoration Day Trophy:

A B Whitlock	11121	11111	11212—15
C McFee	11111	11121	11111—15
W C Harrell	11111	11111	11111—15—45

We hereby certify the above is a correct score as made by the Delhi Gun Club Aug. 24, 1888, and the terms of match were strictly complied with.

GUS HILDEBRAND,
CHAS. W. CAINE, } Judges.
BENJ. CHIDLAW, Scorer.

CLEVELAND, O., Aug. 31.—The following scores were shot to-day:

A B Whitlock	11111	11121	11111—15
C McFee	11111	20102	11111—13
W C Harrell	10121	11111	11101—13—41

We hereby certify that the above is a correct score as made by the Delhi Club at Cleveland, O., on Aug. 31, 1888, and that the FOREST AND STREAM rules as to angle, distance, etc., were strictly complied with.

H. W. BALSLEY,
JAS. CHIDLAW, } Judges.
JOHN INGRAM, Scorer.

CLEVELAND, O., Sept. 17.—Two scores adjourned from Saturday, Sept. 15, account of rain:

Score No. 1.

A B Whitlock	12112	12221	22111—15
W C Harrell	11111	11111	11111—15
C W McFee	11111	11111	00101—12—42

Score No. 2.

A B Whitlock	11111	21211	02121—14
W C Harrell	11121	11111	21111—15
C W McFee	11111	11111	11111—15—44

We hereby certify that the foregoing are the correct scores as made at Cleveland, O., by the Delhi Club, and that the rules as to distance and angles were strictly complied with.

RALPH M. BALSLEY,
CHARLES W. CAINE, } Judges.
GUS HILDEBRAND, Scorer.

CLEVELAND, O., Nov. 9.—Score for FOREST AND STREAM trophy:

McFee	11111	11111	11111—15
Whitlock	11111	21111	11122—15
Harrell	11111	11121	11111—15—45

We hereby certify the foregoing is a correct score as made by the Delhi Rifle Club at Cleveland, and that the rules of the FOREST AND STREAM as to distance and angles were strictly complied with.

R. FARMER,
H. W. BALSLY, } Judges.
C. W. CAINE, Scorer.

This result put the teams in a tie, each having made two perfect scores of 45 to one score of 44. A shoot-off was necessary and a note was duplicated to each of the teams as follows:

GENTLEMEN—Your team has tied for first place in the Trophy Cup shoot with a total of 134 in a possible 135. To decide the matter will you kindly get your team together again any day, within ten days after the receipt of this, and let each man shoot on until he mises, and send on the score at once. This "miss and out" tie shoot to be under the same conditions as the original match as to birds, distances, etc. Yours,

FOREST AND STREAM PUBLISHING COMPANY.

The sickness of McFee and the absence of Whitlock on the Ohio team necessitated a further extension of time in their case, and at last both returns came in as follows:

PARKERSBURGH, W. Va., Dec. 4.—The following scores were made to-day by members of the Parkersburg Gun Club team, Parkersburg, W. Va., by order of FOREST AND STREAM to decide a tie for the FOREST AND STREAM Trophy Cup:

C E Verges	11111	11111	11111—15
	12111	11111	11112—15
	11111	21111	11112—15
	11111	11111	11110—14—59
A W West	11111	21111	11121—15
	11111	11111	11121—15
	11111	11111	11111—15
	11111	11111	21111—15
	11111	110	— 7—67

	11111	11112	11111—15
	11112	11111	11111—15
	12111	12111	11111—15
	11111	11111	11211—15
	11111	11	— 7—112

We hereby certify that the above is the score made by the Delhi Gun Club, at Cleveland, O., Dec. 15, and on account of darkness McFee could not finish and we continued the shoot until Monday, Dec. 17.

JOSEPH HOGGINS,
W. C. HUGHES, } Judges.
JOHN VAN GORDER, Scorer.

Delhi Gun Club, (continued from Saturday), Dec. 17:

C W McFee	11111	11111	11111—15
	11111	11111	11111—15
	11112	11122	11111—15
	11111	21111	12111—15
	11111	11111	11111—15
	11111	11111	11111—15
	11		— 2—92

We hereby certify the above is the correct score made by C. W. McFee of the Delhi Gun Club, at Cleveland on Dec 17, and we certify he did not miss, but it being too dark to shoot he quit when he had broken 92 birds.

JOHN INGRAM,
W. C. HUGHES, } Judges.
JOHN VAN GORDER, Scorer.

Accompanying the record of the Delhi Club's shoot was the following note from its managing director: CLEVES, O., Dec. 17, 1888.—*Editor Forest and Stream:* SIR—In accordance with your order I got my team together Saturday afternoon to shoot off the tie for Decoration Day Trophy, and herewith send you the score made. You will see Harrell missed his 50th bird, Whitlock his 104th, breaking 103; McFee broke 112, when it got too dark to shoot, and the judge called the shoot to be continued Monday the 17th. We got together at 3 P. M., and McFee continued his shoot. It was a drizzly, dark afternoon, and when he had broken 92 without a miss it became so dark the judges decided it was too dark to continue, but I objected to again continuing the shoot and he quit, and I send you the certified score of each day separate: First day—Harrell 49, Whitlock 103, McFee 112, total 264. Second day—McFee 92, grand total 356.

The shooting off of the tie closes the contest, with first prize of the cup to the Delhi Gun Club, and the $40 to the Parkersburg Gun Club.

CANADIAN TRAP NOTES.

GUELPH, Dec. 18.—The Toronto Gun Club, with ten men, arrived in the city to-day and had a friendly shoot with the Guelph Gun Club. The birds were extra good, the day fine, and consequently the match was exciting. The Toronto men came out 7 birds ahead, so that the match was pretty closely contested. Afterward the visitors were entertained at supper. They left for home by the 9:30 train. Following is the score:

Guelph.		Toronto.	
J Wayper	1111111111—10	H George	0111111111— 9
W Quinn	1110011111— 8	J Werden	1101111111— 9

	— 68		— 75

Toronto won the two matches shot last year. Another match will be shot in Toronto shortly between these two clubs.

GUELPH, Dec. 20.—The annual meeeting of the Guelph Gun Club was held to-day, when the following officers were elected: President, Geo. Sleeman; Vice-President, Dr. Howitt; Secretary-Treasurer, G. A. Richardson; Directors—Judge Chadwick, Johnston, G.T.R., T. Holliday and A. Culi.

CAPT. BREWER IN ENGLAND.—The American marksman reached England on Wednesday, Nov. 28, and on the day following was at the open meeting of the Union Gun Club at Hendon near London. A correspondent writes of the shoot on Nov. 31 and Dec. 1: The principal event, the Eighth Great Handicap Sweepstakes of £5 each, with £100 added, brought together fifty-four competitor, but owing to darkness rapidly setting in on Thursday only five birds each were shot at. Consequently it was decided to make an early start on Dec. 1, as nine more rounds had to be completed, and shortly after 11 o'clock the first name was called up to resume the contest for the prize. The birds, owing to the wretched state of the weather, were somewhat slow on the wing, therefore many kills were recorded, misses being few and far between. As the contest approached its termination great interest was evinced in the shooting, and the fine form shown by Mr. Jackson (26yds. rise) and Capt. Brewer (32) evoked rounds of applause. It was the general opinion that not one of the competitors would succeed in grassing all their rocks, but contrary to expectations, Mr. Jackson and Capt. Brewer scored the allotted number, the former gentleman being successful in both his chances. It was agreed to share the proceeds, amounting to £297, Mr. Jackson taking two-thirds of this amount and Capt. Brewer the remaining third. Both sportsmen were warmly congratulated on their success, and it is a long time since such a capital exhibition of shooting has been witnessed. Capt. Brewer has undoubtedly proved himself to be a marksman of great ability, and his victory is all the more meritorious considering that he was standing on the 32yds. mark, giving in several instances 3yds. away. Mr. Jackson also has every reason to be proud of the victory he has achieved. Mr. Jackson hails from Salop, Newport. The afternoon was devoted to shooting £2 sweepstakes, and in these the recipients of the pools were Messrs. Edwards, Worth, J. Woolley, Beasant, Wrient and Willis. Mr. Studd, who divided a £2 sweepstakes at 35yds. rise with Mr. J. Smalley on Thursday, handled a gun by E. M. Reilly & Co., of Oxford street. Mr. H. C. Dillion officiated as referee and scorer throughout the meeting, which passed off most satisfactorily. It is decided to hold a similar gathering in Febuary next. Score of the principal event: Eighth great open handicap sweepstakes of £5 each, with £100 added, at 15 birds each, 54 subscribers.

Jackson (26yds)	111111111111111	Studd (27)	110111111111110
Brewer (32)	111111111111111	Worth (26)	111111101111111
Jackson (26)	111111111111111	W Wrient (25)	111111110111
Wilton (25½)	111110111111111	Studd (27)	110111111111
J Smith	111011111111111		

BROOKLYN, Dec. 20.—Shooting matches are getting to be very fashionable in this section. They are all the rage. To-day there was a pigeon-shooting match at the Woodsbury Driving Park. The weather was chilly and affected the result. The match was between Capt. W. Cromwell and Drs. Griswold and Van Schaick, both of New York city. The following is the score:

Capt Cromwell	0 0 1 0 1 1 1 ½ 1 0 0 1 0 1 ½ 1 0— 9
Dr Griswold	½ 1 1 0 1 1 ½ ½ 0 1 1 1 0 1 1 0 1—11½
Dr Van Schaick	0 1 0 1 1 1 0 1 1 ½ 0 0 0 ½ 1 0 ½— 8½

The figures ½ in the score above represent a bird killed with the second barrel, or, in other words, a bird killed with the second shot. Immediately after the conclusion of the above match the large crowd which had gathered to witness the sport adjourned to an open lot near Washington Hotel, where a clay-pigeon shooting match for sweeps was gotten up. There were three contests. Very poor work was done in the first two, but in the last the chase was very hot and exciting. The score:

First Contest.

Valentine Smith	1	F K Walsh	3
Dr Griswold	2	Capt Cromwell	3
Dr Van Schaick	1	H W Murray	1

Second Contest.

F K Walsh	3	Capt Cromwell	2
Dr Griswold	2	H W Murray	1
Dr Van Schaick	2	H Elsworth Craft	3
Valentine Smith	2		

Third Contest.

Dr Griswold	5	F K Walsh	4
Dr Van Schaick	3	H W Murray	3
H E Craft	2	Valentine Smith	2
Capt Cromwell	1		

Mr. Walsh carried off the honors by making the best percentage, which was 66⅔. Dr. Griswold came next with 60 per cent.

CAMDEN, N. J., Dec. 15.—A return shooting match between the South End Gun Club of Camden and the Gloucester City Gun Club took place in Camden to-day. The match was between sides of eight at 5 glass balls and 5 clay pigeons, the Gloucester team winning by the following score:

Camden Gun Club.	G. B.	C. P.	Gloucester Gun Club.	G. B.	C. P.
Burt	3	5	McQuaid	4	3
Burgin	5	4	Hoskins	2	5
Tobin	5	3	Foster	3	3
Litzenberg	3	3	Hawlings	2	5
Lightcorp	3	3	Smith	4	2
Young	2	5	J McQuaid	3	5
Woods	2	1	Flatley	2	4
Fish	1—26	6—22	Cheeseman	4—24	3—30

ALGONQUIN GUN CLUB.—New York, Dec. 21.—*Editor Forest and Stream:* The Algonquin Gun Club, of this city, probably one of the oldest, and without doubt one of the most prosperous gun clubs in this immediate vicinity—its charter dating back to 1876 (centennial year)—celebrated its twelvth anniversary in a most appropriate and becoming manner last evening at 341 West Forty-seventh street, the occasion being also the annual election of officers for the ensuing year. The election resulted in the unanimous choice of the following gentlemen: President, Mr. Louis Brenner; Vice-President, Mr. Joseph Hanna; Secretary, Dr. Geo. G. Van Schaick; Corresponding Secretary, Mr. E. H. Fox; Treasurer, Dr. H. Griswold; Captain, Mr. Henry Radjinsky; Board of Trustees, Messrs. Robert Gordon, W. H. Purdy and Frank Rinn. After listening to the encouraging reports from the secretary and treasurer for 1888, testifying that our club had more than held its own both financially and in point of membership, and in arranging an impromptu live bird match to be shot next month, two teams being selected from the members present—of which more anon—the members adjourned to the dining room to partake of the inviting repast there spread in honor of the occasion. That the eatables and drinkables were good and toothsome the empty dishes bore ample testimony when the feast was over. Among the changes to be made next year by the A. G. C. is the substitution of either the Keystone trap and targets or the blue-rock, probably the former, in place of the American clay-bird and targets. We can report the outlook, so far as we are concerned as a gun club, very bright and encouraging for the year 1889. Wishing the FOREST AND STREAM a very merry Christmas and a happy New Year, and many of them, the members departed in the "wee small hours.—E. H. F."

BROOKLYN, Dec. 20.—Several prominent wing shots of Brooklyn and vicinity assembled to-day at a well known resort on the Fort Hamilton road just beyond Greenwood Cemetery to witness a match at 10 birds each between W. Green, 21yds., and E. L. Ranft, 25yds. The latter won by hitting 8 birds to his opponent's 5. A sweepstakes of ten entries at 5 birds each followed. J. Lambert, 5 straight, winning first money, G. L. Ayres second and Capt. Meyer third.

BIG FEATS OF ENDURANCE.—Dr. Carver, the great marksman, who proposes to smash 60,000 balls at the Washington rink next week, was rather discouraged last evening when C. J. Jones, commonly known as "Buffalo" Jones, owner of the herd of buffalo on exhibition in Minneapolis, walked into his room at the Nicollet house and made this sort of a break: "Doctor, I don't want to discourage you, but I simply want to say this: I don't believe you can perform that feat next week, and will put up $10,000 on my opinion." Mr. Jones is a man of as much money as nerve and he was prepared for business. The doctor was not ready to wager. He was feeling sore, for he had just been practicing with his favorite rifle. He put in one hour in raising his favorite Winchester, putting it up 3,500 times. He worked a little too hard and he felt it. A number of newspaper men and others experimented with raising the rifle yesterday, and now appreciate what the doctor is going to undertake. A Mr. Wilson, a St. Paul blacksmith, thinks he can raise a 10lb. hammer 60,000 times in a week, and it looks as if there would be a hammer-raising contest between Moeller and Wilson while the doctor was doing his great ball-breaking act.—*Pioneer Press, Dec. 21.*

THE MONACO SHOOTS.—The international pigeon shooting at Monaco for the season of 1888-89, opened for the first series on Tuesday, Dec. 11, and continue every Tuesday, Thursday and Saturday up to Jan. 12, 1889. Special prizes are added to each of the events Grand International Meeting, Monday, Jan. 14, Grande Poule D'Essai, £50; Wednesday, Jan. 16, Prix D'Ouverture, an *objet d'art* and £120; Friday and Saturday, Jan. 18 and 19, Grand Prix du Casino, an *objet d'art* of £200 and £800; Monday, Jan. 21, Prix de Monte Carlo (grand handicap), an *objet d'art* and £120; Wednesday, Jan. 23, Prix de Consolation (handicap), an *objet d'art* and £40. Friday and Saturday, Jan. 25 and 26, Third Universal Championnat (triennial), an *objet d'art* and £200.

A second series of meetings will take place immediately after the Grand Concours and continue until March 10, every Tuesday, Friday and Saturday. Thursday and Friday, March 7 and 8, Grand Prix de Cloture, an *objet d'art* and £80, will be followed by a third series of meetings until April. A third series of meetings will take place in March and April. Prizes are added to each of the events of all series. For full particulars address A. M. Blondin, secretary, Monte Carlo.

GLOUCESTER, N. J., Dec. 17.—Miss Annie Oakley, the famous trap-shot, broke all records at double clay-pigeons here to-day. The conditions of the contest were that Miss Oakley could not break 45 birds out of 25 pairs of clay pigeons, 16yds. rise, Mr. Wm. Howell of Gloucester, N. J., wagering $50 against accomplishing the feat, which was promptly accepted by Miss Oakley's manager, Mr. Butler. When Miss Oakley faced the traps the wind was blowing quite a small gale, which aided the flight of the clays. Miss Oakley was given five trials; on the first trial she made a straight score of fifty breaks, thus beating all records at double birds. Frank McQuade officiated as referee. Miss Oakley used her 6½lb. 12-gauge hammerless Lancaster, loaded with 3drs. Schultze powder and 1oz. No. 7 shot. A large number of the pigeons were smashed at long range, eliciting hearty applause from the audience. Several clippers, that skimmed away like rockets, received particular enthusiasm.

WELLINGTON, Mass., Dec. 22.—At the grounds of the Wellington Club to-day some good scores were made in the badge and merchandise matches. In the merchandise match at 10 clay-pigeons and 10 bluerocks, the following scores were made: Lang 15, Scott 18, Snow 14, Melcher 12, Swift 14, Stanton 18, Bond 15, Bert 15, Congdon 13, Chase 14, Moore 15, Frank 14, Schaefer 13, Perry 17, Bradstreet 12, Webster 11, Nichols 15, Baxter 18, Savage 14, Sampson 11. The scores in the badge match were: Lang 15, Scott 14, Snow 17, Melcher 12, Swift 13, Stanton 14, Bond 17, Bert 17, Congdon 9, Moore 15, Schaefer 13, Perry 18, Bradstreet 13, Webster 9, Nichols 14, Baxter 12, Savage 17. Following are the winners in the sweepstake matches: Six clay-pigeons—Frank. Six clay-pigeons—Scott and Bond. Six bluerocks—Bond. Six clay-pigeons—Frank and Chase. Ten bluerocks—Stanton, Frank, Perry and Baxter. Six bluerocks—Bert. Ten clay-pigeons—Scott and Bond. Ten bluerocks—Baxter. Six bluerocks—Snow, Scott and Bert. Ten clay-pigeons—Snow, Perry and Bert. Six bluerocks—Schaefer, Baxter and Bradstreet. Bert and Chase shot a match of 50 birds, Bert's being 25 doubles, while Chase shot at 50 singles. Bert won, breaking 35 to 31 for Chase.

MINNEAPOLIS, Dec. 20.—Capt. A. H. Bogardus, the champion wing shot, has been at Minneapolis, Minn., for a few days, and gave a public exhibition of fancy shooting, in which he did some exceedingly quick and fine shooting with his rifle at glass balls. After this he and W. T. Best, manager of the Macomber Metal Target Co., shot a friendly 20-bird match at the Macomber improved tin pigeons, using Best's new patent trap puller, each shooter pulling his own trap. Best missed his fourth and the Captain his eighth bird, the match ending in a tie, which was not shot off, Best being amply satisfied in tying the champion. The Captain was pressed for time, he having to take the evening train for Chicago, but before leaving he stated that he intended returning in the spring to give a tournament.

CLAREMONT, Jersey City, Dec. 22.—The clear, cold afternoon did not prevent quite a number of enthusiastic sportsmen from attendance this P. M. These Saturday shoots are derservedly increasing in popularity, several who attended to-day for the first expressed their intention of coming regularly. A fine range, for testing shotguns for both pattern and penetration, is in process of erection, and when completed will afford all parties that desire to have guns tested in the most approved manner at regular or extreme distances a fine chance, and doubtless some interesting facts will be shown about various loads. Three traps were used for practice in addition to those occupied for the following sweeps. All at 9 bluerocks, single; entrance 50 cents.

Sweep No. 1:

All ties divided. The wind caused the bluerocks to fly a little erratic occasionally, which caused the low scores. Traps and trappers will be ready every day during holiday week.—ARDON.

CARVER VS. ERB.—Dr. W. F. Carver, the noted trap-shot, has challenged Fred Erb, of Lafayette, Ind., to a live bird shooting match, and Erb has accepted. The match will take place at the Lafayette Gun Club Park, on Feb. 22, for $100 a side, 100 pigeons each.

HEIKES VS. BANDLE.—Articles of agreement have been signed between Rolla O. Heikes, of Dayton, Ohio, and Al Bandle, of Cincinnati, to shoot at 100 live birds each, for $1,000. Hurlingham rules to govern except as to gauge and weight of gun. The match will take place on the Independent Gun Club grounds, at Cincinnati, Jan. 1, 1889.

NEW JERSEY CLUBS.—A call for a meeting of delegates from the various gun clubs in the State of New Jersey, to take concerted action on a very important matter, has been sent out by Mr. W. Fred. Quimby, president of the Jersey City Heights Gun Club. The meeting is to be held at the Astor House, New York city, on Wednesday, Jan. 2, 3 P. M. sharp. All gun clubs in New Jersey are urged to send one or more delegates, and to advise Mr. Quimby whether they will be represented.

HARRISBURG, Pa., Dec. 23.—Thursday, Dec. 20 the West End Social Gun Club, of Harrisburg, Pa., was duly organized by the election of the following officers: President, Albert Millar; Vice-President, M. H. Brensinger; Secretary, Ephraim Jones; Treasurer, H. A. Bach. Executive Committee, Jacob Weidman, G. C. S. Swartz, H. B. Shoop, Jeff Hargest, Wm. F. Wade. The club is composed of forty representative men, all shooters, and will have regular monthly shoots for medals.—M. H. BRENSINGER.

WALNUT HILL, Dec. 22.—A special trap shooting tournament was held at Walnut Hill range to-day. The attendance was good though many contestants who were intending to be present were undoubtedly kept away by the very unfavorable weather conditions, a strong, cold northwest wind prevailing throughout the day, accompanied by frequent blinding snow squalls, which often rendered seeing the flying targets almost an impossibility. The principal event of the day was the challenge match between Messrs. Dickey and Wheeler, which was easily won by the former who put up a score of 93, a performance which, under favorable circumstances, would be good, but under existing circumstances was remarkable. Mr. Wheeler failed to shoot up to his usual high standard but pluckily fought the match through. Mr. Dickey used a 10-gauge Scott gun, weighing 9lbs. 14oz., and the Climax shell loaded with 4drs. Hazard F F powder and 1¼oz. Tatham's "trap" 7 shot. Mr. Wheeler used a 10-gauge Smith gun weighing 10lbs., and Peters cartridges. Among the visiting sportsmen present were Dr. C. H. Gerrish of Exeter, N. H., who, when in practice, ranked well up among the strong trap shots of New England, and only recently attended a contest for the Climax diamond badge, which in competition with our most expert shots he won, and held until the following competition, when it fell into other hands; and Mr. M. F. Lindsley, of N. Y., superintendent of the American Wood Powder Company, who did some good work at the traps with a 7lb. 12-gauge gun, loaded with 2¾drs. American Wood Powder and 1¼oz. shot. Mr. Perry of the Wellington Gun Club did exceptionally good shooting. The result of the shooting in the various events is as follows:

Five clays from 5 traps—Nichols and Wilbur first with 5, Dickey and Swift second with 4, Perry third with 3.

Six standard targets from 3 traps—Wheeler first with 6, Nichols and Perry second with 5, Hartford, Swift and Wilbur third with 4.

Six standard targets, 21yds. straightaway—Perry first with 6, Stanton and Wheeler second with 5, Lindsley third with 4, Nichols fourth with 4.

Ten clays from 5 traps—Dickey and Swift first with 10, Bowker and Stanton second with 9, Perry, Wheeler and Wilbur third with 8.

Ten standard targets from 3 traps—Dickey and Swift first with 10, Wheeler, Stanton and Snow second with 9, Bowker and Perry third with 8, Chase and Nichols fourth with 7.

Ten clays from 5 traps—Stanton first with 10, Swift and Wheeler second with 9, Chase and Nichols third with 6, Bowker fourth with 5.

Twenty-five clays from 5 traps—Perry and Wheeler first with 24, Dickey and Nichols second with 21, Chase, Lindsley and Stanton third with 20.

Three pairs clays—Perry and Stanton first with 6, Dickey second with 5, Chase and Webster third with 4.

Challenge match at 100 clay-birds from 5 traps, between O. R. Dickey of Boston and G. H. Wheeler of Marboro:

Dickey..... 1101111111111011101111111111111111101111111111111
1111111110111111111111111011111111111111111101111—93

Wheeler..... 0111110100111111101110001011011011101110111111
1111111011110011101111110111011010111111101—78

Ten standard targets from 3 traps—Dickey and Perry first with 10, Swift second with 9, Nichols and Webster third with 8, Bowker and Lindsley fourth with 7.

Ten clays from 5 traps—Perry first with 10, Dickey and Wheeler second with 9, Swift and Webster third with 7, Nichols and Stanton fourth with 6.

Ten standard targets from 5 traps—Stanton and Wheeler first with 10, Lindsley second with 9, Chase, Dickey and Perry third with 8.

Ten clays from 5 traps—Perry aad Stanton first with 10, Swift and Wheeler second with 8, Bowker, Dickey and Webster third with 7.

Seven clays, 24yds. straightaway—Dickey first with 5, Lindsley second with 4, Chase and Webster third with 3.

The eighth competition for the Climax Diamond Badge, open to all, without entrance fee, will occur at Walnut Hill, Wednesday, Jan. 9, 1889.

CINCINNATI, Dec. 19.—Some two hundred shooting enthusiasts presented themselves at the old Avenue Ball Park this afternoon and witnessed Bandle do Shott, the leading amateur shot here, for the second successive time in a match that in all likelihood will not be equaled for many years. Better tame pigeons for trap shooting purposes were never furnished, the winner (Bandle), counting those that fell dead out of bounds, scoring 96 and his opponent (Shott) 95. The birds throughout proved a very lively lot, few needing urging to "git up and dust," and, as to their gameness, the dead birds out of bounds, six for Bandle and nine for Shott, tell the tale in toto. Shott, the loser, is a very graceful, cool and deliberate shooter, and if he would pay more attention to his second barrel work would be a very dangerous man for any expert to run against, and, aside of Bandle and Heikes, it is doubtful if he has his equal in the State—this including "Old Reliable," Ed Taylor. Bandle shot a remarkably remarkable race, mowing his birds down with a certainty that was simply wonderful. Very few of the birds shot could be classed "duffers," all taking wing the instant they were released, and in the majority taking the hardest possible flights. Shott getting 68 away flights to Bandle's 63. The winner made a very poor start, scoring but sixteen out of his first 20 to his opponent's 19, and but 18 to his opponent's 19 again on his second 20, after which he found his place, and with very hard birds allotted him he ran out three averages of 19 out of 20 on his last 60, to his opponent's 17, 15 and 16 respectively, thereby winning the match by 5 birds. H. F. Robinson officiated as referee. Both shot L. C. Smith 10-gauge hammerless guns, loaded alike—first barrel, 4drs. wood powder, 1¼oz. No. 8 chilled shot; second, 4drs. "FFF Extra" Laflin & Rand black powder, 1¼oz. No. 7 chilled shot. Scores: 100 live birds; Hurlingham rules; 30yds. rise:

Al Bandle.	Ed Shott.

o denotes fell dead out of bounds. Referee, H. F. Robinson.

CINCINNATI, Dec. 20.—The two-team match on the Old Avenue Ball Park between Messrs. Honing, Wells, Robinson, Magle, Wick and Paul proved a very tame affair, the shooting being of the poorest, the only reason therefor being a very dark background and hanging smoke. Some eighteen shooters were in attendance, and participated in the side sweepstakes. Frank Becker referee. Conditions: 50 single American clay birds per man, 18yds. rise, from 5 traps, National rules. Stakes, $10 a corner; two moneys; 60 and 40 per cent:

Team No. 1.—Total 61.

T Honing	0101010111111101111011010010010011110110101110—31
G W Wells	1111001110101001110011110000011111111000110100—30

Team No. 2.—Total 57.

Wick	0000011100001011001001011111010101119011111111—31

Tony Honing and Wick are matched to shoot Thursday next for a purse of $25 a side at 15 single and 5 pair clay birds each. N. J. Magle, of Troy, Ohio, is matched to meet Wick in his city (Troy, Ohio,) between Jan. 1 and 15, in a match at 25 live birds for $50 a side. Hurlingham rules barring gauge and weight of guns and traps.

CINCINNATI, Dec. 25.—The friendly shooting match at the Avenue Base Ball grounds to-day, between Albert Bandle of Cincinnati and Capt. A. H. Bogardus, was one of the most remarkable on record. The contest was at 100 live birds each, from 5 ground traps, 30yds. rise, 80yds. boundary, under Hurlingham rules, except weight and bore of Bandle's gun, which was a 9½lb. 10-bore, while Bogardus's gun was a 12-bore, under 8lbs., as required by Hurlingham rules. Bogardus scored 95, using both barrels 18 times. Bandle made the wonderful score of a clean hundred, using both barrels 18 times. In addition to his 95, 3 of Bogardus's birds fell dead out of bounds, and were not scored for him.

TUSCALOOSA, Ala., Sept. 15, 1888.—*United States Cartridge Co., Lowell, Mass.:* Gentlemen—The two hundred Climax shells sent me have been tried with Schultze and Black powder. I am very much pleased with same. Could not get good results with Schultze in any other shell. Will use no other shell so long as you keep this at its present standard. You are at liberty to use this or any other recommendation I can give you. Most respectfully, (Signed) W. C. CROSS.—*Adv.*

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

BROOKLYN C. C.

THIS club has had a most successful season of racing and cruising. The annual meeting for the presentation of reports and election of officers was held on Dec. 13, and resulted in the re-election of Commodore Wilkin and Purser Brokaw; Mr. Weekes was elected Vice-Commodore and Mr. Johnson Measurer, but as Mr. Weekes is unable to serve he has presented his resignation, and the vacancy will be filled at the next monthly meeting. The purser's report showed a healthy state of finances, notwithstanding that money had been used liberally for improvements to the club house and for regatta purposes, a steamer having been chartered on two occasions to permit the friends of the club to witness canoe races.

Commodore Wilkin read a report, stating the condition of the club and also giving a summary of the season's work. Among the cruises for the year was a run down the Delaware from Callicoon, N. Y., to the Water Gap, made by five of the club in the spring, and a summer camp on Great South Bay by a party of a dozen, besides a cruise on Lake George after the meet. The following is a list of races in which the club has taken part besides the B. C. C. events open to members only:

June 9.—Knickerbocker C. C., Regular Sailing—1st, Eclipse (Blake, B. C. C.); 2d, Guenn (Whitlock, B. C. C.).
Brooklyn C. C., Club Regatta—1st, Eclipse (Blake, B. C. C.); 2d, Cygnus (Brokaw, B. C. C.).
Sailing—1st, Vim (Ward, B. C. C.).

June 30.—N. Y. C. C. Regatta, Sailing—1st, Eclipse (Blake, B. C. C.); 2d, Jess (Sinclair, B. C. C.).
Paddling—1st, Minx (Brokaw, B.C.C.); 2d, Eclipse (Blake, B. C. C.).
Tandem—1st, Minx (B. C. C.); 2d, —— (N. Y. C. C.).

July 4.—Passaic River Meet, Sailing—1st, Jess (Sinclair, B. C. C.); 2d, Brunonia (Cooke, Pat. C. C.).

July 10.—Alantic Div. Meet, A. C. A., Sandy Hook, N. J.—1st, Jess (Sinclair, B. C. C.); 2d, Essex (Cox, Essex C. C.).

Aug. 20.—A. C. A. General Meet, at Lake George, Unlimited Sail—1st, Eclipse (Brokaw, B. C. C.); 2d, Notus (Bailey, Pittsburgh C. C.).
Class IV., Paddling—1st, Eclipse (Brokaw, B. C. C.); 2d, Dawn (Leys, Tor. C. C.).

Aug. 21.—Tandem Paddling—1st, Rice & Knappe, Springfield C. C.; 2d, Brokaw & Schuyler, B. C. C.
Maneuvering—1st, Ramona (Jones, Brock. C. C.); 2d, Eclipse (Brokaw, B. C. C.).
Limited Sail—1st, Ramona (Jones, Brock. C. C.); 2d, Eclipse (Brokaw, B. C. C.).

Aug. 22.—A. C. A. Trophy—1st, Eclipse (Brokaw, B. C. C.); 2d, Fly (Butler, Lowell C. C.).

Aug. 23.—Barney Trial Race—1st, Eclipse (Brokaw, B. C. C.); 2d, If (Warder, Jabberwock).
Combined—1st, Eclipse (Brokaw, B. C. C.); 2d, Agawam (Knappe, Springfield C. C.).
All-Around Record—1st. M. V. Brokaw, 30 points; 2d, Emil Knappe, 16.95 points.

Aug. 24.—Consolation—1st, Guenn (Whitlock, B. C. C.); 2d, If (Warder, Jabberwock).

Sept. 3.—N. Y. C. C., International Trial—1st, Eclipse (Blake, B. C. C.); 2d, Bo-Peep (Vaux, N. Y. C. C.).
Second Trial—1st, Eclipse (Blake, B. C. C.); 2d, Vagabond (Vaux, N. Y. C. C.).

Sept. 22.—Brooklyn C. C., Sailing—1st, Eclipse (Blake, B. C. C.); 2d, Vagabond (Ward, B. C. C.).
Special Senior Sailing—1st, Eclipse (Blake, B. C. C.); 2d, Vagabond (Vaux, N. Y. C. C.).

Sept. 29.—Newburgh C. C., Sailing—1st, Whim (Whitlock, B. C. C.); 2d, Pixie (Smith, New. C. C.).

Oct. 6.—Barney Final—1st, Fly (Butler, Lowell C. C.); 2d, Eclipse (Brokaw, B. C. C.).

Oct. 13.—International Race—1st, Eclipse (Blake, B. C. C.); 2d, Charm (Stewart, Royal C. C.).
Second Race—1st, Eclipse (Blake, B. C. C.); 2d, Charm (Stewart, Royal C. C.).
N. Y. C. C. Sailing—1st, Fly (Butler, Lowell C. C.); 2d, Guenn (Whitlock, B. C. C.).

Summary: Entered 21 sailing races, won 18 first and 7 second prizes; entered 5 paddling races, won 3 first and 2 second prizes. Also A. C. A. All-Around Record with maximum points. In all, 26 events and 30 prizes.

Of these prizes, Mr. Blake has won 12 firsts and 1 second; Mr. Brokaw has won 8 firsts and 4 seconds; Mr. Whitlock has won 2 firsts and 2 seconds; Mr. Sinclaire has won 2 firsts and 1 second; Mr. Ward has won 1 first.

TORONTO C. C.—On Dec. 15 the annual meeting of the Toronto C. C. took place at the club house, the following officers being elected: Commodore, Dr. Powell; Vice-Commodore, D. B. Jacques; Rear-Commodore, A. Shaw; Secretary and Treasurer, W. H. P. Weston; Executive Committee, J. D. Kelly; Regatta Committee, Messrs. Tyson, Fraser and Jacques. The club has had a very prosperous year and starts the new season with the most encouraging outlook. It now has a very fine house and is in a good condition financially, with a large roll of members.

NECKEN.

NONE who were present during the last week of the A. C. A. meet this year will soon forget the charming little folk song which was sung so often by Mr. Lundberg, of the Mohican C. C. The song, already a favorite with many who had heard it in Albany, was called for before Mr. Lundberg had spent half of his first evening in camp, and by next morning every one in camp was whistling or humming the refrain. No doubt that part of its popularity was due to the magnificent voice of the singer, but it has also all the sweetness and melody that is so characteristic of the folksongs of Germany and the northern nations. Necken is a mythical spirit of the Swedish folklore, an elf who assumes various characters, often that of a merman, and in the song he is described in this character, singing to the music of his harp. The following English words are in no way a translation, but were written to the air by a friend of Mr. Lundberg, Mr. John H. Jewett, of Worcester, Mass. In sending the music Mr. Lundberg says: "Publish it as a memory of the pleasant A. C. A. meet of 1888." The air has evidently found a permanent place in that rather mixed repertoire of shanty songs, college glees, French Canadian chansons and scraps of opera that enliven the campfires of the A. C. A. meet, and perhaps some among our readers may be able to set words to it more suited to such use than either the original or the English words here given.

SWEDISH LOVE SONG.

(Necken).

English words written for and dedicated to my friend Olof Ragnar Gottfried Lundberg.]

Sweetheart, the day hath no gladness,
While we thus linger apart;
Moonlight and starlight bring sadness,
Thou art the light of my heart!
Here in the darkness entreating,
Longing my Love for thee—

Softly thy name I'm repeating,
Come thou, my Love, back to me.

* * * * * * *

Fondly as ever I'm dreaming—
Dreaming my Sweetheart of thee;
Visions of hope now are beaming
Bright as the dawn o'er the sea.
List! how my fond heart is beating,
Beating with love for thee—

Softly thy name I'm repeating,
Come thou, my Love, back to me.

What though the world be deceiving;
Round us though shadows may lie;
Safe in each other believing,
Bravely love on thou and I!
Necken shall bear thee my greeting
Sweetheart far o'er the sea—

Softly thy name I'm repeating,
Come thou, my Love, back to me!

* * * * * * *

Sweetheart, the spring time and flowers
Tell us of harvests to come;
Ripening through long summer hours,
Waiting the glad harvest-home!
Hasten! Our summer is fleeting,
Th' harvest, Love, waits for thee—

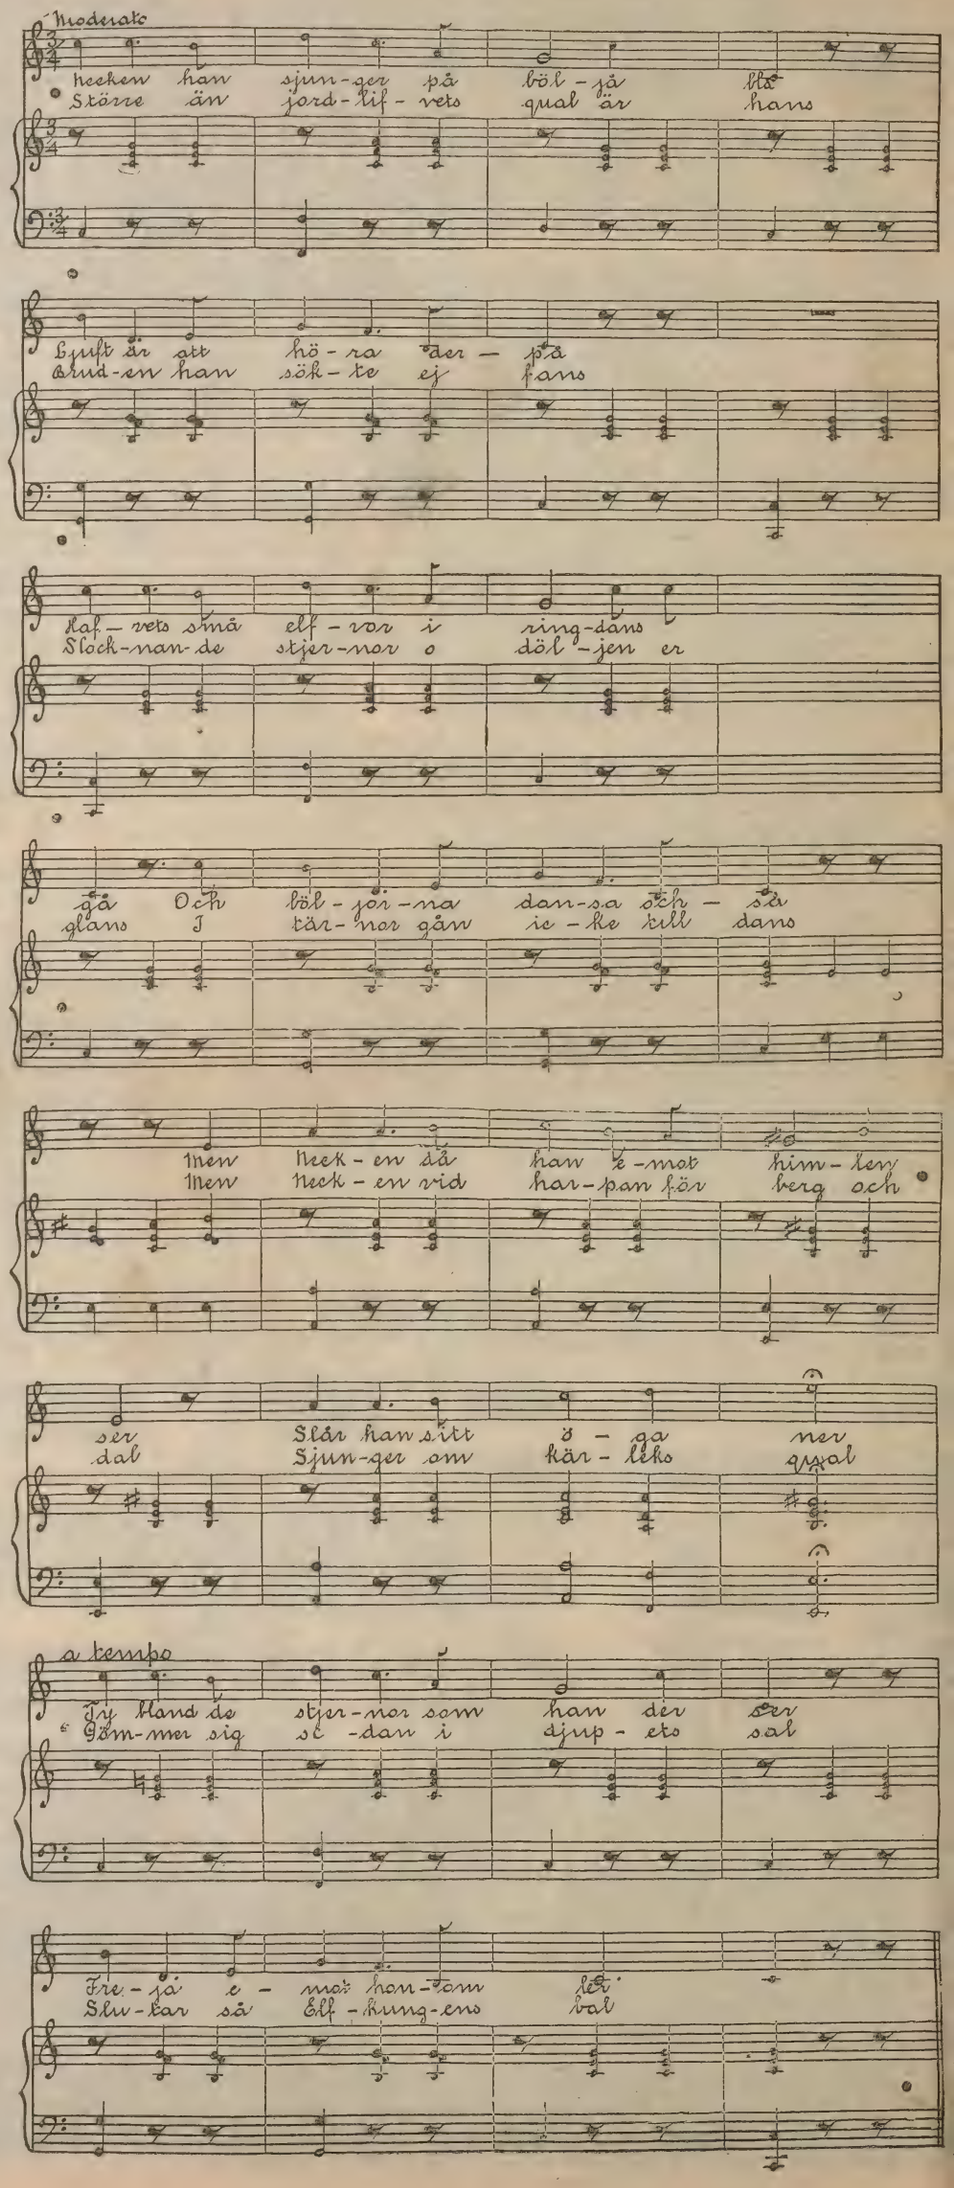
Softly thy name I'm repeating,
Come thou, my Love, back to me.

WORCESTER, Mass., Sept. 30, 1884. JOHN H. JEWETT.

Several popular canoe songs will be found in the FOREST AND STREAM of May 28, 1885.

AN IMPERFECT CRUISING OUTFIT.

MY cruising outfit is neither that long sought for perfect affair, nor is it complete, and, although I will never confess it, I am afraid that it is in truth a failure, not because I have not spent more money upon it than I should have done, but because, between what I can get, and desire, and what I want, there is a great gulf fixed. I began last season with what I proudly thought was a very nice kit, indeed, with the exception of the canoe's hull, the frying pan and the billy, it was entirely new, and every detail had been worked out on paper. Of course it never was completed as planned, because I found there was so much that was wrong in the more important members that I had all I could do to remedy the evils that already existed without bringing fresh miseries upon me; and now there is hardly an article in that brand new kit that would recognize itself in a glass, so to speak. One reason for this was that I made two or three solitary cruises this year; and there's nothing like a solitary cruise, even of a day and a half, to set a fellow's canoe inventing organs to work; and another was that the wet, cold weather of the past autumn prevented my usual fall outing, and I was reduced to monkeying. At present a goodly portion of my outfit is in store, another cantil is upon the ways, and a third portion is on paper, and the three sections are so badly mixed up in mine own mind that in describing my kit I must 'een consider it as a perfected whole, what it will be next spring, not what it is.



My canoe is a smooth skin—both inside and out—flat-floored 15x29, with a turtle deck that gives her a depth of 13in. at the fore end of her 5ft. cockpit, and when the season began, she was equipped with a folding board, two small end compartments, a deck tiller and drop rudder, two light hatches that reduce the cockpit to 18 by 24in. and a deck seat back rest. The principal changes that I have made in the little craftie have been to replace the folding board, which was slow, in the way, and a continual nuisance, by a ¼in. steel board, 30in. long and 15in. deep. This board has been put in entirely forward of the cockpit, and this has thrown the center of lateral resistance so far forward that in future my jigger must not be more than one-fourth the area of the mainsail. I do not look upon this as a defect, however as a small jigger is a boon and a blessing to the cruiser, whatever it may be to the racer. As an experiment I have put in a small movable bulkhead on each side of the new centerboard box, with the hope that in this simple way I can get dry storage. I depend upon a piece of rubber tubing fastened to the jambing edge of the movable part of the bulkhead for tightness, and upon a simple wedge slide catch, to keep the whole in place. Whether this will work or not, who can say, it is still untried, if it does I will abandon water tight bags.

There is still a very decided something to be added to my canoe, and that is a foot steering gear. What it is to be like I do not as yet know, but I do know what I want it to do. It must enable me to keep control of the canoe with one foot, not only when I am inside, but when I am outside of her, and be simple, direct-acting and light. As the substitution of the plate for the folding board has given me a few pounds to come and go on, I hope that even after I have put in the bulkhead and the foot steering gear, the canoe will be no heavier than she was.

My rig includes three "Tramp" sails, one of 60ft. area, one of 40 and one of 15, and they were rigged exactly in the manner and form devised by their inventor. Although I had very bad luck with my cotton last year, and never got a decently set sail on the canoe, I am quite satisfied that this is the best hoisting rig yet discovered. Its great defect as a cruising sail is, that it can only be unshipped from the mast by unreving everything, no end of a job, and a frightful nuisance. To overcome this defect I have replaced the jaw and ring at the boom by a collar with two lugs, which connect by means of a split peg with an eye bolt in the spar end, and have slotted pieces of brass brazed on the batten rings, which slip over tongues on the batten ferrules. By pulling out three split keys the sail is, but for the halliard, entirely free from the mast, and how to get that halliard free is the difficulty. The only practical plan of doing this I have been able to devise is to cut the halliard at the knot, which prevents jambing, and splice two eyes into the ends thus formed. These eyes can be pulled through the yard blocks, an' they be small enough, and by slipping one through the other and a toggle into the end of the first, the connection can be made in a second. It is a somewhat clumsy device, I know, but it works. I use no halliard on the jigger, setting it with a ring and pin on a short mast that serves to hold up one end of the canoe tent when ashore, and I can lift the mast off and stow it away from inside the canoe.

Next in importance to the canoe and its rig is the sleeping equipment, and I have taken more trouble with this part of my outfit than with any other, because upon sound sleep depends—owing to an unfortunate tendency to insomnia—my physical and mental well being, to a greater extent than is altogether pleasant. Last spring, the traditions of canoeing to the contrary, I came to the conclusion that a square-topped canoe tent was not all that could be desired, and had a hipped A tent 6ft. in length, 3ft. high, 3ft. wide and 3ft. on the ridge, with a side flap, built for me. Although made of good heavy drill it only weighs abort half as

NECKEN.

much as the ordinary flat-topped, duck and ticking affair, it is quite roomy when set up over the canoe and it has turned the biggest thunderstorm of a rainy season. I intended when I designed this tent to hook it along the gunwale of the canoe, but as a result of my last year's work I have come to the conclusion that it is a much more satisfactory plan to pin it to the ground about the canoe. It takes less time to do this than to button it down, because if you cannot drive the pins, a stone laid on top of them secures them equally well, it carries the tent away from the canoe, and moreover it secures ventilation without drafts. Besides all these good things the tent is always ready to be set up ashore, and a very comfortable and complete little shore tent it makes for a 125lbs. canoeist. I have improved it vastly as a shore tent by adding to it a floor of oiled cotton, with sides a foot high, which can be hooked on to the tent proper. Although the tent of romance is always white, there are a good many solid advantages about a colored tent, and I intend, if possible, to have mine not dyed but tanned for next season.

My mattress is composed of two cushions, filled with shaved cork, with painted canvas bottoms and rep tops, and a very comfortable bed it is. The painted canvas is too heavy, the rep has not worn well, and the cushions are all too big as cushions, so that next year I intend to replace the two three-foot cushions by three two-foot ones, with oiled cotton bottoms and strong felt tops.

My blanket has nothing particular about it, excepting that it's as blue as I was when the time killers—but I'm not going to tell on myself—but its complement, a sheet-awning, is I think, unique. This sheet-awning is simply a piece of drilling about seven feet square, with a cringle in each corner. It is worth another blanket on a cold night, serves admirably as a wrap for the blanket, and can be set up as an awning in front of the tent in a few minutes. For a pillow I use a canvas bag, which holds my spare clothing, and it is a comfortable enough head rest, as well as a handy wardrobe.

Instead of a mess chest I use a canvas bag, water-proofed by a thin coat of paint, and in which all the eatables, likewise packed in cotton bags, are stowed. This is supplemented by a canoe closet, a round tin box with a telescopic cover, which is divided into seven compartments. In the central one go knives, electro plated steel knives, ground sharp, with their useless round points broken off, electro-plated four-pronged forks—the traditional three-pronged fork is a nuisance—and spoons. The other compartments hold tea, coffee, sugar, matches—in a tin box—salt and pepper—in another—chocolate, and the last holds sliced bacon, packed in its rind. This box will hold enough of these articles to last a lone campaigner for a week, and there is room besides for half a dozen eggs and a couple of small cans of preserved meat. As the cover is lined with rubber and fits down tightly on the compartments, it is not only water-tight, but the different articles run no risk of becoming mixed, that is if some care is taken in putting that cover on. The strap that keeps on the cover also secures three plates to the lid, and I live in hopes of attaching a frying-pan to the bottom of it at some future day.

I began the season with three cooking utensils, a frying pan, a billy, and—all orthodox canoeists are requested to read no further—a brown stone teapot of the smallest size. The frying pan still exists, in a more or less demoralized state, but it is probably equal to cooking anything from porridge to a plum cake again to billy, with a strong taint of coal oil about it, is at the bottom of Lake George, and the teapot is the only bit of bric-a-brac I possess. I can make coffee in a can and punch in a bailing tin, but tea I can't make except in that blessed brown clay affair, and as long as I can carry it safely in the bosom of my spare shirt I intend to do it, in spite of orthodoxy. Next season, however, I intend to have a nest of two or three strong tin or granite ware affairs, which are to be equal to all the boiling and steaming I am ever likely to do, but I am not going to forsake my teapot.

Some years ago I tried a species of camp range consisting of two bars of half-inch iron connected by stout wires, and with folding legs. I kicked the whole affair into the lake one day, what for I hardly remember, and have done my cooking since then on a Nessmuk range or two flat stones. I am now thinking of something of the description of the thing I kicked overboard, to be made to fold back on itself like a zig zag rule, and to be without legs at all, but whether I can work out the idea I hardly know. If I cannot, then I will have a frame of light wire made, 1ft. wide by 18in. long, crossed by lighter wire bars at intervals of 1in. or 1½in., and carry it flat on the canoe's bottom.

Alcohol stove, anchor, double-edged hatchet and sich like affairs I have not, nor do I want them. A candle lantern with clear glass sides, a big knife with a hook on it that will open a can, and a corkscrew concealed in its interior, and a ditty bag filled with three parts rubbish and one part tools, are all the sundries I own, and I want no more that is at present. I have discovered, however, that in canoeing your wants increase in inverse ratio to your means of supplying them, and I may find before very long that I want a host of things I now know nothing about. RETAW.

THE WHITE SQUALL'S 1887 CRUISE.

[Concluded from page 447.]

WE stayed at this camp a couple of hours. I do not know that I intended to mention about our first lard pail of tea being hoisted skyward by a stone that burst in the fire; but how else can I make the name, "Camp Dynamite," seem in any way relevant? Our next stop was at Cole's Island, three miles above. Here we expected to replenish the subsantials in our grub sack, for the havoc we had wrought was alarming. In the first store we tried the proprietor was busily engaged in a conversation in the office, and, perhaps, mistaking us for tramps, only noticed our presence by keeping a sharp eye on us. Mr. Parker, the proprietor of the other, was away, and we heard with regret that the supply of crackers, ship buiscuit, etc., was exhausted and would not be replenished till next day. Then we asked Mrs. Parker to sell us some bread. She told us she only had one loaf baked, but had just put another loaf in the oven. A minute or two before she had given some orders in an undertone to a girl who was in the store, and now the girl reappeared with the larger part of a loaf of bread. Mrs. P. had told her to cut off what she thought would do for supper, and to give us the rest to us. As there is a wide-spread belief, and not without some reason, that it is only the simple-minded country folk that will divide their last loaf with the stranger, I want this act placed to the credit of a city-bred lady—one whose maiden name was very frequently heard in educational circles of this province six years ago, and of whose innate goodness of heart I can show no better appreciation than by mentioning it here. I should also say that she did not know me from any of the other thousands of canoeists, and little imagined that I lived within fifteen miles of her. Notwithstanding my liberal use of the pronoun "we" in the last few sentences, I now recall that Horace staid to watch the canoe instead of going with me to the Parker store, and when I returned I found him and another young fellow, a native, gunning an old man who was lingering half lovingly and half regretfully around the canoe in the hope (which was now trembling on the verge of despair) that a bottle would somehow materialize, detach itself from the outfit and make him wish for the neck of a flamingo that he might get the full benefit of the rare and much coveted dose of spts frumenti. My appearance raised his hopes a little—he hinted his wishes in no uncertain words. I was compelled to shatter his last hope by inviting him to go through the only bottle we had, and which contained molasses. He left, evidently doubtful concerning the moral status, perhaps even the sanity of two men who would venture so far from home without a supply of artificial life: "It was not so when he was young." The young native knew me at sight, but I could not recall his name. Did I "beg pardon, you have the advantage of me," etc? Hardly: I talked right along, asked questions, inquired after the welfare of some of the families I thought he resembled, and in return picked some points about the river above the island, for this being at the head of steamboat navigation I never had been any further up.

We started again under sail, and made our way through the booms, frequently exchanging friendly greetings with the lumbermen who were considerably interested in our craft. We arrived at the rapids, 27 miles from the river St. John, a little before sundown and made camp on a lovely wooded bank. And now in as few words as possible, I will try to describe that part of the St. John, the second in size of St. John's affluents, over which we cruised. From the rapids to Cole's Island 5 miles it runs through a wooded country, with here and there a farm—the banks being in some instances low and at other points high and quite abrupt. A mile or so above the island is a curious perpendicular bluff of conglomerate 30ft. high. The average breadth of the river here is 150yds. From Coles Island to Narrow Piece, 7 miles, there is the same width of channel among winding marshes and lagoons with here and there a bar of good solid interval to give better effect to the scene and more hay to the settlers. Here commences the lake, and from this to the junction with the St. John (15 miles) there are no interval, the shores are fringed with trees and are hard, gravelly and stony, with here and there a sand beach; and abound in coves and nooks. The average width is over a half mile. At the Narrows ten miles from the outlet it contracts to 300yds. and at a point a mile from the St. John it expands to nearly two miles. It enters the St. John through narrow channels on either side of Little Musquash Island.

But to return to our camp; among the things destroyed at the meal we prepared, was a quart of fresh strawberries, and "sour Wilson seedlings" at that. As the wind whistled rather sharply around the rear of the tent we drove a row of stakes and interwove a number of trees in them, thus getting up an effective wind-break. We then gathered a pile of driftwood, built a huge fire, and lay back on our buffalo robe in the bright light, and talked until the time to turn in came. We then rolled together some huge logs that kept up our fire all night.

Morning broke still and warm with signs of rain. We fain would have breasted the rapids, but I expected a party of Bostonians, who had contributed liberally to my enjoyment during my stay in their city the previous spring, to arrive at the home farm that evening, and though they were not unknown to some of the rest of the family I did not feel like allowing them to precede me many hours. So we reluctantly decided to turn our faces homeward; but in the face of the threatening rain we hesitated to strike camp. H. fished some in the early morning with indifferent success, and after breakfast wandered off to the woods, from which he was driven by a light shower. I lay in the tent and loafed. About 9 o'clock the weather cleared, and we hastily left Camp Comfort under paddle. Before we got half way to the island a light air of fair wind sprang up, and scarcely had we set the sails before it petered out. It was so hot that we hated to start the ash breeze again, and we lay in the bottom of the canoe and allowed her to drift. At the booms we had a friendly chat with some lumbermen, who jocularly offered to trade boats with us, and passing down the channel on the western side of the island, made camp about 12 o'clock on the lower end. We cooked and ate dinner very leisurely, and as eggs were a prominent item in our bill of fare, and we decorated a dead bush with the shells we afterward spoke of the place as Camp Hentree. The feminine and juvenile portions of one of the neighboring families were on the mainland shore just opposite us washing clothes. We could hear every word they said, and some of their conjectures concerning us and the vigorous exhortations of the seniors to the juniors afforded us plenty of amusement. A little before 2 o'clock they packed up and left, and we bethought ourselves that it was high time we were following their example.

And here I performed an act of vandalism over which I would fain draw a veil; only this will be very liable to reach H., way down in the City of Brotherly Love, and I am quite certain that if I omitted it he would send up for publication his own version. So, upon the whole, I think I will suffer least by confession. I did not know that there were any firearms in the party, but as we were stepping for our paddle H. passed a revolver back over his shoulder with the remark, "That is a good pistol for 50 cents." I knew no one ever hit anything with a fifty-cent pistol, but I replied, "I'll tell you when I try it." I gave it the regular cowboy drop on an old sturgeon boat that lay 150yds. away, side on on the opposite shore, holding about the same as I would a good pistol and fired. I fully expected to see the bullet strike the water between us and the boat, but instead came the dull sound of a .30-cal. slug on boards. Now, a sturgeon boat is an article the value of which is merely problematical, consisting as it does of about five boards and a few nails, alternately coaxed and bullied into the shape of a flat-iron. Its advent was coeval with the beginning of the sturgeon fishery on the St. John, and the man who attempts to row one instantly recognizes his natural enemy; indeed, he will find that, like a hog, it moves easiest stern first. But any man who desires to own a rival one has a perfect right to have his property respected. Now, I respected this man's rights, but not the property. I would no sooner fire in the direction of a decent boat than toward a man, but I knew if a sturgeon boat was a good object by which to align a bullet, it was the first excuse that I ever found for its existence, and in this thought lost sight of all else. But maybe Horace did not make himself facetious at my expense. He accused me of suddenly developing a fear of my fellow men; of looking frightened every time a man was heading in our direction, and a dozen other things too numerous to give in detail. It turned out that the pistol had been won as a prize at a quoit-pitching tournament, and 50 cents was the entrance fee.

We met a heavy wind about a half mile below our noon camp, and in came the paddles and up went the sail. For the first mile the wind was rather light, then it came about as hard as we wanted. I think neither of us will ever forget that afternoon. The Squall never did and never will do any better windward work that she turned off then. Horace profited by his discovery of two days before and kept his sheets well in. Indeed, our principal objection to the Mohican sail is that as the luff projects forward of the mast the sail has to be trimmed nearly dead aft in order to run close to the wind, and our experience has proved conclusively that we get better work out of the canoe in this way. As we passed the residence of the "Champions of England" Horace said: "Don't I wish that they would venture out here to-day; wouldn't we make a show of them?" But they showed no sign of a desire to renew our acquaintance. The boat swung idly at her moorings and the boys formed themselves in line and gazed. Around the bend of the Narrow Piece we caught the wind full for a mile, and we had to help her with the paddles for about a quarter of a mile to get her from behind the lee of Perry's Bluff. In the broad part of the lake a heavy sea was running, but we kept all sail on and jammed her into it. Fifteen minutes were lost in talking to a man who recognized the craft and hailed us from the shore. We reached the Narrows by sundown, and a stiff head tide gave us a hard tussle to get through.

Fog clouds now began to appear in the south, and a very opaque darkness soon settled over the waters. The wind came in spiteful squalls, to some of which we had to luff, and as we could not see how they were going to strike us we reefed. The clouds grew blacker and the wind shifted to the southwest, then:

"The wind he blow like a hurricane,
Bimeby he blow some more."

H. said, "I hate to give in when we are within a mile of home, but I don't believe she will stand much more of this; let's get ashore while we can." We tried to run in behind a sandy point that would afford us shelter, but fell to leeward. Then it was down sail and out with paddles. The mizen sheet fouled the tiller wires, and while I was extricating it a squall lifted the boat out of water and threw her in the trough of the sea, head off shore. We could no more move her from the position with the paddles alone than we could stir Mount Washington with tooth-picks. But as a Hibernian friend of mine used to render the proverb: "There is more ways o' killin' a cat nor wan way." We both applied the paddles to the windward side till we got steerage way on, and then throwing her stern to the wind with rudder, we gave her a half dozen more strokes that sent her flying off the wind, and again using the rudder stuck her nose into it, and once there we held her till the keel grated on the sand. We hauled out and walked home, arriving just seven hours after leaving Cole's Island.

The next morning dawned bright and clear with a young hurricane from the N.W., a fair beam wind on the lake, and we went up to get the canoe. With mainsail reefed, sheets well off, and both of us "hiked" to windward, we often had to luff, and once to avoid beating her on a point (from making too much weather by enforced luffing), we lowered the mainsail and drifted off shore. When we made the mouth of the river opposite to Perry's saw the visitors ranged along the shore watching us, and with them a man who had often sailed with me in the Squall during the old "jill-poke" period, a spirit of recklessness seized our crew and he asked abruptly, "Can you swim?" "Yes," "So can I, so in case of trouble I guess we can float till they get a boat off to us." And as he got his sheets in for the quarter mile beat to windward, he added: "We must not let that crowd see that the wind is too much for us; keep her into it if she goes under. Don't luff." The sails filled, the batten in the mainsail bending like a whip, the lee gunwale went under in spite of several hundred pounds on the weather side, and then we fairly flew along the long port tack. Another short leg of a hundred yards and we threw her nose into the wind within ten feet of the shore, and as we lay there for a moment, the sails slatting as if they would jump their bolt ropes, H. said in an undertone: "We need not have luffed at all. We only wanted a little more courage—or enough spectators to stimulate what we have." L. I. F.

NEW RULES ABROAD.—A meeting of the Royal C. C. was held on Nov. 21, at which the old board of officers was re-elected. The most important work of the meeting was the adoption of new rules for classification, there being a very animated discussion; but those of our English exchanges which nominally are devoted to the publication of canoe news, very carefully refrain from any intimation of the nature of the new rules, save for the following in the *Model Yachtsman and Canoeist*: "The spirit of the whole thing, apart altogether from the letter, was this: To bar any of the Yankee flying machines that might come over; to discourage the building in England of apparatus of a light character, and to retain the practical and useful." As to the first proviso the R. C. C. is taking time by the forelock in legislating against an invasion of American canoes while all the cups are held on this side. In view of the flimsy specimens of canoe building that have come here from England within the past three seasons, and the many breakdowns that have befallen every English canoe that has raced on this side, no one will say that any undue haste has been shown in the adoption of the second proviso. All the rules, whatever they may be, were passed with the understanding that they should remain unchanged for a period of three years.

THE IMPROVEMENT OF CANOE SAILS.

THERE are very few who would not welcome any substantial improvement in lowering and reefing sails for canoes, and yet the larger number of racing canoeists are content to shirk all efforts toward this end, and to avoid a little trouble by adopting the standing, non-stowable abominations which were seen in such numbers at the meet this year. The probabilities are that within certain limits of wind, and under such conditions as maintain in many races, the standing sail is faster than any lowering and reefing sail can be; but this is absolutely all that can be said in its favor. On the other hand, there can be no doubt of the harm which these sails have done and are still doing to legitimate canoeing, especially to racing. As originally fitted to Pecowsic (several small sails, the largest 40ft., and rigged with a neatness and simplicity that attracted every one who saw them), the evil was not so apparent, but in only two years the size has doubled, while the latest form is so extended by battens that it cannot even be folded up when not in use.

It is easy to see now that it was a great mistake even to permit the use of large sails of this kind, and it is all very well to call for a change of the racing rules which shall summarily debar them, but this does not help the matter. It is no use now to discuss how or why they came into existence; they are here, and the question is how to get rid of them. This, however, cannot be done by any sudden change of the rules, even though such a change would be for the good of the great majority of canoeists. While we contend that it would have been within the power, and was in fact the duty of the Association to limit or prohibit such sails in the first place as soon as they promised to be other than beneficial, now that their use has been permitted for several seasons, and many have adopted them, it would be very unfair, without the consent of a large majority of the standing-rig men, to rule them out summarily for the coming season. This applies also to several other abuses that have grown up of late, things that are undoubtedly bad, but which nevertheless cannot be ruled out at once.

There are, however, two ways of dealing with the sail evil, one of which is also applicable to the huge boards and sliding deck seats. It is fully within the power of the A. C. A. and division regatta committees to offer prizes for canoes which shall be in all respects cruisable craft, however they may be temporarily fitted with larger sails for racing. In laying down new rules for cruising craft to be built up to, the limits may be drawn as closely as may seem desirable, and no objection can fairly be made; those who do not like them have still plenty of races under the present loose limits. It will, however, be a somewhat difficult matter to settle on the definition of a raceable cruiser (title copyrighted), and we will gladly give space to a thorough discussion of the matter. When once this definition is decided on, the A. C. A. as well as the clubs can devote a part of the racing programme to races under the new limits, leaving certain races, as at present, to the racing machines. The owners of the latter certainly cannot complain of such a course, and many would be glad to come within the new limits, the others going on as now, from bad to worse until some machine is evolved so extreme as to drive out all others, as was the case in yacht racing abroad under the old Thames tonnage rule.

A second way of dealing with the sail question is to offer some stimulus to the inventive canoeists, of whom there are plenty, to improve the best of the present rigs; and the New York C. C. has already taken the first step in this direction. Com. Burchard has offered a prize for the best hoisting and reefing sail that may be produced by the opening of the racing season, and his example is worthy of the emulation of the other clubs. It is curious how some clubs have become known largely through certain sails; the Cincinnati C. C. owes a large part of its wide-spread reputation to the lateen sail first put into general use in the States by its members; the New York C. C. was famous a few years since for its huge balance lugs; the Mohicans are known everywhere by the settee that bears their name; while the Pecowsic sails are familiar to canoeists who do not know whether Springfield is in Florida or Canada, as the production of the Springfield C. C. All are aware of the benefit which accrues to a canoe club from a well-established reputation in the world of canoeing, what effect it has on the membership and general prosperity of the club, and from this point of view the benefits to the club which shall give to canoeing a new and really good reefing sail are well worth working for. We hope that by May the generous offer of Com. Burchard will have borne good fruit, and that others will be tempted to emulate him.

Yachting.

FIXTURES.

JUNE.

3-5-7. Katrina-Shamrock, N. Y.

THE CORINTHIAN MOSQUITO FLEET.

A NEW club under the above name was organized in New York on Dec. 14, the object being to unite the owners of small craft of all models and rigs and not over 20ft. l.w.l., for the purpose of encouraging racing and cruising among amateur sailors. The headquarters will be at New Rochelle, N. Y., the sailing ground being on the west end of Long Island Sound. It is strange that with the large number of boating men, canoeists and yachtsmen of limited means about New York and her suburbs, and with water on every hand, there has never been any strong or permanent organization devoted to the interests of small craft save the small yacht clubs which still adhere to the old sandbag catboat or jib and mainsail. In Philadelphia there are hundreds of amateur sailors with a very large fleet of craft under 16ft.; in Boston there are many more, while in Toronto there is a very large and powerful boat sailing contingent, at the head of which is the Argonaut Club, with its fleet of 19ft. skiffs. It is almost 20 years since canoeing was introduced into New York by the founders of the New York C. C., and during this time it has not only brought in a large number of recruits who never would have been won by either shell rowing or catboat sailing, the only existing forms of boating at the time; but it has since graduated a very large number of good sailormen who have outgrown the canoe, but who are still good all-around Corinthian sailors, as every canoeist must be. While some of these old canoeists now own their large yachts, the larger number are unable to afford the time or money which yachting in large craft requires, and at the same time their love of racing and cruising is as keen as when they first grasped a paddle. For them and for many new recruits who wish a larger boat than a canoe there are plenty of good craft, but up to this time no serious effort has been made to encourage a boat too large to come under the care of the canoe clubs and yet so small as to be considered beneath the notice of the leading and most influential Corinthian yacht clubs. The new club will fill a place between the yacht and canoe clubs, and if well managed it should have a very large membership. Within the limits of 15 to 20ft. l.w.l, and within a maximum cost of $500 it is possible to build a very fine little ship for cruising or racing, a single-hander that will accommodate two or three men. A vast amount of good racing may be had out of a class of 15ft. open boats, such as the Thames gigs, the Clyde luggers, and the Toronto skiffs, and if desirable the cost may be made as low as $100 for boat rigged complete. From this limit both size and cost can be increased to meet the different condition of water and the local surrounding, as well as the means of the club members. With suitable classes and racing rules the sport may be just as keen as in any of the large classes, and far more attractive to a great many men of moderate means, who would rather sail small craft of their own than watch other men race in large vessels. It will doubtless take some time at first for the new club to classify the many different boats which are likely to be found in its fleet, and to lay down suitable rules for racing and building, but a season of trial racing should give sufficient experience to enable the club to take some active steps toward the development of several sizes of small boats and yachts, say 15, 18 and 20ft. l.w.l. which shall be especially suited for racing, cruising and general sailing about the Sound

NEW STEAM YACHT.—Mr. Kunhardt has sent design No. 27 to members of the Rochester Y. C. The plans call for a cruising, seagoing steam yacht, 53ft. long on deck, 40ft. waterline, 7ft. 8in. beam, 4ft. 4in. draft. The midship section has great deadrise, with slight hollow in the garboards, an easy bilge and a slight round to the topsides. The overhang aft is of the cutter fashion, 8ft. long, and the bow is of graceful clipper form, with a figure-head and no trail boards. Least freeboard to top of planksheer is 28in. Schooner rig, with strong rake to spars, and a 20in. hatch house, with a pilot house forward, the floor of which is sunk 2ft. below deck. She will probably receive a Wells balance engine and 40in. wheel. This is the eighth design sent by Mr. K. to the Lakes this year,

THE ROYAL CANADIAN AND TORONTO Y. C.

THE long talked-of scheme for an amalgamation of the Royal Canadian and Toronto Yacht Clubs has at last been finally arranged, and at a meeting on Dec. 15 the Toronto Y. C. adopted the report of the joint committees. The conditions under which the union is made are as folows:

1. The assets and liabilities of the two clubs to be pooled, and to be the assets and liabilities of the joint club.

2. The members of the two clubs to become members of the joint club, without election or entrance fee, having the same status in the joint club as they previously had in their respective clubs, that is, honorary members to be honorary members, life members to be life members, and ordinary members to be ordinary members. Life members to be entitled to all the privileges of the club, and to pay no fees whatever; no one, however, to be allowed to become a life member after amalgamation.

3. The executive of the joint club to consist of four officers—commodore, vice-commodore, captain and honorary secretary—and a committeee of ten.

For the first year the commodore and the honorary secretary to be elected by the R. C. Y. C, and the vice-commodore and captain by the T. Y. C.; and five of the committee to be elected by each club.

For subsequent years the election to be held in the usual way at the annual meeting of the joint club.

4. The by-laws and rules of the joint club to be those of R. C. Y. C, amended so as to comply with the terms of this report, and subject to any further amendments that may be considered desirable by a sub-committee, on which both clubs shall be equally represented, to be appointed at an early date after amalgamation.

5. The name of the joint club to be the Royal Canadian Yacht Club.

6. The amalgamation not to take effect until the 15th of May, so as to allow of both clubs sending a full number of delegates to the meeting of the Lake Yacht Racing Association to be held on the 12th of May.

The following figures also show the financial condition and the membership of the new club:

	Assets.	*Liabilities.*
R. C. Y. C.	$21,500	$14,500
T. Y. C.	6,500	3,000
Total	$28,000	$17,500
		Membership.
R. C. Y. C.		367
T. Y. C.		275
Total		642
Estimated joint annual revenue		$9,000
Estimated joint expenditure		7,500
Estimated joint surplus		$1,500

Including honorary members, the roll will number nearly 675, with a fleet of 60 yachts. The new club will own a very handsome club house on the island, opposite the city, with a second large and convenient club house on the water front, within a few minutes' walk of the business center of Toronto. The course for small craft is within the bay, overlooked by both houses, while the large yachts race over a triangular course on Lake Ontario, just outside the western entrance to the bay. The Royal Canadian Y. C. is the older club, one of the oldest in the Dominion, but of late the Toronto Y. C. has been the more active, the present season having been a very prosperous one, so far as racing is concerned. The union of these two powerful clubs is a decided gain to yachting about Toronto, as there was no good reason for the existence of two rival clubs in a city of its size, and where the location naturally brings all the yachting to one point. With the advantages of two fine houses, a large membership, and the life and vitality of the younger club added to the high standing of the older club, the new organization will be not only one of the largest in America in point of membership, but one of the most successful in all ways. One great element of its strength lies in number of Corinthian sailors, all active yachtsmen, among its members, the fleet, large and small, being manned exclusively by amateurs, paid crews, beyond a boat keeper or cook, steward and a few hands on the largest yachts, being the exception.

FIXTURES FOR 1889.

WE will begin next week our list of fixtures in yachting and canoeing, and though it will be a long time before the first spring race is sailed, we would again call the attention of all clubs to the importance of selecting and publicly announcing their dates as soon as possible, in order to permit the full programme of races to be arranged in good season. There is usually more or less clashing of dates between neighboring clubs, most of which might easily be avoided, and each year it becomes more necessary that the clubs should work in harmony as the inter-club racing increases. Beginning with the Larchmont pennant regatta early in June, the races of the larger clubs run on through the month, ending with the Larchmont annual regatta on July 4. Within this time are sailed the regattas of the Atlantic, New York, Seawanhaka, Eastern and Larchmont, and as many of the yachts desire to enter all of these, it is necessary that some mutual concessions be made in the matter of dates, so that after once docking for the first race about New York the fleet can sail the remaining New York races without hauling out a second time, and that afterwhrd they will have time to reach Boston, prepare for the Eastern regatta, and then reach Larchmont again before July 4.

It is the aim of every club to secure a large entry list, and the most certain way to do this is to make it as easy as possible, by a suitable arrangement of dates, for yachts to enter without missing some other event. What we have said concerning the larger yachts of the coast fleet applies just as truly to the smaller craft and to the lakes. Arrange your programmes at once, let the dates be known, and avoid the trouble and annoyance which always follows any delay in these matters. We will be obliged to secretaries and other club officers if they will send us their dates as soon as decided on, and also if they will send prompt notice of any errors in our list of fixtures.

WATERTUBE BOILERS.

Editor Forest and Stream:

I clip the following from a recent number of the London *Engineer* concerning watertube boilers. It fully indorses the strong stand in their favor taken by Mr. Kunhardt in his book on steam yachts and launches. The day cannot be far distant, as he says, when the shell boiler will have become a thing of the past:

"In watertube boilers the pressure which can be carried is practically unlimited. There is no shell. The circulation is natural and perfect. There is no dead water in any part. They are practically inexplosive. They are cheaper to construct. They are easily cleaned. There are no flat surfaces to be stayed against pressure—a feature of the greatest importance. They furnish dry steam. The grate surfaces are large. The combustion is more perfect. They can be taken apart for shipment and stowed in a very small space. There are no riveted members or details, and they are very easily managed in operation. When repairs are needed it is chiefly in the tubes, which are quickly removed and replaced, and lastly, they are much lighter per horse-power than any other boiler. These are really the chief points in any boiler, and that they exist in the watertube boiler is, we think, manifest to all."

X.

NEW YACHTS.

WE are now preparing a list of yachts now building or built since the close of last season, and will be glad to receive from owners, designers and builders any information in regard to new work that they may be engaged on. We should like to have at least the names of owner, designer, builder and vessel, the rig, motive power (whether steam or sail), material and the length on deck, length on waterline, extreme beam and draft. Any news of alterations to old craft will also be welcome.

SHARPIE VOYAGE.—Two small schooner yachts of a peculiar pattern came into St. Augustine harbor Wednesday night, and dropped anchor in front of the city. They were the advance guard of the fleet of the Biscayne Bay Yacht Club, and are just from New York, after a hard and stormy passage. The whole fleet will soon be along, and will cruise in Florida waters all winter, with Biscayne Bay as headquarters. One of the yachts, the flagship of the fleet, is the Presto, commanded by Commodore Ralph Munroe, while the Nettie is in command of Vice-Commodore Edward Hines. Kirk Munroe, the famous canoeist, is the secretary of the organization, and is now on his way to join the fleet with his yacht Alapata.—*Savannah News.*

TORONTO Y. C. WINNING YACHTS.—The winning yachts in the Toronto Y. C. for 1888 are as follows:

	June 9. Place.	June 30. Place.	Sept. 22. Place.	Sept. 1. Place.	Final. 1st.	2d.	3d.
CLASS 1 AND 2.							
Rivet	1	..	2	..	1	1	..
White Wings	2	..	1	..	1	1	..
Cygnet	3	2	..	1	1	1	..
Aggie	..	1	..	..	1	..	..
Cyprus	..	3	..	..	..	..	1
Verve	..	..	3	..	..	..	1
Escape	..	..	..	2	..	1	..
Yolande	..	..	..	..	..	..	..
CLASS 4.							
Caprice	1	2	1	..	2	1	..
Mischief	2	3	..	1	1	1	1
Alvaetta	3	1	..	..	1	..	1
Finette	..	..	3	3	..	..	2
Alert	..	..	2	2	1	1	..
CLASS 5.							
Puritan	1	2	1	..	2	1	..
Irene	2	3	2	..	..	2	1
Ruby	3	1	3	..	1	..	2

The club has given over $800 in prizes during the season, in addition to the Murray, Cosgrave and McGaw challenge cups. In the second and third classes the cups were given for the highest number of points in a series of cruising handicaps in different directions on the lake. The Murray cup was won by Cygnet, the Cosgrave cup by Yolande and the McGaw cup by Caprice. Besides the racing a large amount of cruising has been done during the season.

"WHO WON?"—The second volume of this useful little book has met with such well-deserved success that the author, Mr. J. C. Summers, is now at work on a new volume for 1889. The two volumes already issued, 1887 and 1888, have become the standard of reference for all questions relating to the past history of American yacht racing, while they contain in addition a great deal of general information of value to yachtsmen and would-be yachtsmen. It is Mr. Summers' intention to make the new volume still more complete and accurate, and to issue it earlier in the season than heretofore.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. A. A., Watertown, N. Y.—The pedigree of Lena II. is given as by Royal Ranger and out of Lena. We have no record of Forest Royal.

H. E., South River, N. J.—On Thanksgiving Day we shot a sweepstake match, first and second money. The first event was all killed two birds. We shot at three more apiece, and four killed one apiece and two did not kill any. Do these two get second money. Ans. We presume that six was the total number of entries in the match. All having killed the same number of birds, no one has qualified for second money, and the whole purse is made into one money, to be divided among all, or the tie may, by mutual consent, be shot off under any conditions agreed upon.

New Publications.

A NEW edition of Maynard's "Naturalist's Guide" will be issued immediately by Cupples & Hurd, Boston; also an entirly new work, by the same author, upon the Eggs of the Birds of the United States, with illustrations, in color, done by the author. The latter work will appear in eight fifty-cent parts, at monthly intervals. Subscriptions are asked for, by the author, from those interested.

BIDING HIS TIME, or Andrew Hapnell's Fortune, by J. T. Trowbridge. Boston: Lee & Shepard. J. T. Trowbridge's books for young people have acquired a well deserved popularity. As stories they are well told, and the lessons they convey tend to build up the moral character. Andrew Hapnell, the hero of "Biding His Time," was an orphan, but he had had the double advantage of inheriting high principles from his mother, and of being brought up by her; and so, of course, he goes through the fierce fire of temptation, and comes out of it like gold, purified by the process.

THE STORIES MOTHER NATURE TOLD. By Jane Andrews, author of "Seven Little Sisters." Illustrated. Boston: Lee & Shephard. Price $1. "Sermons in stones, books in the running brooks," are what Jane Andrews finds everywhere, and with childlike confidence she questions Mother Nature of her secrets, and preserves the conversation for the benefit of young people, who will be astonished to find what interesting histories some commonplace things have. This little work is written with an object, and has a high educational value, tending both to enlighten the understanding and elevate the moral nature.

TRAVELERS AND OUTLAWS. Episodes in American history, by Thomas Wentworth Higginson. Boston: Lee & Shepard. Price Under this title the author has published a number of narratives, some of which he has already given to the world through the medium of the *Atlantic Monthly, Harper's Magazine* and the *Century*. They are mostly narratives of what may be called minor episodes in American history, as the Maroons of Jamaica, the Maroons of Surinam, Gabriel's Defeat, Denmark Vesey, and Nat Turner's Insurrection. Of a somewhat different cast is a New England Vagabond, who furnished the materials for his own biography, and a stirring chapter for boys is the Old Salem Sea Captains. These latter were the travelers and voyagers; all the others appear to have been outlaws.

MISS PARLOA'S NEW COOK BOOK. By Maria Parloa, principal of the School of Cooking in Boston, author of "The Appledon Cook Book," "First Principles of Household Management and Cookery," "Miss Parloa's Kitchen Companion." Boston: Estes & Lauriat. Price, 25cts. The essential feature that distinguishes man from all other animals is that he is a cooking animal. The rudest display of this characteristic is evidence of his vast superiority over the beasts, and as between man and man the place of a nation in the scale of civilization may be easily gauged by its measure of progress in gastronomic art and science. Miss Parloa is a leading professor of the art, a votary in its temple, an initiate into its sacred mysteries. As a professor, too, Miss Parloa's popular lectures and practical course of instruction have rendered her deservedly famous, and the work under notice affords ample evidence of a wide grasp and exhaustive treatment of a subject of vital importance. With Miss Parloa as guide and provider of one's table, there can be no question as to whether life is worth living or not.

READINGS FROM THE WAVERLY NOVELS. Edited for School and Home Use by Albert F. Blaisdell, A.M. Boston: Lee & Shepard. Cloth. The Waverly novels consist of a long and splendid series of prose fictions, twenty-nine in number, written by Sir Walter Scott, and for the most part dedicated to the idealization of manly courage and truth, and of womanly beauty, gentleness and heroism. The novels are for the most part historical, covering the whole period of English history from the eleventh to the eighteenth century, and present the men, manners and costumes of each age with such an air of *vraisemblance* that we never hesitate for a moment to accept them as faithful portraits. The charm of Sir Walter Scott's style is indescribable, his stories kindle the latent spark of chivalry in every generous breast, and while he is unparalleled among novelists for the fascination he exercises over the reader, the thought is always healthful and stimulating, the style pure and the events described of solid historic value, lighted by the halo of romance which Sir Walter has shed over them with such charming effect without perverting their historic truth. The selection under notice has been carefully made, and is well calculated to whet the reader's appetite for the perusal of the whole series.

When the case of the Commonwealth against John and Ben Ellman was called in the Criminal Court in Covington yesterday a demurrer to the indictment was made. They were indicted for stealing fourteen ferrets, and the demurrer to the indictment was that it was not a felony to steal wild animals, and the defense claimed that ferrets came under that head. The demurrer was sustained, and the Commonwealth appeals. There is nothing in the statutes that makes it a crime to steal ferrets, and they are classed as wild animals. Those who are inclined to steal can now go ahead and steal tigers, wildcats, lions or even snakes and they will not be punished. A civil action is to be brought against the Ellmans.—*Louisville Journal.*

THE DACHSHUND.

IT seems to me that the people from whom we had the dog, and who have bred and used it for centuries, are the most likely to know what the desirable and correct points of a pure-blooded dachshund should be, and I question the wisdom of altering the characteristics, as these are recognized in his native home, of any imported dog. Modifications are sure to take place in time, but the type should be upheld; and this has not been done in the present instance, as the most cursory comparison will show.

The consequence of this divergence from German views has been that our Teutonic cousins will have none of our dachshund standard, and their kennel clubs, on being invited to exhibit at the great Jubilee Show, held under our Kennel Club auspices, refused, unless classes for German dachshunde were provided, and these classes judged by the German standard.

The dachshund standard, as settled by the Dachshund Club, November, 1881, is as follows:

Head and skull.—Long, level and narrow; peak well developed; no stop; eyes intelligent and somewhat small; follow body in color. (Value, 12.)

Ears.—Long, broad, and soft; set on low, and well back; carried close to the head. (Value, 6½.)

Jaw.—Strong, level, and square to the muzzle; canines recurvent. (Value, 5.)

Chest.—Deep and narrow; breast bone prominent. (Value, 7.)

Legs and feet.—Forelegs very short and strong In bone, well crooked, not standing over; elbows well clothed with muscle, neither in nor out; feet large, round and strong, with thick pads and strong nails. Hindlegs smaller in bone and higher, hindfeet smaller. The dog must stand true, *i.e.*, equally on all parts of the foot. (Value, 20.)

Skin and Coat.—Skin thick, loose, supple and in great quantity; coat dense, short and strong. (Value, 13.)

Loin.—Well arched, long and muscular. (Value, 8.)

Stern.—Long and strong, flat at root, tapering to the tip: hair on under side coarse; carried low, except when excited. Quarters very muscular. (Value, 5.)

Body.—Length from back of head to root of stern, 2½ times the height at shoulder. Fore ribs well sprung, back ribs very short. (Value, 8½.)

Color.—Any color; nose to follow body color; much white objectionable. (Value, 4.)

Symmetry and quality.—The dachshund should be long, low and graceful, not cloddy. (Value, 11.)

Weight.—Dogs about 21lbs.; bitches about 18lbs.

The Dachshund Club states that it does not advocate point judging, the figures given being only used to show the comparative value of the features.

The Germans begin, rightly I think, where the English standard ends, with the description of the dog's general appearance; and it surely cannot be disputed that the German standard is immeasurably the best and the most intelligible.

A long, low dog would not be "cloddy," and a dachshund never yet was and never will be "graceful," in the ordinary sense of these English words, although it may be otherwise in some Pickwickian sense recognized by the Dachshund Club. To say that a dachshund is a graceful creature is a most unfortunate misuse of a word, and its antonym, deformed, more truly describes the animal. If a dachshund is graceful, so is the short-legged, over-bodied, shambling dwarf, and Richard, Duke of Gloucester, was an Adonis, formed "to caper nimbly in a lady's chamber—shaped for sportive tricks, and to court the amorous looking glass," not "rudely stamped and wanting in love's majesty," nor "cheated of feature by dissembling Nature, deformed, unfinished, sent before his time into this breathing world, scarce half made up, and that so lamely and unfashionable that dogs barked at him." The Lady Anne doubtless took a Dachshund Club's view of the graceful outlines of the hunchbacked murderer of her husband and his father; and when dog fanciers put on their tinted spectacles they see beauties in deformities that are hidden from the eyes of mere common mortals.

In head and skull the English and German dachshund widely differ, the latter being broad where the former is narrow and peaked. The ears in the one are "set on low," in the other "placed high." The teeth are described by both as level, but there is a very remarkable difference, the Germans remarking on the great length of the teeth in general, and especially of the "corner teeth," while the English say the "canines recurvent." The corner teeth are the incisors next to the canines. The caduceous corner teeth are erupted when the pup is four to six weeks old, and replaced by the permanent ones at about the fifth month, a month or six weeks later than the other incisors, of which they are always the largest; but I should be gladly surprised to find any marked distinction in that respect between dachshunde and other dogs.

What, then, does our English club mean by the canines being recurvent? They surely do not mean recurvent. And if, as may be reasonably supposed, they mean recurved, I ask if they mean that the canine teeth of the dachshund are different in shape from those of other dogs, and on what ground they rest that statement? The canine teeth of all dogs curve outward and backward, and there is nothing exceptional in the dachshund.

Oscar Schmidt, Professor of the University of Strasburg, writing of the *Canidæ*, says: "Any of our readers who can examine the head of a dachshund, may convince themselves of the fact that the first pre-molar, above and below, can scarcely be of any use to the animal; it is a little stump, which does not come in contact with the opposite row of teeth, and is frequently wanting altogether. If the dachshund is not forcibly suppressed, as a species, its dentition will one day inevitably be reduced by one pre-molar."

At the dachshund show held at the Aquarium in 1886, I examined a considerable number of dachshunde, and found the case to be as described by Professor Schmidt; and, since then, I have noticed the same thing in dogs of other breeds, though I have not examined any very great number. I suppose the gradual loss in size to be accounted for by the comparative little use of the teeth under our common methods of feeding dogs.

In describing the chest, the English say deep and narrow, with breast bone prominent; the Germans, breast broad—the two being absolutely contradictory.

I cannot but look on the standard of the English club as a not very intelligible description of the animal, and the value of their points as decidedly puzzling; not, perhaps, so absurd, however, as the fact that the club does not advocate point judging, but merely gives the figures to show the comparative value of the features. Surely, if the figures show that, it is what judging is supposed to do; and if figures are an aid to any one desiring to value the special qualities of the dog, they must also be of value to the judge, who should use them as a means of instructing students of the breed, but if they are of no practical use they ought not to be put forward.

It is really too ridiculous to say a dog's ears are within half a point of the value of his chest; and to value the stern at 5 per cent. of the whole dog, and to throw the quarters in as make-weight, appears to display a singular misconception of animal structure.—*Bazaar.*

INDENTED – CRIMPED – BLANKS.

The Peters Cartridge Co. is induced by the success achieved the past season to greatly increase its line of manufacture. It now offers the above most complete list of Shotgun Ammunition.

THE
"Indented" Cartridges
Are the most successful ever produced for Trap and fine Wing Shooting. They give wonderful pattern and penetration, with the least recoil and a clean gun.

Peters Crimped Cartridges
Are loaded by the same machinery and with the same materials (including the lubricated elastic felt wads) as the "Indented." The crimp is the best produced by machinery and diminishes the recoil. They shoot strong and leave the gun clean. Price same as for "Indented."

Peters Blank Shotgun Cartridges

(Trade Mark and Patents applied for) are especially appreciated by the "far off" trade, the hunter, farmer, etc. They save freight and the danger of handling bulk ammunition. By their use cartridges for all varieties of game may be quickly produced without the necessity of carrying a full and expensive line of the goods.

ASK YOUR DEALER FOR THEM. LIBERAL DISCOUNTS TO THE TRADE.

The PETERS CARTRIDGE CO.

CINCINNATI, O.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction. Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $3.50.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1 50.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Charley's Wonderful Journeys.

By C. F. AMERY. Profusely illustrated. Inimitable fun and most delightful fancies. Cloth, handsome gold stamp. Price $1.50. See advertisement.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Wild Fowl Shooting.

By W. B. LEFFINGWELL. The contents and illustrations of this volume are detailed elsewhere. Next to a gun this is something to please one whose fancy lightly turns to thoughts of ducks. See advertisement. Price $2.50 and $3.50.

Bird Portraits for the Young.

By W. VAN FLEET, M.D. Fourteen photogravure illustrations of familiar birds, with charming text. A magnificent gift book. Price $3.00. See advertisement.

Names and Portraits of Birds

WHICH INTEREST GUNNERS. By GURDON TRUMBULL. New edition now ready. Price $2.50.

UNCLE LISHA'S SHOP,

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY EW YORK.
DAVIES & CO., London, England.

Book Publishing.

Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

NESSMUK'S POEMS,

FOREST RUNES, By Geo. W. Sears, {Nessmuk}.

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the Fort Benton Fur Market. The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of The Dun Horse will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting. Under the title,

A Breath from the Maine Woods,

will be described the angling experiences of a Boston party at Moosehead, by "W. A. B.," whose sketches of a fisherman's life in Maine have been received with so much favor.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora.

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *ferœ natura*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our Shooting and Fishing columns will be our

Special Correspondence from the West,

keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters, all of which will make the FOREST AND STREAM

A Journal for Western Sportsmen.

The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity. There will be a series of papers from the pen of Mr. J. E. Gunckel, of Toledo, O., entitled,

The Sunset Club,

A continuation of the witty reports of that famous club already known to fame.

The Trap Forest and Stream Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

Wanted.

I WILL GIVE A 10-GAUGE, 10-LB., 30IN. Damascus Colt's hammerless shotgun, used twice, also 500 shells with powder and shot to load same, to any one who secures me the position of fireman on some railroad. Address Box 890, Belvidere, Ill. 1t

For Sale.

Colorado Game Birds.

WM. G. SMITH, Collector of the various branches of Natural History, Loveland, Colo., makes a specialty of mailing birds same day as skinned, arriving perfectly soft for mounting. Send stamp for price list. Would trade skins or mounted birds for an old pattern Parker gun, 12-gauge preferred. dec13,4t

SHOOTING TO LET ON MODERATE TERMS for one year or longer, on St. Simon's Island, Georgia, with small, comfortably furnished house. Over 8,000 acres. Plenty of deer, ducks, partridges and other game, besides best fishing on the coast in season. Situated ten miles from Jekyl Island and Brunswick, with which latter place there is daily communication by boat. Post and telegraph office on the island. Austin's Fish Dog Bread.

Recommended as being highly beneficial by some of the largest kennels, when used in connection with our popular (Beef) Dog Bread.
AUSTIN & GRAVES,
No. 116 Commercial Street, Boston, Mass.

GOODWIN'S
Royal Meat Biscuit

This bread is the result of repeated and careful experiments for my own kennel, but its superior qualities attracted so much attention that I have been persuaded to manufacture for sale. The advantages claimed for it are:
1. The large proportion of finely ground meat it contains.
2. That only perfectly fresh beef and sound flour and meal are used.
3. No foreign substance is used to imitate meat.
Finally, it is a nutritious and perfectly wholesome and safe food for dogs of any age or condition of health. The voluntary endorsements and large orders from prominent breeders are its highest recommendations. We are now ready to supply bench shows, kennel clubs and dog owners in quantities to suit.

Woodfords, Me.

RABBIT HOUNDS.

Before the season opens is the time to get the best. We are making a specialty of them at $20 for broken and $10 for unbroken ones. We have eighty-three in stock at present. Any we ship can be returned if not satisfactory.
ASSOCIATED FANCIERS,
dec6,tf 237 S. 8th st., Phila., Pa.

Mastiff Bitch For Sale.

Annette (A.K.R. 4732). Will be sold low as I have no place to keep her. CHAS. E. SHAW, Clinton, Mass. nov22,tf

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Marydel, Md.

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville Mass. sept22,tf

The Kennel.

ENGLISH MASTIFFS

PUPS BY

Champion Minting and Champion Ilford Caution,

Of the very highest quality and pedigrees.

In the Stud.

Champion Ilford Caution, fee $75; Champion Minting, fee $75; Alonso, 2d novice class, Kennel Club Show, 1888, fee $40.

St. Bernards.

Two very superior litters by Merphant Prince and Alp II.

IN THE STUD

BEN LOMOND, fee.....$50

Send for Illustrated Catalogue.

E. H. MOORE, Melrose, Mass.

Rosecroft Kennels.
Breeders of
FINE ENGLISH SETTERS,

Have more stock on hand, old and young, than can be comfortably wintered, and will sell any of the following to make room:

PASSION, pure Laverack, whelped July 29, '83, by Goodsell's Prince—Pebble. Well known on bench and field, and can win in either place.
ALICE GREY, 2 yrs. old, by Yale Belton—Forest Dora; very typical, very fast, broken and ready for the field.
FANCHETTE, 2 yrs. old, by champ. Foreman—Passion; winner of 1st. Phila., '88.
COUNTESS PEG, 2 yrs. old, by Fairy King—Countess Floy; thoroughly field and house broken and now at work in the field.
CONSTANCE, 15 mos. old, by Lord Nelson—Nancy Dawson; very good looking and in good shape for breaking.
VANDAL, by Prince Foreman—Passion, whelped April 7, '88; very promising; house and yard broken.
DON ANTONIO, by ch. Rockingham—Donna, whelped May 3, '88; weight 40lbs. and very handsome.
FOREST ECHO, by Prince Foreman—Forest Dora; whelped March 23, '88.
As also some youngsters, litter brothers and sisters to some of above, or from equally good stock.
Prices and further particulars on application to G. E. OSBORN, Birmingham, Conn., or WILSON FISKE, 102 Chambers street, New York.

BLOODHOUNDS.

For Sale—The first choice pair of bloodhound pups, whelped Sept. 10, imported, sired by Champion **Barneby**; very large and promising. Also one bitch puppy, same litter. Wishing to make room for more bloodhounds, I will dispose of some very choice bred fine English mastiff pups, from 5 to 7 mos. old. Photographs 25 cents.
J. L. WINCHELL, Fair Haven, Vt.

FOXHOUNDS FROM MY IMPORTED STOCK. 100 pups and 20 trained dogs for sale; also rabbit hounds and coon dogs, bred entirely for field purpose. Stud fee, $10. Also breeder of game fowls. Send for circular.
Lock Box 17. F. H. HAYES, Dexter, Me.

FOR SALE.—POINTERS AND SETTERS; field trained stock and puppies from imported and home strains. Prices always reasonable and stock as represented. GEORGE W. LOVELL, Middleboro, Mass.

ITALIAN GREYHOUNDS AND FINE ENGlish pugs from imported, registered and prize winning stock. In Stud—Prize pug stud dog Cricket, weight 10lbs. HENRY C. BURDICK, 150 Bridge street, Springfield, Mass. jy7,tf

TRAINED DOGS ON BEAR, FOX, COON, Rabbit, Squirrel, Partridge. H. C. GRAFF, Kensington, Ohio.

TO MAKE ROOM

I will sell 20 thoroughbred Gordon setter puppies, 3 to 4 mos. old, full pedigrees and warranted. Price $10 each. Address with stamp,
C. T. BROWNELL, New Bedford, Mass.

Future Winners.

For Sale—Choice pointer puppies by Bang out of Vandalia (Bang Bang ex Zanetta) and Verona (Day's Prince ex Vandalia); ages from 2 to 9 mos. Also several mature bitches. Bang, winner of four 1st prizes and Victor the Blue Stocking, by champion Beaufort, in the stud. Address BRYN MAWR KENNELS, P. O. Box 1247, Phila., Pa. dec13,tf

LLEWELLYN SETTER PUPPIES FROM thoroughly trained and as well bred stock as there is in America. For full pedigree and description address with stamp,
CHAS. YORK,
9 & 11 Granite Block, Bangor, Me.

Dogs Trained.

After Jan. 10, 1889, I will be located for three months in a most excellent quail and jack snipe country, and will have an opportunity to thoroughly train a brace of young dogs (will take only two). Any one having one or two promising young dogs they desire to have broken at a reasonable price, address at once, W. H. PIERCE, Peekskill, N. Y. dec20,2t

WANTED.—LARGE, HANDSOME ST. BERnard bitch at a low figure. Address Lock Box 886, Suspension Bridge, N. Y. dec20,2t

FOR SALE.—AN ENGLISH MASTIFF DOG 3 yrs. old, 31in. high, weighs 140lbs. We house broken and kind to children. Price $2 JOE LEWIS, P. O. Box 304, Cannonsburg, Pa. dec20,2t

KING CHARLES SPANIEL.—VERY HANI some little dog, 2 yrs. old, fine house do and pet. Price $50. Also handsome jet bla cocker spaniel. Price $25. Address JEWELE Lock Box 886, Suspension Bridge, N. Y. dec20.

THE "FOREST AND STREAM'S" GRIZZLY,

Now in the Bear Pit of the Central Park, New York.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 3, 1889.

VOL. XXXI.—No. 24. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

A PORTRAIT *of the* FOREST AND STREAM'S *grizzly bear is issued on an extra sheet with this number.*

SOLDIER MARKSMEN.

THE collections of figures which appear in our rifle columns show with some detail the work done by the Metropolitan Brigade of the State of New York in carrying out the orders for rifle practice imposed by the military authorities of the State. These troops represent the flower of the National Guard of the country. There is no city where the home guard strength is better attended to, no city where eight regiments are supported with ranks more or less full. It is seen that there is no great variation in the figures. About so many men practice out of a possible total, and of this number about so many manage to get up to the grade of marksmen. Those who recall the time when not a single guardsman fired a shot may look upon this showing of skill as phenomenal. A member of a crack rifle club may look upon a man who calls himself a marksman simply because he has managed to get past an average of outers as a very poor shooter. Both critics are right and both in a measure wrong.

The Guard for what it has done and is doing deserves much praise. It must be borne in mind that this exercise is purely voluntary, that those men who don a uniform for the pleasure of the thing really give a great deal of time and trouble to their hobby and assume important obligations. The importance of these figures to readers of the FOREST AND STREAM is in their bearing on the question of arms and shooting. It shows that up to the 500yds. range the Remington State model rifle with its .50-caliber barrel throwing a heavy ball can and does do good work.

The system which Gen. Robbins has elaborated and carried out is a good one. It is one which other States may well copy. Criticism may be aimed at a system which allows officers to shoot and put their totals into a common total with that of the men. In fact, line officers and brigade officials should shoot simply that they may appreciate the efforts of the men, and be able to lend aid and guidance. Again, the counting system is an artificial one for simplicity's sake perhaps, but it would seem possible for something nearer an actual exhibit to be made of the soldier's doings. Each man makes an actual score over fixed distances. These could be aggregated into an average score for each company or regiment.

Again, the present system permits a man to keep on shooting and shooting until a passing score is made. There is no record of these attempts, and the result is that a man of comparative leisure, like one of the 7th Regiment, who may go again and again until he has got a satisfactory score, is at a great advantage against the poor militiaman who can only do his official stint of shooting.

What would seem to be needed in the whole shooting system of this State is a scheme which follows the soldier to his armory. At present a man may go to the range and there for the first time shoot off a weapon. No wonder he shoots wild. The actual shooting of a ball cartridge is the last lesson in a long series, or rather it is the finished work after the instruction has been given. Aiming drill and armory practice at indoor ranges with reduced charges are the preliminary necessities to the making of a good shot. What New York city wants is a central range, safe and secure, where every guardsman in the city should resort for the making of his trial shots. Until a man has been taught to hold his weapon, it is of no use to load it and tell him to hit a mark. The indoor range instructor should be an experienced man and one giving his entire time to it would soon find out the possibilities in the case of each man. If a man cannot become a shooter, then he has no place in the Guard. If he is in the Guard then it is only neglect of his own assisted by those above which prevents him from being a possible shot and to a mob or an enemy a dangerous opponent. The same instructor who acted at the indoor range all winter ought to do duty at the open range all summer. Men ought to come and go as they may find it most convenient, the main aim being to make them individually able to shoot. This accomplished the volley and other firing would soon come. It will be urged that the men who are learning to shoot to-day, who are becoming enthusiastic marksmen now, will be the officers of the near future and will see to it that their men keep up the proficiency. This is in part true, but instead of having 80 line captains each teaching his men or leaving them untaught, the work ought to be done by system and at one central point. Thus the leaven would be inserted which in time would make the Guard a body of sharpshooters.

SNAP SHOTS.

STUDENTS of natural history and all others who take an interest in the subject will learn with satisfaction of the action recently taken by the Board of Apportionment of this city and the authorities of the American Museum of Natural History at the Central Park. At a meeting of the Board of Apportionment last week it was determined to increase the annual appropriation for the Museum from $15,000 to $25,000, on condition that the collections should be exposed to public view either on Sundays or on two evenings each week as well as during the day. This condition has been accepted by the Trustees of the Museum, who have elected to keep the building open until 10 o'clock during the evenings of Wednesday and Saturday of each week. There are many positive and diverse views held by different people as to the wisdom of opening this and other museums on Sunday; but there is probably no doubt in the mind of any one as to the desirability of having them open more that they usually are, and especially at hours when those whose time is fully occupied during business hours can take advantage of the collections on view. The present step is a long one in the right direction, and will make the American Museum of Natural History more valuable than ever as an instructor of the public.

The times are out of joint; the first day of January in the latitude of New York should not have the balmy mildness of autumn; and yet the opening of the new year was as warm and sunny as that afternoon in last October when "Coahama" entered the office and announced that he had come from Mississippi to see the FOREST AND STREAM'S grizzly bear in Central Park. This was a bit of euphuism, spoken, no doubt, in compliment to the bear. "Coahama" is a man of affairs, who does not journey a thousand miles to see a grizzly in a pit, though there is no telling how far he might not travel for a chance at a grizzly in the mountains, for he is a sportsman through and through. His predilections for the gun and the field crop out in all sorts of unexpected ways. When he buys a new hat he selects one of white felt and broad-brimmed and wears it for what it is worth while new, but with a thought ever to what it will be when old, for there is nothing in the world better for duck shooting, says "Coahoma," than a weather-worn old white hat. So we went to the park to see the bear; but first a call was made in the reptile house, where, the case being opened by courtesy of Dr. Conklin, the Mississippi student of reptilian life must needs handle the Gila monsters and fumble among the moccassins with a *sang froid* acquired during a surveyor's life in Southern swamps and canebrakes.

The interest in the bear manifested by "Coahoma" and numerous others has prompted the suggestion that a life-like portrait of the not unprepossessing creature might be acceptable to the public. Mr. Thompson has made careful study of the subject, and his drawing, presented to our readers to-day, is from life. A very faithful likeness it is, as will be testified to by any one of the hundreds of thousands and millions of people who have seen the original. The bear lying in the foreground is the common black bear of this country; and in the background are shown the rocks of the bear pit.

Sewell Newhouse, the author of the "Trappers' Guide," died at Community, New York, on the last day of 1888 at the age of 82. He was a native of Brattleboro, Vt. In 1820, when he was fourteen years old, his family moved to Oneida county, N. Y., then an almost unsettled region, and here at the age of seventeen young Newhouse began to make the traps which have caused his name to be famous at least over the whole of North America. For the next twenty years he was engaged in the business of trap making, his annual manufacture running up from very small beginnings to 2,000 traps a year. In 1849 Mr. Newhouse and his family became members of the Oneida Community, and after that the business of trap making was carried on by the Community under the superintendence of Mr. Newhouse and Mr. J. H. Noyes. His book, the "Trapper's Guide," has run through many editions, and still remains the best authority on this difficult subject.

In many districts of the Adirondacks the deer doggers who aver that the deer are increasing are simply whistling to keep their courage up. As a matter of fact, the game, when the entire North Woods region is considered, is rapidly dwindling year by year, at a rate which leaves little hope for the future, and as if the jacking and hounding in season were not bad enough, the hounders at Paul Smith's and elsewhere, drive deer out of season, and "mountain mutton" is supplied on hotel tables in the summer. Smith, it will be remembered, is the man who as a type of his class says that if his guests and guides want to break the game laws, it is none of his business, and he does not feel called upon to say booh to them. And there was talk of making him a Commissioner of Fisheries, some time ago.

The letters printed to-day bearing on the right and wrong of the killing hares by fox-terriers in the Hempstead Coursing Club fashion are instructive, because they afford a very fair index to the feelings on the subject held by the great body of American sportsmen. As we have said before, the question is not one of cruelty, but of sportsmanship. The one fact that the victim has no chance for its life is what stamps the Hempstead practice as unbecoming and unsportsmanlike. This fox-terrier killing of hares dropped to the ground is not coursing, nor can the advocates of legitimate coursing well permit their sport to be injured by having it confounded with the Hempstead way.

Correspondence relating to the business and editorial departments of this office should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence the letters may remain unopened.

The Sportsman Tourist.

THE MARE-BROWED MAN AND THE PHANTOM LOON.

ON the southwest coast of the island of Newfoundland is an area of the sea about sixty miles in length, and called by the early settlers Fortune Bay, because of the abundance and variety of fishes in its teeming waters. In nooks and corners, by its fiords, coves and harbors, are settled a hardy and simple-minded race of fisher folks, chiefly descended from West Country stock from Old England. They were the pioneers in the cod fisheries, and getting tired of the buffetings of the Grand Banks, they gladly sheltered themselves where woods and water, fishes, fur and feathered fowl were to be had by helping themselves. They, too, sang this song of the lotus eaters:

"Oh, rest ye brother mariners, we will not wander more,"

and returned not again to the old home in England. Needless to say, they brought the folk lore and superstitions of the old land with them, and their descendants to-day in out-of-the-way coves, having little or no connection with the outside world will, if you gain their confidence, give you the goblin stories common two or three centuries ago in the west of England. Their dialect is decidedly West Country, sadly mixed in transportation, scarcely understandable until you have been some months in constant intercourse with them.

They are firm believers in spells, and things lucky and unlucky, in witchcraft and witches, in turning a key on the Bible to discover a thief, and all the mysteries of the Black Art.

On one occasion I was going hunting with an old skipper early in the morning when a woman crossed our path. "We might as well turn back," said he; "no luck to-day, sir." It is also unlucky to meet a red-haired man, or for a hare to cross your path when going deer hunting, and above all, a mare-browed man is unlucky and has the power of putting a spell on you. Their belief is that he is possessed with an evil spirit of mischief, which he is always ready to exercise to your harm. A mare-browed man is always dreaded in the community in which he lives, and he believes as firmly as his neighbors that he has the power of putting a spell on and giving bad luck. Perhaps the word is not commonly known among your readers, and I had better give an explanation.

A mare-browed man is one whose eyebrows meet and extend continuously across the forehead. Fortunately these people are not numerous if their powers are equal to their belief. The word is an illustration of how tenaciously the common people in out-of-the-way places retain a strong hold of a word which would else be almost lost from our language. In this case, however, there is one other instance of its common use in the word nightmare. "Mare" is an old Saxon word for goblin, an evil and mischievous spirit.

And now to my story of the mare-browed man and phantom loon. I was on a pleasure excursion in Fortune Bay in a yacht of about twenty tons. The fishing had been superb in Salmon River, Long Harbor and Trammer. *Salvelinus fontinalis* of the anadromous variety, weighing from 1 to 4lbs., had been caught by our party until we were satisfied, and would catch no more. After a long experience in many waters, I am satisfied that no finer sport can be had than in these rivers from the 15th of July until the 1st of October.

We were homeward bound, but a strong breeze forced us to seek shelter in a cove called Doctor's Harbor, on the north side of the bay. This snug little place is nestled under a range of hills which rise rather precipitously from the water to a height of about 800ft. The scenery is grand. The tops of the hills are bare of trees of verdure of any kind, except club mosses, ground juniper and tuckamores. Here the Arctic hare, weighing from 10 to 14lbs., the rock ptarmigan and willow grouse are numerous. The latter afford magnificent sport. They lie well to the dog, are strong of wing, and require straight powder and a quick eye if you will bring many to bag in the months of October and November. As a game bird they are not surpassed by the ruffed grouse.

In this quiet cove lived five families of fishermen—fishermen in summer, hunters in winter. Their little one-storied huts contained a kitchen with a large open fire-place, on which were old-fashioned iron dogs. The furniture consisted of a deal table, two or three home-made stools and settles, one or two arm chairs made of flour barrels, and the housewife's pride, a dresser of crockery ware of gaudy pattern stood opposite the door, which was near the center of the house. The other end of the house usually contains two small bed-rooms, while the loft is devoted to a miscellaneous stowage of nets, rolls, lines, sails and children. In one of these houses lived skipper John Baker, a mare-browed man, and near by lived skipper Kish Cains.

On going ashore I met the latter at his door step with his right arm in a sling. After a cordial greeting—for he had been an old hunting guide of mine—I inquired what ailed his arm. He replied: "Well, sir, last week I bought this 'ere gun [which stood by the door] from Sam Leak, the Nartin trader, an' gid un varty shillin's fur un. Fish wus scace, so day afore yisday I thought I'd go over the hills and try un on a hare or patridge. I tooked her an the powder harn and shotgut, and starts up yander through the droke. You know the little pond on the top of the hill. When I cumed in sight o' un, the fust thing I sees is a loo' sittin' about the middle uv un. 'A queer place fur a loo' to be,' says I, fur the pond isn't more'n 60yds. across, and no trouble to git in gun shot a he. I drawd down to the tuckamores aside the pond, an' got twixt thirty and varty yards from un. I lets drive and the loo' dove. The gun kicked pow'ful an' I loads her agen, a light load, not mor' 'n six fingers. The loo' comes up in the same place an' I lets drive again, and he dove agen. In a minit he cumed up in the same place, and I loaded an' fired twenty-eight shots at un, an' he dove every time. I hadn't a grain of shot left. At the last shot the loo' disappeared, then I seed I'd been vuled [fooled]."

"What became of the loon?" said I.

"'Twa'n't no loo' at all, sir."

"What was it then?"

"'Twas a spell on me an' the gun; and I knowed then that that blankety blank blank Jan Baker put it on."

"Nonsense," said I, "you should not believe such things."

"Well, lookee here, sir," opening his shirt and showing his shoulders as black as my hat. "I've vised too many guns not to know I wouldn't be served like that if there war'nt a spell on her."

I replied, "Oh, Kish, you are mistaken; she is an old army musket, warranted to kick like a mule."

"Mistaken, sir! I got proof I'm right. Shortly after I cumed out to the harbor Jan Baker he cumed in from vishin, and I says to un, 'Skipper Jan. I thinks there's a spell on my gun.' 'Let me look at her,' says he. I gid her to un an' he looks along the bar'l. 'Yes, ses he, Skipper Kish, there is a spell on her, I can see it. It looks just like a vishes vloat [fish's air float or air bladder].' I ses, 'Canst take it off, Skipper Jan?' He says, 'No, I can't.' 'Well, I can,' says I, 'fur I knows the blankety blank that put it there.'

"So yistday marnin, sir, w'en Jan Baker an' the rest went out vishen, I gets a piece of paper and cuts it out the shape uv a man's heart, an' I writ Jan Baker's name on it and stuck it up on that picket six foot in front uv the door. I puts a small charge in the gun, and cuts off a picce uv silver the size uv a shot and puts it in with the shot. I stood here in the doorway and vired; and I hope that I might never live another day, sir, if I'm tellen ye a lie—every shot cumed flyin' back in the house among the crockery on the dresser and rattlin' on the floor. I looked at the paper heart; not a shot had passed through it, but I seed a small piece chipped out of the edge and I knowed the silver had done it and the spell was off my gun.

"In the evenin' when Jan Baker cumed in, he says, 'Skipper Kish, didst take the spell off your gun?' And I says, 'Yes, I did, Skipper Jan.' And he says, 'I knowed it, Skipper Kish, fur when I was out on the fishin' ground I felt a drop of blood leave my heart, an' I says to myself, Skipper Kish is takin' the spell off his gun.'

"Now, sir, didn't I tell you that I had proof that 'twa'n't no loo' at all, only a spell on my gun."

So ends my yarn of the mare-browed man and the phantom loon. The names of men and places are all real, nothing fictitious: all is set down as repeated to me by Skipper Kish; but I cannot do justice to this dialect on paper.

B.

HARBOR GRACE, Newfoundland.

Natural History.

QUEER FOOD FOR RODENTS.

IT is well known that many of the rodents are omnivorous, and enjoy eating flesh as well as vegetable food. Naturalists long ago called attention to the fact that the red squirrel habitually feeds on young birds and on eggs, that the thirteen-lined spermophile and other western specimens eat grasshoppers, that muskrats eat fresh-water mussels (*Unio*) and that some will eat their own kind. The popular impression is, however, that rodents, except the Norway rat and the house mouse, are vegetable feeders exclusively.

In the interesting report made by Mr. Vernon Bailey to Dr. C. Hart Merriam, of the Bureau of Economic Ornithology, there is given a great deal of information as to the food of many of our mammals found in western Minnesota and Dakota, and among other points brought out is the one to which we have alluded.

Speaking of the muskrat Mr. Bailey says that it is abundant at Elk River, Sherburne county, Minn. "They eat fresh water mussels, small turtles and lily roots. The mussels eaten are both the thin-shelled kind of the mud bottomed lakes, and the heavy-shelled of rivers (*Unio*). Some trappers use mussels for bait. The turtle eaten by the Muskrats is a small bright-colored terrapin, probably *Chrysemys picta*. Three or four years ago I took from a Muskrat house a small turtle with three of its legs and its tail eaten off and the shell gnawed. It was still alive. The lily roots eaten are *Nymphœa tuberosa*, and *Nuphar adoma*. They form a large part of the food of Muskrats in winter when the ponds are frozen."

Onychomys leucogasta is a curious mouse, which is very largely insectivorous and which from this cause is known as the grasshopper mouse. Near Fort Buford, Dakota, Mr. Baily found this species common on the prairies and hills, but not among the underbrush. He kept one in confinement for some little time, and his observations on it are so interesting that we give what he says in full:

"One which I kept in confinement was not full grown when caught. From the first it did not show the least fear. It took food from my fingers when first offered, and never attempted to bite. If not disturbed or very hungry it sleeps all day, and when waked up gapes, stretches and blinks some time before he gets fully awake, but is then lively for a time, though he does not seem to like the light, and if it is bright keeps winking. In the evening he becomes lively and tries to get out, jumping and scratching at the sides of his cage, and biting the wires of the front, but he never gnaws, and though he has been a week in a thin cigar box there is not a tooth mark in it. Sometimes he becomes crazy in his efforts to get out nights, and jumps about with all his might; but usually, unless hungry, he is quiet and intelligent. He will come to the front of his cage at once if the wires are rattled or scratched and look for food. If a fly gets inside he is pretty sure to see it, and seldom fails to catch it. He will not eat raw meat, but the way he takes hold of grasshoppers and flies shows that they are not new to him. He ate 16 crickets, 11 grasshoppers, 1 spider, a black bug, and a big fly one forenoon. When very hungry he will eat weed seed or the leaves and stems of knot-grass and pigweed, but he has not been hungry enough for this many times since I have had him. He will also eat a little cheese and fried cake when hungry, but not much, and evidently does not relish it. His favorite food is crickets; he will not eat anything else while there is a cricket in his box. Next to crickets he will take grasshoppers or flies, but does not seem to care somuch for beetles, though he will eat any kind that I have yet offered him, principally a small black beetle that lives under sticks and stones; he also eats lady-bugs. I have found only one potato bug since I have had him, and he seemed to relish that, as he ate it all but the wings, shell and legs. He always begins at the head of an insect, holding it in his hands while he eats. A grasshopper will just nicely sit on its tail while he eats its head, with a hand on each shoulder; but the hopper is bound to kick, and if a large one, makes him much trouble, sometimes tipping him over; but he never lets go or stops eating until the head is off; then he eats his way to the tail. The wings and legs fall off as he eats the body out of them, and if he has plenty to eat they are left; but if hungry, and the supply is short, he will eat the legs afterward. He eats spiders, soft bugs, and dragon flies. He killed and ate a small frog when hungry, but would not touch one after eating all the hoppers he wanted. Next to insects he will take raw meat, fat or lean. He is very fond of brains. The only insects offered him which he would not eat were ants, and a few in his box make him almost crazy. If a dozen grasshoppers or crickets are put in his box alive he will kill them all by biting off their heads before he eats any. The same day that I caught him I dropped a dead white-footed mouse (*Hesperomys leucopus*) into his box. He pounced upon it like a cat, caught it by the side of the head near the ear, and began biting with all the ferocity of a coon dog. I could hear the bones crack, and when he let go and seemed satisfied that it was dead I took it out and found quite a hole broken through the skull just below the petrous bone. His teeth must have penetrated far into the brain. I put it back and *Onychomys* began at once to gnaw through and pull off strips of flesh from the neck, shoulders and skull, but did not get at the brain. He ate both of its eyes. The savage disposition shown in his manner of attack, and his promptness to seize it, would indicate a habit of killing mice. Sept. 22.—At 7:43 A. M. I gave him 12 crickets and 1 spider. He had eaten them all in seven minutes. At 8 A. M. he ate 4 grasshoppers; at 10, 1 big fly; at 10:15, 4 grasshoppers and 4 crickets, and at 11:45, 4 grasshoppers and a black bug; total 30 large insects in four hours. Did not have time to catch any more for him. Sept. 25.—At 6:45 A. M. he ate 1 fly and 2 black beetles; at 7:30, 1 grasshopper and 18 crickets; at 10, 2 grasshoppers and 2 flies; at 12 M., 3 flies, 2 hoppers and 7 crickets; at 1:30 P. M., 6 blue flies; at 2, 3 big flies; at 2:30, 3 grasshoppers, and at 6, 3 crickets; total, 2 beetles, 8 grasshoppers, 15 flies and 28 crickets, or in all 53 large insects in less than twelve hours. He would have eaten more if he had had them. Sept. 28.—Put a small *Hesperomys* in his box and he served it in the same way that he did the other one; also gave him a song sparrow that I had killed; he bit it through the head and ate part of it. I gave him a black hornet, which he took and ate greedily, but the tail seemed to bother him, and he evidently got stung on the nose, but did not seem to mind it much. He is very fond of cream. Sept. 30.—Gave *Onychomys* a common gray moth, which he ate and seemed to relish. Oct. 3.—He ate a piece of another mouse of his own kind, and tried to eat it before it was skinned. He has settled one thing for me; that a squeaking cry which I heard evenings at Brown's Valley and once or twice at Devil's Lake was made by this species. He has made the same sound several times. It is something like the cry of a flying squirrel. Of four skinned I was able to save but one without the loss of a patch of hair from the belly. Though the weather was cool they would not keep more than six hours without the hair loosening over the belly. Most of those captured at Brown's Valley show one or more bare spots. I have noticed the same thing in striped gophers (*S. tridecemlineatus*), which had been feeding on grasshoppers. Probably the insect food causes this tendency to early decomposition The excrement of this species is easily known by the remains of insects it contains."

THE OPOSSUM ON LONG ISLAND.

Editor Forest and Stream:

During a six years' residence on Long Island I have noticed a marked increase in the opossum crop year by year. Some months ago I saw a paragraph in the *South Side Signal* concerning their introduction here, but neglected to save it. Being interested in this matter I wrote to the editor, asking for information about the animal, and have gathered some facts which may be of interest in awakening inquiry as to the length of time that the opossum has been on the island. It is my habit each night to let my terriers out for a run before going to bed, and a year ago in my little garden they treed seven opossums, which were caught. This winter they have found but two, so far, although they are on the increase. In November Mr. Sylvester Smith, of this place, caught eighteen, nine of them being a female and her young. Another man, name forgotton, caught thirty-two, and the opossum is getting to be a nuisance to owners of fowl, and there is every prospect of their increase. Finding, to my surprise, that the persimmon tree grows on the Island, it occurred to me that the opossum might be indigenous, hence my question concerning them, and these are the facts brought out:

From the Suffolk *Bulletin*, Huntington, L. I., Dec. 22.—"Mr. Fred Mather, Supt. of Fish Hatchery at Cold Spring writes to the *Signal* inquiring about opossums as to whether they are indigenous to Long Island or an introduction here. Before 1880 they were unknown here. Some time during that year Mrs. R. T. Hunn, who was then in Virginia, sent three of them to Charles H. Smith of this village. They escaped from the boy, but only two succeeded in getting away, as one went prowling into F. G. Sammis' cellar, and was killed by that gentleman. Mrs. Hunn, who soon returned from the South and took up her residence at Cold Spring, allowed another to escape, and from these the present numerous array of the varmints is supposed to have sprung. These facts have been published by the different members of the Island press before, and as they were not contradicted, it is supposed are correct. If any one knew of oppossums before 1880 will they so inform us that the question can be settled?"

From the *South Side Signal*, Dec. 23—*Editor Signal:* In the last issue of your paper a correspondent seeks information about the opossum on Long Island, now so abundant, why he is here and where did he come from? Some twenty-five years ago a citizen of Bellport had, I think, five in number sent him from the South. They undermined the pen he put them in and escaped. I also heard a number were turned loose on the north side of the island several years ago. They increase rapidly; in fact, it would take a smart mathematician to "multiply" with them. During my several years' residence in Florida, where I spent many happy hours in hunting and shooting, I became well acquainted with the "varmints." They are very destructive to poultry and game birds, but are very palatable when stuffed and roasted. A "'possum hunt" is a great institution "down in Dixie." And if young America on Long Island would train dogs and

change some of their moonlight excursions into the exhilarating and healthful 'possum hunt, they would render the inhabitants of our fair island a benefit; for one adult opossum will destroy more game in one season than a score of dudes with canine attachments and improved breechloaders. Yours truly, NATHANIEL MILLER (Brookhaven, L. I., Dec. 17.)

Editor Signal: As Mr. Mather, of Cold Spring Harbor, is making inquiries about the oppossum, I would say, in answer to his question, that in the fall of 1850 I brought four to Riverhead from New Jersey, and in the spring placed them in a swamp near the village, and heard no more from them until about ten years ago, when the animals began to be found. They now seem to be plenty all over this part of the Island. Whether the ones I liberated were the first of present ever-abundant supply I must leave you to say. The opposum has a pouch, or false belly, in which the female deposits her young immediately after they are brought forth, and she nourishes them in it until they are able to provide for themselves. The animal is slow-motioned and helpless when on the ground, but climbs with great ease and rapidity and sometimes conceals itself among the branches and surprises birds that come within reach. It feeds on birds, reptiles, insects, roots, leaves and the bark of trees. Yours truly, MULFORD MOORE, (Riverhead, L. I., Dec. 17.)

From a personal letter from Mr. C. P. Rogers, editor of the Suffolk *Bulletin:* "Huntington, N. Y., Dec. 26.—My Dear Sir: I see by the *Signal* that the introduction of the possum is not an honor (?) to be taken by Huntingtonians. Am glad our skirts are clear of it; but it seems strange that when the subject was going the rounds of the Island press some eight years ago these men did not speak out in meeting."

This is all the information obtained, and in view of the fact that the introduction of the opossum is claimed to have taken place at different times and in different localities, it may still be a fair question if this animal is not indigenous. Prof. Jordan, in his "Manual of Vertebrates," gives its northern range as the State of New York, and as Long Island has as short, and as mild, winters as any portion of the State, it is fair to presume that the opossum could have migrated here on the ice, or otherwise, long before the prow of the Half Moon clove the waters of the Hudson or Captain Kidd buried his treasures in Fort Pond Bay.

I do not know in what other portions of the State of New York this double-wombed plantigrade may be found, and, in fact, until I saw it on Long Island, did not know that it was found in the State at all; but, in looking up the question, have gathered what is given above, which, fairly summed up, is of little value in adding to the life history of this animal, because it does not prove that it did not exist here before all of the claimed introductions. Should it stimulate inquiry in others as to the extreme northern range of the opossum in years more or less remote, it will then be of service to that extent. On Monday last there were fifteen opossums hanging at one stall in Fulton Market, and they were said to have come from Yaphank, L. I. FRED MATHER.

COLD SPRING HARBOR, N. Y.

MISSISSIPPI VALLEY BIRD MIGRATION.

THE second Bulletin of its Division of Economic Ornithology has just been issued by the Department of Agriculture at Washington. It consists of two parts, the first of which deals with bird migration in general, but with special reference to the Mississippi Valley, while the second, and far larger portion, is devoted to an annotated list of the birds known to occur in the Mississippi Valley, the movements of each species for the seasons of 1884 and 1885 being traced with as much exactness as possible from the records furnished by the observers of the Department.

The report is the work of Prof. W. W. Cooke, aided by Mr. Otto Widmann and Prof. D. E. Lantz, and it has been edited and prepared for the press by Dr. C. Hart Merriam, who is in charge of the Division of Economic Ornithology, and who, as the chairman of the American Ornithologists' Union's Committee on Bird Migration, is especially well fitted for this task. The whole work is well done.

The first part of the report, Bird Migration in the Mississippi Valley, is divided into the following heads: A brief historical review, theoretical considerations, speed at which birds migrate, relation of migration to barometric pressure and temperature, a study of bird waves which passed up the Mississippi Valley in the spring of 1884, synopsis of migration at St. Louis from Jan. 1 to May 27, 1884, progress of vegetation and awakening of animal life in the Mississippi Valley during the spring of 1884, list of stations and observers for 1884, list of new stations and observers for 1885, form of schedule used in 1885, and notes on the migration and distribution of each species reported as inhabiting the Mississippi Valley. The report contains a capital map of the region with the different stations indicated, and a good index.

The history of the systematized attempts to learn something definite about the phenomena of bird migration is an interesting one, although only a brief outline is given of this history. It is gratifying to note the increased interest constantly felt on the subject, and to see that while in 1882 reports were received from only thirteen persons, the number of observers had grown in 1884 to 109 and in 1885 to 159 who promised to report their observations.

Speaking of the causes which led to migration, Prof. Cooke deals with a subject about which but little is as yet known, and advanced some opinions which are quite at variance with the views of the editor of the Report, and which will hardly be generally accepted by ornithologists. The fact is that we know too little about migration to admit at present of any intelligent and satisfactory discussion of its causes.

The paragraph devoted to a consideration of the speed at which birds migrate, the relation of migration to barometric pressure and temperature, and the study of the "bird waves" which passed up the Mississippi Valley during the spring of 1884, are full of most interesting facts, and ought to be read by every one who is at all curious about the mysterious movements of our feathered friends. While these subjects do not profess to be treated at all completely, they contain a mass of information of very high importance as bearing on migration, and the manner in which they are handled reflects very great credit on all connected with the work. The second part of this Report is devoted to an annotated list of the 560 species of birds known to occur in the Mississippi Valley, and the notes under each species consist mainly of the times of arrival and departure of that species in different years. Incidentally, however, there is revealed in these notes a great deal that is interesting which does not directly pertain to and yet has a bearing on migration. These notes deal only with facts, yet they are full of suggestions.

The Report is a most valuable one, and is certainly by far the most important contribution that has ever been made to the literature of bird migration. To the authors, the editor and the observers is due great credit for their work. They have made a most important beginning in the study of a very difficult and intricate subject.

HARES IN NEWFOUNDLAND.

Editor Forest and Stream:

I have read with pleasure and instruction the series of interesting papers published in your valued journal from the pen of Dr. Shufeldt, but I think some of his statements in the paper of Nov. 29, referring to the Arctic hare, require to be modified.

The Arctic or Polar hare is the only species indigenous to Newfoundland. They are not, and never have been, numerous. They are brown in summer, and pure white in winter, except two black tips to the ears. They weigh from ten to fourteen pounds, and are a very hardy animal. I have seen many, but never knew nor heard of them burrowing in the snow in winter. In this island they always form under a bush or rock.

Dr. Shufeldt says hares have four or five young at a birth. If he includes the Arctic hare, as found here and at Labrador, he is mistaken. These hares never have more than two, oftener one, at a birth; nor do they bring forth young more than twice in a season.

"Those hares of the Eastern States, so universally called rabbits, known to science as *L. sylvaticus*," are not indigenous to Newfoundland, but about twenty-five years ago a public-spirited gentleman, Mr. Stephen Rendell, procured from Nova Scotia twenty-three of these animals, which he turned loose a few miles from St. Johns, Their rapid increase was marvelous. In five years the whole peninsula of Avalon was stocked with them. In ten years they had spread all over the island, and with them vermin—foxes, weasels, owls and hawks have also increased. These hares breed three times during the summer, and bring forth from five to seven at a birth. I think there are 500 of them caught by the settlers for one Arctic hare caught, and yet they increase, while the Arctic hare is decreasing.

Within the past five years we have another and most unwelcome visitor. He has come to stay, too. That is the Canadian lynx or *loup cervier* of the Acadians. The Indians report that they are increasing, and are destroying young caribou, both prickets and fawns. Of course they have crossed from the mainland via the Straits of Belle Isle. The distance from land to land is fifteen miles. Is it not a marvel that throughout all these ages these brutes never found their way across, and were never seen here until within the past few years? B.

HARBOR GRACE, Newfoundland.

Game Bag and Gun.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

In my communication in last week's issue of your valuable journal, I inadvertently made a statement to the effect that no other interchangeable barrreled rifle that I had seen was operated by lever action; I should have added the words "independent of the breech—the lever being attached to the barrel which is built on the tip-up principle." Of course there are several other interchangeable rifles worked by lever movement, such as the Bullard and Merwin & Hulbert; but on each of these the lever is attached to the breech bolt, the barrel being attached to the frame by means of a screw passing through the lug. The M. & H., by the way, appears to be a very elegant and, I believe, reliable little arm. I had an opportunity of testing one of them a few days ago while after ducks on Back River. The cartridge used was the .32-13-90 C. F. While we did not have an opportunity of trying it on the ducks, for the very good reason that they were not there that day, yet it behaved very creditably at the target, and I was particularly impressed with the manner in which it cut a hole through both sides of a shed, passing through about 5in. of plank, at about 30yds. W. W. B.

BALTIMORE, Md., Dec. 15.

Editor Forest and Stream:

"R. S. F." is right in advising "N. Orleans" to try the .22-cal. rifle for small game. Any good rifle of that caliber will kill game up to the size of ducks, grouse and hares nicely and without tearing them all up, as far as any one can see to shoot such small things. When one learns to be a marksman with the rifle and knows its trajectory, he can kill such game further with a .22 short cartridge than any one would believe until he had seen it done. I have killed a great many ducks with a Ballard .22 rifle with 32in. barrel, at all distances up to 200 and 300yds. This rifle with .22 short would make a report not nearly so loud as a common gun cap, and when firing at ducks up the wind, say 200 to 400yds., one could often have several shots before they would take wing. In such cases, when shooting for ducks on the water, one has the great advantage of seeing where the ball strikes, and can "git there" if the duck will wait long enough. I do not pretend that I was ever marksman enough to hit a duck every time on the water at 200 or even 100yds., but if the duck kept staying and I kept shooting, he was my duck if cartridges held out. I know that I have killed many ducks when sitting in rafts over 300yds. distant. For squirrels, quail, grouse and all other small game it is exactly the thing. I have with it sat down and killed six quail out of a bunch of fourteen that were feeding on a smooth sward 50 or 60yds. away before they became frightened and flew. As "R. S. F." says, the ammunition bought by the thousand costs one so little, that he can afford to shoot all he may wish to.

There seems to be but one other rifle suitable for small game. I found that I could do nothing with wild geese, brant and crane with the .22-cal., so I thought a .32-cal. might do for everything, so procured a .32 Winchester. It was a beautiful shooting arm; deadly to Canada geese as far as the ball would travel if you hit them, but it made a powerful hole in them, and would cut a rabbit, grouse or duck often into two pieces. A squirrel hit in the body was butchered ready for the stew pan, but it was too much trouble to hunt up the pieces. It used the regular bottle-neck shell, with, I think, 40grs. of powder. After experimenting awhile I hit on a plan that made it suitable for nearly every kind of game, except, perhaps, grizzly bear. The shells were center fire, everlasting, and I found, if I recollect aright, that No. 5 St. Louis buckshot could be forced into the mouth of the shell. (I should explain that the buckshot should simply be forced in and left in the mouth of the shell and not shoved down on the powder. The old backwoods idea that the ball must be firmly driven down on to the powder or the gun would burst has long been exploded. The buckshot should be at least one caliber larger than the inside of the shell, so as to need to be forced in.) By putting primer on shell and then putting in 6, 10, 20 or 30grs. of powder one could have any charge or velocity he wished, and it shot beautifully; 10grs. of powder was enough for grouse and squirrels, 20grs. for ducks, the shell full of powder for geese, and then one had the regular cartridge for deer, wolves and wild gobblers. With the buckshot charge one was obliged to load it as a single-shot breech-loader; then with the magazine full of regular cartridges one was ready for almost anything. And here we have again very small cost for ammunition. One could load a hundred shells of a rainy day or evening, only costing a few cents. I shot thousands of these buckshot charges from that Winchester without any leading or any other trouble, and as before said it shot perfectly.

When traveling over the hills and mountains here in California this autumn how often I have wished for that Winchester with the buckshot when a jack rabbit, grouse, quail or squirrel calmly sized me up while too far away for shot, and the tens of thousands of geese and brant that raft up in our bays and lagoons safely out of reach of the shotgun could be taught a new lesson with those buckshot charges. Why don't "you uns" come out here where you can hunt during winter without freezing your noses and toes off and find plenty of game also? Tourists' tickets are only $35 from Omaha. BYRNE.

SAN FRANCISCO, Cal.

BIG RIFLES FOR SMALL BOYS.

Editor Forest and Stream:

Last week a salesman in a prominent New York city gun store was accidentally shot through the leg by another salesman who was exhibiting to a customer a .44-caliber Colt magazine rifle, which was not supposed to be loaded.

On April 21 of this year I purchased in that same store a .32-cal. single-shot Winchester rifle, which, though very accurate, I have since sold on account of its great range, fearing that I might kill or injure somebody unwittingly. While waiting for it, a gentleman entered the store, and with him were his three boys, bright-looking little chaps of about eleven, thirteen and fifteen years respectively. "My boys want a rifle," said he, "and I wish to get one for them." He evidently knew nothing whatever about firearms. "Well, boys," said the salesman, "what kind of a gun do you want?" "A Winchester .44 full magazine," replied the eldest, glibly. Did that salesman deprecate the purchase of such a weapon for the use of boys? Did he recommend a smaller and lighter gun, using safer and less costly ammunition? No; he uttered not one word of remonstrance or advice, but got out the rifle asked for, explained the process of loading and firing, and sold it, together with several boxes of cartridges, knowing that it was to be placed in the hands of lads, whose deadliest weapon, if any, should be a Flobert with bullet breech-caps. "Why, boys," said I, "that's quite a gun for you, isn't it? Are you going to kill moose or grizzly bears?" "We're going to shoot crows and squirrels," was the reply. My mental observation was that if I lived in their town or village, I would move out without delay.

The man who shot the other one last week is not the salesman to whom I allude; nor can I assert that he who was shot is the man who sold that .44 Winchester on April 21. The books of the firm may show that. But I do say that the first victim of such a rifle in the hands of a boy ought to be the man who sells it to him without remonstrance. J. L. KEARNY.

PERTH AMBOY, N. J., Dec. 26, 1888.

"THE MAZEPPA HITCH."

Editor Forest and Stream:

The inquiry of "Packer" in the FOREST AND STREAM of Dec. 6 is a timely one. The whole story of the tying of Mazeppa on the back of the "desert-born" horse is a very strange one indeed, for not only did the ingenious packer, who threw this very peculiar hitch, tie him fast with "many a thong," but in the case of the horse itself, the veracious chronicler assures us that he "loosed him with a sudden lash." This was probably done by the artifice by which the mischievous crowd trifled with the feelings of the indignant German who loudly demanded "who tied my dog loose?" Let me say for the information of "Packer" that the tying of Mazeppa was done by a young English pilgrim named Byron, and the peculiar hitch used is known as the poetic license.

ORIN BELKNAP.

Editor Forest and Stream:

Without caring to enter into a controversy with the critics who cavil at Byron's line in which Mazeppa is described as "bound fast with many a thong," I do nevertheless assert most confidently that to a packer of ordinary capacity the performance is attended with no difficulty. The difficulty and art of packing consist in making the pack secure with one thong. But the poets have given us harder knots than that to untie. Take for instance the lines in Walter Scott's Young Lochinvar:

> "So swift to the cantle the lady he swung,
> So light to the saddle before her he sprung,"

and we should like to be favored with illustrations of the methods in which our readers would seek to solve that little difficulty. CRITIC.

THE TARIFF ON FIREARMS.

ALTHOUGH the tariff has been the subject of so much heated political discussion, we have studiously avoided making any allusion to it in these columns, which the reader most assuredly has a right to demand shall be kept free from politics; and this has been done, even though the implements of sport used by gunners are directly affected by the duty. Without going into any discussion of the subject, we have thought that it would be interesting to learn the views of manufacturers and dealers respecting the firearm tariff; and we have accordingly invited all those interested to express their opinion. In the first week in December a letter was sent out embodying this inquiry:

"We are sounding the gun trade for their view of the bearing of the existing tariff on the trade in firearms, and invite you to give us for publication your opinion of the desirability either of maintaining the present rate of duty on firearms or of modifying that duty in any way. If in your opinion any change should be made, will you tell us what you would recommend, and whether there should be different rates on different grades of firearms? Give us the reasons for your recommendation, whether it be to leave the firearms tariff as it is now or to revise it, and specify in what way you think the several branches of the gun trade would be benefited or injured by tariff revision. You will of course understand that the FOREST AND STREAM wants your opinion on this point without any discussion of political parties or platforms."

In response to this inquiry we received the letters printed below. Four replies were sent us declining to express opinions for publication. One declined on the ground of having a great many friends among both importers and American makers; another wrote, "We can hardly see our way clear to comply with your request," and a third thought it "not for the best interest of the gun manufacturers of the United States to agitate the tariff question, inasmuch as it is included in the Senate bill and will possibly be taken care of there."

Editor Forest and Stream:

In reply to your letter asking for our views on the present attempt by the new Senate Tariff Bill to increase the duty on imported guns we certainly are not in favor of it, as if passed it would prohibit the importation of a class of guns which are suited to the wants and means of a large majority of the public. As it now is, a very good breechloading double gun, in the top lever action, with rebounding bar locks and pistol stock, in good, honest, safe and reliable twist barrels, can be imported and sold here for $25, cheaper qualities, ditto, $20, and down to $15; still lower cost double guns in other systems of action and in plain twist barrels down to $10. Such guns pay a duty of 35 per cent. *ad valorem*, and thousands of them are imported and sold yearly. Now it is proposed to put a specific duty of $10 with an additional *ad valorem* duty of 25 per cent. on each and every gun imported, no matter what its cost: equivalent to making an *ad valorem* duty on the low cost guns of about 200 per cent., and on the medium cost about 100 per cent., instead of the present rate of 35 per cent. As the few American gun manufacturers that we have in this country have never offered to the public any similar quality guns at any prices approaching, even with the 35 per cent. duty in their favor, it seems to us that passing such bills would be doing an injustice to a large class of our people. We think the present duty of 35 per cent. high enough and should not be increased on any firearm. WM. READ & SONS.

BOSTON, Mass.

Editor Forest and Stream:

In compliance with your request we herewith give our views as to the import duties that should be affixed to firearms coming into this country from foreign ports. Ten years ago the gun trade of this country was almost entirely in the hands of foreign manufacturers, very few goods in the way of double-barrel guns being made here at that time. Since then the manufacture of double-barrel guns has become a matter of considerable importance in this country, and the prices which consumers now pay for these goods are at least 33⅓ per cent. lower than those ruling ten years ago. The importation of double-barrel guns into this country during the year 1887 was equal in value to the whole amount manufactured in the United States. If this volume of foreign goods should have been shut out, you can see at once that it would put that branch of industry in this country into a very active and healthy condition.

We are more largely interested in the manufacture of revolvers than guns, and the import duty which shall be established upon that class of firearms is particularly to our interest. We have a protected duty of 35 per cent. *ad valorem*, but notwithstanding this, on our cheaper class of revolvers we have been forced down in the last five years over 40 per cent. on account of competition arising from foreign goods, more particularly of Belgian make. We have met this decrease in price partly by reduction in wages and partly by improvements and facilities in the manufacture, but at the present writing these foreign goods are sold in our market at least 10 per cent. lower than our prices. Although made of inferior material and of poor workmanship, they do take the place with a certain class of dealers, of the better grade of goods made in this country. We find upon investigation that the class of laborers we pay 90 cents per day to, only receive in Liège what is equal in our money to 28 cents, and the class of laborers that we pay from $1.25 to $2.50 per day receive in Belgium from 60 to 90 cents. We believe that it is an utter impossibility in this country to force labor down to any such point as is reached by the older countries, even if it were desirable to do so.

We believe that one great source of the prosperity of this country is the fact of a great mass of working people earning sufficient wages not only to buy the necessities of life, but to buy more or less of the luxuries, and that is what, in our estimation, keeps the wheels of industry moving. We also believe that this country is prosperous from the fact that not only its agricultural interests are large, but its manufacturing industries also. The policy of free trade theoretically is correct, if the conditions of all nations were alike, but they are not. England, Ireland and Scotland are comparatively free trade, but England's colonies, every one of them, are protected by import duties; and India, which would be one of the largest markets for our goods, is protected by a wall of defense more secure than impost. Should we send a consignment of goods to any reputable merchant in India, for the purpose of introducing them, they would be confiscated and sold for the benefit of the Indian government. This shows the stringency of their protection. The large manufacturers of metallic ammunition in England, France and Germany have ample facilities by steamship lines to distribute the goods to any part of the world, but on the other hand, if we wish to send ammunition to either Great Britain or the Continent, it can only be taken by one line of steamers, and the expense of sending same by that line often exceeds 20 per cent. of the value of the goods.

Finally we believe that the import duties on firearms should be increased by a specific duty on each arm, besides the *ad valorem* duties which now exist. If that does not take place, we are confident that the time is not far distant when the cheaper class of firearms made in this country will be entirely driven out by foreign goods of inferior quality. MERWIN, HULBERT & CO.

NEW YORK, December, 1888.

Editor Forest and Stream:

Your favor of the 6th inst. to hand. Inclosed you will find tabulated statement as to how matters will stand should the Senate tariff bill pass. Naturally it is not in our interest to have a bill of this kind pass Congress, as, you will notice, it will make it prohibitory to import any cheap guns, and only the better kinds can be brought over. Now, as none of the American makers furnish a good gun cheaper than $20, wholesale purchasing price, you will, therefore, see that they are thereby obliging every one to invest much more money in a breechloading shotgun than they can buy at to-day; and, in accordance with our estimate, it would do a great deal of harm, as only a comparatively small quantity, in comparison with what is used now, would be purchased.

BREECHLOADING GUNS.

The present tariff is 35 per cent. *ad valorem*. The Senate bill proposes $10 per gun and 25 per cent. *ad valorem*, and this figures out as follows:

Foreign cost.	Ad valorem rate. Per cent.	Foreign cost.	Ad valorem rate. Per cent.
$3.65	300	$21.90	71
3.89	285	24.33	66
4.14	267	26.76	62
4.38	255	29.20	59
4.62	241	31.63	57
4.87	230	34.06	54
5.48	207	38.93	50
6.10	189	43.80	48
6.70	174	48.66	45
7.30	162	53.53	44
7.90	152	58.40	43
8.50	142	63.26	41
9.10	134	68.13	40
9.73	128	73.00	39
10.95	116	77.86	38
12.17	107	82.73	37
13.30	100	87.60	36½
14.60	94	92.46	36
17.03	84	97.33	35
19.47	76		

The rate on "Zulus" would be 680 per cent.

You will notice from the inclosed list that the party that buys the highest priced gun and who can well afford to pay a good price, will not be affected by this new bill at all, while the party who has only a few dollars to invest for a breechloader, will be forced to spend considerably should he desire to own a fowling piece, or go without.

We give you our ideas as above, with the request that our name is not to be mentioned in any of your publications, because we do not like to see our name in print.

NEW YORK.

Editor Forest and Stream:

Your letter of the 7th inst. requesting our views on the present tariff on firearms has been duly received. As you do not desire a discussion of the different political platforms or parties or the principles involved therein, we will say that our personal interests would hardly be affected by either a reduction or increase of the present rates of tariff duties. We understand that one of the bills now before Congress proposes to add a duty of $10 to each and every breechloading gun imported besides the present duty of 35 per cent. *ad valorem*. As this would be an increase of many hundred per cent. of the present rate of duty on thousands of cheap breechloading guns annually imported, we can readily see that such a change would greatly affect the cheap and inferior firearms business in this country, inasmuch as such a measure would raise the price of the poor man's gun to double or more of its present cost, whereas it would hardly affect the price of the better grades of guns of which we make specialties. Such a measure might result in a general improvement of the cheapest grades of imported guns, the "trash" now considerably used in this country, by substituting better American-made guns. Of course this would cut down the number of guns in use, and might result in an increase of our present game supply, which, however, would all be done at the expense of the poor man's fun and recreation. As we have said before, our personal interests can hardly be affected by any change. Our desire is always to give the very best quality and value for the money, but inasmuch as the bulk of our trade is among the best and practical class of sportsmen, using the best and practical articles, we will leave the above knotty question for those to settle who are more directly interested than ourselves. A change in the rates of the present tariff duties on rifles and pistols would hardly affect American business interests, because in their manufacture America can beat the world, irrespective of protective tariffs.

NEW YORK, Dec. 11, 1888. VON LENGERKE & DETMOLD.

Editor Forest and Stream:

In response to your request asking for my views on the tariff as it affects the gun trade, I suppose you expect each correspondent to represent the aspect of the question as it appears from the standpoint of his own trade. For instance, a dealer who handles largely the cheapest grade of guns would want the tariff adjusted to suit his particular business and so would call for a low rate of duty on cheap guns, and would very likely desire a higher rate on the better class; while a man handling the more expensive ones would care little whether there was a prohibitive duty on cheap guns, so long as he could import the higher grades so as to successfully compete with high grade American guns. As I represent the latter interest, what I shall say will be from that standpoint. At the present rate of duty breechloading guns that sell at $100 and over can be imported and sold at a fair profit in this market. At the same time there is a constant inducement to American manufacturers to endeavor to produce a better arm than the foreign at a lower price. A very material reduction of duty would result in a largely increased importation, and American manufacturers would be compelled to turn their attention to other branches of business. On the other hand a very slight increase would result in closing this market entirely to foreign manufacturers.

Both of the bills now before our Congress recognize this position and wisely (as I think) refrain from any material change of the tariff on the better grades of breechloading guns. The best interests of all concerned demand that the duty shall be maintained at a point that neither closes the American manufactory nor entirely shuts out of the market foreign skill and intelligent thought; for from this quarter have come many of the most valuable inventions that have made the modern breechloader such a source of delight to the lover of the gun. The present duty enables the American manufacturer to successfully reach out toward the production of the best class of work and stimulates him to avail himself of the highest inventive genius, for which the American artisan is celebrated the world over. It at the same time keeps the price low enough to enable the sportsman of moderate means to avail himself of the skill and experience of the foreign mechanic as well as the inventive genius of our workmen.

An entirely different question enters into the discussion of the tariff as it affects the lowest grades of breechloaders, which at present are produced by a class of foreign laborers who exist on wages that the most unskilled workman in the United States would spurn as the reward of the most menial service. But I refrain from further consideration of that side of the question, leaving it for others more interested in that class of goods.

NEW YORK, Dec. 7. HENRY C. SQUIRES.

Editor Forest and Stream:

In answer to your inquiry, it is our opinion that the existing tariff on firearms should be changed to a specific duty, because it would be easier to adjust and also prevent any chance for undervaluation. A specific duty, however, should be varied according to the different systems, making this duty a protective one on these systems only that American manufacturers are producing. By such arrangement the cheaper systems of breechloading and muzzleloading guns would not be placed in price beyond the reach of many sportsmen, and the better systems, where the competition exists to-day as between the American and imported makes, placed at such a rate that it would protect the former, but not so excessively as to limit the sale to the class of purchasers who now buy these grades. We suggest the following divisions:

Hammerless action breechloading guns.
Top-lever action breechloading guns.
Side-lever action breechloading guns.
Lefeaucheux action breechloading guns.
Singlebarrel breechloading guns.
Singlebarrel muzzleloading guns.
Doublebarrel muzzleloading guns.
Sporting rifles.
Revolvers.

We are not prepared to state without more consideration what the specific duty should be on each of these divisions so as to accomplish the purpose, but that it can be so adjusted there is no doubt. Any duty which would very materially advance the prices of all grades of guns would seriously curtail the sale of them and the sale also of other goods used by sportsmen.

You do not ask our opinion as to the duty named on sporting breechloading guns in the bill now before the Senate, but we are tempted to say that we do not believe the framers of the bill could have fully understood how seriously this duty will discriminate against the poorer class of citizens. To place a duty of 300 per cent. on a cheap system of breechloading double gun and only 35 per cent. on say a gun costing $100, is not exactly in accordance with the spirit of our age or country.

We would prefer the existing duty of 35 per cent. *ad valorem*, rather than have such a change as this.

EDW. K. TRYON, JR. & CO.

PHILADELPHIA, Dec. 11.

Editor Forest and Stream:

In reply to yours of Dec. 7, will say we are not in favor of any decrease in the duty on guns, but rather of a slight advance, if anything. In our opinion the effect of a large increase in the duties would be to induce many more American manufacturers to engage in the business and also bring foreign makers to this country, and the competition of the increased number of makers would have the effect of soon bringing the price of American made guns down just as low as the foreign guns now are, the only advantage being that the money now sent abroad would remain in this country.

SYRACUSE FORGING AND GUN CO.
(per E. L. Baker, Prest.)

SYRACUSE, N. Y., Dec. 10.

Editor Forest and Stream:

In reply to yours of the 6th. We are not in favor of any change on duties on guns. The present rates work very well, and we believe that always, unless there is an exceedingly good reason for a change, rates of duty should be left alone. There is one item only on which we consider it advisable to suggest a change, and that is, that parts of guns should pay the same duty as guns. At present parts pay 45 per cent. and guns 35 per cent.

SCHOVERLING, DALY & GALES.

NEW YORK, Dec. 7.

Editor Forest and Stream:

We are in receipt of yours of the 6th, asking our view of the present rate of duty on firearms, and the advisability of any change in the present law. In reply we have to say that we have very decided views of the matter; what we have to say, however, has reference to the firearm manufacturers rather than to the dealers. At the present time the business is in a deplorable condition, owing in a great measure if not wholly to the importation of the cheap and worthless trash of both guns and revolvers. This seems to be the opinion and expression of most every one engaged in the business. This state of affairs cannot long continue, or those engaged in the manufacture of firearms will have to employ their capital (what little they have saved) in some other business.

Now what is the remedy for this? To our minds there is but one answer, if the firearm industry is to be sustained; and that is, to place a specific duty on all arms

of all kinds, high enough to shut out completely the cheap, miserable trash from coming to this market. There should be a law to absolutely prohibit a certain class of arms from being landed at our ports, and a duty high enough on the meritorious arms to enable every manufacturer here in this country with the high-cost labor to compete successfully with such. Not one-tenth of the breechloading doublebarreled shotguns that find a market here in this country, are made by our own manufacturers; they are imported; also revolvers to a large extent, whereas, in our opinion, every one should be made here. I would have a higher duty on a high-cost gun than on the medium grade; but it should always be a specific duty instead of an *ad valorem*, for we suffer so much by the practice of undervaluations.

With regard to the effect on the dealer, I think that he would be much better off to handle the domestic arms instead of the foreign, for I believe there is not a manufacturer in the country but would aim to put his product on to the market in such a way as to insure the dealer a good and fair profit for handling the goods. You will see that I am a strong protectionist, I believe in protecting and sustaining our own industries; it is a question of political economy, and does not enter the domain of politics. S. FOREHAND (FOREHAND & WADSWORTH.)

WORCESTER, MASS., Dec. 10.

WEIGHT OF CARIBOU.

Editor Forest and Stream:

Either the types are at fault or your correspondent "Cap Lock," in issue of Dec. 13, page 410, must have fallen upon a herd of elephants in the vicinity of Moose River and taken them for caribou. He thinks his three caribou must have averaged 1200lbs. in weight dressed and that he saw tracks of others that must have weighed double that!

If any one has seen a caribou weighing over 700lbs. he has seen a monster but when it comes to 1200lbs.; not to speak of 2400 dressed, must be excused for assuming that it means elephants. We have heard of the jumbo moose, in fact several of him, but his reign is over if "Cap Lock" does not retract.

The trouble is that "Cap Lock" bases his estimates on those which he killed and is supposed to know about. A novice might be excused for wild estimates of the weight of caribou judging from their tracks alone.

The caribou—as every hunter knows—is able by the spread of his hoofs, by resting part of his weight far back on the leg, to produce something of the effect of a snowshoe, and to shamble along over crusts and snows into which the deer and moose sink helplessly. Even in the lightest snow the track of the caribou looks astonishingly large. On my last hunt I measured the track of an old bull in less than an inch of snow and it measured just 12in. in length, but I suppose he was just the ordinary "big fellow."

While we are about it let us hear from some of the brethren about the weight of caribou. EBEMEE.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 24.—"The earth do move." I can remember very well when people hadn't any sympathy with the present great movement in favor of mental relaxation and physical culture. To-day it is not only a proper thing, but a fashionable thing to affect the outdoor world, and in the matter of physical cultivation not only gentlemen but also ladies show progress and claim recognition. I was never more forcibly impressed by this fact than on the other evening, when I was talking with Prof. Hartl and the eight lady fencers whom he this year brought over from the Vienna Academy. Prof. Hartl, himself a model argument for physical culture, has in his eight young friends a charming further comment. These girls are ladies and from the best families of Vienna, and although they give public exhibitions of their skill, they are not by any means to be roughly classed under the category of actresses. Quiet and demure as they are, however, they are fairly radiant with a perfect health, and so far transcend the average lady shopper as to cause simple wonder. The glow of the skin is different, and the absolute sparkle of the eye, so much written about and so rarely seen, is as marked as in an oarsman in perfect condition. It is Greece come back again to see these sensible young German girls, so happy, well-poised and unaffected do they seem. Neither the Professor nor his pupils can speak any English, but when shown FOREST AND STREAM, with a word of explanation, they said it was next door to their own work, and they should take it with them to Vienna, whither some of them soon return, and where interpreters should inform them of American outdoor sports. Prof. Hartl trained H. K. Bloodgood, broadsword champion, and L. W. Lawson, champion with foils, of the New York Athletic Club. He is doing good in his day and generation, and his academy at Vienna is the center of the modern movement mentioned, for that city, and quite as many ladies as gentlemen avail themselves of its advantages. This is decidedly all right. The world seems waking up to the truth of the general doctrines of FOREST AND STREAM.

I was a good deal startled by the way "W. N. B." puts it in his review of Dec. 20, on Mr. Franck's Colorado hunting article. I confess I am not familiar with Colorado game laws, but I used to live in New Mexico, and I know that in that Territory the prohibitions of the game laws are plainly stated to except the killing of such game out of season as camp necessity may demand. This is a not uncommon and not unsensible provision in a mountain country where settlements and supplies are infrequent. I do not know how it is in Colorado. As to actual waste of meat on the hunt in question, while I would rather not go too closely into the ethics myself, I would like to say that Mr. Franck told me himself that no meat was wasted, as ranchmen lower down on the trail went back and brought it down for their own use. It isn't my business to vindicate anybody of undue game slaughter, but if I were going to hop on to anybody, I would a lot rather it should be somebody else than these men, whom I know to be on general principles about as near white men and square sportsmen as the most of us.

In referring to Mr. F. A. Howe's statement as to the insufficiency of wild rice as duck feed, I am inclined to think that the remarks of "Ren" have some justice. I believe that Mr. Howe's opinion holds better to the marshes in his locality. Mr. John Taylor, of the English Lake Club, has made to me almost the same statement which "Ren" here makes about the amount of rice which will be collected in a boat. Perhaps the blackbirds are not so plentiful in these other localities as on the marshes under Mr. Howe's notice. The blackbirds eat a great deal of the rice. Perhaps, too, the great support of the assertions of Mr. Howe, who is a very accurate and observant sportsman, lies in the fact that after the rice is ripened the greater portion is shaken off into the water. What remains is only a small portion of the entire crop.

Two market shooters lately returned from the New Madrid swamps of Missouri, report that the Egyptian lotus is found in that locality. They were too late for the flowers, but saw plenty of the large round leaves, which could hardly be mistaken.

DEC. 26.—Heavy rain is falling to-day, as it did yesterday and the day before. We had a green Christmas here. The weather is unprecedentedly mild, and altogether contrary to the general predictions of a severe winter. Water is rising over the long-dried-up marshes of this State and Indiana, and it is thought that it will be deep enough to prevent a freezing quite to the bottom.

DEC. 27.—Nothing to write about but the weather; but it has an erratic, strange and truly zebraic character at present that warrants comment for once in a way. Out in Dakota they are having basket picnics and baseball games. In Iowa snow is drifted so badly in Des Moines as to impede business. A straight western wind struck this city last night. This morning it is cold, with some snow. It looks like winter now. E. HOUGH.

THE MAINE UNDERGROUND RAILROAD.

THE open season on moose, deer and caribou in Maine will have closed before these lines reach the eye of the readers of the FOREST AND STREAM, but it would hardly be the treatment the readers of that most pleasing and instructive paper deserve to let the subject pass without the statement of certain facts concerning the most prosperous season the deer hunters have realized in that State. The number of deer killed in the open season has been great; greater than ever before. But the number of moose and caribou has been small; smaller in the direction of moose than last year. Deer have been seen in most unthought-of places—even running into towns, and out into fields and farmyards; all going to show how numerous these beautiful game animals have become, and to what lengths their habits will permit them to go when their most deadly enemy—next to the wolf—the hound, is not permitted to be let loose upon them. There is a good deal of frozen venison up in Maine, and the question with the owners is how it can be got to the Boston market.

That Tom Allen seizure, recorded in the FOREST AND STREAM last week, was simply glorious. It was an excellent stroke toward damming up the underground railroad between that State and the Boston market. I could not resist the temptation of sending a man down to interview Hamilton Campbell, the man whose shipping cards were on the packages containing the venison, marked empty bottles. Mr. Campbell is in the liquor business, and he resents the imputation that he had anything to do with the venison found by Warden Allen with Campbell's cards on the barrels. Campbell says that he never heard of the venison till he saw the account in the Boston *Herald*. He has nothing to do with receiving unlawful goods. He explains the use of his cards on the packages in this way: "I go through certain parts of Maine every month or two, and I leave my cards. The card reads, 'Hamilton Campbell, dealer in wines and liquors, 216 Commercial street, Boston.' Somebody got hold of a lot of these cards, and knowing that I sometimes receive empty bottles, they thought it would be a good way to get the venison through, directed with these cards. It is plain that the owner of the venison intended to be in Boston and receive the meat at the depot, or at the wharf, without saying a word to me. He simply made a tool of my cards, and got caught. But it has caused me some annoyance, for my friends come in and squint around and ask for a slice of that venison. It don't do much good for me to deny it, for it has got into the papers, and everybody believes that I have had a hand in receiving Maine venison, which I have not."

But there is another form of underground railroad for Maine venison to this market. Warden Allen will do well to watch every consignment of poultry, especially in barrels. A gentleman called my attention to something in front of the place of a noted receiver of poultry on North Market street only Saturday. He told me to go quickly and I should see the men taking a Maine deer out of a barrel. He had just come from that point and seen them take out one, and there were other barrels to be opened. I went at once to the store, but there were no deer in sight. I got another friend to ask where those deer came from, but the receivers were as mum as they would have been to me. Now it looks suspicious to see a deer drawn from a barrel marked poultry, especially since all the western deer which come here are simply wrapped in the hides. I don't blame Commissioner Stilwell for asking for a square non-export law on game in his State. Boston market men are too deeply interested in it. They are sufficiently interested to ruin the entire State as a hunting resort, if allowed to ply their nefarious game business for two seasons without molestation.

But Hamilton Campbell further says that every one of those deer carcasses seized by Warden Allen will reach Boston sooner or later. How much does he know about it? He says that the wardens and the Commissioners are permitted to sell the meat. Once out of their hands, it will quickly drift toward the borders of the State. Kittery is the point he names as the place where the smuggling across the line will be done. Then once out of the State the venison comes to Boston without interruption. But he forgets that the railroads and express companies are not permitted to receive deer even on the soil of Maine. Three deer, two caribou and one moose in a season the law reads, and the courts have decided that this decision refers to a railroad or an express company as much as to an individual. Still it would be a good thing for the Commissioners to be on the lookout for poultry barrels and mutton boxes at Kittery or any other considerable border railway station on the line of Maine. Doubtless the coming Legislature of that State will give the Commissioners better laws and more money with which to execute them. By the way, that report of those Maine Fish and Game Commissioners was a masterly document. It is full of truth and vim. A gentleman, a regular visitor to Maine with gun and rod, each in the proper season, remarked to me only yesterday that if the full gist of that Commissioners' report could be carried out, it would not be three years before Maine would be the play ground for the lovers of gun and rod from almost every State in the Union. SPECIAL.

IN MEMORIAM—WILLIAM SENTER.

DIED.—In Portland, Me., Dec. 22, 1888, Hon. William Senter, aged 75 years.

WHEREVER William Senter was known—and his acquaintance was broad as the continent—there will be sorrow, sincere and profound, at the tidings that his kind heart has ceased to beat. His friends were legion. To know him was to love him. His nature was singularly frank, gentle and kindly. His love was not bounded by humanity, but went out toward every created thing. The beasts of the field, the birds of the air and the fishes of the streams, were all his comrades and friends. He loved the open air, the broad upland, the deep forest and the sounding sea of our rocky coast. He was an ardent follower of manly outdoor sports. When in the spring of 1861 Mr. Senter and his associates sailed their new yacht Sparkle in our waters, they created a revolution in yachting in Maine. Hitherto we had sailed in open boats. With the Sparkle came the era of decked yachts, and in them we cruised with unwonted comfort along the entire coast of "hundred-harbored Maine."

Many who read these lines will recall with pleasure some sail in the Sparkle among the islands of Casco Bay, the rare good fellowship of the kind host now departed, his keen interest in the tides and currents, and every change of sea and air, and the quaint legends of the isles he repeated to his friends grouped about him on deck, as he steered homeward when the day was spent and the domes and spires of our city by the sea stood sharply outlined against the glowing west.

Mr. Senter was a keen sportsman, a good shot and a skillful wielder of the rod. And yet his chief object never seemed to be to shoot birds or capture fish. True, he took his rod with him as he wandered along the brooks in June, and he whistled to his dog and shouldered his gun as he went afield in brown October; but these were simply the outward excuses he made to the world, and perchance to himself, for getting away from the din and dust of the city and spending the day with nature and in the companionship of some friend, trusted and true, with whom his soul was in sympathy. And how unselfish he was, too, in these sports, always willing his friend should whip the best trout pools before him, and always ready to plunge into the thickest alder swamp with his setter and hunt the covert through, while his comrade stood on the outside to shoot the woodcock. Often as the day drew on you would miss him, and when found again he would be picking wild flowers to carry home to some sick neighbor, or perhaps you would detect him quietly entering a poor country cottage to leave some dainty or gift he had brought from the town. Everything in nature keenly interested him, and what a world of lore he had upon the flight of birds, the habits of wild animals and the growth and characteristics of every wild flower that grew in your path; and how freely and willingly and entertainingly he imparted his knowledge, the result of a long life of observation and research. How eloquently, too, he discoursed of the wonders of the heavens as you drove briskly homeward in the autumn evenings, with the stars shining brightly through the frosty air. Ah! what a rare comrade he was. His loss leaves a void in the heart of many a friend that will never be completely filled in the world again.

More than three score years and ten had rolled over Mr. Senter's head, yet he never seemed to grow old. His heart was as young, his feelings as fresh and his voice as cheery as ever. He loved the society of younger men, and they in turn found no one of their own age whose soul was so bright and youthful as his. He was the life and soul of every circle in which he moved. None so cheerful, hopeful and helpful as he.

To the very last he kept up his excursions into the woods and fields. It was only last October that I spent a day with him hunting in the woodlands, near our city—our last outing. It is true we did not shoot a bird. We fired never a shot. But that bright autumn day when we trod together well-known forest paths, and conversed together with the freedom of long years of unbroken friendship will ever remain a mellow, hallowed memory.

Ever since I can recollect, his shop on Exchange street has been a headquarters for troops of friends. There all knew they were welcome, and there at almost any hour of the day you were sure to find a little cluster of kindred spirits grouped about the proprietor, who while continuing steadily the work or writing he had in hand, at the same time was easily able to entertain his friends with anecdote and repartee. Many a man has entered that hospitable store on Exchange street dejected, careworn and despondent, to come forth a little later bright and buoyant, feeling that the skies were again clear above his head and life worth the living.

And William Senter's good deeds were not confined to cheering up his friends with apt stories and lively banter. He was constantly doing good deeds and kindly offices for others, and yet he was so quiet and modest in his charities that none except his most intimate friends even suspected how large his field of benevolence really was.

Especially did Mr. Senter seek out those who had known better days, and who were suffering in silence, too proud to make known their wants. To many such has he conveyed much needed succor and relief, and in so gentle and sympathetic and unobtrusive a way that no one's pride was ever hurt or feelings injured.

If to go about doing good is the mark of a true follower of the great Master, then William Senter is one of the best Christians I ever knew.

Mr. Senter was an upright and successful man of business, learned in astronomy, skillful in mathematics, honest and incorruptible; and he filled every station from private citizen to the chief magistrate of our city with ability, success and honor.

Of his sterling business life of more than half a century among us a volume might well be written. But all this I leave to others who knew him as a man of affairs.

I write these few hasty lines as one of those who had the rare good fortune to be the companion and disciple of this genial interpreter of nature, in his excursions in the forest, by the stream and on the shore.

His comrades-in-arms—if I may so speak—loved William Senter with the deep strong love of brothers, and as one of them I place this hurriedly plucked chaplet on his bier. W. W. THOMAS, JR.

REMINISCENCES.

EVERY sportsman who is really in love with his gun and the woods will gather many pleasant recollections of camp life which will continue to live in memory long after the actual scenes of his adventures have passed away. From early boyhood I have handled the rod and gun, and it was then I first ventured into the wilds of the Alleghenies, eager to learn the business, but too much afraid of wild animals and of getting lost to trust myself out of sight of older persons.

The first few trips were made in company with stalwart men, who generally dragged me over the hills from day to day, until my tender frame seemed ready to part at every joint; and when night drove us to camp and hunger made fat bacon a relish, I could take my share with evident satisfaction.

On one occasion I accompanied some hunters to the mountains for a few days' stay at an abandoned sawmill. One morning the tracks of a catamount were seen along the tramway leading in the direction of our proposed hunt; they were quiet fresh. Henry, being the senior member of our party, conducted its movements and gave general directions; he now proposed beating the brush before going any further. I was ordered to a point several hundred yards distant from where the tracks were discovered, but I kept my companion well in sight. The dog started and worked along the stream for a short time. Within half an hour the catamount was in motion, but kept under cover until pressed too closely by the dog, when he attempted to cross the tramway and was brought to the ground by a well-directed shot from Henry's rifle. I had no desire to see the animal alive much less to shoot him, and was, therefore, greatly relieved to find his dead carcass lying directly at the point where his tracks had first been seen. In moving about after the watch just ended my companion spied the tracks of two deer, and suggested that we take the trail, while the rest of the party concluded their war dance over the dead catamount.

The hillside was scantily timbered, the more valuable trees having been taken out, logs and brush made progress slow, and boy-like I followed, looking only for the next best place to set foot. My companion was but a few paces in advance and scarcely half way to the top. Hearing the click of his triggers, I stepped aside in time to see two deer bound away from an uprooted tree, separating at the start and running in almost opposite directions. A few bounds put the doe out of sight, but the buck ran to the top of the ridge and stopped. Here was my chance at 100yds. range. One barrel of my gun was rifled, the other charged with buckshot. As might have been expected, I made a mistake and fired the buckshot. The deer moved on. We were soon where he had stood when I shot, but could see nothing to indicate that he was wounded. There was abundance of snow, and we followed on, hoping to overtake and kill the deer. He must have taken us for new hands, because we were able to catch glimpses of him frequently without an opportunity for a shot. Finding a half day's trailing of this kind rather monotonous we bid him a final adieu.

Rising refreshed next morning, I was prepared for breakfast and a full day. Plans had already been laid, so no time was wasted, and in a little while I stood alone to guard one of the runouts. Time passed slowly, the thoughts of yesterday's catamount and other visions caused cold chills to play up and down my spinal column. Remaining possibly an hour without hearing the dog or seeing any of the party, I concluded to take the trail of the man who was watching higher up the stream. Shortly after reaching him we heard our dog, and when we again met the drivers we were informed that he had chased a deer over the very crossing at which I had been standing. My record thus far looked rather bad, but the old fellows were a good-natured set and freely forgave me. In crossing a stream we came upon a cabin, at which we halted to rest.

Leaving the cabin we ascended a ridge, and upon reaching its summit saw the freshly made beds of two deer. They had evidently taken fright at our approach and were traveling toward a thicket. From some cause the party divided after my blunder in the morning and now numbered but three. Hugh meditated a few moments then said that Gid and I should take the trail and he would keep a lookout for the deer. We did so, but Hugh soon disappeared, and when we saw him fifteen minutes later was wearing a broad smile. Near him lay a fine doe which proved to be one of the deer we were following. Hugh had grown old hunting deer and knew what was to happen when he left the trail to us and slipped out of sight. Probably two miles intervened between us and our camp and this deer could not be permitted to remain so far from home, for there are some thieves even among hunters.

Hugh excused himself from lending assistance by suggesting that we fasten a rope to the deer's legs and drag it, there being plenty of snow upon the ground, and he would hurry to camp and have supper prepared for us, including heart and liver. Both Gid and myself entertained the belief that we were the victims of a forced contract, but were soon on the way. The only relief I could give was on down hill stretches, when the guns were carried by my partner. I had been trudging along for some time, trying to find the clear spots in a thicket through which we were passing, when a buck jumped up and ran broadside within a few feet of me. I had a gun on each shoulder, which placed me in a somewhat helpless condition. Every time I think of that buck I can see the twinkle in his eye as he dashed by and disappeared in the thick brush. Wearily we tugged along until the stream near the camp was reached, and there strung up our game and departed to find on arrival a well cooked meal, of which we partook with great relish. F. G.

TYRONE, Pa.

[TO BE CONTINUED.]

KANSAS.—Cimarron, Kan., Dec. 15.—You asked about pigeon roosts some time since. There was a big one 25 miles southeast of —— last summer. It was in a cañon and was about four miles long and from 100 to 200yds. wide. They were not molested and left in peace for winter quarters. State the fact but do not give location. I will take any scientific man down there if he wants to go next summer. But I don't want them netted or killed off if they come back next summer, which they probably will. There are more antelope in western Kansas than there have been for the last three years. Cause, settlers leaving the country and antelope coming back from the Southwest. There are a hundred within fifteen miles of Cimarron.—W. J. D.

THE YELLOWSTONE NATIONAL PARK.

Editor Forest and Stream:

With the opening of winter the large game animals began to collect on their usual range in the northern section of the Park. Thousands of elk can be seen in bands from ten to hundreds. Early in the day they are feeding in the valleys, on the hillsides and ridges; before noon most of them seek shaded and sheltered places to bed, until a little before sunset, when they again appear on their feeding ground. Now they are dainty about their food, pawing the deep loose snow away from the choice bunch grass, where it is still green and tender under the drifts. By spring they are not so particular. Then the snow is very deep and crusted, the little grass to be found is bleached; this, with willows, quaking asp and even fir twigs, constitute their only food until the snow begins to melt. One can find elk within a short distance of the Mammoth Hot Springs. They have been within 300yds. of the quarters. Entering the Swan Lake basin, either by the old road or the Golden Gate, you see elk at once, and by going on to the ridge between Glen Rock, Gardiner River, hundreds can be seen. The scout at the springs never fails to see elk in great numbers in this basin.

On Mt. Evarts, besides elk, there are about 300 antelope, fifty mountain sheep and a few blacktail deer. The latter were very plenty, but most of them have gone to their range in the lower country. The mountain sheep frequent the Gardiner and Third Cañons. Those in the Gardiner Cañon are very tame, paying very little attention to passing men or teams. Often a band will be within less than 50yds. of the road, some feeding, others lying down or looking at the passer-by with no apparent interest. The young lambs show the most curiosity for a while; then they, too, become familiar, and show no fear when they are undisturbed by man, as they are in the Park. The antelope do not appear to grow much tamer than they have been for the past three years.

Parties traveling the Cook City road, either from Gardiner via the "Turkey Pen" or Mammoth Hot Springs, are in sight of game all the way to Soda Butte. The elk are most numerous about Specimen Ridge, although they are to be seen by hundreds in the Black Tail Creek country and about Yancey's Station, on Elk Creek. It is wonderful to see the immense bands everywhere, like domestic cattle on the range or buffalo in the "days gone by." It is incredible to any one who has not seen the game here to believe that there is so great a number.

Last winter it was estimated that there were about 4,000 elk in the northern part of the Park. Add to that this summer's increase, somewhere near 3,000 calves. Some of the best judges place the whole number now at near 8,000, but I think that figure too high.

No one knows how many elk there are in the southern part of the Park, probably very few, as there is but a limited area suitable for a winter range. That a great many rear their young and spend the summer there is well known, and it is known also that there are several thousand that pass the winter south of the Park, only to return in the spring. These do not have the protection the northern bands do, only the laws of Wyoming keep the skin and market hunters from "finishing them up in a short time." The worst enemy these elk have are the Shoshone and Bannock Indians. Hundreds of these Indians left their reservation last summer and spent months in the country just south of the Park, killing a great many elk. The greatest damage done by the Indians though, is letting fires get out. One fire north of the Tetons burned several hundred acres of heavy fir timber. This fire is supposed to have been caused by Bannock Indians. So far as known these Indians did not hunt inside the Park boundary. Captain Harris did everything in his power to have them kept on their reservation, but very little attention was paid to his request by the Department. In their travels to and from the Sembi agency they cross the southwestern corner of the Park at Falls River, where they usually spend some time hunting moose and elk.

The FOREST AND STREAM band of buffalo have returned to Hayden Valley and the Alum Creek country where they spent last winter. They have been seen several times this fall, but no accurate count has been made as to their number, and the proportion of bulls, cows and calves. On one occasion, when partially in the timber, seventy-five were counted. This band can be seen any time by any one willing to make a snowshoe trip. Up to the first of this month the trip could have been made on horseback. Buffalo are also to be seen in the Lower Geyser Basin, but in smaller bands. Mr. Wilson, the Government scout, counted fourteen calves in one band this past summer, while most of them were in the edge of the timber. These buffalo frequent only a timbered country, and thus are very difficult to count.

In August Messrs. Walter Weede and Madding, of the U. S. Geological Survey, saw a band of eighteen buffalo, thirteen bulls, three cows and two calves, on Pelican Cone east of the Grand Cañon. One of the soldiers stationed at Soda Butte, while scouting in this same section, reported seeing a band, supposed to be the same. In the summer I saw sign where a few buffalo had passed the winter before on Pelican Creek. I therefore think these buffalo winter on the east side of the Yellowstone, and do not join those that winter on Alum Creek, and so can be counted separately. In October I followed a band of eight from Lewis to Shoshone Lake. These were apparently on their way to Hayden Valley. With this year's increase I think there are at least two hundred and fifty buffalo in the Park. It was feared that they would drift out and be killed, as parties were on the watch for them. Fortunately they have not been far from their winter range, which is well toward the center of the reservation. I see it reported in some papers that wolves, mountain lynx, bear, etc. have increased here to an alarming extent; that they are killing cattle and horses outside the reservation, etc. That will do to tell marines and pilgrims. These animals have undoubtedly increased in proportion with the game, and will stay inside the Park with the game or whatever they prey on, except the bears. These "hole up" in winter and are apt to be out of the Park one day and in it next. That it will be necessary to kill some of these animals at some future time is apparent. This can easily be done in winter by the use of poisoned baits.

There is about the usual amount of snow for this time of the year—at the Upper Basin about fifteen inches, ten at the Lower Basin, growing deeper toward Norris. From there to Willow Park thirty inches, and the same at the Grand Cañon. H.

MAMMOTH HOT SPRINGS, Yellowstone National Park.

A CHRISTMAS STORY.

Written for The Veterans' Christmas Carol, by Gen. N. M. Curtis, Commander Department, N. Y., G. A. R.

AT the close of a quiet day in camp, in the month of October, 1864—one of those peaceful yet busy days in which we had made substantial preparations for active hostilities, in distributing arms and equipments to a large number of recruits who had joined us—I received orders to march my brigade in the early morning, "with two days' cooked rations and forty rounds." Our army corps was to make a reconnoissance in the direction of the enemy's left, and it was intimated that if any weak points were found in his line, I would receive orders to test one of them with "cold steel."

While preparing orders for the march, my ears were saluted with merry peals of laughter, following the relating of some remarkable adventures, in which the bow had been drawn very long for the benefit of the recruits who gave listening ears, and, not infrequently, answered with incidents of civil life quite as marvelous as any in the field; snatches of song, some jolly, others sober, from one quarter, a line or two falling in between the merrier sounds,

"A day's march nearer home,"

and,

"He died to make men holy, let us die to make men free,"

coming up from those unconscious of the fact that before the setting of the morrow's sun they would be sharply engaged with the enemy, and many would contend in their last battle.

These sounds, so dissonant to my line of thought, oppressed me with indescribable feelings, which ever came over me when arranging plans of battle, surrounded by men who were to execute them, and from whom, by the custom of the service, knowledge of intended movements was withheld until revealed on the march or by the order of attack. These experiences I recall, after twenty odd years, as among the most disagreeable sensations connected with the service. I went out to shake off in a sharp walk my unpleasant feelings, before turning in.

Having passed through the camps, and returning from the extreme left, I was attracted by the voice of one of the recruits who said, "Now, we have had a big one from one of the 'battle-scarred,' let me tell you one of the 'honest Injun sort,' which happened in the Adirondack wilderness."

I was interested by his reference to that section of the State, rising between the valleys of the St. Lawrence and Monawk in succession of mountain ranges and lofty peaks, covered with primeval forest, silver-streaked by streams and lakes, in which the gamiest of fish, eager to be caught, would jump out of their element to take the sportsman's hook; a retiring place for game which shared with the Indian the land between the Atlantic and the prairies. Civilization has sent the Indian to the plains and Rockies, but nature preserved this wilderness an asylum for the moose, caribou and deer; for its rigorous climate forbade its ever becoming fit for the habitation of man.

In the valleys surrounding this wilderness had been born the greater number of men under my command, and from the south door of my own home could I see the mountain ranges rising above the beautiful valley of the St. Lawrence.

Standing by a large tree, unobserved, yet within easy earshot, I heard

THE SPORTSMAN'S STORY.

"In the summer of 1863 I left New York with two others to spend our vacation in the Adirondacks. We had three hounds, the property of the senior of our party, who had large experience in hunting in Virginia before the war, and had twice been in the North Woods. He knew the habits of game, and was a good shot. The third member and myself had no acquaintance with the forest and handled a rifle with as little dexterity as I do the musket issued to me to-day.

"We engaged two guides, and made our principal camp on Indian Lake, from which we made hunting excursions, returning to camp after each one for a day or two of rest. These trips were often long, much longer than you would suppose gentlemen seeking recreation and rest would willingly take; for, after each hunt we were compelled to travel longer distances to get favorable stands on untried runways.

'The deep-mouth'd bloodhound's heavy bay'

fills one with sensations no other sport awakens—an indescribable glow and frenzy, carrying one into a fever, unnerving him at the critical moment; he sees the deer coming straight toward him; he spasmodically clutches his gun; as the deer nears him his demoralization is complete, and if he fires at all the shot goes wide of the mark. Buck-fever, which seizes the unskilled hunter, allows many deer to escape on the runways, and transfers the finish to the lake, where, with club and shotgun, the capture is easily made."

Such was the substance of his story, omitting many descriptions and finishing touches not necessary to repeat. He closed without response, as he had related it without interruption.

After a pause he said: "You must regard my story as tame, quite too tame to interest those familiar with sterner events."

"No," said one of the oldest of the men, who had seen three years of active service, "it is not tame. It don't strike me that you gave the deer a fair chance. It is too much like shooting pickets without notice, after a week's trading tobacco and coffee between the lines."

"You are right, comrade," said another, "I don't think it's fair to draw a line on a poor devil who has run the gauntlet of a dozen shots, if he does leave a portion of his body exposed after reaching shelter. We break for big timber ourselves, sometimes, you know."

"Yes, that is so," said another of the old men, "it's well to think of the other fellow, for we are about as often under his fire as we have the drop on him."

The bold hunter felt the rebuke, and said he was the only new man in that group who had spoken, and wished some other recruit would take the stand and relieve him from further criticism.

"Yes," said one, "if I were in your place I would look for relief guard."

"You tell one," said the hunter, pointing to a new man who sat apart from the rest.

THE SURVEYOR'S STORY.

"My story is suggested by the one just related and will be a continuation of the sportsman's. It gives something of the deer's side.

"In July, 1863, I was employed by a lumber firm to examine timber lands in that region of the great wilderness in which the hunting party to which out friends belonged was camped."

"Yes," said the hunter, "it was in July, 1863, that we had the successful hunting trip, during which the events I have related took place, and if some scallawag had not shot two of our hounds we would have remained a fortnight longer in the wilderness. We suspected the lumber agents then hunting the best timber lands for the next winter's cutting. When they get a chance at the State lands, they are pretty sure to help themselves to the best, regardless of ownership."

"I am content to have you finish your story before I begin mine, and I trust you will do so. When you are done, I will proceed."

"All right, I am done," said the hunter. "Go ahead with what you have to say. You may be the man who shot our dogs."

"I had a single guide," said the surveyor, "who was caterer and cook. Our food consisted of supplies brought from the settlement and trout caught by the guide. I directed him to get a buck, if possible, but not to shoot a doe, as they were suckling their fawns, and, should he get one, she would be unfit for food, and her fawn would starve. His plan was stalking, but he failed to get one, as the baying of the dogs had driven the deer beyond his reach.

"I had gone over a greater portion of the property my employers desired me to make a map of. I arose early the last day of my sojourn with the expectation of completing my work and leaving for the settlement. I had gone about two miles from my camp, when in crossing a rocky ridge destitute of timber, only here and there small shrubs growing among the rocks, I saw twenty rods beyond a movement in the brush, indicating the presence of some animal. I examined my rifle to see if it was ready for use, and ascending a knoll near by saw a deer moving slowly across the open space. Her movements seemed uncertain, and when she stopped for a moment she stood on sea legs and supported herself with difficulty.

"I watched her with interest for several minutes until she passed out of sight into the thick forest. I knew by her pace that I could soon overtake her and walked cautiously in the direction she took.

"In ten minutes I came in sight of her again. She had been joined by her famishing fawn, which lustily drew its rations 'in kind,' while every drop taken from the provident breast reduced

the strength of the wounded mother. She struggled to keep her feet and fell. the hungry fawn still holding to the dying doe, taking the stored supply and each drop secreted until the unyielding breast had no more.

"She had the previous day run the gauntlet of the hunters' rifles and escaped the dogs by plunging into the lake, an asylum her instinct taught her to seek for safety against her natural enemy, the wolf, or his tamed cousin, the dog, not less ferocious when excited in the chase than the unpitying wolf.

"The passing scene recalled a picture by Aristides, and I came to better understand and appreciate its sentiment, while before I had simply regarded its figures and coloring—the one representing a mother dying from a wound in her breast and holding back her child lest it should suck blood instead of milk. I addressed the language of the epigram, of which that picture is the subject, to the helpless fawn:

> "Suck, little wretch, while yet thy mother lives,
> Suck the last drop her fainting bosom gives;
> She dies; her tenderness survives her breath,
> And her fond love is provident in death."

"The fawn was carried to my own broken home, and in a park near by it lived and grew a pet, not only of my motherless baby girl, but of all who came there and learned its history."

"Well," said the hunter, "if I had known what a chicken heart you had, I should have been ashamed to come to the army in your company. This is no place for you. Such milk sops should be kept on a farm, feeding chickens and ducks. You are a coward, and, I believe, the rascal who shot the hounds. I have a notion to punch your head for it anyway. You would not dare resent it if I did."

"But you won't," said several of the men.

"I will, if you will stand back and give me a chance."

"Let's give them a chance, boys," said one, "I'll bet the chicken hearted will double him up the first round."

"Yes," said another, "it will be worth as much to them as a half hour in squad drill."

The hunter stepped up to the surveyor and asked if he was willing to show his mettle.

The surveyor calmly replied that he had no desire to get into a broil; that he had never struck a person in anger, and had never met a man who really wanted to strike him. "Your language shows that you have not the sentiments of a gentleman."

The soldier who wanted to see a substitute for squad drill, said: "It is working, boys. Stand back! Give 'm a chance. I'll go two to one on the chicken; he's game, I'll bet."

I had heard enough, and, passing out from under the tree, walked up to the angry men and said: "You will not settle the question at issue by blows. You have an unfavorable opinion of each other, and each forms his estimate of the other by a different standard. You will have an opportunity, perhaps earlier than you think, of exhibiting the qualities which will bring you the commendation, or contempt, of your fellows. When you have been tried in the ordeal of battle, you may, with more confidence than now, speak of the courage of each other."

The tattoo sounded, and, as the men fell in for roll-call, I went to my quarters with a fixed estimate of the qualities of these new men.

The following day was a memorable one for my command. They were never before so hotly engaged, nor had the brigade ever lost so large a number in killed and wounded.

The engagement lasted into the night, and not until morning did I learn that the braggart hunter skulked from the line before the engagement commenced. When found hiding by one of the corps staff and told that he would be shot for leaving the ranks, he went into a fit, and after being carefully examined by the surgeons, was discharged as a moral and physical coward.

The "chicken hearted" surveyor was one of the first to volunteer for a most hazardous undertaking, and, without flinching, manfully performed his whole duty. In the last charge he received a serious wound, from which he suffered uncomplainingly many weeks in General Hospital, and was finally discharged, maimed for life, a true illustration of the saying "the gentlest are the bravest."

The Federal administration, "in grateful recognition of his services," gave him an appointment his early education well qualified him to fill, in the Granite Building on Wall and William, where he is still employed, unless a recent victim of "offensive partisanship."

In his dining-room and library combined, in a humble house in South Brooklyn, are suspended on the south wall a Springfield musket and the accoutrements of an infantry soldier; on a table in the north end a surveyor's compass, the needle pointing, "by the mark," due north, and hanging on the wall over it, a pencil sketch, entitled "The Dead Doe and her Hapless Fawn." Underneath it are the lines translated by Webb, above quoted.

At his Christmas dinner, to which many luxuries have been added by The Memorial Committee, will be seated two persons, one a young woman, the baby girl of 1863, the other a man in the fifties, an empty sleeve pinned to his breast beneath a Grand Army badge, and, if you listen, you will hear words of thanksgiving and praise, "That the nation lives, that Fraternity, Charity and Loyalty bind its defenders as comrades," and that "God will bless them, every one."

THE CONNECTICUT GROUSE SNARER.

Editor Forest and Stream:

Justice Alonzo G. Case, of Simsbury, Conn., gives to the public his reasons for the release of the grouse-strangling Goddard, and intimates with some warmth that he held the scales of justice with an all-wool bandage about his eyes and true deliverance made between the State of Connecticut and the prisoner at the bar.

In Justice Case's published opinion he says: "We took the ground (after taking legal advice) that, if it was lawful for a person to snare on his own land, he could give another permission to do the same, and that verbal permission (if proved) was as good as though it were written."

To take the ground that Goddard, the grouse snarer, was not the "owner or occupant under lease" of the land where he strangled the ruffed grouse for which he was prosecuted.

Section 2,545 of the General Statutes says: "Every person, not the owner or occupant under lease of the land upon which said birds shall have been taken, nor a member of the family of such owner or occupant, who shall sell or exchange, or offer to expose for sale or exchange, any partridge, quail or woodcock, which have been taken or killed by traps, snares, nets or similar device, shall be fined not more than $10 for each bird so sold, or exchanged, or offered, or exposed for sale or exchange."

The defendant Goddard claimed he had a verbal parol license or permission to snare grouse on the land of McLaughlin (McLaughlin denied this until brought into court, and then apparently to shield Goddard claimed to have given him permission); was he then an occupant of the land under a lease within the meaning of the statute? Justice Case answers the question in the affirmative by saying that a lease is a lease, a sound statement in law or logic, but one that manifestly has no bearing upon the disputed point.

The question is not: Is a lease a lease? but is a verbal license —permission to do a particular act upon the land of another—in any sense a lease of such land? In a case in the 11th volume, Massachusetts reports, page 537, Chief Justice Parker says:

"A license is technically an authority given to do some act or series of acts on the land of another without passing any estate in that land, such as a license to hunt on another's land or cut trees. A license amounts to nothing more than an excuse for the act which would otherwise be a trespass."

Chief Justice Williams, in the 11th volume of the Connecticut reports, pp. 379-381, quotes and approves the Massachusetts case, and says:

"Permission to go upon the land of another to build or do particular acts is a mere excuse, and conveys no interest in the land."

Is then a man who has a verbal permission to go upon the land of another to do a particular act, such as a license to hunt, cut trees, erect buildings, or strangle grouse, an occupant of such land under a lease?

Has he any interest in the land or leasehold interest whatever? The Supreme Courts (not justice's courts) of Connecticut and Massachusetts say no! Justice Case (and his legal adviser), of Simsbury, say *contra*. Again, was the verbal permission given to Goddard one that would extend the right to snare to any member of his family?

The statutes say: "That the occupancy of the land must be such as will give the family of the occupant the right to take and sell," etc. Justice Case does not touch this point in his published opinion (State vs. Goddard), but the facts as stated by him show conclusively that Goddard's permission or license to snare was a mere personal one, and this of itself ought to have satisfied Justice Case that Goddard was not a legal lessee within the meaning of the statute.

The words "occupant of land under lease" are well chosen words of grave legal import, and were evidently used by the General Assembly for the sole purpose of preventing the promiscuous licensing of the professional snarer from strangling and exterminating our king of game birds, the ruffed grouse. You will note that our war is not only with the game law violators, but with grand jurors (grand jurors in this State outside of the cities have to sign all warrants for the arrest of any one before you can get the justice of the peace to issue a warrant for the arrest) and justices of the peace *et al.*

Our association was not formed to play enforce the law, but for business, and we propose to enforce the game and fish laws regardless of these obstacles. A. C. COLLINS,

President Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish.

HARTFORD, Conn., Dec. 30.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated pamphlets of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. This book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybilleno" and other competent authorities to be the best treatise on the subject extant.

Camp-Fire Flickerings.

"That reminds me."

251.

COAHOMA and W. L. P. were shooting birds in company. A bird passing near Coahoma received his kindly attention, but flew on, badly wounded, to the vicinity of P., who shot it again, and secured it. Coahoma protested that P. ought not to have shot the bird as it was evidently falling when he fired. P. contended that the bird was still in the air when he pulled trigger, and that he acted properly in shooting it. While the dispute was going on between them the bird became disgusted, and, escaping from P.'s pocket, flew away, his flight being accelerated by two ineffectual shots from Coahoma's gun as he departed. Query: Who killed the bird?

COAHOMA.

252.

"It was my fortune," said Bill Davis, as we sat in his parlor, "on our way to the Big Horns hunting, to see in Lower California an exhibition of throwing the lasso that is rarely indulged in. We were coming up in a long wagon train, going to Los Angeles, and in our company were two Mexicans named Pedro and Juan, though what their last names were I could never find out. One evening the whole encampment was thrown into a state of excitement by the wagon boss, who had been out on a hunt, riding up and announcing that a big grizzly bear had run into a large thicket about a mile from the camp; and he asked the men to come and help him get the bear out. All of us caught up our guns and followed him to where the bear was hidden. I didn't see Juan and Pedro until nearly there, but along they came riding, with not a sign of a gun, and responded pleasantly to the chaffing of the rest of us. When we reached the thicket of course none of us were anxious to go in, as the chances of the bear getting us were greater than of our getting him. The boys fooled away a little while in making dashes into the bushes until I got tired and thought that if the bear should come out he'd be most likely to make a break for some small timber about 200yds. away. So over to the edge of this grove I went and sat down at the foot of a tree on the edge. Well, the bear must have gotten tired of the yelling and noise, for presently I saw him poke his head out of the bushes on the side toward me and opposite to the rest of the men. Then his body followed, and he set out in a slow lope directly in my direction. I got all ready for him, but he had hardly gotten half way, when I saw those two Greasers coming after him, swinging those blamed ropes of theirs. Pedro came up first, and when he was within 20ft. he let drive, and the noose settled right over the bear's head, around his neck. The little horse planted his legs firmly, and when the tug came, over went Mr. Bear. Up he got, red hot; and as he lifted his paws to get the loop off, Juan threw his lariat; around both of his paws it went, and being tightened, there was the bear between two ropes, one choking him and the other holding his forelegs. As soon as the Mexicans found they had him as they wanted they both jumped from their saddles, and running up began kicking the bear and hitting him with sticks, and up I got and walked over to see the fun. When I got there I wanted to shoot the bear, but no, they must torture him a little, until at last I told them to kill him; and do you believe, instead of doing it in a Christian manner those imps of Satan got out their pocket knives and cut his throat. It wasn't my business or I'd have interfered, but presently down the bear sank and soon was dead. I have often heard tell of men roping a bear, but this was the first time I ever saw it done, and the utter helplessness of that bear was funny to see. He just couldn't do a blamed thing, stretched at the end of those ropes. R. H. W.

DUCK SHOOTING AT CURRITUCK.—Messrs. W. G. and Bayard Dominick, of the New York banking firm of Dominick & Dickerman; Thomas S. Torrey, the Wall street banker, and Mr. Henry Sampson, have just returned with a party from a two-weeks' shooting trip with the Narrows Island Club at Currituck, eighty miles from Norfolk, Va. The gentlemen are members of the club, which consists of New York and Cleveland business men. The hunters have brought North with them as evidence of their prowess a fine lot of canvasbacks, redheads, widgeons, wild geese, black swans, and other sorts of game. Mr. H. R. Barker, who was a guest of the party, said yesterday: "I never saw such a place for sport in my life. There is a fine club house, which cost over $25,000, set down near a tract of marsh of 1,000 acres. Currituck is a long peninsula about sixty miles northwest of Hatteras. It is narrow and flat and covered with tall reeds. The club puts in its blinds at favorable points, and over forty varieties of game fly over them. On favorable days the air is literally blackened with wildfowl. Six of us bagged 120 birds the first day. A single sportsman rarely bags less than fifty birds a day, and the club ships them home for distribution among their friends." There are three of four other clubs in the immediate vicinity of Narrows Island, composed of sportsmen from New York, Philadelphia and Boston. The season's record of these clubs reaches 3,000 birds, with seldom more than five or six in the party. The season runs from Nov. 10 to March 1.—*Sun.*

BURLINGTON ROUTE DAILY EXCURSIONS TO THE PACIFIC COAST, COLORADO, WYOMING AND UTAH.

Railroad ticket agents of the Eastern, Middle and Western States will sell, on any date, via the Burlington Route from Chicago, Peoria or St. Louis, round trip tickets at low rates to San Francisco, Los Angeles, San Diego, Portland, Tacoma, Seattle, Vancouver or Victoria; also to Denver, Cheyenne, Colorado Springs or Pueblo. For a special folder giving full particulars of these excursions, call on your local ticket agent, or address P. S. EUSTIS, Gen'l Pass. and Ticket Ag't, C. B. & Q. R. R., Chicago, Ill. —*Adv.*

Sea and River Fishing.

A CHRISTMAS REMINISCENCE.

IT was about forty years ago, the exact time will make no difference to you, it might have been a year or two more, certainly not less, when, by a compact made some days before, John Atwood and I started to fish for pickerel through the ice in Kinderhook Lake, something less than a dozen miles below the capital of New York, on the eastern side of the Hudson. John was older than I by two or three years, and had probably reached the advanced age of fifteen, and had been my guide, philosopher and friend from the time that I first went bird-nesting, or deceived a fish with the promise of a worm, which, if it did not turn into ashes, like the apples of Sodom, at least surprised the dace by having a vertebræ of steel, keeping the promise to his eye and palate, but breaking it to his hope. John was a long-legged boy who knew the best apple tree in every orchard for miles around, knew where most of the birds nested, and where the chipmunk hid its store of nuts, and if I looked up to him as a marvel of wood-lore, a juvenile "Nessmuk," his wonderful knowledge justified it, from a boy's point of view. In after life John became a railroad engineer, and one day I was almost prostrated to read that an engine had burst its boiler, at Poughkeepsie, and the body of John Atwood had been thrown out on the ice of the Hudson River. I had not seen him for twenty years; dinner did not seem as good as usual that day, and I wondered how a very early song sparrow on the garden fence could have the heart to sing when John Atwood, who always noted the arrival of this bird and was the first to say, "I heard a song sparrow yesterday," lay cold and deaf to either bird song or squirrel chatter.

It was the day before Christmas when we started to walk down the track of the Albany & Boston Railroad, which then came into Greenbush at the lower ferry, or where the south bridge now ends, and lists of needed articles had been made out, amended and added to, as a brilliant idea of some unthought-of luxury came up or a fancied necessity was reluctantly subtracted if John said that we could not carry it all. I suggested that we take along some alum and salt to tan our deer skins, for I had read that these articles were used. John thought well of this at first until it became necessary to reduce the weight to our carrying capacity, when he said that our deer skins could be brought in without tanning, and these articles were stricken out. A suggestion for some antidote for rattlesnake bite was spurned by John, who said that snakes did not run in winter. Knapsacks of enameled cloth had been made by our own hands, and belts with hatchets and hunting knives adorned our waists. The main object of our trip was pickerel fishing through the ice, with variations of hunting the moose, elk, deer, bear and other game which might be found in this wild and unexplored region. Besides hooks and lines we took a hundred dead minnows, for John said they would be good if we could not get live ones at the lake: crackers, cheese, sausage, flint and steel to use if matches were damp, salt and pepper, coffee and sugar, two blankets each, besides ammunition for an old flintlock horse-pistol to be used on the big game, or any Indians who might come near us. John said that we would not need a tent, for he knew of a cave where we could live and keep warm and dry. With about twenty pounds on our backs and with the lightest of light hearts, we started for Kinderhook Lake.

There had been some hard freezing weather, but the morning air was invigorating, and life seemed to be a joyous affair. A light snow a few days old did not whiten the landscape to a great degree, but served to emphasize the brown stubble, which stood in the fields, and to deepen the brown of the woods. In my enthusiasm I had talked until I was tired, had asked John how many pickerel he thought we would get, what size they would be, and if we would have to hire more than one team to bring our deer home. I told him that Natty Bumpo always shot a deer just behind the foreshoulder with his long rifle, and John most irreverently asked, "Who the devil was he?" Silence fell upon me at this. John Atwood not know the Leather Stocking! How could John have so much knowledge of the woods if he had not read of Deerslayer, Pathfinder, Uncas, Chingachcook, Hawk-eye and Leather Stocking?

We trudged in silence past the Indian Orchard and down through Teller's woods, when a red squirrel crossed the track ahead of us and sat jerking his tail on the fence as if in anger at our intrusion on his domain. John believed that he could knock him off the fence with the revolver, but I suggested that the shot would alarm the deer, and that when we were after big game we should not shoot squirrels. As we turned the curve beyond I looked back and saw the little chickaree washing his face on the fence in nearly the same spot where he defied the two mightiest hunters that walked the earth, in ignorance of the fact that our horse pistol had in it four buckshot for deer and an unknown lot of No. 8s for small game. The day was still and the notes of the chickadees and sapsuckers were distinctly heard. Not a leaf stirred, those which remained on the trees were frozen fast, the snow held the ones below. It seemed that we must be getting far into the interior of the country, but John said we were not half way to the lake. My shoulders ached from the unusual strain of a knapsack, and I proposed a halt for dinner. John agreed, although he said it was not 9 o'clock, so we made a fire and cooked some sausage by running twigs through them and holding them over the coals. Then came the discovery that we had no coffeepot nor cups to drink from. After all our calculations we had omitted these things, without which the sugar and coffee might also have been left. John thought we might find a coffeepot which had been abandoned by a camper or that one could be borrowed, and we finally concluded that water was just as good as coffee, and the sausage and crackers tasted the best of any that we had ever known. Taking up the march we reached the lake about noon. I was surprised to see several farmhouses and evidences of civilization in the wilderness, which I had pictured to be far from the haunts of man.

A little bough-house attracted us, and it showed signs of recent occupancy, the most valuable of which was a little tin pail, just the thing for coffee, and we could drink from it in turn. Cups were voted to be a luxury of civilization, entirely unnecessary in camp. Trying the

ce with the hatchets showed it to be over a foot thick, and we were in despair. It would take half a day to cut a dozen holes, even though we had an axe. I started for the nearest house to get one, and found there a gentleman who had been fishing the lake for several days, but not feeling well had not gone out this morning. As he would leave in the evening he told me that opposite the camp was the best fishing place. He had cut twenty holes there which were only lightly frozen over, and we would find a box with some live minnows in it about forty rods from the holes, to the west in a spring by the shore, to which we were welcome. Here was luck! Just like a fairy tale, where the prince turns up at the proper time to rescue the beautiful maiden. The gentleman, whose name we never knew, had a dozen or more pickerel of perhaps two to four pounds, and the prospect of a similar catch, and the strange surroundings, kept one of our party awake most of the night. We merely opened the holes and left them for the morrow, gathered wood, cooked supper—coffee this time—talked about camp life, fishing and hunting, and turned in on the boughs. I remember reminding John that no herd of deer had been to the lake for a drink, and hoped the bears would not disturb us, while he answered with a snore that might have been genuine, or a hint that the time for talk was ended. I sat up several times to see if it was morning, and once felt sure that it must be day, and that the sun had forgotten to rise. The moon was full and well up, and this betokened midnight, but it seemed as if it must be a mistake. It was colder, and, piling more wood on the fire, I walked out, first seeing that the priming in the pan of the pistol was in order, so that if a bear should come he would surely be mine, and then I wondered if it would be best to have his skin made into an overcoat for myself, or if I should have a rug made of it for mother. The rug was decided on after a struggle to give up the coat, and I crept up to an old oak as silently as the crisp snow would allow.

After the echoes made by walking had subsided, the stillness was oppressive. The bright moon cast strange shadows which fancy wove into such forms of life that the situation was uncomfortable, and to retreat to the shanty might bring a host of wolves, bears or other beasts directly upon me. A sensation of fear was mingled with one of cold, and camping in the wilderness where bears are plenty did not have the roseate hue at midnight that it had borne in the morning. If only an owl had hooted there would have been a relief to that dreadful silence, for I was familiar with that bird and its cries and hootings. Should I fire the pistol to scare the monsters which surrounded me, or should I call for John? A knowledge that I would have to explain matters, and a dim consciousness that when John told the story of the adventure to our schoolmates I might be the butt of ridicule, prevented either course being taken. After long consideration, and with a heart trying to burst its ribbed inclosure, and with pistol at full cock, I carelessly stepped a few steps in the direction of the shanty, which lay full in the moonlight forty rods away. The assumed carelessness must have deceived the monsters, for when I faced about and presented the pistol in their direction with the intention of killing the foremost, and then rushing for the shanty, not one had stirred. Several repetitions of these tactics brought me to the fire, when John asked: "Where have you been?" "Me? Oh, just out to see what a beautiful night it is and to see if any game is about." He yawned and said: "Put on some more wood and turn in, there is no game here that stirs at night except rabbits and skunks, and the snow makes so much noise that they'd hear you a mile off. I heard you go out and then you stopped a long time; what were you doing?" "Watching for game," said I, and, after firing up, turned in to count the stars across the Hudson, for the bright moon had extinguished them at the meridian. What if a bear should come in the shanty? The flint of the pistol was let down, but the weapon was at hand. John was unimaginative, unpoetical, a plain matter-of-fact fellow, and rabbits and skunks were all that he had seen when he was here before. How did he know there were no deer, wolves and bears about us?

The holes were reopened in the morning while John was in the bush cutting tip-ups, and the lines were baited and set before breakfast. Sausage, crackers and cheese were beginning to weary the appetite, but John said that pickerel would surely be on hand for dinner, and so it was. One fish, small at that, was taken at noon when we came back from our woods tramp. The place where the monsters gathered at midnight, near the old oak, showed only tracks of mice, birds and rabbits, but as John knew nothing of the demons that had peopled that wood ten hours before, it did not seem necessary to refer to it. A south wind had sprung up toward morning and the snow was already softening. There was less crunching under foot, and a few dead leaves that had hung on the trees through the freezing weather began to flutter down on this mild Christmas morning. We came upon the track of a man, made after the snow had hardened. The edges of the crust were broken, perhaps the track was only a day or two old, and as it led in our direction we followed it. Soon John said: "This fellow is snaring partridges," meaning the bird we now call ruffed grouse. "How do you know?" He pointed to a low hedge made of twigs and brush and said: "There is his 'fence,' and we'll see what he has got." This was a thing that I had heard of, but had never seen, and so was very curious about it. The fence had been made before the snow fell, because there were no man tracks along it. The trapper kept a few feet from it, and we passed the first opening where we saw that he had been and perhaps taken a bird out since the snow fell, but not before it crusted. The second opening contained a bird, and we held a discussion on the ethics of snaring game. John said that we had as much right to it as the unknown had. "But isn't it stealing to take the bird that he has caught?" I asked of my mentor. "No," answered John, "it is not stealing to take from a thief, and I heard Jim," meaning a well known Albany sportsman, now living, "say that it was agin the law to snare a pa'tridge, and that the man that did it was a thief, and I'm goin' to have that bird, anyway." "But, John, he will track us to camp, and make us give it up, and likely get us in trouble." As he took the bird from the snare he designated the place where the snarer might go to warm himself, if he chose, and added some other remarks as he kicked down the fence, set in the frozen ground. Two more grouse and a rabbit came to us in the same way before we returned to camp.

As I sit in a cosy room writing this story, on a Christmas eve more than forty years after the events, I want to thank John Atwood, a boy of whose company I was fond, but of whose companionship I was repeatedly warned as one who was good for nothing except to loaf about the woods and who had rather play than work, for the first lesson I ever received in game protection, and of the right of game to its life under the law. I had doubts as to our right to take this game, but John removed them, and to-day I would do the same thing, if occasion offered. I was but a small boy, made timid by what I thought to be a wilderness, because it was ten miles from home, and even if we were justified in taking this game we might be made to regret it. We never heard of the trapper, who may not have made his rounds for some days after.

The horse pistol was not discharged, although a pileated woodpecker seemed to be too familiar with the bold hunters, and only dodged around a tree as we came near. John said he wasn't good to eat and didn't harm anybody, and after aiming at him and being assured that he could be dropped, as the bird ventured on our side of the tree, we left him pecking away, unconscious of his peril, a second lesson in sportsmanship.

The stillness and the absence of life was surprising to me. No herds of deer, with a great stag at their head, crossed our paths and invited a shot. Bears, wolves and catamounts did not come to us to be slaughtered, and we returned to the lake to find the solitary pickerel mentioned above. The holes had not frozen over and there was a little water about them. The white ice at the edge of the lake, that from which the water had fallen, and in cold weather shows those curious markings, had fallen in and lay in confused heaps. The chickadees were enlivening the scene by flitting from tree to tree and, best of all, breaking the intolerable silence.

Although the baits were changed and fresh live fish put on, we did not get another fish. If you are told that we cooked that pickerel for dinner, and had the rabbit for supper and breakfast, and took the birds home, that ends the story, for I am tired of writing it on this anniversary when I have several stockings to fill before I go to bed, and it is midnight now and the moon is shining brightly—the same moon that wrought the monsters in the woods about Kinderhook Lake more than forty years ago.

FRED MATHER.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 29.—The despatches for this district yesterday morning contained the following in regard to a very important arrest made for violation of the State fish laws:

"AURORA, Ill., Dec. 27.—This afternoon an officer arrived from Elgin and served papers upon Messrs. Jameson, Stolp, Hoyt, George and other owners of the water power in this city, commanding them to appear for trial at Elgin within ten days and answer to the charge of violating the State law in the matter of refusing to construct a fishway in the dam in Fox River. Leading manufacturers in Geneva and Carpenterville were also arrested. Mr. Stolp, who is one of the principal owners of the power here and who has operated the woolen mills for fifty years, said to-night that they would refuse to construct the fishways for the reason that it would entail a great and needless expense and would be an irreparable damage to the water power. He said that they had bought this power of the Government in 1842 and had deeds signed by President Tyler, and they did not propose that they should be denied the privilege of regulating their own private property. Besides, there were no fish in Fox River, and the law was not only unjust but nonsensical. He declared they would fight it to the end."

Commenting on this, the Chicago *Mail*, a very bright evening paper which occasionally bears marks suggesting the presence of a sportsman upon its staff, had yesterday the following editorial remarks:

"A number of mill men in this State have been arrested for refusing to provide fishways in their dams. Without considering whatever may be the merits of these particular cases, it may be said that the enforcement of the law regarding fishways is most desirable, and that the fishing associations and authorities which institute such suits are doing a good work. The fish commission in Illinois is fortunately something more than a mere bureau of ideas, and is doing a great work in stocking the streams, and lakes, and ponds, and increasing the food supply of the State. Its efforts should be supplemented by the force of a vigorous public opinion favoring the enforcement of every law for the propagation and preservation of fish, and to create this opinion the impression must be done away with that the statutes are of a character to imply a laxness as to the observance of their provisions. Let the law be enforced thoroughly for a year or two and the good results following will be so apparent that there will be no sympathy extended those who suffer for disregarding it. Illinois affords a magnificent field for pisciculture. There are large rivers and small ones, and there are thousands of lakes and ponds, the waters of which are as well adapted for the raising of fish as are the prairies for the raising of cattle. Great progress has already been made in the right direction, and the work which the present fish commission is engaged in cannot be carried forward too vigorously."

These words are comment enough, they go to show the growing respect for sport and sporting possibilities which is apparent in this country. As to the absurd statement of Mr. Stolp that he didn't propose to respect the law because it was "unjust and nonsensical," I trust he will be sharply taught the fact that he isn't arbiter for the people of Illinois, and they don't look to him or his indorsement. If there "are no fish in Fox River," the need for the law is apparent. Put in the fishways and give the fish a chance. His "fight to the end" is asinine. The fishway would be cheaper.

E. HOUGH.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

Fisheulture.

THE RHODE ISLAND COMMISSION.

WE have the annual report of the Commissioners of Inland Fisheries of Rhode Island to the General Assembly at its January session, 1888, including the work done the previous year. Ten thousand eggs of landlocked salmon were received from the U. S. Fish Commission and hatched by Mr. C. A. Hoxie, at Carolina, R. I., where the fry will be kept until it is a year old, when it will be distributed in various waters of the State adapted to their nature.

One hundred and five thousand brook trout fry were purchased and 40,000 of them distributed by the Commissioners and the remainder by persons interested in stocking certain waters. Much public interest is now taken in the attempt to restock the streams with this fish, and the efforts will be continued. Black bass are now well established in the various ponds and rivers of the State and only require protection during the spawning season.

Shad have increased and are reported to be more abundant than for some years previous to the restocking of the waters. Carp have been distributed in 1886, but the Commissioners are without any report from the persons to whom they were sent.

The bay and coast fisheries is a subject which, sooner or later, must have the careful consideration and legislation needed to afford better protection during the spawning season, or they will cease to be a source of income or an attraction to the summer resorts of the State. Prices of most kinds of fish have been quite as high as last year.

A report of the expenditures of thirteen States for stocking their waters in 1886, as well as that of Rhode Island for 1887, is given, as well as the list of the different Fish Commissioners.

THE FISHES OF GREAT EGG HARBOR BAY.

WE have the report of Dr. Tarleton H. Bean, ichthyologist of the U. S. Fish Commission, on the fishes observed in Great Egg Harbor Bay, New Jersey, during the summer of 1887, printed as an extract from the Bulletin of the U. S. Fish Commission for the year. It comprises 152 pages and three plates, which contain fifty-eight figures.

The seines proved effective in taking eighty-six species. The largest seine was 20 fathoms long and 10ft. deep, but it was too small for the capture of skates, rays and sharks. For the latter fishes Dr. Bean thinks the net should be from 60 to 70 fathoms long and about 15ft. deep in the bag. Some of the species which were found in abundance by Prof. S. F. Baird, when he explored these waters and made a report thereon in 1854, were not seen, and upward of thirty species which were not recorded by Baird were found last year. The sheepshead was not taken in 1854, and is not abundant now, but adults are occasionally caught with the hook, and the young were found in moderately large numbers at Beesley's Point. On the other hand, young drum were found to be abundant by Professor Baird, but Dr. Bean failed to find any; neither did he see the young *Lutjanus*.

A day or two before his arrival at Somers Point a cargo of 40,000 mackerel was landed there by one of the menhaden steamers, and a few days later a fishing schooner took 10,000 off Squan, N. J. These mackerel were of the kind known as "thimble-eye," an earlier species than *S. scombrus*. There are no pounds nor traps in Great Egg Harbor Bay, and seines were used, which is contrary to law. Fishing with hand lines is very satisfactory, and large catches of weakfish and kingfish are made in this way during the summer. Gill nets are used in winter, the principal yield being white perch. At the time of his departure, Sept. 1, the only good catches of weakfish were made in the ocean adjacent to the bay.

A CENTURY OF SAWDUST.

Editor Forest and Stream:

I was delighted with the intelligent way in which your correspondent "Piscator" handled the sawdust question in your issue of Dec. 27. It is a comfort to listen when a well-informed person speaks, but in these days of callow pretension experience is usually elbowed back from the front.

In my opinion the famous Mill Brook, of Plainfield, Mass., which has a record of a century as the finest trout water in the Hampshire Hills, supplies those very conditions and corroborative data which "Piscator" declares are essential to determine what pernicious effect the presence of sawdust has upon the denizens of mill streams. Here is a water-power which carried no less than thirteen manufactories fifty years ago. These included a tannery, a sawmill and factories for making brush and broom handles, whipstocks and cheese and butter boxes, all of which discharged more or less sawdust and shavings into the streams, to say nothing of three satinet factories and a felt hat factory, whose waste must have been delcterious to fish life. Most of the buildings have since been destroyed by fire or tumbled into pieces by decay, but the old foundation walls and dams remain, and untold tons of tanbark and sawdust still cover the beds of the abandoned mill ponds knee deep, all of it in a perfect state of preservation, as I happen to know from wading the stream last summer. Nevertheless, the brook continues fairly stocked with small trout, despite the supplementary fact that it has been unmercifully fished ever since the memorial days of the "Mountain Miller," fifty fingerlings per rod being not unusual now for a day's catch. Besides, at no time within my recollection have there been less than three sawdust producing mills on this stream at once, so that it may be asserted that its waters have not been normally clear for a century. Where the current is rapid and the water broken by ledges or boulders, the presence of the sawdust is scarcely perceptible, but at mill-tails, and in the basins above the dams, it accumulates in quantity and remains, becoming water-soaked and sinking to the bottom. Obviously, in localities where the entire bottom is imbedded by sawdust, fish can neither spawn nor feed; but it happens that such deposits do not form on their breeding places, nor is the area of their foraging ground appreciably diminished by their presence. Even in the half-emptied and now useless ponds, the current constantly scours out a central channel through the sawdust, leaving the bottom clear and pebbly; so that, in fact, these local beds are of no more detriment to the fish than so many submerged logs. The trout can range far and wide without encountering them at all. Yet, strange to say—that is, it must seem strange to those persons who take it for granted that sawdust kills fish—the most likely places for the larger trout are these self-same pebbly channels in the old ponds, along whose edges, despite a hundred freshets and ice-shoves, the persistent sawdust and tanbark lie in windrows so deep that the wader feels as if he were going to sink out of sight whenever he puts his foot into the yielding mass, every movement of which stirs up a broadening efflorescence which spreads for rods away, distributing itself throughout the stream. From these sawdust beds I can always fish out three or four good trout with a cautious fly, and at certain times the surface is fairly dimpled with breaking fish, which presumably are after larvæ and insects which the sawdust has harbored, though careful investigation might discover other inducements for their congregating there.

In passing I would remark that this Mill Brook is fed by seven lateral brooklets, which tumble into it from the adjacent hillsides at intervals between dams, and are so effectually protected by overgrowth that they must always serve

as prolific breeding places, secure from predatory birds and small boys, as well as places of refuge to trout which wish to escape the sawdust of the main stream. I have seen trout streams, especially in the pine barrens of northern Wisconsin and Michigan, which were by no means as favored as this Mill Brook, the current being comparatively sluggish, and not so capable of purging itself of sawdust; yet I know of few trout streams in any lumber region where its denizens cannot avoid the sawdust if they will, by withdrawing to the headwaters or lateral tributaries, provided fishways are supplied to enable them to surmount the dams where the accumulations chiefly occur. What I remark as most singular in the Mill Brook is, that the trout gather most where the sawdust is thickest, both on old mill sites and on sites where mills are running now. I take my best trout right from under the flume of a whipstock factory and sawmill, where the refuse is dumped as fast as it forms.

But I recall to mind a still more striking example of the innocuousness of sawdust. There is in Hampshire county, Massachusetts, a series of three large natural reservoirs, varying from half a mile to two miles in length, which for fifty years have abounded in pickerel, perch, eels and bullheads. It is said that they originally contained trout, but the water is dark and discolored by the drainage of spruce and cedar swamps. At the outlet of the lowest pond once stood a village called Hallockville, which operated a grist mill, sundry sawmills, and what was then the largest tannery in Massachusetts. It was burned in 1846 and never rebuilt, and the dams and foundation walls are now almost destroyed and buried by a new growth of forest. But the sluice and flood stream below are still clogged with the sawdust and tan bark deposited a half century ago, and the water is black and forbidding, though much broken into swirls and rapids by boulders and ledges. But for the color of the water, it is a most likely-looking place for trout, though it has been tested time and time again without successful results. It has always been maintained, from the date of the building of the tannery, that there were no trout in it. I used to fish it myself when I was a boy. Last summer I took therefrom five small trout with a worm. They had doubtless worked their way up from the Buckland streams below, for they never came through the dam from the pickerel ponds above. Nevertheless the lower streams are occupied by many sawmills and carry their proportion of sawdust, that substance which some of your correspondents maintain is fatal to fish life. I leave your readers to draw their inferences, and trust that Mr. Fred Mather will feel himself sustained by this testimony of the streams. That gentlemen is not apt to make mistakes. He is gray with the experience of years, and that is better than guesswork. CHARLES HALLOCK.

WASHINGTON, Dec. 29.

FIXTURES.

DOG SHOWS.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6850.**

DOG SHOW REPORTS.

PEORIA, Ill.—*Editor Forest and Stream:* In looking over the show reports of New York, Boston and Buffalo, I find a few comments by your reporter—Mr. Mason, I believe—which I would kindly ask for an explanation of. It is not in the spirit of criticism I write, but simply for information. I am unable to attend the Eastern shows, and, with many fanciers, depend entirely on the study of show reports to fix in our minds the relative value of dogs and control our purchases in the East. I happen to own a puppy, sire Minting, dam Lady Beatrice, and am anxious to know about what the quality of the dam is as judged by an expert such as your reporter must be, and have followed his comments closely and am still at sea. He describes the bitch at New York (vhc.), showing her to be faulty in five points; but I have read his description of Caution attributing to him four bad points, so I concluded Beatrice must be a good one. The next report was Boston. Here, after an opening statement that mastiffs were the best and largest class ever seen in America, and that bitches numbered sixteen, with Duchess and Lady Beatrice well ahead. I made up my mind Beatrice was an exceptionally good one, and procured a puppy from her. Now, after this study of his reports before buying, and thinking I had a rare-bred one, he dashes my hopes to the ground in his Buffalo report. Describing Derbyshire Lad, he says, "Out of a very ordinary bitch." Well, his dam is Lady Beatrice, and what are we to think? Was she good enough to win in Boston and yet, as dam of Lad be "very ordinary"? or is it not the same Lady Beatrice, or how is it? If not trespassing on your space too much, I should like to be straightened out in the matter.

CHAS. E. BUNN.

THAT LONG ISLAND RABBIT BAITING.

Editor Forest and Stream:

Before speaking about what I regard as genuine sport, I beg to express some opinions on that which to my mind is very far from it. Some sportsmen (?) on Long Island seem to have taken up the idea that a caged and benumbed rabbit, turned loose within 25yds. of fox-terriers, affords amusement worthy of human aspiration. There can be no disputation upon subjects of taste. But the sport (?) above indicated can hardly be so classed; and I am unable to see how persons of common refinement can find entertainment, much less pleasurt, in what closely approaches barbarity. If, as I see, it requires only from 30 to 50yds. for the dog to catch the rabbit, and none ever escape, I fail to see how any one of becoming taste and ordinary human sensibility can tolerate it. I beg to suggest with all respect that the Hempstead sportsmen could have much more sport, exhilarating and healthful, and but little more expensive, if they would come to North Carolina and try the old fields in the central part of the State, with hounds or beagles and a shotgun. They would not then get all which they would start. If they used fox-terriers only they would get very few. The judges and other sportsmen could not ride during the chase, but would have to "foot it," to the great improvement of their health.

As I said, I cannot discuss a matter of taste. I may contend that certain indulgences are not according to my notions of good taste. Now, as none of the rabbits escape and every "course" is successful, why cannot these gentlemen amuse themselves equally well by shooting a 10-bore shotgun loaded with 4drs. of gunpowder and 1¼oz. of No. 10 shot, at the side of a barn 30x60ft. at a distance of 20yds., with a rest at that? They would hit every time. Or they might tie the rabbits to a stake and shoot with a rest at 30yds. Then, if they killed at every shot, the fun might come in by counting the pellets in each carcass.

But there is plenty of healthful sport rendered keener by the possibilities of an occasional miss both in the open field and the brush. Bob White can afford it and the central counties of this Commonwealth, especially off of the lines of the railroad, present many attractions. Luxuriant sportsmen, who come among us in a palace car, with all the necessaries and comforts of life and a quantity of what is neither necessary nor healthful, may enjoy themselves—"after a fashion"—but will have little of the sport enjoyed by those who get away from the sound of a railroad whistle and content themselves with such accommodations as the country can afford.

I have made three trips into Chatham county during the present season. Birds were not so abundant in the field as I had expected. In consequence of this the bags were not large ones. But I had some sport nevertheless and quite as much exercise as I wanted. My own little gun caused the death of only 103 in all of them, and it required almost 175 shots to do it. That was far better than any of my companions did. On two of the occasions my competitors killed two or three birds more than I, but they burnt more powder. The fact is I cannot walk as fast nor as long as some persons. I am obliged to get over ground slowly and keep a sharp lookout to avoid stumbling. In plain English, I economize my breath and muscle, and hence fail to shoot as often as he does who rushes along over gullies, stones and marshes, and through thickets of brush and brier. My little dog is getting old, too; and he, like his master, is deep in the shade of life. Still he does his best and holds out as long as he can. Poor old Argo! Well, he and I have had "lots of fun."

WELLS.

ROCKINGHAM, N. C., December.

Editor Forest and Stream:

Considered in the abstract, there can be no defense to the charge that all "sporting," *i. e.*, the hunting, chasing or killing of any wild animal without some useful purpose in view, is simple cruelty, and a strict application of abstract principles might properly class such "sporting" as brutal cruelty. Now we all know that this cannot be true in actual practice, for we know many men of the kindest of hearts and the noblest of impulses, who are devoted to such sports. Take for instance the English country gentlemen. No race or class of men ever rivaled them in mental, moral and physical characteristics. They have done more for the advancement of the race in intelligence, culture and all its highest attributes than any other existing. It is simply absurd to say that such a body of men can be habitually cruel or brutal, yet they are, and always have been, preeminent in the sports of the field. Then what are the qualifying circumstances that explain the enigma? Simply that the free, outdoor exercise, the stimulus, bodily and mental, resulting from sports, elevate them to not only a pleasure, but a potent factor in human development. In this stimulus the excitement of overmatching the game in wits, skill, endurance, and the contest between human skill and wild animal vigor, instinct and wariness, affords the stimulus of the enjoyment. As perfection in hunting weapons and skill in using them advances, with it grows a higher standard of privilege allowed the game, that the contest between hunter and hunted may remain as nearly equal as possible. As I understand it, this is why it is not "sportsmanlike" to shoot a bird in a tree or on the ground. I know it is now bad form in fox hunting to relay a fox with fresh hounds (although it is sometimes done if a particular fox becomes too much of a terror to chickens and must be extirpated as a nuisance), and a bag fox is looked on with contempt by all but "dude" fox hunters.

Now if my premise that all hunting of game, not for some useful purpose is *per se* cruel, in the absence of some qualifying circumstance, I would ask what possible defense can be set up for the performance of capturing a lot of timid hares, confining them for a season, and then turning the frightened, confused brutes loose in strange grounds to be dogged to death by a lot of fox-terriers? That it is destitute of the first trace of "sport" is shown by the published accounts of the recent devilling to death of rabbits. A rabbit is taken out of the cavern of a pocket, shown to some dogs, let loose and is run into in 31 seconds. Now many and many the good foxhound have I seen running a rabbit on his native ground, and the chases lasted ten minutes oftener than they did five, and when bunny was picked up in any such time as even three minutes we always felt that he didn't have a fair chance.

I never saw a rat-killing match, but from accounts of them I should say that the performances at Hempstead were duplicates of the sports of "Mose," "Bill," *et id hoc.* Cannot you interview a "bhoy" and get an expert opinion whether the dignitaries at Hempstead have faithfully followed out rat-pit etiquette? Ratting has at least two claims on favor; it tends to the suppression of destructive wild animals, and the gameness of the rat surely impels him to fight for his life, and the terriers are put on record whether they have earned a right to exist, but the pitting of the most timorous animal living, whose natural cowardice is improved by confinement in a box, against a pair of terriers, is—well, "high toned" will probably do as well as anything. W. WADE.

HULTON, Pa., Dec. 20.

Editor Forest and Stream:

I have read with a good deal of interest certain comments in FOREST AND STREAM regarding Long Island "rabbit coursing" and I must acknowledge that my sympathies rest entirely with the rabbits. On the Western prairies it must be grand sport coursing hares in the open, and it certainly is excellent amusement in the East, shooting rabbits in the swamps and thickets; but a person who takes pleasure in seeing a number of harmless animals, caged and half dead with fright, killed as if they were vermin, is not my ideal of a sportsman. In Australia we are told that the (domestic) rabbit is a plague; and in some portions of our West that the jack rabbit is a nuisance. Where such a state exists it is allowable of course to make use of unusual means of extermination; but with game in the East as it is, steadily diminishing in numbers, there is no such excuse for want on destruction. As for the cruelty of such a way of killing, I suppose that is an open question; but for one I protest against degrading rabbit chasing to the same category as rat killing. If a rat killer is a sportsman, all I can say is that I don't wan't to be known as a sportsman. *

BOSTON, Mass.

Editor Forest and Stream:

My attention having been called to the Hempstead mode of killing rabbits, I wish simply to state, without any undue warmth in the matter, that while I have always advocated the necessity of outdoor, manly sports, I must confess that I never could see the sport in anything bordering on brutality. I should as soon advocate cockpits, bull fights, dog fights, prize fights, and all other demoralizing and devilish systems that make men worse and not better. That is the rule I wish to apply. "If this be treason make the most of it." OCCIDENT.

SEDALIA, Missouri.

Editor Forest and Stream:

Measured by the low standard of the Yankee fox hunter's ethics, the Hempstead method of coursing hares is murderous and beneath the contempt of any one who calls himself a sportsman or even a decent man. But as it insures the certain death of the hare and pleases the dogs and, excepting the hare, the other participants, who no doubt are true sportsmen, it must probably be conceded that it is a very noble sport. Bull baiting and badger drawing were once so considered, but we have fallen on better times, when such brutality is not tolerated. AWAHSOOSE.

VERMONT.

Editor Forest and Stream:

The life of an animal is as dear to that animal as the life of man is to man, and consequently man should not deprive an animal of its life except in case of necessity, and when we do take from an animal its life, surely we should not out of the pain, torture and death of the animal extort or even attempt to extort pleasure. The act of taking the life of an animal for food is justified. The act of taking the life of an animal for pleasure is simply concentrated cruelty. The butcher, when he takes life, performs what he considers an act of duty. The rabbit-baiter, when he takes the life of rabbits for the purpose of extracting pleasure for his morbid appetite, performs simply an act of cruelty. You pay your money and take your choice. I prefer the butcher.

OLD JIMMIE.

ST. BERNARD PUPPY WEIGHTS.

MELROSE, Mass., Dec. 28.—*Editor Forest and Stream:* On receiving this week's FOREST AND STREAM the first thing my eye rested on was "Mastiff Puppy Weights," and credited to Plinlimmon and Lady Wellington. Perhaps it is unnecessary to say anything about it, as Plinlimmon is too well known, but it don't sound very well, and as I own Lady Wellington I prefer to call her a St. Bernard. Will you kindly mention in your next issue some of the heaviest rough St. Bernards you know of at 2, 3, 4, 5, 6, 7, 8, 9 and 10 months old, and oblige not only yours truly but several others. E. B. SEARS.

[The mastiff heading was a clear case of heterophemy. We have no record of weights for consecutive months, and would be glad to receive such, together with measurements and method of care and feeding.]

ALBANY, N. Y., Dec. 20—*Editor Forest and Stream:* Having noticed in your last issue an account from the Halfway Brook Kennels of the St. Bernard puppy Princelimmon, aged 3 months and weighing just 50lbs., I would be very happy to hear through your columns the measurements of said puppy, if Halfway Brook Kennels would oblige. I have a St. Bernard puppy from my Mt. Sion III., aged 5 months. His measurements are:

Height (at shoulder)	24	inches.
Length of nose to stop	4	"
Stop to occiput	6	"
Occiput to setting on of tail	34	"
Length of tail	23	"
Girth of chest	32	"
" " loins	29	"
" " arm	9½	"
" " muzzle	13	"
" " skull	19	"

Weight 84lbs.

Do you think he weighs too much for his measurements? Should I reduce his feed or continue to feed the same? He is very healthy and straigh-tlimbed. By advising me through your columns you will greatly oblige A SUBSCRIBER.

[The puppy is a large one for his age. Give him plenty of exercise, and do not allow him to get too fat.]

PITTSBURGH DOG SHOW.

WE have received the premium list of the fourteenth annual dog show of the Western Pennsylvania Poultry Society, to be held at Pittsburgh, Pa., Jan. 29 to Feb. 1. In the mastiff, rough St. Bernard and smooth St. Bernard classes, the premiums are, champion dogs $15, bitches the same; open, dogs, $10, $5, and silver medal; bitches the same; puppies, $10, $5, and society medal. In pointers (two classes) and English setters the champion prizes are $10, with $15, $5 and picture in each of the open classes, and $10 and society medal for puppies. In some of the other classes the prizes are $10 in the champion, with $10 and $5 in open classes. In other classes special prizes are offered, and some have $10 and society medal, and a few, including spaniels and some of the terriers have $5 and society medal. Entries close Jan. 19. The address of the secretary is C. B. Elben, Box 303, Pittsburgh, Pa.

NEW BEDFORD DOG SHOW.—The premium list of the twelfth annual exhibition of the Southern Massachusetts Poultry Association, to be held at New Bedford, Mass., Jan. 15 to 19, is ready for distribution; 140 classes are provided for dogs, with prizes of 60 per cent. of entrance fees to first, 30 per cent. to second and highly commend to third. There are also a large number of valuable special prizes offered. Mr. Charles H. Mason will judge all classes. Entries close Jan. 8. The address of the secretary is Frank W. Dean, New Bedford, Mass.

MR. W. R. DOCKRELL'S ADDRESS.—68 Fitzjohn's avenue, Hampstead, N. W.—*Editor Forest and Stream:* In a book recently published entitled "Our Prize Dogs," somebody has inadvertently given my address as 7 Newman street, Oxford street, which is incorrect, my proper address is 68 Fitzjohn's avenue, Hampstead, London, N. W. By kindly inserting this in your widely circulating journal you will oblige, W. R. DOCKRELL.

EASTERN FIED TRIALS CLUB.—There will be a meeting of the Eastern Field Trials Club at the St. James Hotel, New York, Jan. 8, at 8 o'clock P. M. A full attendance is requested.

THE INTER-STATE FOX HUNT.

[Special Report to Forest and Stream.]

THE Inter-State Fox Hunt held its first meeting at Waverly, Miss., the home of Capt. Wm. Young. Waverly, situated on the high ground overlooking the Tombigbee River, is a delightful old mansion, and has long been famous as the home of the Youngs. Capt. "Billy" and his brother Maj. "Val," were untiring in their efforts to make the assembled huntsmen comfortable, and the hearty hand shake previous to our early morning departure for West Point on Friday testified more thoroughly than words can tell to the thorough success of their efforts. The ground was rough and heavily timbered, making close following impossible. The foxes had been brought from a distance and baited at a pen for some months back; consequently the races were not as long as could have been desired, but taking everything into consideration the hunt, or rather the field trial for foxhounds, was an unquestioned success.

All things must have a beginning, and it is doubtful if any test of merit, so entirely novel, has ever resulted in a choice of winners so satisfactory to the mass of competitors. Nearly one hundred dogs were on the grounds, and a very high percentage of them competed in the various stakes. The attendance during the entire meeting was most encouraging, and the marked good feeling which prevailed from beginning to end proves unquestionably that the foxhound interest is on the boom. A strong club was formed under the name of the Inter-State Fox Hunting Club, with the following officers: President, Col. Robert Gates, Jackson, Tenn.; Vice-President, Maj. G. B. Young, Waverly, Miss.; Secretary and Treasurer, Col. Lewis, Paris, Tenn. In addition to these there was a vice-president from each State represented, Col. Anderson, Clinton, Ala.; Mr. Miers, St. Louis, Mo.; Mr. Crump, Louisiana; Mr. Whitlock, Kentucky; H. B. Duryea, New York; J. M. Avent, Tennessee.

Let all Northern, Eastern and Western lovers of the foxhound join us and there is no telling how far we can go toward the goal of perfection with our favorite dog.

We regret extremely that the short time given us to prepare this report for the next issue of the FOREST AND STREAM prevents our giving a more detailed account of the many pleasant happenings which crowded fast upon each other during our too brief sojourn with those glorious hosts Capt. "Billy" and Maj. "Val."

On Tuesday, Dec. 18, a start was made at 7:30 A. M. It was a blustery disagreeable day with a strong north wind blowing, making good work impossible. The judges were Messrs. John Davidson, Michigan; Wm. Anderson, Jackson, Tenn.; Wm. Meyers, St. Louis. This race was a test of speed, but as the dogs entered in the bottom class had to run in every class except those for the aged dogs and puppies, they also started. There were seven entries in the speed class, viz.: Wild Goose Pack's Calley Gates, Dimple, Don, Ramble, Roam, L. Willis's Buckskin and Leader. In the endurance class ten started, viz., U. B. Johnson's Jack and Dutch, Wild Goose Pack's Don and Roam, Columbus Hunting Club's Rye Straw and Robert E. Lee, J. M. Avent's Lead and Music, Maj. G. B. Young's Walker and Rowdy. As Don and Roam were entered both for speed and bottom we started with a pack of fifteen.

About two miles west of the house the pack struck a good trail, and going up the road at a rapid pace for about a half mile, turned northwest, and going by the fox pen to the main road, made a complete loss. At this time Dutch and Lead, who had struck another trail, started a gray fox and ran him off north toward the river, out of hearing. The pack, after a few minutes' loss, turned back toward the pen, and doing some good trailing, jumped a large red fox that ran out in plain view of the spectators. They packed well for a short time, but soon made another loss. Lead, Don and Dimple, making a wide cast, caught the trail again and ran the fox to earth before the rest of the pack caught up. Time from jump to finish, 30m. About this time Dutch and Lead were heard coming back from the north with their gray fox, and the pack was harked away to them. They packed and ran well for about 15m., when they again made a bad loss. After hunting around for some time they did some good trailing and jumped him for the second time, only to be finally and effectually evaded by the wily reynard.

A wide circle was then made in search of another track, and the pack finally brought back to a place where some of the spectators had seen a red fox cross about three hours before. The dogs soon struck the trail. Lead and Don carried the trail with accuracy and precision for a full half mile, clearly out-working the rest of the pack to a point on the ridge, where Lead jumped the fox. The pack was soon harked to him, doing some beautiful running and packing well for about 35m., when reynard decided that discretion was the better part of valor and went to ground in the same hole that the first fox took. Calley Gates was leading the pack for the last round.

This ended the day's sport, and in a few moments the large array of attendant sportsmen, including many ladies, wended their way back to hospitable Waverly. The judges very justly awarded to Calley Gates the first prize for speed, the second prize going to Dimple. The winner is a beautiful black, white and tan bitch, and shows at times a great turn of speed. She is, however, too wild a runner, making at times some very bad losses. Dimple is a bitch of much the same character, but somewhat slower. Quite a number of other high-class dogs showed well during the day, including Don, Lad, Buckskin and Dutch.

Wednesday was set apart for the aged dog (over nine years) and puppy (under twenty months) classes. In the aged dogs seven started, viz., Wild Goose Pack's Fleet and Chester, Columbus Hunting Club's Drummer, Jesse James and Rover, Maj. G. B. Young's Monk and Frolic. The puppy class had five entries, viz., W. B. Johnson's Sam and Joe, Columbus Hunting Club's Rose II., L. Willis's Lou and Dora. The weather was cold and clear and much more favorable than the preceding day. The attendance was large, and a start was made at 8 A. M. Two miles from the start a strike was made, and some nice trailing was done for a short time, when the hounds got scattered. Two hounds were heard about a mile away near the river, one of which Col. Lewis claimed as old Fleet, and the whole crowd harked the dogs away and went like wild men to join them. When we neared them it was found that two outside dogs had trailed a deer from across the river. The dogs were then carried back toward the pen to see if they would start again on the trail they had lost. On the way they struck another trail, supposed at first to be of a fox, and did some very good trailing down to the hurricane. From the way the hounds worked it soon became evident that they were on a wildcat, and the master of hounds ordered the dogs to be blown off to try for another fox. After circling around for some time through the pine hills they struck the trail of a gray fox, which they soon jumped and lost. While at loss an unentered dog named Brooks jumped a deer and was joined by the rest of the pack. After a good race of about an hour and a half the dogs went out of hearing toward the river. This was a very exciting race, as the deer was frequently seen by the attendant sportsmen as he dodged through the woods and across the different roads which intersect the woods at this point. When the dogs went out of hearing the master of hounds ordered the hunt off for the morning and we proceeded to Waverly for dinner. As most of the work done consisted of trailing the cat and running the deer the judges could not come to a satisfactory decision, and ordered the old dogs and puppies out to run next day with the packs. Subsequently the judges awarded first and second in the aged dog class respectively to Fleet, owned by Wild Goose Pack, and Drummer, belonging to Columbus Hunting Club. Mr. W. R. Johnson's black, white and tan dog Sam won first in the puppy class, and second was awarded to Columbus Hunting Club's Rose. Sam is a beautifully marked dog and quite a promising youngster. Rose also showed some very good traits, and with more experience will make quite a good trailer.

After a well-served luncheon the hunters and trailers were ordered out. In the hunting class there were four entries, viz., Wild Goose Pack's Don and Fleet, J. M. Avent's Lead and Cleveland. Nine entered in the trailing class, viz., Wild Goose Pack's Don and Rambler, Columbus Hunting Club's Rye Straw and Robt. E. Lee, J. M. Avent's Cleveland, Lead and Spot, Maj. G. B. Young's Trouble and Truman. As the bottom dogs had to run also, the three classes made quite a pack, and afforded more sport than any other contest. At three P. M. the dogs struck the trail of the deer started before lunch and did some good trailing, but were soon ordered off for new grounds by the master of hounds. On the new grounds Lead and Don struck a very cold trail and were joined by the pack. Some good trailing was done, when Lead turned to the right and trailing about half a mile jumped the fox. The pack was then harked to join him, and they had a good race for a few minutes, when they lost. The pack then turned back and trailed on the back track for about a mile. Lead, Cleveland, Truman and Trouble left the pack and trailing back in the right direction soon jumped the gray for a second time. They made several rounds after him before the pack could be gotten back to join in the chase. Some beautiful tacking running ensued for about forty minutes, when the fox made a short turn back through the crowd, and an unentered puppy running behind met the fox, and after a short sight race in plain view of the spectators, ran him in a log. As it was nearly dark the dogs were called off to be taken home. On the road back, however, they soon struck trail of a red, and the pack turning on the back track Music and Dutch went to the right and started the fox.

They ran some time about a quarter of a mile ahead of the pack, when the fox made a short turn and the pack caught up with the front dogs. The fox made a wide cast toward the river, and the pack ran out of hearing for some time. We then came back by the pen followed by the pack, running beautifully. After a good race of about two hours they made a loss, and some of the hunters thinking that they had caught the fox commenced blowing horns. This broke up the best day's sport we had during the meet. As it was dark and disagreeable weather the hounds were taken home without any effort to again jump the fox. The judges awarded first prize in the hunting class to Don. He is a large black and tan dog and shows good hunting qualities and was justly entitled to the award. Lead won first prize for the best trailer and second in the hunting class. He is a good-sized black, white and tan English dog, well formed, and proved himself the best trailer of the meet, constantly taking up difficult losses and jumping nearly every fox in the classes in which he competed. He also showed wonderful endurance and speed, and we regret that the time was so short that the endurance class could not be tested between the English and native bred dogs. Second prize in trailing class was won by Truman, a medium-sized, well-formed, red ticked dog. He has a good nose and is a close trailer, showing lots of hunting sense. There were other high class dogs in this stake, but our time does not permit description.

On the third and last day the packs were started. There were five packs and thirty-three starters, viz., Wild Goose Pack six, J. M. Avent five (one of his dogs not answering in time he was allowed to start five), Maj. G. B. Young six, Columbus Hunting Club nine, Mr. L. Willis seven. As breakfast was late we started at 10:30 A. M. After hunting a long time a trail was finally struck at 12 M. The dogs trailed beautifully for about a mile through the pine hills and hurricane. Trailing up a steep hill by the hurricane some of the dogs went off on a track that was not a fox, which caused a very bad loss of time. After waiting some time, Lead came up and worked the trail to a place where the fox had jumped some time before. The pack soon joined in and some beautiful work was done for some time on the fox that was evidently walking in front of them. Finally working him across the road into the hurricane again they got a close run on him. At the time, the crowd, evidently excited by the sight of so many dogs, made such a disturbance that they caused the pack to make a complete loss. The packs were then separated and circled in various directions for the fox without any good results. This ended the meet, as the owners of the Wild Goose Pack and one of the judges were obliged to go home. It was evident to all that the race was between the Tennessee dogs, and very justly the judges gave first prize to the Wild Goose Pack, second prize being awarded to Mr. J. M. Avent. The bottom class was declared off, as there were no opportunities to test endurance sufficiently. The Wild Goose pack are a very nice lot of even-sized dogs, and hunt well at a good rate of speed. They are not, however, first-class trailers, being a trifle wild. Mr. J. M. Avent's are all close trailers, and show good speed and endurance. Maj. G. B. Young has also a very good pack of reliable trail dogs.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream:

In reading a communication in your last edition signed "Tallyho," I came to the conclusion that his ideas, like most of our erroneous ones, are imported. He tells us that shooting foxes is unsportsmanlike and even murderous, and would hold up to execration all who hunt in this manner. Now I have hunted and killed all kinds of animals east of the Rocky Mountains, and fail to see that a fox suffers more by being shot than any other species of the animal kingdom. From a point of ethics it is obvious that "Tallyho" occupies a poor position, as any person who has ever seen a fox killed by dogs knows that the pain then endured is infinitely greater than when the gun is the instrument of execution. This is so well understood that there are instances on record where the participants in this sort of amusement were prosecuted for cruelty to animals, for even Americans can get a surfeit of "English, you know."

If "Tallyho" thinks the poor, persecuted fox has no chance to escape, let him try the sport himself. After he has run about for a few hours from hill to hill looking for a chance shot, he will, I think, modify his views on this subject. I have frequently returned empty-handed, as have the rest of a party of half a dozen good shots, after having hunted a whole day where foxes were plenty enough to destroy a great quantity of poultry. In conclusion let me suggest that if any man wishes a good day's sport, let him bring together a few companions, with about the same number of slow-running hounds, arm themselves with heavy shotguns charged with BB shot, and start for the woods in a double-seated democrat-wagon (the ride in which will be appreciated on their return), and I will warrant that they will not be averse to repeating the experiment. W. R. W.

Editor Forest and Stream:

I am not a fox hunter, therefore the note on the ethics of fox hunting, which you printed in a recent issue, is not much of my affair. I merely rise to say that I have met a few New England fox hunters, and, in my opinion, they are sportsmen. Should ever our Southern friend be fortunate enough to fall into their hands, I think he will agree with me. And before dropping down on them quite so hard he should have remembered that the ground in that country is unsuited for cross country riding after hounds, and even if it were not, the sport requires a longer purse than many of us are afflicted with; while nearly any one can stand the expense of the style he condemns. I have learned that when any form of sport has a firm foothold in a large area of country it is well to have a thorough knowledge of the ins and outs of the whole subject, and then to think several times before making a sweeping denunciation of it.

In the matter of differences of opinion on any subject, I think the philosophy attributed to a certain semi-civilized Melicete Indian, who lives not far from here, will bear close study and application. A certain religious denomination was divided on, and of course quarreling about, a certain point of doctrine. The sachem wondered greatly thereat, as "it was agin sense." He then proceeded to formulate his views in the following language: "You use worms for bait and ketch um chub, me use chub for bait and ketch um eel—that's all right. You tell me what good fish chub is; me tell you what bully fish eel is. You make me believe you—all right; me make you believe me—all right. But 'spose we throw down our lines and go to fightin'; neither one git anything. Then you try to show me chub is good by crammin' one down Injun's throat, then"—and the sagamore frowned—"then you must 'spect me to poke eel into you." So, likely enough, "Tallyho" will catch it; and every one will hold about the same opinions and as many foxes will be killed as if never a line had been written on the subject.

L. I. FLOWER.

NEW BRUNSWICK, Christmas Day.

Editor Forest and Stream:

In your issue of Dec. 20 "Awahsoose" takes me to task for my "contemptuous comments" on New England fox hunting, and attempts to defend the so-called sport. I beg to say that my knowledge of New England fox hunting has been gained by personal observation during a long residence in Massachusetts, where I had frequent opportunities to take a hand in the sport (?). Fox and hare hunting, as conducted throughout the Southern and Western States, is a time-honored sport, and allowed to be the perfection of hunting. Tallyho and such as he who follows fast and killing hounds on horseback, and undergo the fatigues of the chase, cannot appreciate the "woodcraft" nor the "sportsmanship" display of the-man-with-the-gun skulking behind the convenient fence or brushheap, where he lies in ambush for the luckless fox. "Awahsoose" is not likely to abandon his "favorite pastime," which involves neither expense nor dangers, and above all secures the coveted fox skin in a salable condition. The slaughter of foxes will go on just the same, the fox shooter will dignify his butchery by the name of sport, and continue to glory in his exploits despite the indignant protest of TALLYHO.

COLORADO SPRINGS, Dec. 26.

THE IRISH WATER SPANIEL STANDARD.

SCALE of points for judging adopted by the English Spaniel Club, Dec. 3:

POSITIVE POINTS.		NEGATIVE POINTS.	
Head and jaw	10	Cording, or tags of dead or matted hair	20
Eyes	5		
Topknot	5	Moustache or poodle hair on cheek	10
Ears	10		
Neck	7½	Lank, open or woolly coat	10
Body	7½	A natural sandy, light coat	15
Forelegs	5	Furnishing of tail more than half-way down to sting	5
Hindlegs	5		
Feet	5		
Stern	10	Setter feathering on legs	15
Coat	15	White patch on chest	15
General appearance	15		
Total	100	Total	90

DISQUALIFICATIONS.

Total absence of topknot.
A fully feathered tail.
Any white patch on any part of dog, except a small one on chest or toe.

DESCRIPTIVE PARTICULARS.

Head.—Capacious skull, rather raised in dome and fairly wide, showing large brain capacity. The dome appears higher than it really is, from its being surmounted by the crest or topknot, which should grow down to a point between the eyes, leaving the temple smooth.

Eyes.—Highly intelligent, amber-colored. Dark is generally preferred.

Nose.—Dark liver-colored, rather large and well developed.

Ears.—Set on rather low. In a full-sized specimen the leather should be not less than 18in. and with feather about 24in. The feather on the ear should be long, abundant and wavy.

Neck.—Should be "pointer-like," *i. e.*, muscular, slightly arched and not too long. It should be strongly set on the shoulders.

Body (including size and symmetry).—Height at shoulder from 20 to 24in., according to sex and strain; body, fair-sized, round, barrel-shaped, well ribbed up. When wet would resemble in contour that of a sporting-looking pointer.

Shoulders and chest.—Chest deep, and not too narrow. Shoulders strong, rather sloping and well covered with hard muscle.

Back and loin.—Back strong, loins trifle arched and powerful, so as to fit them for the heavy work of beating through sedgy muddy sides of rivers.

Hindquarters.—Round and muscular, and slightly drooping toward the set-on of the stern.

Stern.—A "whip tail," thick at base and tapering to a "sting." The hair on it should be short, straight and close-lying, except for a few inches from its root, where it gradually merges into the body coat in some short curls.

Feet and legs.—Forelegs straight, well boned. They should be well furnished with wavy hair all round and down to the feet, which should be large and round. Hindlegs stifle long. Hock set low; they should be well furnished except from the hock down the front.

Coat.—Neither woolly nor lank, but should consist of short crisp curls right up to the stern. Topknot should fall well over the eyes. It and furnishing of ears should be abundant and wavy.

Color.—Dark rich liver or puce (to be judged by its original color). A sandy light coat is a defect. Total absence of white desirable, any except a little on chest or a toe, should disqualify.

General appearance.—That of a strong, compact, dashing-looking dog, with a quaint and very intelligent aspect (the light rim round the eye, objected to by some, frequently adds much to their intelligent, knowing expression). They should not be leggy, as power and endurance are required of them in their work. Noisy and joyous when out for a spree, but mute on game.

[We are indebted to Dr. J. F. W. Ross, of Toronto, Ont., who was present at the meeting of the Spaniel Club at Birmingham, Eng., Dec, 3, for a copy of the standard.]

DOG TALK.

THE premium list of the coming Pittsburgh dog show has never a word to say about the A. K. C. Evidently the managers are "disgruntled" from some cause and intend running affairs to suit themselves. Whether exhibitors will support them or not remains to be seen. Time was when the Pittsburgh show was in the front rank, but lately, through bad management there has been a serious falling off in its popularity, and it behooves the society to bestir itself and make strenuous efforts to regain its lost prestige. It appears to us that a step not in this direction has been taken in the substitution of a miscellaneous lot of merchandise in lieu of cash in the prize list. It is bad enough when giving special prizes to saddle innocent exhibitors with cook stoves, cigars, muffs, casters, umbrellas, pictures,

knives, overcoats, revolvers, pipes, etc., but when these articles are made to do duty in the regular classes we fear that the cash saved will not recompense the society for the loss of patronage that may consequently ensue. Since writing the above we have this note: "PITTSBURGH, Pa., Dec. 31.—*Editor Forest and Stream:* At a meeting of our society, held Dec. 30, it was resolved we resign from the American Kennel Club.—C. B. ELBEN, Sec'y.

SPANIEL PRIZES AT PITTSBURGH.—New York, Dec. 31.—*Editor Forest and Stream:* In looking over the premium list of the Pittsburgh show I find that the spaniels are very badly treated, and I consider the classification to be a direct insult to spaniel exhibitors. There are no champion classes, and the prizes in the open classes are $5 and a pewter medal! The "Dandy" Dinmont and Irish terriers get the same, while in all of the other classes the first prize is at least $10. Even the black and tan terriers—usually one of the smallest classes—get twice as much as the spaniels. Why this is I do not know, but I do know that I shall not show my pets at Pittsburgh.—EXHIBITOR.

KENNEL NOTES.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Dinah. By Oakview Kennels, Philadelphia, Pa., for white, black and tan beagle bitch, whelped Nov. 5, 1888, by Tony Weller (Kino—Fly) out of Merrybell (Victor—Vota).

Tristram. By Onota Kennels, Pittsfield, Mass., for red Irish setter dog, whelped March 12, 1888, by champion Tim (champion Biz—champion Hazel) out of champion Yoube (champion Elcho—champion Rose).

Snow Dick. By F. F. Dole, New Haven, Conn., for white bull-terrier dog, whelped June 16, 1888, by Tony (champion Count—White Violet) out of Lady Tarquin (champion Tarquin—Luce).

Dorothy. By F. F. Dole, New Haven, Conn., for white bull-terrier bitch, whelped June 29, 1888, by champion Jubilee (Bendigo—Queen) out of Modjeska (Dutch, Jr.—Young Venom).

NAMES CHANGED.

New Haven General to Buffalo General. By A. W. Smith, Buffalo, N. Y., for black and tan terrier dog, whelped Nov. 27, 1887, by Halifax General out of Lady Lottie.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Chippy—Racket, Jr. C. H. Starks's (Chatham, N. Y.) beagle bitch Chippy (Elmore's Bob—Jenny) to his Racket, Jr. (Cameron's Racket—Krueger's Nellie II.), Nov, 19.

Helen—Pat. C. H. Starks's (Chatham, N. Y.) beagle bitch Helen (Cameron's Racket—Krueger's Nellie II.) to J. Whitbeck's Pat, Nov. 17.

Lady Beatrice—Alonzo. E. H. Moore's (Melrose, Mas.) mastiff bitch Lady Beatrice (Ilford Caution—Brenda II.) to his Alonzo (Orlando—Lady Canute), Dec. 11.

Brenda Secunda—Alonzo. E. H. Moore's (Melrose, Mass.) mastiff bitch Brenda Secunda to his Alonzo, Nov. 20.

Countess—Minting. E. H. Moore's (Melrose, Mass.) mastiff bitch Countess (Turk—Nell) to his Minting, Dec. 25.

‖*Princess—Ilford Caution.* E. H. Moore's (Melrose, Mass.) mastiff bitch Princess (Ilford Cromwell—Brenda II.) to his Ilford Caution (Crown Prince—Ilford Claudia), Dec. 25.

Bernie V.—Ben Lomond. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Bernie V. to his Ben Lomond, Dec. 25.

Madam—Ben Lomond. Buckminster Kennels' (Framingham, Mass.) St. Bernard bitch Madam (Merchant Prince—Nun) to E. H. Moore's Ben Lomond, Dec. 13.

Flora—Ben Lomond. L. Daniels's (New York) St. Bernard bitch champion Flora to E. H. Moore's Ben Lomond, Dec. 10.

Meg Elcho—Patsy. E. N. Foote's (Northampton, Mass.) Irish setter bitch Meg Elcho (A.K.R. 6493) to E. O. Damon's imported Patsy, Dec. 25.

Duchess—Sensation. J. H. Davidson's (Millbrook, N. Y.) bull-terrier bitch Duchess (champion Count—White Violet) to F. F. Dole's Sensation (Bulrush—Fancy II.), Nov. 29.

Royal Rose—Sensation. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Royal Rose (Randolph—Nell) to his Sensation (Bulrush—Fancy II.), Nov. 12.

My Queen—Sensation. F. F. Dole's (New Haven, Conn.) bull-terrier bitch My Queen (champion Grand Duke—champion Maggie May) to his Sensation (Bulrush—Fancy II.), Nov. 28.

Lill—Roy. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Lill (Tom's Royal—Hamilton's Fillis) to his Roy (Banks's Royal— ———), Dec. 20.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Muckamuck. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Muckamuck (Laddie—Jennie Deans), Dec. 11, nine (seven dogs), by W. A. Daniel's Ben Hur (Clifton Hero—Madge Wildfire).

Queen of Scots. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Queen of Scots (Clifton Hero—Picture), Dec. 3, nine (seven dogs), by Gibson & McEwen's Guelph (Gilderoy—Jess).

Golden Spark. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Golden Spark (Clifton Hero—Sparkle), Dec. 11, seven (six dogs), by M. Harrison's Scotilla (champion Dublin Scot—champion Flurry II.).

Blackberry Girl. J. L. Lincoln, Jr.'s (Chicago, Ill.) collie bitch Blackberry Girl (champion Rutland—Strawberry Girl), Aug. 20, four (two dogs), by J. A. Long's Clifton Hero (Trevor—Gazelle).

Nydia. Hamilton & Shugush's (Council Bluffs, Ia.) mastiff bitch Nydia (Clement—Ashmont Queen), Dec. 19, nine (four dogs), by Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands).

Bernie VI. E. H. Moor's (Melrose, Mass.) St. Bernard bitch Bernie VI. (Lion—Bernie V.), Dec. 7, fifteen (eight dogs), by his Ben Lomond (champion Barry—Thetis).

Leigh Doane III. Oakview Kennels' (Philadelphia, Pa.) Irish setter bitch Leigh Doane III. (champion Bruce—Leigh Doane II.), Dec. 19, seven (two dogs) by C. T. Thompson's Desmond II. (Frisco—Grouse II.).

Lady Belmont. Reynard Kennels' (Lancaster, Pa.) fox-terrier bitch Lady Belmont (Earl Leycester—Coquette), Dec. 21, three (two dogs), by J. R. Trissler's Star (Resolute—Coquette).

Floss. C. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Floss (Dreadnaught II.—Maggie), Dec. 7, two (one dog), by P. H. Coombs' Bradford Harry (Crawshaw's Bruce—Beale's Lady).

Polly. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Polly (Sir Star—Minnie), Oct. 1, three (two dogs), by his Roy (Banks's Royal— ———).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Ouray. Brindle mastiff dog, whelped Aug. 27, 1888, by Ilford Caution out of Princess, by E. H. Moore, Melrose, Mass., to J. H. Rhue, Peru, Ind.

Baron. Fawn mastiff dog, whelped Aug. 15, 1888, by Minting out of Duchess, by E. H. Moore, Melrose, Mass., to Richard T. Francke, Havana, Cuba.

Count. Fawn mastiff dog, whelped Sept. 1, 1888, by Hamlet out of Belva, by E. H. Moore, Melrose, Mass., to Richard T. Francke, Havana, Cuba.

Count. Orange and white St. Bernard dog, whelped Sept. 8, 1887, by Apollo out of Miranda, by E. H. Moore, Melrose, Mass., to Geo. W. Patterson, Lake View, Mass.

Chequasset Maud. Orange brindle, white markings, St. Bernard bitch, whelped Oct. 12, 1888, by imported Beauchamp out of Lady Henley, by Chequasset Kennels, Lancaster, Mass., to George Q. Dow, North Epping, N. H.

Scotch Bonivard—Madam Whelps. Tawny and white St. Bernards, whelped Sept. 9, 1888, by E. C. Johnson, Framingham, Mass., a dog to B. W. Taylor, New Orleans, La., and a bitch each to L. W. Franklin, Natick, Mass., C. W. Shaw, Brookline, Mass., A. E. Lincoln and E. C. Barrett, Boston, Mass.

New Haven General. Black and tan terrier dog, whelped Nov. 27, 1888, by H alifax General out of Lady Lottie, by Frank F. Dole, New Haven, Conn., to A. W. Smith, Buffalo, N. Y.

Sensation. White bull-terrier dog, age not given, by Bulrush out of Fancy II., by F. F. Dole, New Haven, Conn., to F. Norton Goddard, New York.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. F. M., Kent's Hill, Me.—A cocker spaniel. He has small blotches or pimples in many places upon his body and upon his legs; there is a peculiar odor to the matter which discharges; scabs have formed in many places. What is it? Is it contagious to dog, or to man? Can it be cured? Ans.—It is one form of mange or eczema, a skin disease. You had better keep the dog by himself. Keep the bowels open by teaspoonful dozes of syrup of buckthorn or two compound cathartic pills hidden in a morsel of meat. Give 5 grains of quinine each morning in pill form and apply to affected parts night and morning an ointment made of equal parts of zinc oxide and diachylon ointments.

Rifle and Trap Shooting.

RANGE AND GALLERY.

CIVILIAN SOLDIERS' MARKSMANSHIP.

WHEN a dozen or more years ago attention was called to the deficiency which existed in the National Guard in the matter of shooting ability and the National Rifle Association was started to remedy the evil, there was for a time a great deal of misdirected effort in getting started a smooth-working, practicable scheme of rifle drill. The regiments went down and turned a day on the range into a grand junket. This was the first effort. Then came rules and methods, and about all they succeeded in showing was the utter want of skill on the part of the majority of the men. Those who got into condition to shoot accurately and well soon discovered that their skill was far in advance of the weapon in their hands, but for all that the bulk of the men then and now are not by a long distance up to the merit of the State arm. It was not until Gen. Robbins took control of this important department of the State military work that a system was put forth which could be readily grasped, and by which a scale of merit could be established as between one organization and another.

It is a very simple plan. Each season stands by itself. The men and officers are divided into classes. Those who don't go near the range for practice are placed in the third class. Of course at the opening of the shooting season, running during the six months ending by the 10th of November, a man who goes to the range and shoots, even if he fails to score anything or makes such a poor score that it is really nothing more than a fluke, is enrolled in the second class in the annual returns. A man who manages in 5 shots at 200yds. to make a score of 25 in the possible 50 upon the Creedmoor target, is regarded as a first class man on the returns. A marksman goes further and gets a decoration for making a total of 25 or more in the possible 50 at 200yds. standing and at 500yds. in a prone position, 5 shots being fired at each distance. There is another class of sharpshooters for such as get up to 42 in the possible 50 at these two last-named distances. The sharpshooters are few in number, and in the First Brigade, including all the infantry in New York city, number 83 during the past year, and of these 49 are in the Seventh Regiment. In 1887 there were 92 men reaching this high point of merit.

In the following tables are given the record made by the soldiers of the New York city brigade during the six years of the present régime. There are eight regiments in the brigade, and they possess varying degrees of excellence. In the first column is given the strength of the organization at the annual muster, showing that the metropolis now has a total of over fifty-two hundred men in her home guard. The next column gives the number of men who found it possible or convenient to go to the range; about 60 per cent. go down, and in this column the season just passed does not appear good in comparison with previous years. The absent column are those who did not practice. They are the "dead wood" which gets into all organizations. Possibly there are good marksmen among them, probably there are not. The Seventh this year has reached the proud distinction of having every one of her members report at the range for practice at some date during the season, and so avoid the demerit of absenteeism. The interesting part of the table comes in the fourth column. This shows how many men there were who, firing at 200yds. and again at 500yds., managed to make at least 50 per cent. of a perfect score. Take the series of years right through and it will be seen that the percentage of marksmen to the number practicing has greatly increased. In 1883 it was only 1,167 out of 2,229, or less than 40 per cent., while in 1887 it had risen to 1,887 in 3,152, or nearly 60 per cent.

In looking at those figures it should be borne in mind under what condition they are made. The men go down on days fixed on long in advance; they take the weather as they find it, and cannot pick a day when everything assists in enabling them to roll up a good score.

This practice is but one part of the powder burning which the soldier is invited to do. He is put through a brief exercise in volley firing and in skirmish work. In these tests the officers do not participate as they do in the individual shooting already given. In volley and skirmish work the officers take their proper places as directing powers in the work of the company. In volley firing the non-commissioned officers are drawn up facing a broad target at 100yds. This target is 6ft. high and has a broad black band 2ft. wide horizontally across the middle counting 5. One foot on either side is another division mark, leaving two areas 1ft., each counting 4. The remainder of the target being a band 1ft. wide along the upper and lower edges, counting 2. At the word of command the company fires a round and repeats this five times, making a possible 25 for each man in the ranks. Out of the 3,019 who went down to the range during the past year, 2,040 took part as shooters in the volley firing. This would make a total possible score of 51,000 and out of this the score actually made was 31,932.

The skirmish firing is a test of distance judging and is a close simulation of actual practice in the field. In this the regular second class Creedmoor target with its 2ft. bullseye is used. The men are drawn up at about 325yds. from the target, go forward at the word of command, halt and fire at irregular distance down the range as far as the 100yds. point and back again to the starting point. The sound of the bugle is used as a signal when to halt and fire, and each man is supposed to use 5 rounds in his march back and forth. There were 2,035 out of the 3,019 who shot in this drill this year, and out of the possible 50,875 grand total score, the record was 18,424. This shows that at the more difficult test of estimating distances and covering them the men did very well and as snap shots were able to score about 36 per cent of a possible 50,875.

All the figures are for the men of the New York City Brigade. They are under special disadvantage in that a trip to Creedmoor is a matter of some considerable expense and much more difficulty. It is a day's work to get in an hour or two of practice. The out-of-town commands have a much better chance for gaining efficiency. The New York city guardsman is generally a workingman or a clerk who finds it difficult to get off. The country guardsman is more the master of his own time, and the range may be so near his place of residence that a trip to the butts may be only a matter of a few moments' time and no expense. The figures show what one body of willing workers have done and what the laggards in the organization have left undone. On the whole they are encouraging, and if a general in the field had a force anywhere near as effective when in actual conflict, he might, number for number, safely defy any body now under arms.

WILMINGTON, Del., Dec. 5.—To-day was a Christmas long to be remembered at Healdmoor Rifle Range. The day was a perfect one for the enjoyment of out-door sports and favorable for good shooting. There was not only a general turn-out of active riflemen, but the large crowds of visitors testified the growth of this delightful pastime in popular favor. The good order which characterizes the management of these matches not only attracts good citizens as active competitors, but invites a quiet, orderly class of visitors. The Quarterly Continuous match ended, and it represents not only an improvement, but far the best shooting ever done by the Wilmington Rifle Club. The scores are as follows, standard American target, at 200yds. off-hand:

Bullseye and Continuous Match.

J F McCafferty	9	6	7	9	8	10	6	10	10	8—88

G Alfrey							3	2	7	5	3—20	

BOSTON, Dec. 25.—A large number of shooters visited the range at Walnut Hill on Christmas day, and kept up a continuous crack of the rifle. All of the matches were well patronized, and many good scores made. The weather conditions were all that could be asked, a light wind blowing most of the day. Following are the best scores at 200yds.:

Rest Match.

L R Avay	10	9	12	12	12	12	10	12	12	12—113

SNOW FORTS.—A Norwegian officer reports that he has found tightly packed snow to be proof against musketry at an ordinary range even when less than a yard thick, and he asserts that snow can also resist field artillery. Norway, in that case, can rely on having a good supply of defensive material for parapets in case of operations being undertaken against her in the dead of winter. The use of snow for stopping rifle balls has been common on the ranges here for some time. It is employed instead of sawdust to catch bullets at short range when studying the effect of rifling, etc.

THE NEW WIMBLEDON.—Brookwood, near Woking, has been fixed upon as the new location for the British National Rifle Association shoots.

SPRINGFIELD, Mass., Dec. 25.—The Rod and Gun Club shoot at Lake Lookout Range to-day was a great success. There was a large attendance and the shooting house was filled with riflemen and spectators. The day was perfect for the sport, and as a result the scores were good. The record match was first shot, and then came the prize matches. Wilson won the first class and Hitchcock the second class. Those using military rifles were given a handicap of 7 points, which proved to be a little strong. The third class did not fill. The scores are as follows:

Rest Match.

Stephens	6	8	6	7	8	10	8	9	8	8—78
Bull	8	5	5	8	10	7	6	7	5	10—71
Farnsworth	7	4	6	9	6	8	7	5	8	7—67
McDonald	6	4	4	8	5	10	9	5	5	8—64
Dean	8	6	8	2	4	6	10	7	6	4—31
Leonard	5	2	6	9	5	6	9	8	7	4—61
Walters	3	5	3	3	7	5	8	4	9	—58

First Class, 15 shots.

Wilson	137+7—134	Talbott	117+7—124
Stephens	132	Gassner	123
Allen	126	Farnsworth	115+7—122

Second Class.

Hitchcock	122	Bowers	100+7—107
Kimball	114+7—121	Sterling	92+7— 99
F R Bull	108+7—115	Leonard	89+7— 96
Hindley	113	Leroy	91
Johnson	104+7—111	McCann	74+7— 81

GARDNER, Mass., Dec. 29.—At the meet at Hackmatack Range this week of members of the Gardner Rifle Club they were favored with fine weather. Shooting was off-hand, 200yds., standard target:

G F Ellsworth	9	8	7	8	9	10	8	9	10	8—86
	8	9	8	8	10	8	10	10	10	10—91—177

	8	6	10	6	6	9	4	6	8	6—69

G. E. M.

SALEM, Mass., Dec. 25.—Salem marksmen did a lot of shooting at the Independent Rifle Range to-day. Among the best shots made at 200yds., out of a possible 200, were these:

Lieut W G Hussey	41	38	37	37—155
*G A Ropes	32	20	28	28—108
*J M Wilson	36	29	28	28—115
W F Rodigras	33	33	36	30—132
†Corp Bruce	50	37	29	34—150

*Handicap 16. †Handicap 10.

These were for special prizes. Among other shots made were these:

*Sergt Reuben Ropes	29	30	26	25—186
Sergt C F Ropes	25	26	27	31—109

*Handicap 20.

H. S. Cummings, with a handicap of 20, made 123. Corp. Osgood, on a decimal count, of a possible 100, made one score of 70 and a second of 67.

OTTAWA, Ont., Dec. 26.—The Department of Militia and Defence has just about closed its operations for the year. The active militia consists of 35,783 officers and men, divided as follows:

Cavalry	1,044	Infantry	31,297
Field Artillery	1,449		
Garrison Artillery	1,823	Total	36,783
Engineers	179	Permanent Corps	950

During the year 20,689 men reported for drill. The amount of ammunition issued for practice from 1867 to June 30, 1888, is as follows:

	Rounds.		Rounds.
Ball	13,053,789	Blank	6,834,42

In addition there were sold 9,825,675 rounds of ammunition.

GERMAN-AMERICAN SHOOTERS.—The German-American Shooting Society, an organization of about 1,400 members of New York city, dedicated its new hall and headquarters in St. Mark's Place on the evening of Dec. 16. For years the society has been striving for this consummation. Its twenty-four companies had previously met in the Germania Assembly Rooms on the Bowery. They gathered together there for the last time and marched in a body, escorted by several sister societies, to their new headquarters. The new building is a stone structure, five stories high. In the basement are a shooting gallery and a bowling alley. Back of the saloon on the first floor is a large restaurant and assembly room, and on the second, third and fourth floors, front, are company rooms, the rear being finished for lodge and assembly rooms. On the fifth floor are the kitchen, and private appartments of the janitor. The building is in French renaissance style, and occupies a modest space at 12 St. Mark's place. It is fitted more in a practicable than in a luxuriant manner, containing a number of large rooms instead of the usual grand hall of the club building. "In unity there is strength," the motto of the German-American Schuetzen Society, is conspicuous on the St. Mark's place facade, and it actually tells the whole story of the building. The entire building was handsomely draped and festooned with the national colors of Germany and America and with fancy banners. In the assembly room on the second floor, where the speechmaking was done, there were large portraits in oil of Washington, Lincoln and Grant. Mr. Henry Fishler, president of the society, delivered an address of welcome and introduced Judge Nehrbas, who congratulated the society upon the realization of its desires for an independent headquarters. Among the other speakers of the occasion were Coroner Levy, and Mr. F. A. Ringler. The New York Maennerchor, conducted by Claussen, rendered several beautiful choruses. There were many visiting shooting societies present from New York and Brooklyn. A collation followed the speechmaking.

BOSTON, Dec. 29.—This was the last sporting day for 1888 at the Massachusetts range, and many were on hand to take their last chance in the matches. Below will be found the prize winners in the Victory medal match, with their winning scores:

H. L. Lee (Gold victory, 10 scores of 86 or better): 86, 87, 89, 87, 91, 86, 89, 87, 86, 87.

Gold membership medal, won on 10 scores of 81 or better: 81, 84, 81, 84, 88, 83, 87, 83, 82, 83.

Silver victory, won on 10 scores of 80 or better: 82, 92, 81, 90, 82, 83, 86, 83, 84, 90.

Bronze victory, won on 10 scores of 75 or better: 76, 86, 80, 82, 78, 79, 87, 81, 80, 83.

J. A. Frye (gold membership badge, 10 scores of 81 or better): 82, 83, 85, 82, 86, 81, 83, 82, 81, 82.

G. B. Warren (bronze victory badge, 10 scores of 75 or better): 76, 81, 79, 77, 80, 75, 80, 81, 78, 77.

Silver membership badge, 10 scores of 70 or better: 74, 84, 70, 71, 71, 70, 75, 70, 73, 71.

MASSACHUSETTS RIFLE ASSOCIATION.—The management of the Massachusetts Rifle Association announce a new series of matches for 1889 as follows: All-comers' practice match—200yds.; rounds, 10; no prizes. Members' practice match—Entry fee, to members only. Revolver and pistol—Practice match, open to all comers; entries good for 10 and 50yds. practice matches. Sighting shots—Tickets good for 10 shots, to all comers. Victory medal match for 1889—To close Dec. 31, to be shot on standard American target; 200yds., standing; rounds, 10; no handicap; scores made in other matches do not count in this. Prizes as follows: First prize, a victory gold medal, to the competitor who scores 10 80s during the year; second, a gold membership badge, to the competitor who scores 10 81s during the year; third, a victory silver medal, to the competitor who scores 10 80s during the year; fourth, a victory bronze medal, to the competitor who scores 10 75s during the year; fifth, a silver membership badge, to the competitor who scores 10 70s during the year; sixth, a bronze membership badge, to the competitor who scores 10 65s during the year. Medal and badge match—all comers; standard American target, 200yds., standing; rounds, 10; any rifle; members will compete on revised handicap list; non-members on such handicap as may be fixed by the executive officer (subject to approval of executive committee); prizes to be won on the aggregate of each competitor's best five scores, counted as one continuous score; membership badges can be won by members only; military rifles to be shot without cleaning during each score. Each competitor in this match who fails to secure a prize, but who has shot 10 or more scores, will be entitled to have 20 per cent. of his entry fee refunded; this match to close July 4, 1889; 10 prizes, value $88.

Rest match—200yds.; rounds, 10 on standard American target; with rest bullseye; prizes to be won on the aggregate of each competitor's best five scores, counted as one continuous score; rifle, any, without restriction as to sights, weight or trigger pull, except that hair triggers must be provided with safety lock, rifles of over 12lbs. weight, with telescope sights, will be handicapped 2 points to each score; any position or rest, provided the rifle is shot from the shoulder; this match will close Fast day, 1889; prizes, percentages of the entry fees.

Champion medal match—Members only; 200yds.; rifle, any; standing; rounds, 10, on standard American target; medal to be held by the winner until the next regular shoot day, when it must be delivered to the executive officer at the range, it finally to become the property of the competitor having won the greatest number of times during the year; if a tie exists at the end of the year it shall be decided as follows: Each competitor tied shall shoot a string of 10 shots, handicapped on the basis of the average of 10 shot strings of his winning scores. Twenty shot rest match (for gold medal)—All comers; 200yds.; rounds, 20 on standard American targets with rest bullseye; one score only allowed each day; rifle, any, no restriction as to sights, weight or trigger pull, except that hair trigger must be provided with safety locks and rifles of over 12lbs. weight with telescope sights will be handicapped 4 points; any position or rest, provided the rifle is shot from the shoulder; conditions with reference to name, finishing score and deciding ties, same as "champion medal match."

SAN FRANCISCO, Cal., Dec. 23.—The target ranges at Shell Mound Park were occupied to-day by "the Nationals," companies C and G, First Regiment, National Guard of California. The scores made were unusually good, as shown by the following list; 10 shots at 200 and 500yds.: Champion Class—A. H. Baird 43, 47, A. Johnson 43, 46; John E. Klein 45, 40; Charles Meyer 46, 40; T. E. Carson 46, 36. First Class—H. Kock 37, 29. Second Class—J. G. Hult 42, 41; O. Noble 42, 39; O. F. Peterson 42, 39.

ANNUAL MEETINGS.—The annual meeting of the National Rifle Association will be held at the 22d Regiment armory in this city on Jan. 8. The annual meeting and dinner of the Massachusetts Rifle Association will be held at Young's Hotel Jan. 8.

THE CARVER SHOOT.

MINNEAPOLIS, Dec. 24.—Dr. William F. Carver, the famous rifleman, began his six days' shoot at the Washington Rink this morning. He will try to break his own and the world's record of 60,000 glass balls in six days. If he succeeds in accomplishing this herculean task he will receive $2,500 for his work, but should he fail he will be out his expenses. As some people have charged that the cartridges are loaded with shot, a single grain of which would break a glass ball, wooden balls have been secured and the mark of every bullet can be plainly traced. Another condition is that a .22-caliber rifle shall be used. As this is a smaller bullet than the marksman is accustomed to, he says the feat will be more difficult than when he made the world's record in 1884. He expects to break 8,000 or 10,000 balls to-day, and to increase this number daily. The only difficulty he says he will encounter will be shooting too fast on the first day. This caused a partial paralysis at New Haven in 1884, and almost resulted in the doctor's death. While he admits that he has not trained as thoroughly as he should, he is confident of success. Theo. C. Moeller, the well-known dumb-bell manipulator, who intended to break as many balls with a 10-pound sledge as the marksman did with his rifle, broke 8,003 balls in nine hours' practicing, and sprained his arm so badly that he will not be able to enter. He has been engaged to look after Dr. Carver's guns.

On one side of the great front hall of the rink a huge screen made of two thicknesses of heavy plank and reaching from floor to ceiling has been erected, and it is against the whitewashed surface of this screen as a background that the Doctor intends to fire about 63,000 shots and break 60,000 balls in six days.

It was shortly after 10 A. M. yesterday when the first ball was thrown and the first crack of Dr. Carver's heavy Winchester rifle rang through the rink and the ball fell splintered and broken. On a table by the marksman's side lay ten rifles, all alike, and one man—and he understands his business, too—stood ready to keep the magazines full, and another undertook to repair any damages to the guns and keep them all in working order. The cartridges used are .22 short, and each loading of each rifle gives 20 shots.

Dr. Carver shot almost continuously from 10 o'clock in the forenoon until about 1, when he took a rest of a little more than an hour for dinner, and then shot again until after 6 o'clock in the evening, when he left his position by the table and went to supper. All through the forenoon and the earlier part of the afternoon the light in the rink was very bad, and this, with the inexperience and the fear of the boys who were throwing the balls, made the work very difficult and trying, and caused more ciphers to appear in the score than would otherwise have been found there. But when the electric lights flared up at a little after 4, the artificial proved better than the light of the sun, and from that time until about 6 o'clock he made a great run, missing about 18 balls out of 2,000 shots. It was a wonderful sight to see him stand firm and square, apparently calm and unconcerned, just dropping his right hand far enough to open the breech and throw out the shell, and throwing it back in place, pull the trigger and send the bullet into the wooden balls just as they reached their greatest altitude and seemed to stand still in the air. A ball struck square on the side would break in pieces and fly to various parts of the room, while some would barely move, and the only way a hit could be detected was by the rapid spinning of the ball as it fell.

The throw shots with both eyes open and seldom fails to take even bad chances where the throwers fail to give a ball a clean toss, or some catch in the lock of the gun makes him late in sighting the object of his aim.

The crowd became enthusiastic as the number of targets mounted up into the thousands, with scarce a perceptible increase in the number of stray shots. Nearly every one in the hall took pains to possess himself with a piece of a ball with a bullet embedded in it or some other memento of the wondrous display of marksmanship he had beheld. The time by thousand shots was as follows:

	Begun.	Finished.		Begun.	Finished.
1st	10:05 A. M.	11:05 A. M.	6th		5:05 P. M.
2d		12:05 P. M.	7th		6:50 P. M.
3d		1:12 P. M.	8th	7:35 P. M.	8:40 P. M.
4th	2:05 P. M.	3:10 P. M.	9th		10:15 P. M.
5th		4:05 P. M.	10th		11:30 P. M.

In the case of all except the 4th and 8th thousands he began on one ten hundred shots immediately on finishing the one before it, but between the 3d and 4th he took dinner and went to supper between the 7th and 8th thousands.

At 12 o'clock Dr. Carver had fired 10,000 shots and had missed something over 230 balls. He then commenced to shoot to make up the full 10,000 targets and in a half hour did that much and added an extra 50 for luck. He made a new record in the matter of breaking successive balls, and at one time struck about 325 balls without missing one. The balls used are nearly round and are about 2½in. in diameter.

Dec. 25.—Dr. Carver has put in the second day of his great ball-breaking effort at the Washington rink, Minneapolis. It was the hardest Christmas the famous shooter ever passed. He kept at work just as if people around him were not enjoying themselves to the fullest. It was the Doctor's way of enjoying himself. He seemed to derive great satisfaction from seeing the wooden balls fly to pieces. When he took up his Winchester rifle at 10 o'clock he made an astonishing and discouraging discovery. He seemed to have no control of his arms. He could hardly elevate the rifle to an angle of 45 degrees, not to say keep elevating and firing. He at once sent for a physician. Electrical batteries were used, liniments employed, and by noon he was ready to resume his second day's work. He rested several times during the day, but was encouraged by the presence of a much larger number of spectators than were present the first day. Many of them were ladies, who took seats in the galleries and watched the shooting with much apparent interest. The great rink is not the best lighted building in the city by any means, and the Doctor was handicapped in this respect. The electric light is not the best light to shoot by, and then something of a cloud of smoke made it still worse. However, the Doctor did remarkable shooting during the day.

By 10:30 in the evening the Doctor had shot at 17,610 objects and had missed but 328, of these 235 were missed the first day, showing that but 93 were missed to-day up to within about an hour of the close last evening. The young men who throw the balls into the air are getting the art down fine, and are pretty regular in the distances they throw the ball. This is quite an aid to the marksman. Among the spectators were a number of gentlemen who have won local fame as marksmen. When the Doctor began to-day he had a little over 10,000 to his credit. His unexpected delay in starting the second day put him behind a great deal, and he was little a discouraged. He says he will stick to it, however, and do the very best he can. He expects to gain some to-day and to-morrow, perhaps enough to make up the daily average of 10,000. He received several telegrams from his friends in the East, who urge him to do his best. The score to-day was:

11,000	12:35 P. M.	15,000	6:10 P. M.
12,000	1:45 P. M.	16,000	8:20 P. M.
13,000	3:15 P. M.	17,000	9:45 P. M.
14,000	4:45 P. M.	18,000	10:50 P. M.

The wooden balls have been used so much that hundreds of them are shattered to pieces. Others are chipped so much that they are too small to half look original size.

Dec. 26.—Dr. Carver went to the Washington Rink this morning feeling better than on the night before, although his wrists were swollen considerably. He began shooting at the usual hour, 10 o'clock, and expressed himself as being confident that he would be able to have his total score up to 30,000 when 12 o'clock midnight came. He had miscalculated, however, as after shooting about 300 balls his right arm became helpless, and he was forced to discontinue. Dr. Tower, who was present, applied the current of a small electric battery that he had with him and bound the arm with bandages saturated with liniment, and in a short time he began work again. His aim remains true and he rarely missed what he aimed at. The boys engaged in throwing up the balls seemed in just as bad shape as the rifleman, and they did not toss as well as they might have done. The crowd at the rink was not as large as on Christmas Day. All expressed themselves as being sure that the doctor will fail in his task, and a number of experienced riflemen stated that they considered his feat an impossible one.

It was 12 o'clock before the marksman had shot his first 1,000 targets, and unless he made up during the afternoon it would be an impossible thing for him to make his 10,000 at midnight. At 3 o'clock he had hit 2,475 targets, and only missed 25.

Dr. Carver was in bad shape all the evening, and he looked very pale. His arms pained him severely. Despite that, however, he worked away steadily, and at 11 o'clock he had shot at 7,250 targets and missed only 60, making a total for the three days 20,735 targets and 26,555 hits.

	Begun.	Closed.		Begun.	Closed.
20th	10:10 A. M.	11:55 A. M.	24th	6:30 P. M.	7:50 P. M.
21st	12:00 M.	1:25 P. M.	25th	8:05 P. M.	9:00 P. M.
22d	2:20 P. M.	3:45 P. M.	26th	9:00 P. M.	10:20 P. M.
23d	4:40 P. M.	5:40 P. M.			

The doctor began on his 27th thousand at 10:50, but did not finish it at 11:35, he felt so badly that he thought he had better retire, and stopped with the score of 420. Altogether in the three days he has shot at 26,714 targets, and missed but 407. When he went to his room at the Nicollet House at midnight his wrist was in bad shape. Electric batteries were applied after which it was poulticed with flaxseed. The doctor is not discouraged.

Dec. 27.—The Doctor has already shown himself to have lost none of the grit and endurance he displayed a year ago when he made his New Haven record. At noon to-day he had fired altogether 30,000 shots, which means, without exaggeration, that he had lifted, up to that time 300,000lbs. His rifle weighs 10lbs., and he had carried that to his shoulder 30,000 times. The terrible work is telling on him, however, and he looks like an altogether different man than he did when on the first day he stepped inside the railing and lifted a rifle to his shoulder. He did not feel so fatigued as on the day before, but his wrists and fingers were swollen worse and pained him more.

At 11 o'clock in the forenoon, while the doctor was busy firing, the massive bulwark which is used as a back-stop for the bullets, suddenly gave way from the top and came crashing down. The scorer and the two ball-tossers had a narrow escape for their lives, and the doctor came near losing an arm, as the heavy boards struck the table by which he was standing, within a few inches of his arm. It took a good deal of time to get the bulwark back to its former position, which caused the doctor to lose a good deal of valuable time. His rifle did not work any better than it did the day before, and the boys tossing the balls tossed worse if anything than before. The balls that were missed were few and far between however.

When the evening shooting opened his score for the four days was 34,600 shots with 493 misses. He is considerably behind his average, and intends shooting all night to make up for what he has lost. After 12 he laid down for an hour's sleep, and then began shooting again. He will shoot and sleep at intervals of an hour all night. The score up to 1 o'clock stood as follows:

	Begun.	Closed.		Begun.	Closed.
28th	10:25 A. M.	11:25 A. M.	33d	5:25 P. M.	6:25 P. M.
29th	11:40 A. M.	12:35 P. M.	34th	7:10 P. M.	8:00 P. M.
30th	12:55 P. M.	1:40 P. M.	35th	8:00 P. M.	9:15 P. M.
31st	2:25 P. M.	3:50 P. M.	36th	9:20 P. M.	10:55 P. M.
32d	3:35 P. M.	4:45 P. M.	37th	11:05 P. M.	1:00 A. M.

Dec. 28.—Dr. Carver's shooting to-day was wonderful. He kept up his work until 4 o'clock in the morning when he went to bed and slept a few hours. He had shot altogether over 38,500 targets before that hour. He began again at 10 o'clock in the forenoon, and from that time on a continuous stream of fire came from that part of the building where the rifleman was standing. He was determined to have the 3,000 which he was behind in his score wiped off the boards before he stopped, and make at the close of the fifth day a total score of 50,000. There were a great many visitors at the rink during the day, among them several prominent St. Paul marksmen. At 9:30 in the evening the doctor had shot 3,500 times since 10 o'clock A. M. and missed but 60 shots. His arm, wrist and hand were still in terrible condition, and it was necesary for a doctor to inject morphine into his shoulder with a hypodermic spring to keep him from fainting with the pain. He is looking very pale and haggard, and has probably lost twenty-five pounds in weight during the five days' work. The following table will show Dr. Carver's total score up to the close of the fifth day:

	Begun.	Closed.		Begun.	Closed.
37½	1:05 A. M.	2:25 A. M.	44½	5:00 P. M.	6:15 P. M.
38½	2:55 A. M.	3:30 A. M.	45½	6:15 P. M.	7:30 P. M.
39½	10:00 A. M.	11:00 A. M.	46½	7:30 P. M.	8:50 P. M.
40½	11:30 A. M.	1:25 P. M.	47th	8:50 P. M.	9:30 P. M.
41½	1:25 P. M.	2:30 P. M.	48th	10:00 P. M.	11:15 P. M.
42½	2:30 P. M.	3:30 P. M.	49th	11:15 P. M.	12:40 P. M.
43½	3:30 P. M.	4:55 P. M.			

The total score of the day since 10 o'clock yesterday morning is 10,500 with 61 misses. Total for the five days, 49,000 with 590 misses.

Dec. 29.—Dr. Carver's right hand was powerless when he took up his rifle at 9 o'clock this morning and he hadn't the strength to throw the lever of his Winchester down. All day yesterday he kept steadily at work, and had 49,000 balls to his credit when he was forced to stop. During the day Dr. Lowers was called in and injected morphine into his swollen arm. He told the marksman's trainer to bandage the wrist with a flaxseed poultice when he stopped shooting, but this was not done, and this morning it was in very bad condition.

When Dr. Carver found his arm was powerless he applied the electric battery, but the full strength of the current had no effect on him. Dr. Lowers was called in and advised the Doctor to quit, but he refused to stop and said: "If you can get this hand to work I'll go ahead if it kills me."

"If you keep on," said the physican, "the first thing you know your right arm will have to be amputated."

"Well, I'm going at it again, and I'll break 11,000 balls to-day, but if anybody ever gets me into a scrape like this again it won't be while my name is Carver."

After receiving an injection of morphine, Dr. Carver commenced shooting at 10 o'clock. His left arm has caused him no trouble at all, but from the condition of his right hand early morning visitors were of the opinion that he would break down before completing the task.

At 3 o'clock this afternoon he had shot at 52,800 balls, and missed 605. He expects to finish his task of breaking 60,000 balls by midnight. The prospects are that he will break his record, as he started out to do, but at a terrible physical expense.

An attempt was made to-night by some of the local gamblers to

prevent Dr. Carver from completing his task by attaching his guns on an alleged claim of $87. Mayor Ames became responsible for the guns and the shooting was continued. Fully one thousand people were present.

At half-past 9 to-night the score was 57,100 shots and 605 misses. The marksman was in better condition than at any time during the day, and bets of 5 to 1 that he would win could find no takers.

Dec. 30.—Dr. Carver finished his task of breaking 60,000 balls in six days with single bullets at twenty-five minutes of 3 o'clock this morning. He missed only 650 balls, and made these up before stopping. He was given several hypodermic injections of morphine yesterday to still the terrible pain which his wrist gave him.

The Doctor was completely exhausted when he finished, and was put to bed at once. To-day the services of a physician were necessary for his swollen wrist, and it will be several days before he is restored to his normal condition.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NIAGARA FALLS, Ont., Dec. 27.—The first of the two days' International Trap-shoot Tournament of live pigeons and blackbirds took place to-day on the grounds of the Whirlpool Gun Club. A large number of marksmen were present from the United States and Canada, who took part in the day's sport. The weather was unfavorable for good shooting. The sun did not make an appearance and a strong left rear wind blew all day. The following is the score; Match No. 1—Sweepstakes; entries $2, 6 blackbirds, prizes 40, 30, 20 and 10 per cent. of purse:

J Simpson, Niagara Falls	2
S Skuse, Buffalo	1
H Brown, Toronto	2
W McCarthy, Buffalo	4
J Bampfield, Niagara Falls	3
A Downs, Buffalo	3
J Wayper, Hespeler	3
A Menton, Buffalo	3
H McMurchy, Syracuse	4
J Cline, Hamilton	2
E Hudson, Syracuse	4
W C Hadley, Rochester	4
J Koch, Buffalo	4

W. McCarthy took first money, and H. McMurchy, Hudson, Koch, and W. Hadley divided second, third and fourth money. Match No. 2 ($75 guaranteed)—Prizes, $25, $20, $15, $10, $5; 10 live pigeons, entries $3.50:

G Rogers, St Catharines	9
J Stauber, Buffalo	8
H McMurchy, Syracuse	9
G Bishop, Niagara	8
J Wayper, Hespeler	9
Wm McCarthy, Buffalo	8
A Downs, Buffalo	8
J Boulton, Niagara	8

Fourteen retired. Rogers, McMurchy and Wayper divided first, second and third money; Downs, Stauber, Bishop, McCarthy and Boulton divided fourth and fifth money.

Match No. 3—Sweepstakes; entries $2.50, 6 blackbirds, prizes 40, 30, 20 and 10 per cent. of purse:

E Hudson, Syracuse	6
W McCarthy, Buffalo	2
E H Smith, La Salle, N Y	5
J Koch, Buffalo	2
H Ochmig, Buffalo	5
B Minton, Buffalo	2
W C Hadley, Rochester	4
J Simpson, Niagara Falls	1
J Wayper, Hespeler	4
W Wilhem, Buffalo	1
J Stauber, Buffalo	4

The Syracuse man, E. Hudson, collected first money; E. H. Smith and H. Ochmig divided second and third money; J. Wayper took fourth money, he winning the shoot-off for the ties.

Match No. 4 (extra sweepstakes)—Six blackbirds, prizes 40, 30, 20 and 10 per cent. of purse, entrance $2:

H McMurchy, Syracuse	6
E H Smith LaSalle	4
W McCarthy, Buffalo	6
J Koch, Buffalo	3
W C Hadley, Rochester	5
S Skuse, Buffalo	3
J Stauber, Buffalo	5
H Brown, Toronto	3

McMurchy and McCarthy divided first and second money, Hadley and Stauber third and fourth.

Match No. 5 (extra sweepstakes)—Entries $2, 6 blackbirds, prizes 40, 30, 20 and 10 per cent. of purse:

H McMurchy, Syracuse	6
G Miller, Buffalo	4
W C Hadley, Rochester	5
W McCarthy, Buffalo	3
J Wayper, Hespeler	5
E Hudson, Syracuse	2
E H Smith, LaSalle	5

H. McMurchy, Syracuse, breaking his 6 birds, straightaway, took first money. The three ties of 5 in shoot-off for second, third and fourth places were won in the following order: E. H. Smith, J. Wayper, and W. C. Hadley.

Dec. 28.—The second and last day of the International trap shoot brought weather more favorable for the sport. The Canadians held their own better. Rogers, of St. Catherines, particularly distinguished himself. The two Syracuse men did equally as well as yesterday, as also did Smith of La Salle. The following is the score:

Shoot No. 1, 6 birds sweepstakes, entry $2, 40, 30, 20 and 10 per cent. of purse:

McCarthy, Buffalo	4	Hudson, Syracuse	6
Hadley, Rochester	6	Graham, Buffalo	4
Wayper, Hespeler	4	Kellogg, Tonawanda	5
McMurchy, Syracuse	5	Cline, Hamilton	2

Hadley and Hudson divided first and second money, McMurchy and Kellogg third and fourth.

Shoot No. 2, $75 guarantee, entry $3.50, 7 live birds, prizes $25, $20, $15, $10 and $5:

Kellogg, Tonawanda	1111110—6	Desher, St. Catherines	1110111—6
McMurchy, Syracuse	1011111—6	Wayper, Hespeler	1011111—6
Hudson, Syracuse	1111011—6	Bampfield, Niag. Falls	1000000—1
V Jones, Hamilton	1011101—5	Rogers, St. Catherines	1111111—7

Six retired. Rogers, the St. Catherines crack shot, knocked over 7 straight birds and took the first money. Kellogg, McMurchy, Hudson, Disher and Wayper divided second, third, fourth and fifth money. In this contest a "baby" prize was given to the marksman making the smallest score. It was won by Jas. Bampfield, the popular proprietor of the Grand Trunk restaurant.

Shoot No. 3, 6 birds sweepstakes, entry $2, prizes 40, 30, 20 and 10 per cent. of purse:

E H Smith, La Salle	6	H McMurchy, Syracuse	6
W McCarthy, Buffalo	4	E Hudson, Syracuse	6
J Wayper, Hespeler	6	J Graham, Hamilton	2
W C Hadley, Rochester	4		

Smith, Wayper, McMurchy and Hudson divided the purse.

Shoot No. 4, extra sweepstake, 6 blackbirds, entries $2; prizes, 40, 30, 20 and 10 per cent. of purse:

Hadley, Rochester	5	Wayper, Hespeler	5
Graham, Hamilton	4	Jones, Hamilton	3
McCarthy, Buffalo	6	E Smith, La Salle	5
Hudson, Syracuse	6	Cline, Hamilton	5
McMurchy, Syracuse	5		

McCarthy of Buffalo and Hudson of Syracuse divided first and second money; Hadley, McMurchy, Wayper, Smith and Cline divided third and fourth money.

Shoot No. 5, extra sweepstake, entries $2; 3 live blackbirds; prizes, 40, 30, 20 and 10 per cent. of purse:

Smith, La Salle	3	Wayper, Hespeler	3
Kellogg, Tonawanda	1	Graham, Hamilton	0
Rogers, St. Catherines	2	McCarthy, Buffalo	3
Hadley, Rochester	2	Margetts, Niagara Falls	3
Hudson, Syracuse	2	Disher, St. Catherines	0
McMurchy, Syracuse	3	Cline, Hamilton	1

Smith, McMurchy, Wayper, McCarthy and Margetts divided the purse.

Shoot A, extra sweepstake, $2 entry, 6 blackbirds; prizes 40, 30, 20 and 10 per cent. of purse:

Hadley, Rochester	4	Dr Sherley, Sus Bridge	3
Bampfield, Niagara Falls	4	Wayper, Hespeler	5
McCarthy, Buffalo	3	Smith, La Salle, N. Y.	6
Hudson, Syracuse	2	Kellogg, Tonawanda	2
McMurchy, Syracuse	4	Miller, Markham	5

Smith took first, Wayper and Miller divided second and third. After the shoot off of ties for fourth place Hadley and McMurchy still remained tied and divided fourth money.

WASHINGTON HEIGHTS CLUB.—Christmas was thoroughly enjoyed by the Washington Heights Gun Club at Saul's Fort Washington Hotel, New York city. Double shooting matches were made up. The most interesting feature of the day was the work of a prize winner setter, the property of the Washington Heights Kennel Club. She and three of her 5-months old pups were allowed to retrieve the birds, and the youngsters acted like old dogs. They were photographed in action. In the 10 birds, 30yds. rise gold medal contest, Mr. W. B. Peet killed 8 birds, winning the prize. Messrs. Greloch, Davidson and Helmbold were tied on 7 birds.

BROOKLYN, Dec. 25.—There was a large gathering at the Woodsburg Driving Park Christmas forenoon, to see a pigeon shooting match. There were two matches. The first was between Capt. William Cromwell and Commodore Joseph Rotino, both old-time crack marksmen. The conditions of this match were: 25yds, 10 birds, 80yds. boundary:

Capt Cromwell	1110111100—7	Com Rotino	1110100110—6

The second match was for sweeps, best out of 5, 25yds. There were seven contestants, W. W. Murray, C. Brower and F. K. Walsh won the prizes.

THE CARTERET CUP.—The pigeon shoot for teams of four held by the Carteret Gun Club at its grounds near Bergen Point, N. J., yesterday, was a success in everything except weather. It was showery all day, especially in the afternoon, when the fourth men—the cracks—of each of the teams were shooting. The light was also very bad in the afternoon, but as there was no wind the rain and bad light was neutralized. Of the seven clubs invited to meet the Carteret's team, five responded, viz.: Philadelphia and Riverton, of Philadelphia; Country, Tuxedo and the Kennel club's, of New York. The conditions were that the Carteret Club should give a silver cup of the value of $500, for which teams of four men from each club should shoot at 20 birds, 30yds. rise, 50yds. boundary, each team to pay $50 entrance. The shooting, which was fairly good, began at 11:05 A. M., with C. H. Arnold, of the New York Stock Exchange, as referee, and the veteran "Krik" as official scorer. In the little betting done the Carteret had the call, with the Country Club team next. The Carteret team proved much the stronger, having Mr. Gladwin to lead, who killed 18. Mr. O. Thorne was second man, but did badly, only killing 14, after which Mr. C. Floyd Jones and Dr. G. Knapp came, and as they killed 19 each the total for the team was 70 killed, of which 69 fell dead inside of 21yds. and one inside of 50yds.

Gladwin	11111011111011111111—18
Thorne	11111100111001010111—14
C Floyd-Jones	11111110111111111111—19
Knapp	11111111111111011111—19—70

	K.	M.	Q.R.	Q.L.	D.	Inc.	T.	Times 2d bar.
Gladwin	18	2	9	2	4	5	0	15
Thorne	14	6	5	3	11	1	0	16
C Floyd-Jones	19	1	4	1	9	2	4	12
G Knapp	19	1	3	4	10	2	1	15

The Country Club of Westchester county won second honors, with 66 killed. The team was strong with one exception, and at half the race they led the score with 36 killed out of a possible 40. Unfortunately Mr. Iselin went to pieces, and at the end of the third round the team's total was one killed behind Carteret. Of the 66 killed, 65 fell dead inside of 21yds. and 1 at 35yds. Score:

Thebaud	01111101111111111111—18
Williams	10111111010111111111—18
Iselin	01011010111111001111—14
Pearson	11110101111111100111—16—66

Iselin	14	6	5	2	7	5	1	17
Pearson	16	4	4	1	12	3	0	18

Owing to some delay in receiving the invitation the Rivertons could not get their regular team together, but some of the young members decided to come, and it was practically a team of rookies. All but Mr. Chew did well, especially Yale Dolan, who, with age and experience, will make a great shot. In fact, the Rivertons look upon him as the coming "crack." The team killed 65, all of which fell inside of 21yds. Score:

Randolph	11110101111111111110—17
Chew	10010101101011110111—13
Farquhar	11101111111111110110—17
Dolan	11111111101110111111—18—65

Farquhar	17	3	4	1	11	4	0	13
Dolan	18	2	2	2	12	3	1	11

The Philadelphias presented a fairly strong team, with Mr. Handy as best man and Mr. Coxe the poorest. The team killed 64, of which 62 fell dead inside of 21yds. and 2 inside of 35yds.:

Sartori	11101111111111011110—17
Coxe	01011111010101011111—13
Howard	11001101111111111111—16
Handy	11101111111101111111—18—64

Watson	15	1	6	2	8	3	1	12

Among those who thronged the balcony of the handsome club house and watched the contestants in the drizzling rain were Treasurer J. B. Metcalf of the Carteret Club, W. H. Sands, S. S. Sands, George De Forest Grant, R. C. D. La Montagne, Marvin Storey, Chauncey Devin, Adolph Dubarry, N. Thorne and H. G. Crickmore. A. C. Arnold was referee.

The cup, which was made specially for the occasion by Tiffany, is a very handsome one, but, although exhibited, was unfinished. It is a silver loving-cup two feet high, with pigeons in flight for handles on either side. It bears the inscription "Carteret Gun Club Trophy." The retrieving, which was very badly done, was with the dogs Ralph, Phil and Joe. They acted as if they had been worked too hard. A diverting incident occurred. Oakley Thorne's white pointer Joe picked up one bird that he was sent after and carried it in far enough to be out of range. There he waited until the next man had fired, watching the effect of the shot as soberly as a judge until the bird dropped and became quiet. Then he trotted out and picked it up, carrying both prizes at once to the bag. The birds were an excellent lot, nearly all dark blue or slate color. Time of shoot, 5h. 10m.

WILMINGTON, Del., Dec. 25.—To-day was a big day at Wawaset Club grounds. There was shooting all the time, and the sport was witnessed by about 500 people. The scores are as follows:

20 Clay-pigeons Sweepstakes.

W McKendrick	13	D Buckmaster	9
R Miller	14	W Buckmaster	12
W H Hartlove	13	G Miller	12

The next was at 5 clay-pigeons, for amateurs. The prize was a pair of ducks, which was won by J. Cloud.

J Cloud	4	H Nichols	3
D Forrest	3	J Johnson	2
W Coverdale	2	J Jeffries	3

The next contest was at 6 bluerock pigeons. The first prize was 3 ducks, second 2 ducks, third 1 duck. The scores:

W Buckmaster	5	M A Hulp	5
D. Buckmaster	5	G Miller	4
W H Hartlove	4	R Miller	5
H McKendrick	5	W Smith	2
A H Stout	4		

In the shoot-off D. Buckmaster won first prize, A. H. Stout second and W. Smith third.

The scores in the bluerock pigeon shooting for three money prizes were as follows:

G Huber	111011—5	P McCloskey	101111—5
E Molchor	010101—3	W Smith	011111—5
P Ambold	111011—5	T Weldin	011001—3
J Cloud	000001—1	A H Stout	100101—3
L Yeamans	011110—4	W Silitoe	100110—3
W McKendrick	111101—5	J Elliot	001111—4
D Buckmaster	110010—3	W Buckmaster	111011—4
Goodwin	000000—0		

The first money was divided between Ambold, McKendrick and McCloskey; second, Elliot and Yetman; third, D. Buckmaster, Silitoe and Weldin.

The next contest was for an immense turkey weighing 36lbs. R. Miller won the bird by the score of 10 straight. A number of the other men withdrew from the contest after shooting several times. The score:

W McKendrick	1010101111—7	R Miller	1111111111—10
P Ambold	1011111000—6		

The annual supper of the Owl Gun Club will take place on Jan. 4.

CLAREMONT, JERSEY CITY, Dec. 26.—Christmas Day brought a large turnout of shooters and spectators to the New York Suburban grounds. Six traps were provided for sweeps and 6 for practice, which were kept busy by those who did not wish to tackle the experts. Sixteen sweeps were shot in all, the principal of which are given as follows:

Sweep No. 1:

Douglas	1101100001—5	Morton	0010001010—3
Reuter	0001101100—4	Miner	0003010010—2
Moffat	0010000011—3	Evans	0000003010—1

Sweep No. 2; $2 Team Match, losers to pay for birds:

Apgar	1111111111—10	Morton	1010110111—7
Reuter	1011011000— 5	Tee Kay	1100100111—6
Douglas	1011000100— 4	Peck	0100000111—4
Evans	0100000110— 3—22	Moffat	0000000110—2—19

Sweep No. 3; $3 entry:

Apgar	1111111110—9	Sanford	1101101100—6
Morton	0011110101—6	Douglas	0000101101—4
Tee Kay	0111010111—7	Schmidt	0010000101—3

Morton shot out Tee Kay and Sanford for second.

Sweep No. 4; entry $1:

Morton	1111111110—9	Schmidt	1010010111—6
Tee Kay	1011111111—9	Ellis	0111011010—6
Peck	1001111101—7	G Squire	1111000010—5
Apgar	1101111100—7	D Terry	1101011000—5
Smith	1101100101—6	W Squire	0000110101—4

All ties div.

Sweep No. 5; entry $1:

Tee Kay	1011111111—9	Peck	0110001011— 5
Apgar	1111101110—8	Smith	0110101001—5
J T Richards	0101011111—7	Ellis	1101100100—3
Morton	0110111110—7	G Squires	0000100100—3
Schmidt	1111011100—6	W Terry	0000 —0
D Terry	0100111011—6		

Richards won third on shoot off.

Sweep No. 6; entry $1:

Craft	1111111111—10	J T Richards	1111010101— 7
Smith	1111111011— 9	Morton	1101011101— 7
Apgar	1110111101— 8	Ellis	1101001111— 7
August	1110011111— 8	W Squire	1101011101— 7
D Terry	1101111101— 8	Tee Kay	1011101001— 6

Apgar won third on shoot-off.

Sweep No. 7; entry $1:

Craft	1111111111—10	Tee Kay	0101111110— 7
Apgar	1011111111— 9	Morton	1001111010— 6
J T Richards	0111111101— 8	Peck	1011110001— 6
Smith	1111111101— 8	Fussell	1110110000— 5
T Terry	0111011111— 8	Ellis	1010011000— 5

Richards won third shooting off after an excitings contest. Terry shooting at 2, S. G. Smith at 7 to decide a tie.

Sweep No. 8; entry $1:

Tee Kay	1111111001—9	J T Richards	1111010111—8
Smith	0111111111—9	D Terry	1001111110—7
Craft	1111101110—8	Schmidt	1001110110—6
Apgar	1111111010—8	Fussell	0010100101—4

First divided; Craft won second on shoot-off.

Sweep No. 9; entry $1:

J T Richards	1111111011—9	Apgar	0111111101—8
Craft	1101111111—9	Smith	1101011110—7
Tee Kay	1111111101—8	Fussell	1010110110—6

Richardson won first and Tee Kay second on shoot-off.

Dec. 27.—The fine afternoon induced quite a number of shooters to attend, most of whom preferred to practice, in order to show good scores on New Year's Day.

Sweeps, entry 50 cents:

Siegler	1011111111—9	Albee	0110011111—7
Lindsey	1100101111—8	Hathaway	0011100111—6
Siegler	1111111111—10	Lindsey	1111101111—9
Albee	1111111101— 9	Hathaway	0110110100—5

Second divided.

Albee	1101111111—9	Siegler	1000111111—7
Lindsey	1111101101—8		
Siegler	1111011111—9	Hathaway	1100111101—7
Lindsey	1101111101—8	Albee	1111010001—6

Two moneys in each. Grounds open every afternoon and all day Saturdays.

BLAUVELTVILLE, N. Y., Dec. 29.—The regular holiday matches of the Spring Hill Gun Club were held on Christmas, Dec. 25. The day was exceedingly fine and the shooting very good, as will be seen by the scores. First match, at 50 bluerocks, straightaway, 3 traps, 16yds. rise, Keystone rules. Sweepstakes, $3 entrance and cost of birds:

T S Hammond	1110010111011101111111110101011101111011111111—40
James Bogart	1110001100111111111011110011011000111111111101110—35
J Jones	0100111111101011111001110111101101111111011110—37
C J Bogart	1000110110011000100111111101000010011111001101101111—50
A D Kittle	1111110011000111111111010110111010101111111111111—39
C A Kittle	0011010101011011111011001110111111000111101111000—31
Dr C C Allen	1110111101111111101101011111111111111111001001101101—38
C M Hathaway	1010000111001101001111111111111000101101111111—31

Second match at 25 blue rocks, straightaway, 3 traps, 16yds. rise, Keystone rules, sweepstakes, $3 entrance and cost of birds:

A D Kittle	1111111111111111101011011011101101111011—21
T S Hammond	0100101011011011111011001101—16
Dr C C Allen	0101110100011101011111011101—16
J Jones	1011111011111011111111011—21
C A Kittle	0111110110011011111011000001—15
C M Hathaway	1010000101110111011111111110—17

Ties for first: A. D. Kittle 3, J. Jones 2. Ties for third: T. S. Hammond 3, Dr. C. C. Allen 0.

Third match, at 10 bluerocks, straightaway, 3 traps, 16yds. rise, Keystone rules, sweepstakes, $1 entrance and cost of birds:

A D Kittle	1111001011—7	T S Hammond	1101100111—7
C M Hathaway	1011000110—6	C A Kittle	1101111001—7
Dr C C Allen	1001011111—8		

Ties for second at 3 birds, then miss and out, won by C. A. Kittle.

Fourth match, at 10 bluerocks, straightaway, 18yds. rise, national rules, for club medals. Hathaway and Hammond 20yds. James Bogart gold medal, C. J. Bogart silver medal:

Dr C C Allen	1001101011—6	James Bogart	1011101111—8
A D Kittle	1110001101—6	T S Hammond	0001100w
C J Bogart	0111001101—6	C A Kittle	0001000110—3
C M Hathaway	1101110010—6		

Ties for second on 3 birds won by C. J. Bogart.

Fifth match, at 3 pair bluerocks, straightaway, 15yds. rise, sweepstakes, national rules:

Dr C C Allen	10 10 11—4	James Bogart	10 11 10—4
A D Kittle	11 00 11—4	T S Hammond	11 11 00—4
C J Bogart	10 00 00—1	C A Kittle	11 10 00—4
C M Hathaway	00 10 11—3	C A Kittle	11 10 00—3

Ties for first on one pair won by Hammond, second divided.

Sixth match, at 7 balls, 18yds. rise, national rules, sweepstakes:

Dr C C Allen	0011001—3	James Bogart	0101011—4
A D Kittle	1011101—5	T S Hammond	1100100—3
C J Bogart	1100011—4	C A Kittle	1011111—6
C M Hathaway	1001100—3		

PITTSBURGH, Dec. 25.—To-day's excellent weather was thoroughly enjoyed by the Herron Hill Gun Club members. It is a long time since there was such exciting shooting contests as those participated in during the day by the cracks of the club. There were several matches and sweepstakes, but the principal was the big shoot at 100 bluerocks for a sweepstake of $10 each. This was indeed the great shooting event of the season, and between 300 and 400 spectators were present to see it. Nine contestants entered, and when the contest started excitement ran high. Mr. McClure's friends were exceedingly confident of his success, but he commenced very unsteadily and never appeared to be in his best form. The winner turned up in Elmer E. Shaner, who ran up the excellent score of 95 out of a possible 100. His victory was, indeed, a popular one, as he is one of the most energetic, obliging members of the club. His longest run without a miss 45. Shooting of this kind places Mr. Shaner among the best ones. W. J. McCrickart and T. Cummings tied for second prize, each breaking 83 birds. Charles Richardson by patient work captured third money by breaking 82, and McClure was fourth with 79. The National rules governed the contest. The judges were M. E. Harrison and Samuel Shaner. Following were the scores:

Elmer E Shaner	11111111111111011111111111111111111111111111111111111111111111111111111111111111—95
Q A McClure	11011101100100111101111011010101010111111111111111111111111111111111111111111111—79
C Richardson	11111011111111111111111111111111111111111111111111111111111111111111111111111110
W C McCrickart	11111111101011111111111111111111111111111111111111111111111111111111111111111111—82
T F Cummings	10111011111111111010001110011111111111111111111111111111111111111111111111111111—83

GERMANTOWN, Pa., Dec. 26.—Score of the Cliveden Gun Club, held on Christmas Day, at their grounds in Germantown; clay-pigeons, 21yds.:

H Bates	1101111101—8	J Sherred	0111110110—7
B Lowe	0000101111—5	G Price	0111101110—7
R Smith	1010010100—4	H B Master	1101111111—9
S Raymond	1001111111—8		

The prize was a handsome silver medal.—PRESTON BUTLER, JR., Sec'y.

PITTSBURGH, Pa., Dec. 25.—The four clay-bird matches of the Squirrel Hill Gun Club to-day were hotly contested, and afforded fine sport for those taking part in them. The following is the score of the first match at 9 bluerocks:

Robt McKnight	6	Jas Caughey	6
Jas McKnight	4	K Cooke	6
John Regan	4	Gwynne	6
Wm McKnight, Sr.	5	Davison	7
J P Andrews	6	Hafermalz	6
A Turner	3		

Davison won first prize, Robert McKnight second, William McKnight, Sr., third, John Regan fourth and A. Turner fifth.

The score in the second match at 10 bluerocks stood:

Robt McKnight	5	A Turner	2
Samuel Hanna	7	Wm McKnight, Jr.	4
Jas McKnight	6	Jas Caughey	4
John Regan	4	Chas Cloche	6
Wm. McKnight, Sr.	4	S Guigan	5
J P Andrews	5		

The prizes in this match were won by Samuel Hanna, Jas. McKnight, Robt. McKnight, Wm. McKnight and A. Turner in the order named.

The score of the third match, which was a sweepstake, $2 entrance fee and at 15 birds, is as follows:

E Lauer	4	W Lauer	2
Samuel Hanna	5	Wm McKnight, Jr.	5
Robt McKnight	14	Jas Caughey	7
John Regan	6	C Cloche	3
John McKnight	11	Davison	13
J P Andrews	11	Hafermalz	10
Wm McKnight, Sr	3	Hatch	6
A Turner	6	Martin	6

Robt. McKnight got first, F. F. Davison second, John McKnight third, Theo. Hafermalz fourth and Wm. McKnight, Sr., fifth money in this contest.

The fourth and last match was at 6 bluerocks, the score standing:

R McKnight	6	Davison	5
Samuel Hanna	4	Jas Caughey	2
Jas McKnight	1	C Cloche	1
E Lauer	3	John McKnight	5
Wm McKnight, Sr.	5	T Hafermalz	3
P Andrews	4	A Martin	4
A Turner	3	Sloan	3
Wm McKnight, Jr	1	Gwynne	3

The prizes in this match were won by Robt. McKnight, F. F. Davison, J. P. Andrews, E. Lauer and Jas. Caughey.

The prizes contested for were 20 in all, and were made up of everything of use to a wing-shot.

HUTCHINSON GUN CLUB.—Hutchinson, Kas., Dec. 27.—*Editor Forest and Stream:* The Hutchinson Gun Club held their Christmas shoot. The weather was terrible, a regular Kansas blizzard, with rain, wind and sleet. The live birds were a good lot and got away like lightning, and the heavy wind carried many out of bounds that were hit hard. The bluerocks darted around like swallows and were very difficult shooting. Following are the scores:

Match No. 1, 15 single bluerocks:

Taylor	111111111111011—14	Burslem	011100111010111—10
Woodnutt	110111101111101—12	Young	101101110011000— 8
Jones	111011011100001—10	Holly	0000.0110101111— 8
George	111000101111000—10		

Taylor first, Woodnutt second, George third.

Match No. 2, 10 live birds:

George	0111110—8	Burslem	1110011100—6
Chamberlain	1011111010—7	Jones	1101500110—5
Young	1111001011—7	Taylor	0111000001—4
Holly	1001111001—6		

George first, Chamberlain and Young second, Burslem and Holly third.

Match No. 3, 12 singles:

Young	111111001111—10	Burslem	111000011011—7
Chamberlain	110101110111— 9	Holly	100100101011—6
Taylor	101100111111— 9	Jones	111000110001—6
George	101110101111— 9	*Grant	010001010010—4

Young first, Taylor and George second, Burslem third.

*Non-member.

DEC. 10.—Medal shoot, 15 singles and 5 pairs bluerocks:

Young	111111011111111	11 11 11 00	10—21
Taylor	101001010111111	11 11 10 11	10—18
George	101111100011001	10 10 11 11	11—18
Allen	100101111111111	00 00 11 11	10—17
Burslem	011011111101111	10 10 10 01	11—17
Chamberlain	101010.01111011	11 10 01 10	01—16
Jones	010001100111111	11 10 10 10	10—15

Young won the medal, Taylor won the cup on the ties.

Match No. 2, 6 singles and 2 pairs:

Young	111111 11 11—10	George	101101 10 10—6
Chamberlain	011110 11 11— 8	Taylor	111101 11 10—8
Allen	111100 11 10— 7	Jones	010111 11 10—7
Burslem	101101 11 10— 7		

Eh Young again got there.—SHADY.

BOSTON, Dec. 26.—The attendance at to-day's meeting was a trifle smaller than usual, owing to the fact that so many matches were held yesterday. However, the prospective winners in the matches just closing were on hand, and the final competition was exciting enough to suit any one. Better weather conditions than prevailed could not have been asked, and the scores ran up to good figures accordingly. The winners and their prizes are as follows: Wheeler first, $20 in gold; Stanton second, ice pitcher; Swift third, $15 in gold; Nichols fourth, ice pitcher, salver and goblet; Snow fifth, $10 in gold; Perham sixth, carving set; Crown seventh, silver shaving mug and brush; Burt eighth, $5 in gold. The summary follows:

Gold Coin Match, 10 clays, 10 standards:

	Clays.	Standards.
Field	1111110011— 8	1101111111— 9—17
Perham	1111111101— 9	1101110111— 8—17
Snow	1111011111— 9	1100111111— 8—17
Stanton	1111111110	1011010111— 7—17
Knowles	1111011010— 7	1101101111— 8—15
Chase	1011110110— 7	1011111011— 8—15
Webster	1110110101— 7	0111110111— 8—15
Swift	0011111111— 8	1001101101— 6—14
Crown	1010111010— 6	1101111000— 6—12
Nichols	1011001101— 7	0100011111— 5—12
Wigglesworth	1111010100— 5	0110110100— 5—12
Rule	0111110110— 7	0110000011— 4—11

Consolation Match, same conditions:

Chase	1111101111— 9	1111111110—10—19
Knowles	0100111111— 7	1111001111— 8—15
Rule	1110111101— 8	1110100111— 7—15

Winners in minor events—Five clays, Knowles and Rule 5; six standards, Field 6; five clays, Knowles 5; six standards, Field and Swift 6; five clays, Crown 5; six standards, Crown, Nichols and Knowles 5; five clays, Nichols and Stanton 5; six standards, Perham and Swift 5; five clays, Swift 5; six standards, Knowles 6; five clays, Nichols 4; six standards, Stanton 6; ten clays, Stanton 10; ten standards, Field 9; three pairs clays, Curtis and Stanton 5; six standards, straightaway, Snow and Stanton 5; ten clays, Stanton 10; ten standards, Chase 10; five clays, Perham, Snow and Stanton 5; six standards, Knowles, Nichols, Perham and Stanton 5; six clays, Nichols 5. The next shotgun meeting at Walnut Hill will be held on Wednesday, Jan. 9, 1889. The occasion will doubtless attract a large number of shotgun men, as, in addition to the eighth competition for the Climax diamond badge, there will be two contests—one for the five-man team badge of the State Association, and one for the individual glass-ball medal of the State Association, now held by Mr. Stanton.

WELLINGTON, Mass., Dec. 25.—There was a goodly number of sportsmen at the Wellington range to-day. The sport was perfect and the weather immense. The winners were as follows: Six pigeons, Field and Webster; 6 bluerocks, Perry and Melcher; 6 bluerocks, Snow, Field, De Rochmont and Schaefer; 6 pigeons, Snow, Perry and Chase; 6 bluerocks, Field, Sanborn, Webster and Schaefer; 6 bluerocks, Edwards, Field and De Rochmont; 6 pigeons, Bond, Perry and Swift; 6 bluerocks, Field and Bond; 3 pairs pigeons, Perry, Chase and Swift; 6 pigeons, Webster, Snow, Perry and Chase; 3 pair bluerocks, Grimes, Perry, Tribble and Melcher; 6 bluerocks, Perry and Chase; 6 bluerocks, Perry; 6 pigeons, Nichols and Snow; 6 pigeons, 24yds. rise, both barrels, Perry and Snow; 3 pair bluerocks, Perry.

LOWELL, Mass., Dec. 25.—About a dozen members of the Lowell Rod and Gun Club went to their range at Tewksbury and enjoyed the day in sweepstake matches at clay-pigeons and blackbirds. Fourteen matches were shot besides team matches and a private match. The first team match was won by Knowles, Colt and Piper, at 5 clays, defeating Bates, Dutchy and Gregg. The latter won one match and were defeated in a second one. Most of the participants shoot under fictitious names, relieving the sport of public interest. A private match for $5, between Bates and Hartford, at 25 clays, resulted: Bates 23, Hartford 21. Among those present willing to be known by their proper names were Knowles, Hartford, Bates, Gregg, Bowen and Shedd.

BANDLE'S 'BIG SCORE.—The magnificent showing made by Al Bandle, of Cincinnati, at the Christmas Day shoot against A. H. Bogardus is the talk of every marksman in the country. Between 1,300 and 1,500 lovers of the sport witnessed the shooting, and to their credit, be it said, they acted very impartially in applause, crediting the world's famous champion, Bogardus, when a good shot was made, equally as well as the undoubtedly Cincinnati wonder. The birds were but fair as to the great strength of wing, but there were some good hustlers. Poorer birds have been sprung, and the Cincinnatian's record is the best under any established club rule ever made. Even if the birds had been good the prospects are that the form Bandle was shooting in would have landed him where he did. He resorted to his second barrel in the majority of cases where it was not at all necessary, his only object apparently being to make sure and make good his promise made some years ago, that if he shot at the trap long enough he would some day score a straight hundred live birds from English traps. He has done it, and the record he made is very likely to stand for many years yet to come. There is certainly nothing of the nervous man about him, and if one defeats him he must do so by merit of better judgment and knowledge of shooting. Bogardus, the father of the trap, was surprised from the 20th bird on, and finished with a score that, made against any other man, would be looked upon as phenomenal. Though fifty-six years of age it is doubtful even to-day if he has an equal in the country. When he hits his bird with the first barrel he never hesitates at the score, but steps away, knowing well his bird is sufficiently hit to be gathered in bounds safely without resorting to his second barrel. Pigeon shooters that have not witnessed a shooting match for many years were present to see the world's record beaten:

Bandle	1 1 2 1 1 1 2 1 1 1 2 1 2 1 1 1 2 1 1 2—20	
	1 1 2 2 1 1 1 1 1 1 2 2 1 1 2 2 1 1 1 1—10	
	1 2 2 1 2 1 1 1 2 1 1 1 2 1 2 1 2 1 1 1 2—20	
	1 1 1 2 1 1 1 1 1 2 1 1 1 2 1 1 2 1 1 1—20	
	2 1 1 1 1 2 2 2 1 1 1 2 1 1 1 1 2 1 2—20—100	
Bogardus	1 1 2 2 1 1 1 2 2 2 0 1 2 2 1 2 1 1 2 1—19	
	0 1 1 1 2 1 0 1 2 1 2 2 1 1 1 1 1 1 0 1—17	
	1 2 1 1 1 1 1 2 2 2 1 2 2 1 2 1 2 1 2 2—20	
	2 2 1 1 0 1 2 1 1 1 2 1 2 1 1 1 1 1 1—19	
	1 2 2 2 1 1 2 1 1 1 1 1 2 2 2 2 2 1 1 1—50— 95	

Three of Bogardus's birds fell dead out of bounds. Time of match, two and one-half hours. Referee, S. A. Tucker, of Meriden, Conn.; puller, A. C. Dick; official scorer, Edwin Taylor. Bogardus shot a 12-gauge L. C. Smith gun, hammerless, 7lb. 12oz. in weight, and shot 4drs. American wood powder in his right barrel. 1¼oz. No. 8 shot in first and 1¼oz. No. 7 in left, backed up with 3¾drs. Laflin & Rand Orange Lightning powder. Bandle shot the same make of gun, 10-gauge, and used right barrel, 4drs. wood powder, left barrel, 4drs. Laflin & Rand "FFF extra" powder, 1¼oz. No. 7 shot. In commenting on the event, "Capt. Bogardus said that never in the world before was a clean score made under the rules at 100 live birds, the feat that Mr. Bandle has accomplished. Mr. S. A. Tucker, the referee in this match, pronounces the feat unparalleled. A score of 87 out of 100 and upward at live birds entitles any marksman to a rank among the great shots of the world. This Christmas shoot was under strict Hurlingham rules, except as to Bandle's gun gauge. The five ground traps, instead of being scoops which push the bird out and encourage it to fly, were the tin lay open traps, such as are used in bird shooting in England. They are not the best to make the birds fly. There were 5 of these traps arranged 5yds. apart on the arc of a circle, the distance of which from the shooter was 30yds. The stake was the gate money. The birds were domestic pigeons. While they were a fairly good lot, some of them were too good and some were not good enough. This makes the task of the shooter more difficult, as it increases the demand upon his nerve and judgment. Any shooter will admit that an uneven lot of birds is the hardest to make a good score upon. Fully half of these birds had to be whipped up with the ropes after the trap had been pulled open." Dr. William F. Carver has just challenged Albert Bandle to shoot 100 live birds for $250 a side. Bandle has accepted the challenge under Hurlingham rules, except as to weight and bore of gun for himself, the match to come off at Cincinnati early next March. It is for Dr. Carver to say whether he will accept the exceptance allowing Bandle a 10 or 9½lb. gun.

CINCINNATI, O., Jan. 1.—*Special to Forest and Stream.*—The match between Al Bandle, of Cincinnati, and Rolla O. Heikes, of Dayton, as rearranged yesterday for $250 instead of for $500 a side as first agreed upon, was witnessed to-day by nearly 1,000 people. There would have been a much larger crowd of spectators had the match begun at half past one instead of at eleven o'clock. The weather conditions were perfect except that it was a trifle muddy under foot. An army of bushwhackers surrounded the Old avenue grounds on three sides and rendered it impossible to score birds that fell dead out of bounds. The conditions were 100 live domestic pigeons to each man from 5 ground traps 5yds. apart, 30yds. rise, Hurlingham rules, except in respect to weight and bore of gun. Both used 10-bore hammerless guns, 9¼lbs., loaded with Schultze powder and No. 8 shot in the right barrel and with black powder and No. 7 shot in the left, 4drs. of black powder and its equivalent in white powder were used by both. The traps were the square lie-open traps set on top of the ground, not the hidden scoop trap. Not much attention was paid to trappers, several different ones officiating for both men. The number of the traps to be pulled was indicated to the trapper by lot. Mr. L. K. Burtain, of Dayton, O., State game warden, Heikes's right hand man, was the official scorer, and Mr. Edward Taylor, of Cincinnati, was referee. Here is a complete summary of the score by twenties:

Heikes	1202101020111110010—19	
	1101220111121121121—19	
	1112011121121211111—19	
	2101210112 0012?111—16	
	2201121202020031201— 13—81	
Bandle	1011102121221201122—19	
	1120111111112011121—18	
	2111210121201111211—18	
	1011221222022101111—17	
	2111112121112121111—20—90	

The first twenty and the last thirty birds were grand fivers, the others were fairly good. Bandle had 5 incomers from No. 2 trap, and Heikes had 5 tailers from No. 4. At the sixty-second shot they tied on 54, but from that time on Bandle led, making his last 24 straight. JOHN R. CHAMBERLIN.

DAYTON, O., Dec. 25.—At the meeting of the Ohio Trap Shooters' League here last fall, C. W. Hart, of Huron, O., and Rolla O. Heikes, of this city, tied on 95 birds in the 100 bluerocks match for the State championship and the L. C. Smith $500 silver cup. In the shoot off they tied on 49 birds and postponed the contest. They met here to-day to settle it, and a fair audience of shooters was attracted. Gray, cloudy, but mild weather prevailed, and the surroundings were all favorable to the shooters. Conditions of the match were 100 bluerocks each, 3 traps, 18yds. Mr. Cad Langdon, of Piqua, was chosen referee; H. Hart, of Huron, brother of the shooter, and Wm. Pratchett, of this city, were judges, and J. H. Keifer was official scorer, and following is his record:

Heikes	1111110111	Hart	1011111111
	1111111111		1111011111
	1111111101		1110111111
	1111111111		1111001111
	1011111110		1111110101
	1110111111		0111111111
	1111101111		1111111111
	1111011111		1111011111
	1111111111		1011111111
	1111111111—93		1111111111—90

When each of the men had shot at 20 birds Heikes was one ahead and he held that advantage until Hart lost his 35th and 36th, which gave Heikes a lead of 3, which he maintained until the match was finished. When Hart lost his 51st he was 4 behind. Heikes dropped his 64th, but was an easy winner. Heikes will retain the cup and the honors until the next League tournament, when he will be called upon again to defend it.

TOLEDO, O., Dec. 25. The following is the score of a team match which was shot to-day between J. S. Acklin and E. A. Longdon and G. C. and C. F. Osborn, at 100 bluerocks a side:

J S Acklin	1111111111001111101111—22	
	1111011111111001010111111—21—43	
E A Longdon	1111011111010111011101110—19	
	1110101110111111111110111—21—40—83	
G C Osborn	1111111111111011111111111—24	
	1111111111111111111111111—25—49	
C F Osborn	0110111111010101111111011—19	
	1111111111101101010111111—22—41—90	

ELKTON, Md., Dec. 25.—A series of pigeon shooting matches on the outskirts of Elkton this afternoon was largely attended by local sportsmen and others. Over 200 birds were shot at. The principal match, 20 birds a side, between Henry Cameron and Robert Rudolph and Edward Garrett and John Morgan, was won by the last named two. Harry Garrett defeated Thos. Settle, and Henry Cameron beat Robert Rudolph in other matches.

CONEY ISLAND, N. Y., Dec. 25.—A shooting match at the Old Mill on Coney Island Creek was held to-day. The stakes were $100 a side, each man to shoot at 25 birds. The following is the score:

Charles Rein	1111101111101111011111111—22
William Golding	1111111111011111110010110—20

Referee, David Van Wicklen.

BALTIMORE, Dec. 25.—The South Baltimore Gun Club had a clay-pigdon shooting match at Acton Park to-day, and the silver medal was won by W. T. Clements. The shoot was at 25 pigeons for each man. Clements hit 25, Wroten 22, Cotterton 20, Jory 20, Schultze 19, Clellan 19, Stone 16, Parks 13, Essex 11, Stevens 8, Fisher 4.

TORONTO, Dec. 25.—The annual Christmas shoot of the Guelph Gun Club was held this morning, at 7 live birds each, and resulted as follows:

Brown	1111111—7	J Hogan	0110101—4
G Thompson	1101111—6	A Cull	1110101—5
C Queen	0101111—5	Edwards	1001101—4
H L Walker	1001111—5	J Turnbull	1101111—6
G Thompson	0010110—3	J Johnson	1001001—3
T Holliday	0011101—4	F Hall	0011110—4
J Johnson	1101110—5	J Hall	0101001—3
Theman	1101111—6	J Wayper	1111011—6
H Cull	1111101—6		

The match was a handicap one. A match at Hamilton blackbirds came off after the live bird match. Walker broke 16 out of 20, Miller 16, Cull 7, Johnson 12, Wayper 20. In the shoot off in the tie Walker won.

PHILADELPHIA, Dec. 25.—There was shooting for club prizes, open to members only, at the grounds of the North End Gun Club, of Frankford, to-day. The terms were 25 bluerocks per man, class shooting. Those winning prizes and the scores they made were as follows: First, W. H. Wolstencroft, 22; second, W. M. Pack, 21; third, James Wolstencroft, 20; fourth, H. Ridge, 19; fifth, George E. Pack, 18; sixth, A. Lawrence, 17; seventh, S. Richards, 16; eighth, J. Crowther, 15; ninth, Elmer Ridge, 14. There were a number of ties, which were shot off with great spirit.

NEWARK, N. J., Dec. 29.—The South Side Gun Club had a pleasant day's sport at artificials Christmas on open sweepstakes. Breintnall led the list on the aggregate broken, breaking 96 out of the 105 shot at. Yeamans broke 92, missed 13; Thomas broke 58, missed 17; Terrill broke 118, missed 26; White broke 76, missed 19; G. Still broke 49, misse 5; Leroy Still, a new hand at trap work, broke 34, missed 11. This afternoon a competition was held for the Essex County Gun Association Cup, held by O. Von Lengerke since the last shoot. The conditions were that each man should shoot at 15 bluerocks, 20 clay-pigeons and 15 bats, 50 in all. Breintnall won yesterday's contest with the fine total of 48 breaks; White and Phillips each broke 44, Hunt and Oswald Von Lengerke each 42. In an open sweep which followed White took first with 10 straight; G. Still, Breintnall and Phillips 9 each; I. H. Terrill, Hunt and Von Longerke 8 each.

PROVIDENCE, R. I., Dec. 25.—A large and interested company was present at the Christmas shoot of the Narragansett Gun Club. The day's sport consisted of twelve events, which called for about 2,000 birds, winners as follows: 7 bluerocks, E. S. Luther; 7 clay-pigeons, Houghton; 7 bluerocks, Luther and Houghton; 7 clay-pigeons, Potter; 7 bluerocks, Luther; 4 pair bluerocks, Payne and Luther; 7 bluerocks, Houghton; 7 bluerocks, Tinker and Potter; 7 clay-pigeons, Luther; 25 bluerocks, Luther; 25 clay-birds, Gray, Houghton and Luther; 50 bird contest, Luther first, Houghton, Potter and Gray second, Tinker third, Adams fourth. Luther 39, Houghton 37, Potter 37, Gray 37, Tinker 31, Adams 30, Payne 28, Crandall 27, Randall 26, Carey 27, Bender 13.

LITTLE HAWKEYE.—At a sweepstake shooting match at glass balls, for a purse of $25, between Isaiah Budd and Rachel Hunsinger (Little Hawkeye), at Gloucester City, N. J., on Christmas day, the former won by breaking 13 out of a possible 15. Miss Hunsinger only broke 2.

ST. LOUIS, Dec. 25.—This afternoon the Oak Hill Gun Club had a meeting and shot three sweepstakes. The first event was at 9 live birds each man, ground traps, 28yds., use of both barrels: S. Wade 5, Swiveller 5, Junge 4, E. Gutgesell 2, G. Thorpe 4, J. Twist 4, F. Loesacam 2, Kendall 4, Wm. Twist 4, Wm. Gutgesell 3. Wade and Swiveller divided first money; ties on 4 and 2 divided. Second event, 3 birds each: Swiveller 3, Wade 3, E. Gutgesell 3, G. Thorpe 2, C. Thorpe 3, Loesacam 2, Kendall 2, Wm. Twist 3, J. Twist 2, Wm. Gutgesell 2. The pigeons were first-class in all respects, leaving the traps like a flash. The balance of the day was spent in bluerock shooting, Mr. Gutgesell making the highest average—86 per cent.

CINCINNATI, O., Dec. 29.—On Dec. 15 Rolla Heikes of Dayton, O., and Albert Bandle of this city agreed in writing to shoot a match here at 100 live birds, using Hurlingham rules except in respect to the weight and bore of their guns, for $500 a side. When the money should have been put up, Heikes wanted to change the amount of the stakes to $250 instead of $500. Bandle telegraphed that he would shoot for $500 or not at all, to which Heikes replied that he would not put up more than $250, so that the match which was expected on New Year's was declared off.

NEW YORK, Dec. 28.—The Mount Morris Gun Club, an organization recently formed by some well-known Harlemites, held its first sweepstakes shoot to-day at Oak Point. Three matches were decided, the first being at 9 clay-pigeons, the second at 10 live birds, and the third at 5 clay-pigeons. Mr. Frank Bonbam, of the Cribb Club, was referee. Joseph Heraty was scorer and J. Smith had charge of the traps. In the match at 9 clay-pigeons were four contestants at $5 each. Their scores were as follows: P. McKeon 8, T. Mullen 7, P. Mullen 6. The live bird match was at 10 birds, 21yds. rise, for $20 a man. T. Mullen won, killing 9, P. Mullen was second with 8, J. Mullen third with 7, and P. McKeon last with 4. The last match was won by P. McKeon, who killed 5 straight; T. Mullen second at 4, and P. Mullen third with 3.

MONTREAL, Dec. 22.—The gun men only had one shoot to-day to keep them busy, but it was an unimportant one, the Montreal challenge cup being shot for. It is just a year ago since the Montreal Club offered a silver cup for open competition. At that time there had been no split in the club, the Dominion club had not been formed yet, and with the combined good shooting of what is now two clubs, it is not to be wondered at that the first shoot was won by the Montreal Club. The conditions of the cup are that it is a perpetual challenge cup, the club holding it to be obliged to defend their title every thirty days. The Lachine Club were the first to challenge the Montrealers, and the Lachine men won. The Cote St. Paul Club then put in a claim and twice shot for the trophy on the Lachine grounds, being defeated each time. The Dominion Club, shortly after its organization, challenged for the cup, but when the day came one of their cracks went all to pieces at a critical point, and for the fourth time the Lachine won the trophy with a little to spare. This was a good many months ago, and at last the Dominions remembered the fact that the cup was still waiting for customers at the old stand, and the outcome of this recollection was Saturday's shoot, and for the first time Lachine sustained defeat. It was unfortunate, too, that the time set for the shoot was somewhat inconvenient, 1:30 was too early for some of the Lachine men, although they set the time themselves. The Dominions, however were on hand with a full team, and so four Lachine men shot against five Dominions. The shooting, from the high winds and the setting of the traps, was about as poor as it could be. The score was: Dominions 31, Lachine 23.

MONTREAL, Dec. 25.—It was awfully bad weather, but it did not deter the shooters from turning out to the Dominion Gun Club competition. At 10 o'clock the shoot for the Captain's cup was started. This trophy will be won by the man making the best aggregate score. To-day Mr. L. T. Trotter broke 11 singles and 7 doubles, a total of 18 and won the first match; W. Lumsden with 10 singles and 6 doubles coming next and Mr. Ferguson with a total of 15 coming third. In the competition for the Horsley gun, Mr. Ferguson won the mortgage with 17 out of 20, but only after ties on the same number had been shot off with Jones. On the first tie they broke four birds each; on the second tie Jones stepped to the score and broke two out of five, while Ferguson broke his three easily and won the competition, being the second time he has put a match to his credit. Still the ownership of the Horsley looks a long way off.

STICE VS. BUDD.—J. R. Stice, who recently won the title of champion wing shot of America from L. S Carter in the shoot at Decatur, has accepted the challenge of C. W. Budd of Des Moines to shoot for $50 a side and the championship cup. He names March 5 as the date and Jacksonville, Ill., as the place for the match.

TALLMADGE, O., Sept. 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* Dear Sirs—I have used a good many U. S. cartridges, and they have never failed to give satisfaction. Yours truly, (Signed) E. S. METLIN.—*Adv.*

A RIGHTHANDER FROM A "COWARD."

Editor Forest and Stream:

1. "I think the regatta committee owe it to the Association to suggest changes that appear to them to be for the general good, and I hope this year that we will have a committee with sufficient backbone to do so." The 1888 committee then were cowards!

2. "One would naturally think, after seeing about 8in. of a circular saw projecting above a coaming, that it would just take the regatta committee about fifteen minutes to see that if by the sailing regulations they ruled that 'a centerboard must not project below the keel,' that they had an equal right to legislate that they [the writer does not make it quite clear who he means here] should not go to the other extreme and run the board 6 or 8in. up through the deck or cockpit.

3. "Something that was never anticipated when the present rules were framed, and so was not guarded against.

4. "By the action, or rather want of action (in this line) of past regatta committees, one would think that the rules which were given us many many years ago were so sacred that to offer or suggest a change to the executive committee would be a most heinous crime, never to be forgiven." (Letter from Mac in FOREST AND STREAM of Dec. 20.)

I have had considerable abuse showered on my head this year from one source or another in connection with the A. C. A. Regatta Committee, of which I had the misfortune to be appointed chairman, much against my will, and at great personal inconvenience to myself; but it has remained for W. G. MacKendrick to call me and my fellow members of the committee cowards. I will attempt to answer his statements in their order.

1. A letter was sent by me to the executive committee meeting in Toronto embodying the suggestions that the regatta committee of 1888 thought of sufficient importance, in the matter of changes in rules, conduct of regattas and arrangement of programme, to receive attention at their (the ex. com.'s) hands. The majority of these proposed changes in rules, etc., have been published in FOREST AND STREAM, I believe this answers the charge of cowardice, although the special things aimed at by Mac were not there mentioned for reasons which will be stated.

2. The regatta committee have no power to change the rules, and therefore whatever conclusion they happen to reach "in fifteen minutes" after seeing something, cannot be incorporated in the rules until they have made their suggestions to the executive committee in meeting, and that august body has acted on the same. Where would we be if the regatta committee were allowed to change the rules at their discretion every fifteen minutes? A man whose boat was built according to rule could then be ruled out after he had arrived at the meet because the regatta committee did not fancy his boat or rig. As only one boat appeared at the meet with a board coming much above deck, and as that characteristic did not seem to be conducive to race winning, although the arrangement must have been very inconvenient to the owner of the canoe, it did not seem of importance enough to the committee to take any action upon it.

3. Really, and what then was the first board ever used in a canoe in America? A daggerboard, which when raised clear of the keel either came out of the trunk entirely or projected so high above deck that it actually endangered the free swing of the boom.

4. As the rules have been changed, added to and amended almost yearly proves this statement to be incorrect, like many others in this letter.

I believe that about this time last year the same writer expressed himself very forcibly in a long series of long letters as to how the Association and its races should be conducted in his opinion, and when the commodore gave him the authority to inaugurate and conduct the business in the line of his ideas, he instantly dropped out of sight and of mind for many months, declining to even take a hand in the reform he so emphatically urged. Still he is a member of the A. C. A., and as such perhaps deserves some attention—to the extent of correcting a number of his misstatements at any rate.

The standing rig, hikeout deck seat and centerboard in middle of canoe coming above deck are the three objects of his wrath at present. As I have never used any of them, and never intend to I will not be charged with a personal interest in speaking of them.

A conservative policy should be observed as to changes in the A. C. A. sailing regulations. In any event Rules I. and II. are the only ones affected, the definition of a canoe (to compete in the races) and the crew and rig.

The performances of canoe Fly have proved that the hoisting rig is quite the equal of the standing rig in point of speed (contrary to Mac's statements). I detest the standing rig for many reasons, but I would not prevent any one else from using it if he so desired, believing as I do that it will work its own ruin. One boat, one man, one rig is too general. What shall one rig consist of? Two sails? I prefer to have three sails and a spinaker, but I am quite willing to carry all of them in the canoe at all times. The races can easily be arranged to make a standing rig next to impossible, without touching the rules, as "Retaw" has suggested.

I see no objection to the deck seat, knowing as I do that just as soon as it is carried too far, the crew is sure to get soused. Yet I would not oppose its being ruled out if it extended beyond the side of the canoe, although I can see how this would be a very unfair rule to certain members. Likewise I would not oppose a rule forbidding the board coming above the deck; but I protest against the hard things said in the letter about the framers of the rules and the various regatta committees that have enforced them. I don't see how the rules can fairly prevent a man putting his board wherever he pleases in the canoe, although under no circumstances would I fill up my cockpit with one in the very middle of the canoe. Let necessary changes be made in the rules; but don't do it on the fifteen-minute (MacKendrick) plan, or a wreck will ensue.

C. BOWYER VAUX.

A CLERICAL CANOE CRUISE.

THE following extracts from a letter were sent us by Vice-Com. Tyson, the writer being the Rev. Richard Young, D. D., Bishop of Athabasca, an honorary member of the Toronto C. C. The Ripple is a modified Pearl canoe, built about six years ago by Glendinning. Her owner has used her a great deal in his visits to remote parts of his bishopric, which is situated in the northern part of Canada:

ST. PAUL'S MISSION, Chipewyan, Athabasca, N. W. T., Canada, July 30, 1888.—*Dear Mr. Tyson:* When I last wrote you I think I intimated my intention of relegating the Ripple to a shelf in the T. C. C. museum of antiquities, a sort of canoe "Victory," to be moored in your museum for the curiosity of visitors. However, there is some life in the "Grand Old Girl" yet, and she continues to do good services; but not without worthy scars. Last spring we were troubled at Vermilion with a flood from ice jams, which threatened at one time to be rather serious.

In the beginning of July I had the pleasure of meeting my clergy in Synod; two of the number having traveled down the Peace River on a raft, over two hundred miles.

The following week I set out with my Archdeacon for this mission on Lake Athabasca. The Ripple afforded us excellent though rather strained accommodation, my Archdeacon being on the wrong side of 200lbs. We started with a stiff wind, the Archdeacon ensconced in the waist of the ship, and I perched on the after hatch. There was a considerable cross sea running, and I found it required some care in keeping my seat. A bend lower down afforded us a sailing wind for a while, but before long we had to once more grasp the paddle and force our canoe through the choppy sea in the teeth of quite a respectable gale. We camped at about 7 P. M. in what is here termed a "schnei," or narrow channel between an island and the main shore. The mosquitoes made the best of their opportunity before a pretty heavy shower of rain, from which we were glad to escape by seeking repose under the shelter of our tent.

We were off about 5:30 A. M. A calm, bright morning, but with a promise of head wind, and so paddled till about eleven. We had a fine view of the Caribou Mountains at our left, and the river scenery, with its noble reaches studded with islands, has an attraction of its own. Eleven A. M. rain, but fair wind, and so pulling ashore we set the kettle boiling, and making tea and necessary preparations, shoved off and hoisted sail and luncned as we traveled. For two or three brisk puffs, interspersed with showers, the wind died away and we took to the paddle once more. We could now hear the souud of the rapid and "shoot" or "fall" which forms the only interruption to navigation in the whole course of the Peace River. We paddled steadily on in a regular Scotch mist until we were almost at the head of the rapid, when prudence dictated debarkation and our first portage.

Once more we started on the rapid current till almost at the head of the "shoot" or fall, which extends across the whole width of the river. I continued in the canoe, while my companion crept along the edge, rope in hand, and so we gained a point or two more. We then hauled the canoe on the rocks and went forward to reconnoitre, and found the portage, not an easy one at the best of times, rendered considerably more difficult by the unusual height of the river. However, with great care we managed to lower our canoe to a ledge of rock on the very verge of the fall. Here, unless we wished to depart as our Toronto friends of the pleasure of gazing some day on what might be taken fairly to represent the original hull of the Ripple, we had once more to portage. It was not easy work, in the drizzling rain, on the slippery rocks, with the wretched mosquitoes taking mean advantage of both hands being occupied. Having hauled the canoe below the "fall," the question then arose, where were we to put her in. A few yards below the fall, where the water was not so boisterous, the rock went sheer down, and rising some 5ft. above the water. The only place was right at the foot of the fall, where the water was boiling and seething. Here on sounding we found there was a ledge of rock about a foot in width, some 2ft. under the water. My Archdeacon, having the most ballast, was deputed to take his stand on this and hold the canoe, and as each surge did its best to stave in her sides on the rocks, and each resurge to suck her out under the fall, it required all his weight and muscle combined to keep her in anything like position. It fell to my lot to load her, necessitating my gingerly stepping on board with each piece and putting it in its proper place.

Our centerboard had also come to grief on the rocks, and instead of being dropped into the well had to be laid on the bottom of the canoe. It was rather an anxious time, as should our ship be wrecked we should have found ourselves in a wilderness, sixty miles at least from any help, and no road. The next question was, when I had loosed the rope and taken my place, whether my companion would be nimble enough to secure his seat. The next, whether we could at once sheer out sufficiently to clear a projecting tree, which, stripped of its bark and branches, jutted out from the rocks like a huge spar some 2or 3ft. above the water. By great Archdeaconal agility the first difficulty was successfully overcome. A prompt use of our paddles shot us well out into the boiling current, and next moment the falls for that trip were a thing of the past. A steady paddle of about three miles through the drizzling rain brought us to the H. B. Co.'s post at Little Red River.

Gladly would we have known that a warm welcome was in store for us, as is ever the case in these northern latitudes. But we knew the post was shut up; nailed up doors and barred windows frowned upon us. Wet through and weary, standing up to our knees in rank wet grass, we could not afford to stand on ceremony, and we managed to find backland branches, jutted out from the houses. A blazing fire in the mud chimney, and a hot supper soon dried and refreshed us, and though the mosquitoes swarmed like bees, we put in a very comfortable night.

Next morning we devoted to repairing our centerboard with "shaganappi." The fracture seemed hopoless, except in a blacksmith's shop, but we found a piece of shaganappi an excellent provisional remedy.

We started once more about 11. Fine weather, but head wind. However, sometimes by tacking and sometimes by running very close to the wind, we secured some substantial rests. The next day a strong, fine wind blew, of which we made the most. We were rather lazy by the stern. Once or twice we ran with our stern under water. The wind then got gusty, and prudence dictated taking in a reef. About 5 P. M. we came to the only other rapid on the Peace River, which, though of considerable length, offers no real obstruction to navigation. Here, however, we nearly came to grief. As the water was unusually high we anticipated no difficulty, and carried on, the wind being still very stiff. While bowling merrily along I noticed a peculiar rippling of the water and dropped a half paddle down to sound, to find we were hardly three feet of water, and shallowing. To drop our sail and haul up the centerboard was the work of a few seconds, and as we were from this point fairly in the rapid, we proceeded with the paddle.

The course of the river affords some fine scenery here. It passes through a low range of limestone hills. The cliffs in the river face abound in gypsum, which at points crops out in considerable quantities. At the foot of the rapid is what is called Stone Island, the upper face rather resembling an old castellated ruin. I have generally passed this part of the river in fine weather. The evening we passed in the Ripple was not behindhand in solemn beauty, with a young moon overhead. We chose for our camping spot, being Saturday night, rather an abrupt ascent crowned by a grassy slope and fragrant with wild herbs. The mosquitoes, who take an active interest in all camping proceedings about sundown, were out in force, but a strong evening breeze and a good "smudge" held them in abeyance.

The following day being Sunday, we remained in camp during the morning, with morning service, in which, like Dean Swift, one might have commenced the exhortation—"Dearly beloved Roger, the Scripture moveth you and me," on an occasion when he found the congregation consisted of himself and the clerk; though in scantiness of numbers we found no drawback to our enjoyment of the grand old service. After dinner we started with a light breeze, and part sailed and part drifted with the stream. A Sunday calm rested on creation, and floating slowly past the pine-covered islands, we enjoyed the lights and shades that flickered in the summer breeze, and the shafts of sunlight penetrating among the dusky pines and throwing into strong relief the leafy snades—shades that seemed to woo us to rest amid their cool retreats, did not the string of mosquitoes in anticipation bid us with policeman-like sternness to move on.

Floating out on a lakelike reach a shot from a distant bay awoke the solitudes, and soon a couple of hunting canoes ran alongside, as though eager to make the acquaintance of their Canadian cousin. The occupants, these Chipewyan Indians, shook hands all round and then proceeded with broad grins and many ejaculatory grunts to inspect so strange and novel a departure from birch bark traditions. Being an aquatic race they have an eye for anything in the boat line, and it may please Mr. Glindinning to know that his craft appeared to meet with their full approval, but whether he will receive any orders is a little doubtful. In any case he had better not "give debt." Our friends accompanied us to camp, and we spent the rest of the evening in religious instruction. It turned out that they were survivors of a band of twenty-eight, of whom nineteen perished from starvation during last winter, Poor fellows! On inquiry I found out that this was the hand with which I had fallen in four years previously under, for them, happier circumstances.

One hot July morning, together with a missionary student and an Indian pilot, I was coming down the last-named rapid in a dug-out, when we espied a moose. Being short of provisions we started in vigorous pursuit. As our heavy canoe surged ponderously through the water, and we watched the moose with its long swinging trot, as though it was leisurely picking its way among the large boulders that strewed the narrow strip of shore under the cliff, it seemed about as absurd as for a tortoise to hunt a hare; and yet, as in the case of the fable, the battle was not to the swift. Our moose did not go to sleep, but, what was fatal to her, she took at last to the water, and very soon we had our quarry in tow. No sooner was the heat and the excitement of the chase over than I began to regret the waste of food which the large carcass, the hot weather, and our paucity of number must inevitably bring about. Hardly had we commenced cutting up when a shot was fired from the opposite bank. A couple of shots from us went out in reply, and in ten to fifteen minutes twelve light hunting canoes appeared round a headland. Very soon their occupants were shaking hands, hearing the accounts of our successful chase, and with skilled rapidity cutting up the game. Retaining what we needed, we handed the rest of the carcass to them, and a few handsful of tea made us the very best of friends. Any fears about waste of food, if not already dissipated, vanished when an hour afterward we came across a laughing and chattering crowd of women, boys, girls and babies, with the dogs and household canoes. Some crows, which had scented the prey from afar, and had been hovering around, appeared to be of the same mind, and wisely concluding there would be nothing left for them had disappeared.

On the Tuesday afternoon about 3 P. M. we paddled out on to the fine Athabasca Lake, the arm on which the Fort and Mission stands being picturesquely strewn with islands. It was quite refreshing to restore the Ripple once more to her native element—a good broad lake—and though the wind was dead ahead we were eager to test her good sailing qualities. So, paddling well outside the mouth of the Quarte Forche, the narrow twisting cut that connects the Peace River with the lake, we hoisted sail, close hauled. On the next tack we covered about half the distance, and then feeling sleepy the captain retired below, *i. e.*, I managed to stow myself well down in the waist and sought the refreshment of a nap. Awoke to find the Archdeacon grumpy, a nasty choppy sea, and too close-hauled to make much progress. So instead of finishing our 270-mile trip with flying colors we had to paddle in. My old burgee being sadly dilapidated we manufactured a new one.

Nearly every evening during my stay here, either alone or in company, I have enjoyed a cruise in the Ripple, over which the T. C. C. burgee has proudly flaunted in the breeze.

Ever yours most sincerely,

RICHARD YOUNG.

CHRISTMAS CANOEING.—Boston, Dec. 26.—This year our California and Florida canoeing brothers cannot claim the honors of being the only members of our large family who went canoeing on Christmas day. The fine, spring-like balminess of the day in Boston and the jolly, steady breeze allured some of the Puritans for a sail on Dorchester Bay. There was a good stiff breeze, and a very merry Christmas was passed in tacking about the bay.—A. C. ALLEN CHAMBERLAIN, Puritan C. C.

Yachting.

FIXTURES.

JUNE.

THE CRUISE OF THE LEONA.

Editor Forest and Stream:

The following clippings are from a letter received from Capt. Lutes, dated Norfolk, Dec. 8;

"I have not exact data as I have not kept as correct account of our trip as Commodore Work did last winter in the Monarch, as published in the FOREST AND STREAM; but I have tracked him thus far. We left Betterton for Chester River (before the oyster war), where we encountered a northeaster and had to lay off for three days. It was here the heavy anchor we got from you saved the ship. Many thanks for urging us to take it. Ran across to Annapolis, where we stayed another week. Left here and ran to Herring Bay, from there to the Patuxent; wind N. and blowing a gale. Carried the three lower sails, falling in with the dredgers going in, and kept them company all the way up, the lighthouse keeper saluting us. No one would believe we came from Herring Bay that day until verified by a buckeye that came in from that place and saw us when we left. It stormed and blew a gale for a week. Got under way, but came near washing Whiting (mate) overboard; so we put back, and took a fresh start next morning and ran to Jerome Creek and were caught in a snowstorm and stayed two days. From there we crossed the Potomac and ran to Great Wicomico; wind N.W., blowing heavy. You know how it is across the Potomac in that kind of wind, but we were in for it, and had to go. Had to board the yawl, after vainly endeavoring to tow her with double quarter lines. Some oystermen laying under the upper point hailed us. 'Where are you bound? For the lower point? Well, you will never get there with that cockleshell.' But we did all the same; the big fellows did not know that we were drawing as much if not more water than they. From Wicomico we harbored in a small creek below the Rappahannock. Next day ran to Yorktown, where we put in three of the most interesting days of the trip. * * * The fact is, everything being new to us, events so crowd each other that we scarcely have time to jot anything down. But our stay here will never be forgotten. Left Monday at 8 A. M. and reached Norfolk at 3 P. M.; would have made it in less time, but had to fight a strong adverse tide in Hampton Roads.

"The buckeye is the prevailing boat here; they range all the way from 18 to 60ft. long, and sail very fast and will live in almost any kind of sea. The small boats are flat-bottomed and are called jo-boats, the round-bottoms are dug-outs. The small sloops and schooners are of the worst class and shape, slow, unseaworthy and badly kept. The men in that have charge of them are very timid, and are surprised to see the Leona go out in a stiff breeze with everything set, while they are reefed. They think us reckless sailors and a shade too fast, yet we have been treated well by the people all the way down.

"Yesterday being Sunday we were crowded all day with visitors. One young man stayed all day, leaving us late in the evening, neglecting to take his lady-love to church, for which he got his hair pulled. Besides, his indulgent parent will probably not purchase a schooner for him as promised. The incident points a moral. Almost every white lady seen on the street has a body guard and a shotgun. The mate, however, contrives to dodge both. Probably this precaution will not be necessary after we leave. We will probably stay here another week, and hereafter will keep a better account of our trip."

The crew of the Leona, while fully competent to take care of the ship, are a little 'reckless and a shade fast' as the Southern people suggest. A squall struck her off Port Richmond (Delaware River) with the light sails set. Every boat in the range of my vision took in sail, but she came through all right with all the cotton still on her. I remonstrated but without avail. She is non-capsizable, and it is probably from this fact she is frequently driven for all that's in her when there is no necessity or hurry. Thus it is we 'ride a free horse to death.' Capt. Lutes is not cramped for time, and will not return to Philadelphia until late in the spring if then."

R. G. W.

DEATH OF MR. DAVID CARLL.—On Dec. 27 at his home near Crescent City, Fla., Mr. David Carll, the well-known ship and yacht builder, died suddenly of apoplexy, at the age of 61. Mr. Carll was located at City Island for over 25 years, building a number of coasting vessels, pilot boats, oyster schooners and yachts. Of late he has resided in Florida, where he owned a large orange grove, the ship yard being leased to Mr. Henry Piepgrass.

SEAWANHAKA C. Y. C.—Besides the advanced class in navigation, a new class has been formed at the club house. On Dec. 29 the first of the weekly classes in marlinspike work met in the kitchen of the club house, under the instructions of Mr. Philip Low. The club has just received a handsome model of Volunteer as a present from Gen. Paine.

CRUISING.—Norna—While the schr. Norna was lying at Norfolk last week on her way south her owner, Mr. Townsend Smith, died quite suddenly on board. The yacht is now offered for sale. Dashaway, steam yacht, Mr. C. L. Hutchinson, arrived at Norfolk on Dec. 26 on her way to Florida.—Com. W. F. Weld, Eastern Y. C., proposes to make a cruise to the Mediteranean, chartering a steam yacht in England,

A CRUISE ON SUPERIOR.

AWAY up on the north shore of the great lake, separated by 200 miles from the nearest pier, lies the now thriving town of Port Arthur; at the time of which I write called the Village of Prince Arthur's Landing. Founded originally by the Government as a landing place and base of supplies for the development of the amphibious Dawson route through the interior to the valley of the Red River, Prince Arthur's Landing became the home of a few enterprising and determined men, and when the Dawson route was abandoned and its *raison d'être* had ceased to exist these men engaged in fishing and mining. They furnished supplies to the Canadian Pacific, building hard by from a different terminus, and their enterprise and perseverance was such that they built a little railway of their own, extending the C. P. R. to their own wharves and competed successfully with the terminus chosen by the builders of the main line itself. So the village gained a little year by year until the C. P. R. passed from the hands of the Government into those of the present company, and it was decided to extend it east along the north shore to connect with the existing system of Ontario near Ottawa. The little railway was bought up and became part of the main line. The merchants engaged in hotel keeping, in selling stores to the contractors, in steamboating to convey the stores to the points of action along the coast, the old population became rich; and thousands of new people came flocking in; town lots began to boom, and Prince Arthur's Landing leaped suddenly into prominence as a rival for Duluth, and became a flourishing town of 5,000 inhabitants, with a mayor and corporation and all the usual machinery of office.

It was in the early days of Port Arthur when this growth was giving promise, but had not actually been consummated, that the writer began to take FOREST AND STREAM, and to become imbued with cutter ideas. He had been a boating man all his life, and had made and rigged numerous models, and owned two or three sailing skiffs, and had even made an essay, which ended in disgust and nausea, in the direction of catamarans. His soul hankered to own a perfect boat, one which could be trusted not to capsize, even should the lumberman take his eyes off the lee gunwale for a minute or two to light his pipe; one which would go through a heavy sea without pounding and thumping; one which could be slept in with some decent approach to comfort and warmth; and last but not least one which was not practically cut in halves by a beast of a centerboard always getting jammed and frozen up in frosty weather, and combining with aforesaid pounding and thumping to pull the boat to pieces, and make a shaky, leaky old basket of her by the time her owner had got used to her little eccentricities and peculiarities of character, and had worked her into her best sailing form.

In conjunction with a friend he had built a good wholesome full-bodied compromise yawl of 5 tons and had got a lot of amusement and satisfaction out of her, but the friend and he had different ideas. The former wanted to take out the dandy mast and rig as a cutter and the latter knew that this would be a death knell to his single-handed bliss; a 25ft. main boom was too much for him to handle alone. Then again the friend, inclined to luxury and ease, inserted elegant cushions and curtains which the writer wetted and spoiled in the first blow he was caught in. Lastly the friend and he did not agree on the subject of ballast, the former wanted headroom in cabin and to lower the floor and the latter wanted to raise the floor so as to concentrate and increase the ballast and "bring her down to the turn of her bilge." The disagreement went so far that the two began to look coldly on one another when they met and to talk at one another at the yacht club meetings, and the writer joyfully assented to take a little less than what he had put into the Lurline for his interest, and go his deep draft heavily ballasted way alone. Then he was then, high and dry in the spring of the year, with the ice on the bay showing signs of weakness and no boat. What was to be done? Build again, of course, and he was soon in the agonies of designing. His purse was short, so his boat must be small and cheap, 20ft. waterline, by 5ft. beam was decided on, she must be eminently handy, so he stuck to his favorite yawl rig. She must be a good sea boat and carry her sail well and claw off any lee shore no matter how hard it blew. So he gave her a flush deck, a good draft of water and both fore gripe and drag to excess. Here was her great fault, the longitudinal plane was so great and the frictional resistance engendered so excessive that in light winds and especially down wind she was simply nowhere: but otherwise, considering that Winnie was designed and built by amateurs, that she was ballasted with wrought iron scrap mostly inside and piled as we best could, that her bottom and keel was studded with projecting rivet and bolt heads and merely paid over with tar, she was a mighty good boat, could stand out in anything, and when it fairly howled could hold her own with the big centerboards and the Lurline to windward, in spite of her small size.

Winnie came down the main street on rollers and was dumped into the drink from the wharf in very unceremonious fashion, and immediately began to leak like an old basket. She was raised, a nail hole discovered and plugged, and she went back into the water to leak no more. She was quickly masted and rigged, and contentment began to overspread the hitherto worried countenance of her owner. A few trials on the bay merely wetted his appetite for cruising, and he longed for an extended trip, to plow the waters of the unsalted sea outside the capes of the bay, and to explore the long stretch of broken, almost unknown, coast to the east of him.

The opportunity came at last, and with a boon companion, a lawyer, and the office boy as crew, the Winnie stole gently out one evening in midsummer from her moorings. A gale from the south had been blowing all day, and a great ground swell was rolling in, but the wind had dropped almost to a calm and progress was slow for the first hour, but as soon as the land was shaken off the breeze freshened to a stiff blow, and darkness coming down with every propect of a dirty night, the skipper got hold of the range lights in the Raministiquia River and ran in to a snug berth for the night.

On deck at daylight next morning he finds the glass nowhere, and a few rays of clouds traveling eastward at a rate which said much for the velocity of the wind behind them, but all was quiet on the water and there was plenty of shelter ahead for some distance, so we boldly put to sea. No sooner across the bar than down came the gale with a shriek, and down comes our mainsail just about as quickly, and away we go under the tiny foresail for the harbor at Welcome Islands. The sea gets up in a tumbling confused conflict between last night's southerly swell and this morning's westerly blow, and between the two our dingy (a long Racine canoe) sheers wildly about, fills, upsets and breaks the painter. To pick her up in this turmoil is almost out of the question, so we scud on to leeward with the little foresail threatening to blow to ribbons every moment; double in between the two islands and let go in the snug little harbor among the fishing boats. Breakfast over the crew and cabin boy clamber across the island to look for the canoe, and there, sure enough, she is coming bottom up right for the island. "Will she come ashore?" Our enthusiastic lawyer gets ready for a struggle with wind and wave; but no, she drifts by just out of reach into the smooth water under the lee of the island. The envoys come back and report to the skipper. It is blowing a hurricane now, and if we lose our hold of the island and get blown off there is no other harbor for a long distance to leeward, but our dingy must not be sacrificed without an effort. So the mainsail is double-reefed and the staysail single and out we go—through the foam and spindrift. The canoe is sighted without much search, and we bear down to leeward of it. "Steady now, boys." down goes the helm and we come up to the wind with canvas slatting and snapping about our ears. Slowly she loses her way and approaches the canoe. We have gauged the distance to a nicety, and she is scarcely moving as she comes alongside. "Now, then, look alive." Munroe leans over the side and grasps the bow and lifts it inside the riggings, the skipper gets hold of the stern and the cabin boy is ready with a rope, and in a trice the canoe is on board and securely lashed—but we are too anxious yet to chuckle or exult.

The island is a mile to windward, and the little break it makes to the sea is getting less and less effective every moment. "Fill away!" the ship heels to the cockpit coaming, and the cabin boy tries to get under the canoe in his efforts to keep as far on top of the boat as possible. "'Bout ship!" and she is up in the wind and off on the other tack under her rag of canvas with a steadiness and precision which astonish the skipper, and he begins to smile at once and enjoy the sail. No question about climbing to windward when she stays as readily as that, and he begins to speculate upon the feasibility of continuing the voyage. What to do with the canoe is the great trouble. In comparatively smooth water it is all very well to have her turned up on deck; but how will it be outside? We abandoned the idea of putting to sea again, and settled down to dry blankets, read, and put in time generally, but not for long.

After noon the wind shifted a little and brought the rollers sweeping into the mouth of the little harbor, and started Winnie jumping and straining at her cable in an alarming manner. So up comes the anchor and the double-reefed mainsail again, and we beat up for the lee or the weather island. The wind commences to fall almost as soon as we get the hook in the mud again, and after a hearty supper and a chat and pipe over a camp-fire on shore we turn in, thoroughly tired and with a full confidence that we are perfectly safe for the night and shall have fine weather on the morrow.

Nor are we disappointed. Morning shows us only a fresh pleasant breeze blowing and scarcely any sea running, and no time is lost in getting the anchor apeak and proceeding on our voyage. A light, fair wind wafts us gently out to Thunder Cape, and we slide slowly from the back of one long swell to another and realize what must have been out here yesterday, with a 200-mile sweep for the sea to get up in, and the giant cliffs of Thunder Cape towering 1,300ft. into the air for it to break against, and we all feel a little bit relieved that prudence triumphed over daring and kept us in port. At Silver Inlet we stop an hour to buy some stores and get further posted as to the severity of yesterday's gale, and find the natives as deeply impressed with its force as ourselves. Every one of your readers, I fancy, has heard of this curious mine discovered on a little rocky island so small that the waves broke over it at every gale, and that it had to be artificially enlarged by cribwork before it would furnish room enough to stand the pumping and hoisting machinery upon. The workmen's houses, etc., and the company's stores and offices had to be located on the mainland a mile away, and at the time I write of the mine had been sunk to a depth of 1,000ft. below lake level, and the crust between the drifts and the water was often so thin that the water oozed through and the surf could be heard roaring over head. A year or two after the mine became so leaky and the pumping so expensive that it was abandoned as unprofitable, and the village and works are now rotting away.

Off again we drifted slowly down to the mouth of Black Bay, a huge fiord in the coast line thirty miles deep and six or seven wide. The breeze is almost dead and Munro amuses himself trolling from the canoe and is soon rewarded by catching a magnificent salmon trout of about 16lbs. A little later the Kate Marks, a small propeller, is hailed, bound for Prince Arthur's Landing, reports us in due course.

"All aboard, Munro, here's a breeze coming." And in another minute we are lying well down to a stiff norther and bowling along for the narrows behind Point Porphyry. It is evening and getting dusk when we round to at last in the snuggest of snug little anchorages and turn in with the satisfaction of knowing that howl as it likes from any quarter it will scarcely ruffle the water in here. Another good night's rest and we are off again with a fresh northerly off-shore breeze, the best sailing weather we have yet had, and we romp merrily along through the Amygdaloid and Roche de Baut islands, but lose time and wind by not keeping out to sea. And evening is drawing on and the breeze dying by the time we have threaded the last of the intricate channels and come out in the open opposite Lamb Island light. The half-breed lightkeeper pulled off to us here and froze the very marrow in our bones by tales of the starvation and lonely watches he had endured by reason of the supply boat from Nipigon being behind time. And as our marrow froze our hearts melted, and we bestowed on him all we could spare of hard tack, bacon and tea, and sent him on his way rejoicing. The half-breed who has his stomach full of these three staples is indeed a happy man, and a king should be glad to exchange sensations with him. A stretch over to the point of the imposing Fluor Island and back to the mainland brought us into the Nipigon Straits, and a few shorter boards to a good anchorage inside. Then comes the sunset, the supper, the pipe, the gathering shadows, the starlight and intense stillness of the Northern wilds, a combination of the pleasures of the yachtsman and the canoeist and camper that it would be hard to find otherwise than on Superior or the Georgian Bay.

Morning brought with it a fresh southerly breeze, before which we went bowling through the straits and across Nipigon Bay at a great rate and entered the mouth of the river. And here for the first and last time on the cruise the man at the wheel was at fault. The charts were on too small a scale to show the channel, and we stood boldly up the center of the estuary, when bump! thud! bump! the Winnie careens over and comes to a standstill on a mud bank. Thanks to her rockered keel, we can turn her head for the channel with a pole, even when fast aground amidships, and getting her broadside to the wind and all hanging out to leeward, we reduce her draft sufficiently to enable her to flounder into the channel. Then we sweep up the river past the house of our good friend John Watt, and come to beside the once noble wharf of the Hudson's Bay Company, built in anticipation of this point becoming the Lake Superior terminus of the Canadian Pacific Railway, and now falling into decay. Munro is an enthusiastic sportsman and canoeist, and one of his dreams has been a trip up this famous river to the fishing grounds, and we accordingly spent the balance of the day in planning and preparing, with the aid of the company's courteous officer, Mr. Flanagan, for the expedition; and evening found us with a bark canoe engaged and everything ready for a start on the morrow.

Sketches of fishing trips up the river have been too often printed in your columns to make an account of this one particularly interesting to your readers. Suffice it to say that we ascended with a southerly gale at our backs to Camp Alexander, portaged over the rock and fished the rapids ahead with very poor success, and returning we ran successfully in a two birch bark the famous chute, a feat which, as far as I know, had not been successfully performed before, though large canoes run it almost daily.

The surge at the bottom certainly was terrific, and with the strong southerly gale blowing we had no little trouble in keeping her head on. Darkness overtook us on the way back, and the gale blew great guns, so we crossed Lake Helen when we got to it to the camp of a friend, whom we had met the day before on the river, and which we readily made out by the brilliant camp-fire he had burning, and who entertained us so royally and hospitably that we were constrained to pass the night with him and do the remaining five or six miles in the morning. A wild night that was, between wind and rain, and we thanked our stars that both ourselves and the cabin boy on the Winnie were in snug quarters and safe from harm.

At 11 A. M. our friend Walker started us off with a good breakfast inside us, for it was Sunday, and the gale still blew from the southward, and there was no need for hurry. The paddle down the lake was a tough one with the gale right ahead, but we stuck to it, and in a couple of hours entered the river again, ran the rapid and came down alongside the Winnie to the intense delight of the cabin boy, who had been quite lonely and frightened the night before.

Too late to put to sea to-night even could we work out of the river against this gale. But morning brings a change, and with a piping nor'west behind her Winnie gets out of the river, and down past the frowning bluffs of LaGrange and Isle Perte in very short order. Here, however, the breeze dies out, and we work backward and forward with shifting and baffling airs all the afternoon, letting go at last in Pays Plat Bay, forty miles from our starting point, in a beautiful harbor between two islands, and here the real novelty and excitement of the trip commenced. From this point east not one of us has ever been, and the rough chart will be our only guide. The skipper's nerves fairly tingle with excitement and impatience for the morrow, and a good breeze. The morrow breaks and, pshaw, what a disrppointment! A fine misty rain and not a breath of wind. The skipper retires to the cabin to read and meditate, but the indefatigable Munro gets the Racine out and trolls piously up and down the harbor. His diligence is rewarded by catching a couple of magnificent brook trout. About noon we get a little air, and run down among the islands in the entrance to Nipigon Bay, some ten miles further up; but it fails us again, too soon for us even to reach a good anchorage, and we have to let go behind a rocky island in rather an exposed position. Munro lights a great bonfire, and dries sundry damp garments, and cooks the evening meal on shore, and at 9 we turn in hoping for better things on the morrow.

H. K. WICKSTEED.

[TO BE CONTINUED.]

NEW YORK Y. C.—The nominating committee of the New York Y. C. have announced the nomination of the following officers and standing committees to serve for the ensuing year: Com., Elbridge T. Gerry; Vice-Com., Latham A. Fish; Rear-Com., Archibald Rogers; Sec., John H. Bird; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch; Regatta Committee, S. N. Kane, Chester Griswold and Wm. E. Iselin. The election will not be held until the first general meeting of the club in February.

CHELSEA Y. C.—At the annual meeting of the Chelsea Y. C. the following officers were elected: Com., W. H. Wedger; Vice-Com., Wm. Marshall; Secy., T. J. Parsons; Treas., Chas. P. Long; Meas., Chas. R. Fisher; Fleet Capt., C. L. Smith. The club is in a prosperous condition and has a membership of over 125 members. The annual ball under the auspices of the C. Y. C. will take place Jan. 7.

COOPER'S POINT CORINTHIAN Y. C.—The Cooper's Point Corinthians sailed their last and 31st race of the season on Dec. 9. The Idem won, beating the Allmond by 4ft., with Cook a short distance behind. The Idem made the fastest time over the club course in 52m., breaking the Wilkins's record by 1m. 13s.—R. G. WILKINS.

A NEW 40-FOOTER.—Mr. Burgess is at work on a keel 40-footer for Mr. Seymour of Washington.

YACHTING ON THE PACIFIC.

WHEN my last communication to the FOREST AND STREAM, entitled "A Split Jib on a Lee Shore," was published (Jan. 17, 1884), I had no idea of the changes that time had in store, or that four years more would find me on the Pacific coast enjoying a trip on a yacht which is, in all respects, the opposite of the deep-keeled Gem which I owned then.

Last June, while living at Sierra Madre, a pretty village high up among the foothills some thirty miles from the coast, I felt such an intense longing for a glimpse of old ocean as only one can feel who has been reared in sight of it. While having one of my worst attacks of seasickness, or sea-homesickness, I received the following dispatch from my good friend Chas. J. Ellis, of Los Angeles: "Be on board the Aggie next Friday night; everything provided."

On the day named, June 8, I was one of a party of eight gentlemen, including Mr. McFarland, the owner of the yacht, who took the train from this city for San Pedro, a safe harbor where the schooner Aggie lay at anchor. She is in all respects a beauty, inside and out. Her dimensions are as follows: 83ft. l.w.l.; 23ft. 8in. beam; 6ft. 10in. draft with centerboard up, and 16ft. when down, and she is without doubt the fastest yacht on the Pacific coast.

Arriving at San Pedro at 6 o'clock P. M. we immediately set sail so as to make the most of the trade wind, which, in summer, usually dies away about 7 o'clock. On getting outside our course was laid for San Diego, distant 100 miles. The wind dropped away early in the evening, and our progress was, consequently slow until the following morning. On Saturday morning, upon going on deck, we found ourselves about thirty-five miles from San Diego harbor. After a delicious breakfast, served in excellent style by the steward of the Aggie, we awaited eagerly the coming of the breeze.

The trade wind makes yachting on this coast a particular pleasure, for this reason, one always knows when it will blow and when it will cease. It comes with a gradually increasing pressure with no flaws or unexpected squalls.

We soon began to bowl through the water, and then came our first experience with the fish, which was very exciting. Lines were thrown over, and we soon had fast fish almost as game as our bluefish of the Atlantic; bonita, albicore, barracouta, all large fish, Spanish mackerel, and, last but not least, yellowtail. The yellowtail is one of the finest fish on this coast. We caught one weighing 27lbs. This one we had baked for dinner, and the firmness and sweetness of its flesh suggested Eastern trout.

Our best fishing was along the outside edge of the immense fields of kelp, which lie just outside the harbor of San Diego. I was amazed at the extraordinary size of this kelp. While ours in the East would average about ¾in. in diameter, some of these were six or eight times as large and 60ft. in length.

Here in California it seems as if the fish vied with the vegetables in point of size. I noticed crabs measuring 9 or 10in. across the back, and crayfish the size of large lobsters, etc. All hands had a good turn at the lines, and each caught as many as he wished. Most of these were thrown back alive, as we needed but few for food.

We arrived at San Diego at 1 o'clock P. M., and went ashore to pay a visit to the Hotel del Colorado. So much has been said and written concerning this magnificent establishment that I will not attempt a further description than to state that it covers a greater area than any other hotel in the world, and that, in point of excellence, it is all that its enthusiastic guests have claimed for it. The members of our party all being musically inclined, we enjoyed a sing in the elegant theater connected with the hotel.

Having delayed our departure from San Diego until the early evening, we found that the wind had begun to slacken, and a steam schooner going out took us in tow and dropped us some miles outside, where we lay all night, ready for the morning breeze.

During this day (Sunday), the wind being rather light, we made slow progress toward our new destination, Catalina Island; and night finding us still short of it, we lay to. On Monday morning some of the party wished to take the train, and we laid a course for San Pedro. The wind, starting in light, gradually freshened, until the beautiful yacht lay well over, carrying all the sail she could stand, and we had an exciting race to catch the train which left San Pedro at 3 o'clock. We went into port in grand style, and rounded up opposite the wharf with five minutes to spare.

On Aug. 18 the same party made another trip by Mr. McFarland's invitation. It is true, as stated in FOREST AND STREAM some time ago, that yachting is not lively on this coast at present; but, so far as the Aggie and her owner are concerned, we must make an exception, for she is hardly out of commission three months in the year, frequent trips along the coast being made in her.

An easy breeze enabled us to reach anchor off Redondo beach, some thirty miles north, early on the following morning. This place is situated to the north of a prominent headland, and seems to be on one side of an immense eddy, several miles in extent. It is a natural feeding ground for fish of all kinds.

A long pier extends from the beach out into the ocean, and this was lined with fishermen of all ages, who were pulling up fish at a lively rate.

The wives of the yachtsmen were taken on board the Aggie from this pier and we sailed for Santa Monica, some ten miles north. The breeze throughout the day was strong, and the freedom of this shore from all rocks and shoals allowed us to run quite near land.

Arriving at Santa Monica we turned about for San Pedro. A magnificent sailing breeze enabled us to make this point in time for the 5 o'clock train to bear us back to the "city of the angels."

J. A. OSGOOD.

LOS ANGELES, Cal., Dec, 6.

BEVERLY Y. C.

AS usual, the Beverly Y. C. is the first in the field with its list of fixtures, the following dates being already set for 1889. The officers of the club for the year are as follows: Com., John B. Paine, Swordfish, cutter; Vice-Com., George H. Richards, Petrel, cat; Sec'y and Treas., W. Lloyd Jeffries, Kiowa, cat; Meas., R. C. Robbins, Dolphin, cat. Regatta Committee—Robert Saltonstall, Nerina, cat; B. B. Crowninshield, Witch, cutter; Patrick Grant, jr., W. Lloyd Jeffries. One vacancy to be filled. Following are the fixtures for the coming season:

June 22.—141st race, Marblehead, first championship.
June 29.—142d race, Monument Beach, first open sweepstake.
July 4.—143d race, Monument Beach, first Buzzard's Bay championship.
July 4.—144th race, Marblehead, first cup race.
July 6.—145th race, Marblehead, second championship.
July 13.—146th race, Monument Beach, second open sweepstake.
July 20.—147th race, Marblehead, second cup race.
July 27.—148th race, Monument Beach, second Buzzard's Bay championship.
Aug. 3.—149th race, Marblehead, first club sweepstake.
Aug. 17.—150th race, Marblehead, third championship.
Aug. 24.—151st race, Monument Beach, third open sweepstake.
Aug. 31.—152d race, Marblehead, first open.
Sept. 2.—153d race, Monument Beach, second open.
Sept. 7.—154th race, Marblehead, third cup race.
Sept. 14.—155th race, Monument Beach, third Buzzard's Bay championship.
Sept. 21.—156th race, Marblehead, sail off.

The open race, Aug. 31, is probable, not certain; possibly a club sweep will be substituted.

A RACING ASSOCIATION FOR NEW YORK.

THOUGH it is evident that there is no immediate prospect of a National Yacht Racing Association, and though the large clubs show no desire to further such an organization, it is somewhat encouraging to see that the small clubs are preparing the way by the formation of local organizations. Boston has its New England Y. R. A., which has done a good deal and is in a way to do much more for the advancement of yachting in the smaller classes. On Lake Ontario the L. Y. R. A. has become a strong and powerful body, embracing all the yacht clubs on the lake; and further west is the Interlake Y. R. A.

A movement has lately been started by some of the clubs about New York, the Columbia, Yonkers and Sing Sing clubs being the leaders, to form an association of a similar nature which shall include all the clubs in the vicinity of New York. The objects will be to secure uniformity in racing rules, to avoid the clashing of dates, and to promote the interests of racing in general. The movement is mainly confined to the clubs racing yachts of 40ft. and under. A meeting will be held at the Gilsey House, New York, on Jan. 31, at 8 P. M. Clubs interested are requested to send three delegates each to the meeting.

Considering the extent of the waterfront on the bay, the Hudson, East River and its junction with the Sound, and also the large number of clubs and yachts, it seems strange that similar efforts in the past have not been successful, but yachtsmen have of late given more thought to the subject of rules and organization, and there is good reason to hope that the present attempt

will prove successful, and that the good work of the N. E. Y. R. A. will be duplicated in New York.

It must be expected that some difficulties will be encountered, there will be some conflict of interests, but at the same time there is so much for each club to gain from the establishment of a recognized and responsible body that each can afford to make some concessions, if necessary. Of course the most important and at the same time the most difficult detail is that of measurement. It is necessary, in order to secure the aid of all, that existing boats and conditions be considered in adopting a rule; but it is still more important that the rule, whatever it may be, shall encourage the building of better boats than most of those now in the racing. Even though it may be necessary, out of regard for existing boats, to adopt a rule that may not be altogether desirable, it should be framed in such a way as to permit of the substitution of a better rule as the older boats drop out of the racing and new ones take their place.

OSWEGO Y. C.—The Oswego Y. C. announce three receptions during the winter, the first on Dec. 26, the second on Jan. 17 and the third and last on Feb. 7. These parties have been very popular and much more to the committee's taste than the grand "annual balls," attended with all their pomp and worry and expense. These more moderate affairs bring out all the society folk, and are thoroughly enjoyed. The racing season of 1888 found the Merle the only American keel that could hope to cope with the fast Canadian craft. It was confidently expected that the Alice Enright would cross the starting line off Burlington piers on July 28, and that the Lake Erie boys would have a chance to try the Merle. A party, of which the writer was a member, were on board Commodore Mac Farlane's steam yacht Aida, and had left Oswego on the evening of the 27th and made a night run to Hamilton, to witness the contest. We were thoroughly crestfallen when the information was imparted to us from the judges' steamer that no Enright had appeared, but that she was expected in tow, and that two of her crew were ashore anticipating her arrival. After the sun had crept snugly below the horizon the helpless craft towed or drifted in to moorings, and the regatta committee announced a postponement for lack of wind (enough breeze could not be discovered all day, no matter how dainty her midship section, to shove a yacht three miles an hour), we were startled by the information from Vice-Commodore Ames, owner of the Merle, that he was in receipt of a telegram from the Enright stating that she was windbound at Ashtabula. Next summer the Burgess sloop will go to Lake Erie, where we are sure she will find a warm reception, and our Commodore and his friends have unlimited faith in the Merle's ability to "get there" in the event of a little breeze. That our boys were in earnest at Hamilton is evident from the fact that in the vest pocket of one of the guests on the Oswego sloop lay folded a New York draft for $250, which was put up when the news came that the Toledo yacht would meet the Merle.—K. G.

SACHEM.—Messrs. Metcalf and Owen have sold Sachem to Mr. Chas. H. Smith of New York, a member of the New York, Y. C. It is not known yet whether she will be raced by her new owner. Her old owners are likely to build a new yacht for the same class.

SYBILLA, steam yacht, Mr. J. F. Betz, has been lengthened 30ft. at Baltimore. She will soon start on a cruise south.

SIPPICAN Y. C.—This club has selected the following dates for 1889: July 6, open regatta; Aug. 31, club regatta.

BUILDING NOTES.—The contract for the new Morgan schooner has been given to Piepgrass of City Island.

ANNAPOLIS, Md., Sept. 19, 1888.—*U. S, Cartridge Co., Lowell Mass.*: Gentlemen—I am glad to be able to inform you that I have found your Climax paper shot shells perfect, and the only shell I have yet found in every respect equal to the Eley shell for use with Schultze powder. Yours very truly, (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. G., Chicago.—I should like to know the price of the "Yachtsman's Souvenir," by Stebbins. Ans. The price is $4.

QUAIL, Boston.—The pointer bitch Bang's Van (A.K.R. 6133) is by Day's Prince (Burnett's Dash—imported bitch) out of Van (Bang Bang—Zanetta). The New Jersey quail season in lower section closed Dec. 15, in upper section Dec. 25.

B. R. H., Philadelphia.—Do black bass hibernate? I have been a careful observer of the habits of black bass for some years, and also read Dr. Henshall's and other writers' opinion on the hibernating of the bass, and there seems to be a wide difference of opinion; please let me know something about it through your paper. Ans. It is a question of temperature entirely. In the far north they hibernate thoughout the winter. In the south they do not. In intermediate regions they are dormant only in severe weather.

B. M., Orillia, Ont.—1: Has the brook trout any scales? 2. Has the salmon trout of Canada any scales? 3. Does the salmon trout belong to the trout or salmon family? Ans. 1. Yes. They are small and plainly visible when the skin is dry. 2. Yes. 3. The salmon is taken as the type of a family, *Salmonidæ*, to which all the trout, graylings and whitefishes belong, therefore ichthyologically speaking, there is no trout family. The salmon family is divided into several genera, as *Salmo*, the salmons and the large-scaled trout of Europe and our Pacific coast; *Salvelinus*, our eastern brook and lake trout, etc. These genera are then sub-divided into species.

CANOE HANDLING.
By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction. Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Charley's Wonderful Journeys.

By C. F. AMERY. Profusely illustrated. Inimitable fun and most delightful fancies Cloth, handsome gold stamp. Price $1.50. See advertisement.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Wild Fowl Shooting.

By W. B. LEFFINGWELL. The contents and illustrations of this volume are detailed elsewhere. Next to a gun this is something to please one whose fancy lightly turns to thoughts of ducks. See advertisement. Price $2.50 and $3.50.

Bird Portraits for the Young.

By W. VAN FLEET, M.D. Fourteen photogravure illustrations of familiar birds, with charming text. A magnificent gift book. Price $3.00. See advertisement.

Names and Portraits of Birds

WHICH INTEREST GUNNERS. By GURDON TRUMBULL. New edition now ready. Price $2.50.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

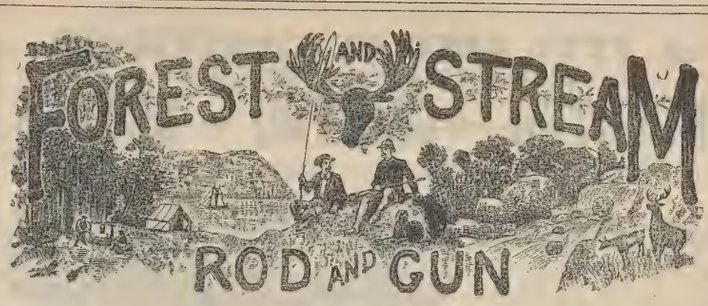
A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abija Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.

Book Publishing.



Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

NESSMUK'S POEMS.

FOREST RUNES, By Geo. W. Sears, {Nessmuk}.

Large octavo, 208 pages, printed on heavy paper, bound in cloth, gold lettering, with a portrait of the author. Price, $1.50.

FOR SALE BY ALL BOOK DEALERS.

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the Fort Benton Fur Market. The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of The Dun Horse will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting. Under the title,

A Breath from the Maine Woods,

will be described the angling experiences of a Boston party at Moosehead, by "W. A B," whose sketches of a fisherman's life in Maine have been received with so much favor.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *feræ naturæ*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our Shooting and Fishing columns will be our

Special Correspondence from the West,

keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters, all of which will make the FOREST AND STREAM

A Journal for Western Sportsmen.

The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity. There will be a series of papers from the pen of Mr. J. E. Gunckel, of Toledo, O., entitled,

The Sunset Club,

A continuation of the witty reports of that famous club already known to fame.

The Trap Forest and Stream Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

A FULL LINE OF CARTRIDGES.

10-Ga., 12-Ga., 14-Ga., 16-Ga., 20-Ga.

INDENTED – CRIMPED – BLANKS.

The Peters Cartridge Co. is induced by the success achieved the past season to greatly increase its line of manufacture. It now offers the above most complete list of Shotgun Ammunition.

THE

"Indented" Cartridges

Are the most successful ever produced for Trap and fine Wing Shooting. They give wonderful pattern and penetration, with the least recoil and a clean gun.

Peters Crimped Cartridges

Are loaded by the same machinery and with the same materials (including the lubricated elastic felt wads) as the "Indented." The crimp is the best produced by machinery and diminishes the recoil. They shoot strong and leave the gun clean. Price same as for "Indented."

Peters Blank Shotgun Cartridges

(Trade Mark and Patents applied for) are especially appreciated by the "far off" trade, the hunter, farmer, etc. They save freight and the danger of handling bulk ammunition. By their use cartridges for all varieties of game may be quickly produced without the necessity of carrying a full and expensive line of the goods.

ASK YOUR DEALER FOR THEM. LIBERAL DISCOUNTS TO THE TRADE.

The PETERS CARTRIDGE CO.

CINCINNATI, O.

Send for our large 52-page Illustrated Catalogue.

MANUFACTURERS OF THE

STEVENS PATENT

Breech-Loading, Sporting and Hunter's Pet Rifles, Single and Double Shot Guns, Pocket Rifles.

The Best Scores on Record in America, from 10 to 50 yards, have been made with the Stevens Pistol.

STEVENS TARGET PISTOL.

Known throughout the world as possessing unsurpassed accuracy, perfect of form and finish. The professional shots all unhesitatingly select the Stevens Pistols to perform the most difficult feats of marksmanship.

AUDUBON'S

Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Audubon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

LIST OF BIRDS REPRESENTED:

ANSWERS TO CORRESPONDENTS.

REVOLVERS FOR OFFICERS.

THE question of placing revolvers in the hands of officers as a regular arm is just now receiving an extra share of attention. It is assumed from the start by those who are in favor of this small arm that it cannot be too speedily adopted, and that an officer who fails to make himself an expert off-hand pistol shot is neglecting his military education very much. On the other hand there are officers who stand very high in shooting matters and whose opinions are well worth taking, who think that when a line officer has managed his company well and has gotten the best possible work from the hundred men under his command he has done about all that could be expected of him. To do this and do it well will tax the attention and ability of any army man, and with a hundred rifles well drilled and ready to speak—and speak effectually—at his command, the officer need not bewail the lack of the few pistol balls he might be able to send along with the rain of rifle bullets. An officer is supposed not to need protection, but to have his men about him not only able to form a body guard, but to do a great deal more besides in the way of harassing the enemy.

There are cases when on detached duty the officer might find the possession of a revolver and the ability to use it a matter of life and death on his part. This would only apply to staff officers, however, to aides, etc., who might be acting as messengers and away from their own men. The ordinary line officer is hardly likely to find himself in any such position.

It is for these reasons that those who speak with care and thought express the opinion that the present rush for revolver practice on the part of officers is somewhat of a craze and not founded on a complete knowledge of the conditions likely to be met in actual hostilities. But it may be urged that the same objections would apply to rifle practice by officers of the line and by staff officers as well. True, an officer would not be required to take up and use a rifle either as an offensive or defensive weapon. He has a body of men about him, each with a tried rifle at hand, and he uses his skill and position as an officer to see that those rifles do their full work. It must be borne in mind, however, that an officer learns to shoot a rifle when he is in the ranks, that he improves during his non-commissioned stage, and then as a commissioned officer he shoots to encourage and instruct his men. This draws the difference between rifles and revolver shooting so far as the militia is concerned, while for the regular army the officer is supposed to know the whole art of war, including the use of all manner of arms.

In expressing these views entertained pro and con on the matter of revolver work, we would not for a moment seek to discourage revolver practice. It is an admirable sport, one entirely military, and the danger is that our officers will know too little rather than too much. Every armory should have its revolver gallery for the officers as well as the rifle range for the men, and each should be liberally patronized. There seems to be a contradiction in heaping up the scores of officers and men in one grand total as the shooting ability of the whole guard, when in war practice the officers will not use the rifle at all. For this reason the skirmish and volley firings are in every way better than the fixed distance scores in determining the shooting ability of the entire force.

AMERICAN SHOOTING ASSOCIATION.

IN our issue of August 30, last year, was given the outline of a scheme, proposed by Mr. C. W. Dimick, for the organization of manufacturers of guns, ammunition and artificial targets, under the title American Shooting Association, to promote the interests of trap-shooters. As then stated the project was to draft a set of rules to be universally adopted as the standard, to classify shooters according to skill, to form State leagues and to organize inter-State or national tournaments, which should be participated in by these several leagues. There was to be a central office in New York, with a general manager. The capital of the Association was to be used to provide prizes, and in short, everything was to be done to foster and encourage the sport.

From that time to this nothing further has been heard of the Association; and the public is beginning to fear that the scheme may have been abandoned. We are glad to say this is not the case; the project of an American Shooting Association has not been given up; those interested in seeing it put through are carefully considering all the pros and cons, and there is a strong probability that at no distant day the organization will be in working order.

It is very likely, too, that there will be a number of material departures from the exact lines of the Association as originally planned. Among those who have given thought to the scheme is Mr. S. A. Tucker, whose experience as a trap-shooter and an almost universal acquaintance with shooters in every part of the country, entitle his opinions to great weight. As modified by Mr. Tucker, the Association would provide a set of rules for common adoption, and would classify shooters, unless some scheme of shooting were adopted making such classification unnecessary. But in place of the State and inter-State league system, which practice has shown to be cumbersome and difficult of satisfactory management, Mr. Tucker proposes that the Association shall support tournaments in general by guaranteeing certain sums of cash as prizes. The tournaments thus supported may be managed by individuals otherwise wholly independent of the Association, or by persons selected by the Association as managers, and by it supplied to clubs wishing such services. Thus, there are many towns where tournaments might now be held with every reasonable prospect of success, but where they are not given because no one is willing to risk the contingency of failure; in such a town, if the individual or club organizing a tournament shall guarantee a certain number of shooters, the Association in turn will guarantee a certain sum of cash for prizes, under conditions to be determined. So, too, if a club is in need of a tournament manager, the Association will designate some one believed to be competent to conduct the affair, the responsibility, however, being not with the Association, but with the individual. The scheme is, in short, to encourage and support tournaments given by others, rather than to give tournaments of its own, or to manage a complicated league system. It will readily be understood that Mr. Tucker's plan would involve less expense for the machinery of the Association, and would thus secure a larger proportion of its funds to be given directly as prizes, and that is where the money will do the most good.

The modifications proposed by Mr. Tucker are such as may well commend themselves to the projectors of the American Shooting Association, and we hope to chronicle the early organization of the movement. As pointed out in our trap columns, the need of some central body having jurisdiction and accepted authority in trap-shooting affairs is imperative. Only by such a recognized court or board of appeal may the numerous vexed questions which come up from time to time be settled. Such a body, too, might very well take cognizance of and strive to reform various abuses which have a retarding influence on the sport.

ANNOUNCEMENT.

MR. FRED MATHER, having been compelled by the demands of other business arrangements, to resign his position as editor of the Sea and River Fishing and Fishculture columns, after eight years' connection with the FOREST AND STREAM, those departments will hereafter be under the direction of Dr. Tarleton H. Bean, who is in every way admirably qualified for his new work. Dr. Bean is the Ichthyologist of the United States Commission of Fish and Fisheries, and the editor of the Commission's publications. He is known as a careful student, an accomplished scholar, and the leading living authority on many families of fishes, among them those which are of most interest to anglers. Dr. Bean's opinions on ichthyological subjects as expressed in the FOREST AND STREAM may be accepted as worthy of confidence, and entirely in accord with the latest knowledge concerning the topics discussed. To this end his personal qualifications will be supplemented by the facilities of the Smithsonian Institution, the National Museum and the United States Fish Commission. The heads of departments in each of these institutions have assured Dr. Bean of their co-operation in every fitting way. Add to this that Dr. Bean is a young man, earnestly devoted to the subject, and is one among the men who are making the literature of the day in this special field, and no assurance is needed from us that the fishing departments of the FOREST AND STREAM will be of the highest attainable excellence and invaluable to anglers and fishculturists. It only remains to bespeak for Dr. Bean and for the FOREST AND STREAM from our multitudinous friends and contributors a continuation of the encouragement, support and co-operation which always have been and always must be essential adjuncts, without which the highest editorial success cannot be attained.

SNAP SHOTS.

A SARCASTIC critic might find a point for a sharp thrust in the new shooting society's house just opened on Eighth street in this city, and of which some facts were given in the last issue. There is a tall and stately club house, specially built to house a shooting society, and yet the only provision made for firing off a rifle is a narrow slit 5ft. wide partitioned along one side of the basement. The Zettler Brothers have taken charge of this gallery and the veteran Noone put up a fine off-hand target of 110 in 10 shots on the opening day. Two sets of targets may be worked and they are ingeniously contrived so that they travel to and fro from the firing point to the other end of the range along a sort of elevated railroad mounted on steel wire. It is a very clever arrangement and will utilize the meager shooting facilities to the utmost. Yet it remains queer and characteristic that in this metropolitan shooting palace nominally there is ample room for about 500 simultaneous beer drinkers and just two simultaneous riflemen.

The town of Union, Maine, is at war over a dead dog. The man who shot the dog is willing to settle for $5, but the man whose dog was shot holds out for $100. This is an anomalous condition of affairs for Maine, whose Supreme Court has ruled that dogs are *ferœ naturœ*, wild animals, and thus to be preyed upon and destroyed with impunity by mankind.

PERSONAL.—Will Mr. Henry Macdonald, author of "Early Days on the Missouri," kindly send his present address to this office. We wish to communicate with him.

AFTER STOLEN HORSES.

IT was beginning to get light. In at the small square window, through the open chinks between the logs, and especially through the doorless entrance to the cabin, was struggling a faint, dull light, which told of the coming day. A heavy gray mist hung over all the prairies, and as yet objects fifty yards from the house could not be distinguished. As the light grew stronger one of the blanketed forms on the floor began to stir uneasily, and then pushed down the covering from his face, sat up, and after yawning cavernously once or twice, shook off the sleep that oppressed him and sprang to his feet. He ran his hands through his hair sleepily, rubbed his eyes and slowly pulled on his trousers and boots. Then he opened the door of the oven in the stove, took thence half a dozen sticks of dry cedar which had been put there the night before, and began to whittle shavings for starting his fire. As soon as this was lighted and going well he filled the coffee pot with water and put it on the stove, and then called: "Come, boys, get up; breakfast's nearly ready."

No response more intelligent than few grunts of discontent greeted his call, but he seemed perfectly satisfied with the impression that he had produced, and whistling softly he drew a pipe and plug from his pocket and began whittling some tobacco. After he had lighted his pipe he stepped over to the stove, and, picking up the nearly empty water bucket, walked toward the door to go down to the spring. The light had grown stronger, and though the sun had not yet risen it was nearly full day, and he could see a long distance. The cook did not get beyond the door. Before he had passed it he stopped suddenly, and called out in a suppressed tone:

"Here, boys, some of ye, get up quick and kill this coyote. He's just in front of the house."

Two piles of blankets suddenly sprang into life at these words, and two scantily clad men seized their rifles and ran to the door. The Chief got there first. There was the coyote, with head and tail down, nosing about not 75yds. from the door, after the sneaking, depressed fashion of coyotes the world over. He would trot a few steps, then stop, sniff, turn around, trot off another way, come back, smell about again, and then move off in a new direction. This did not continue long, however. The Chief's old needlegun came down, rested for a moment, and then the shot rang out. The coyote dropped to the ground, sprang up again, yelling like a whipped cur, ran for a dozen jumps at top speed, and then turned a summersault, his bushy tail showing against the gray sky, and lay still.

"Good shot," said Yo, approvingly.

"Lord, didn't he yell!" remarked the cook with enthusiasm.

"I always like to kill one of those fellows. They and the grays make us lots of trouble," said the Small Chief, as he set his gun down by the door and began to pull on his trousers and boots. "I'll go down and get the fellow, and you can skin him after breakfast," he said to the cook.

Yo finished dressing and stepped outside the door to wash, and as he did so he saw the Small Chief walking, rifle in hand, down toward where the wolf lay. Suddenly, just before he reached the spot, he was seen to stop, stoop down and scrutinize the ground before him, and then rising take a long look over the whole country. Then he turned at right angles to his former direction and walked on, occasionally stopping to look at the ground, and once stooping to pick something up. Retracing his steps, he went to where the wolf lay, picked it up and strode toward the cabin. Arrived there, he threw down his burden and, entering, said quickly: "Buck, did you put the horses in the pasture last night?"

Buck stared for a moment, and then replied: "'Course I did. Didn't you tell me to yourself?"

"Then we're left afoot, I guess. Look at that!" and he held up for our inspection a rag of calico. It was perhaps fifteen inches long by two wide, and crumpled across, as if it had been used as a string to tie about something; a common enough strip of red calico with a faded black figure running through it. The younger boys, perhaps, did not know what it meant, but to most of us it told its own story. It was a rag such as is often used by an Indian to tie up his tobacco sack.

"Which way were they going?" said Frank, quickly.

"Up the creek," replied the Chief. "There are tracks of about twenty-five horses, some of them dragging rawhide ropes."

"Buck, you take some breakfast in your hand and go down as fast as you can to the lower ranch, and you and Wes get together what horses and saddles you can, if there are any left, and come up here with them on the keen jump. Chief, you and Yo go down to the pasture and see if they got all the horses. If they left any bring them up here, and I'll stay here with Billy and wait. They must have come from Red Cloud or Spotted Tail Agencies, and if we can get the horses to follow them, we may be able to catch them, though they have got all the best ones."

Eating as they went, the Chief and Yo, with full cartridge belts and loaded rifles, trudged off through the sand toward the pasture, while Buck's long figure grew smaller and smaller as he went along the trail toward the other ranch, four miles down the stream. It seemed a long and toilsome walk to the heavy Texas cowboy, who was little used to any exercise save that of the saddle, and he was heartily glad when he came in sight of the low ranch building and saw near it a wagon with one horse standing by the tongue and the other, led by Wes, just coming out of the stable. Before the team was hitched up Wes had caught sight of the solitary pedestrian, and had stopped his work to watch him and wonder what he could possibly be doing afoot.

"Where's yer horse?" was his salutation, as Buck came up, and stopping, wiped the perspiration from his face.

"Stolen, I guess," said Buck. "The durned Indians took all the horses out of the pasture last night."

"Injuns! Thunder. How d'ye know."

"Chief picked up a rag that they dropped; and I see in the trail near the house where their ropes drug in the sand. What horses ye got here?" was Buck's reply.

"Well, there's old Baldy and the bucking dun in the stable, and I see eight or ten head last night on the hills across the creek. Likely if yer ride up there you'll see 'em in sight somewheres."

"Well," said Buck, "I'll go look for 'em, and if I can find 'em I'll drive 'em right up to the upper ranch. You'd better put your saddle on the wagon and take your gun and go up there too. If I git there first, I'll tell 'em you're comin', and if I ain't there by the time you are, I will be soon after. You take old Baldy with you; I'll ride the dun."

The two disappeared in the low, dark hay-covered stable, whence Wes at once emerged leading a bald-faced bay horse, while the snorting, plunging and profane shouts which came out of the darkness told that Buck was at work at the always difficult task of saddling the bucking dun. The noise continued for a few moments, and then just as Wes, having tied Baldy behind the wagon and placed his rifle on the seat, was about to clamber into the vehicle, Buck came out of the stable leading the dun, who came quietly enough, but you could see from the way in which his full clear eyes rolled about that he had a temper of his own, and would make trouble for a timid rider, or one who was not used to the vagaries of the cowpony. He was a medium-sized, short-coupled clay-bank horse, with black mane, tail and legs; one of those animals that seem a bunch of muscles and wire; the very horse one would select if he had to make a hard, quick ride of a hundred miles without change. The only difficulty would be to start him. After he had once got into his stride you could depend on him to last.

Buck led him away from the stable a little distance, to a place where the sand was soft, and not beaten down by the feet of horses and the wheels of wagons, and then facing him round, so that he looked up the flat, prepared to mount. Buck was a cowboy of the cowboys—"born in a cow camp, and raised on raw-hide," he would have said himself; and, though occasionally thrown, he claimed that he could ride anything that would stand up. He gathered up the reins in his left hand, grasped the cheek-piece of the bridle, and placing his right hand on the horn of the saddle, put his foot in the stirrup and rested a part of his weight in it; as he did so the horse reared, and quick as a flash threw himself over backward. As he scrambled to his feet again, Buck, who had stepped back, caught the bridle and again tried him. The horse threw himself again. The third time he stood to be mounted, but the moment he felt the man's weight firmly upon him he began a series of pitching and bucking which would have soon deposited an ordinary horseman on the ground. Plain, ordinary bucking was varied with whirling side-winders, during which his head faced every point of the compass in quick succession, while his muscular back arched itself and straightened again with a vigor that was appalling. Buck clung to him firmly, muttering through his set teeth, "Pitch, blast ye, and get it over with," and meantime plied quirt and spurs as hard as he could. At length, after what seemed fully ten minutes of this, the horse struck into a swift, swinging lope, and dashed down across the creek and up the bluffs on the other side. Not till then did Wes gather up his lines, and remarking to himself, "Well, he is a tearer to buck, sure enough," start his team toward the upper ranch.

Meantime, the Chief and Yo had reached the pasture, and had read the plain story that was written there. There were moccasin tracks in plenty where the Indians had stood near the bars, a red shred of blanket caught on a rough post, the trail of a dragging rope over the horse tracks where the animals had crowded through the bars, and, most significant of all, an arrow stuck up by the feather end in the trail, its iron head pointing backward toward any one who might be following on the track of the marauders.

"There's going to be war if we follow 'em, eh, Chief?"

"Ye bet there'll be war if we can catch them," he replied, grimly. "We didn't need them to tell us that."

An examination of the pasture showed that all the horses were gone except one, "Old Whitey," an animal which was too old and lazy to be worth taking along. Returning to the cabin, some bread and meat was put up, enough for four men for four days. Before these had passed they would either have overtaken the robbers or have given them up. Soon after, the team came in sight and a little later Buck appeared, driving in eight head of horses that had been out on the range, and so escaped capture by the Indians.

It was not long before four horses were saddled, and Frank, Buck, the Small Chief and Yo ready for a start. Wes and the cook were directed to load up the wagon with what was in the house and move down to the lower ranche, taking the horses with them, and there await the return of the pursuing party. The horses they were to herd during the day close to the house, and at night to put in the stable, which was protected by a chain and lock and could not be entered without making some noise.

They started on the trail at a good hard gallop, Small Chief, as trailer, keeping about fifty yards ahead of the others. It was nearly noon and the chances were that the Indians had at least twelve hours start, for the trail showed that it had been made not later than the middle of the night. The way led up the creek for a mile and a half, and then turned north through a broad draw between two sand hills. It crossed the main Loup two miles above Mead's ranch, kept on pretty near due north for a while and then turned east. Just before dusk the men stopped at a water hole to eat, and calculated that they had come fifty miles. There would be a moon that night, but only till ten o'clock, when it would set, and the chances of following the trail in the dark were not encouraging. The horses, after their drink and bite of grass, were fresh enough, and could go all night. The little party rode on through the gathering gloom, watching the shadowy form of the Small Chief, who still rode ahead of them and seemed to have no difficulty in following the trail in the bright moonlight. At length the moon sank behind the western hills, the pace became a walk, the trail was lost two or three times, and it was determined that it would be better to wait for light before going further. So the horses were unsaddled and picketed, and the men, wrapping their saddle blankets about them, lay down to get what sleep they could.

Next morning by gray dawn they were in the saddle, and before they had gone a mile they came upon something which filled their hearts with wrath. It was the camp made by the Indians the night before. They had traveled along slowly, not hurrying themselves, for they supposed that the ranchmen had no horses left on which to follow them, and had camped at evening. No doubt, as a matter of precaution, they had left a watcher behind them on some high hill, who had descried the party of pursuers and had gone on to tell the camp that they were coming. There was evidence of a hasty start, and it could be seen where they crossed the little stream that the trail was twelve hours old. Now too they were hurrying, as the deep tracks, the thrown up sand, and horses all bunched together clearly showed.

To have been so near to them and yet to have missed them was enraging. All that day the pursuers followed hard after them, riding patiently and swift under the broiling sun and over the shimmering yellow sand hills until toward night the trail crossed Running Water, and the pursuit was given over. The Indians would reach their agency at Whetstone before they could be overtaken, the horses would be hidden and it would be impossible to recover them. The white men turned about and rode gloomily back to the ranch.

So much took place under Yo's eye. The sequel was told him later one night in camp by the Chief, who said:

"After we got back I wrote to the agent at Whetstone, giving him a full account of the occurrence, and a description of all the horses, and asked him to look out for them. For some time I heard nothing from him, but in the early part of the winter I got a letter saying that he had two of the horses, one of mine and one that belonged to Buck, and that he had sent them down to Fort Randall and turned them over to the quartermaster there, so that they would be safe.

"I started for Randall, and when I got there saw the quartermaster and Colonel M., whom I knew, and who was in command. They were both disposed to be kind and helpful. The Colonel wanted the worst way to buy my horse, but I told him there wasn't money enough in the post to buy him, and that I would not part with him under any circumstances. The quartermaster told me that I would have to get an order from the agent at Whetstone for the horses, as he had receipted for them to him. Colonel M. suggested that instead of going up to Whetstone with the horse that I had ridden in on, I should take my own horse to ride. I was glad to accept this suggestion, and next morning started for the agency. It was a long cold ride, and when I got there it was dark. I left my horse at a house across the river from the agency and went over afoot and into the trader's store, which stood on the edge of the bluff. The first person I saw as I got inside the door was old Nick Jennisse. He was cordial to effusiveness and wanted to know all about the folks down in the lower country, and we walked to the back of the store, and I sat down behind the stove to warm myself, for the night was very cold. The counter ran along the back of the store, but at one end it was cut off and did not meet the side wall, leaving a space in which stood the stove in the corner of the room. All

around the stove there was a space perhaps two feet wide, and behind it a window looked out over the river, which was but a short distance away.

"Nick and I talked for a little while, and then he was called away to attend to one of the Indians with which the store was crowded. I saw one of them speak to him as he walked away, motioning toward me, and Nick made some reply which of course I did not understand, for I don't know Sioux. In a minute though I saw that something was up.

"I learned afterward what the old fool had said, and I have never forgiven him for it. It seems that the Indian said to him, 'Who is that man and what did he come for?' And Nick like an old idiot replied, 'Why, don't you know him? He is the Small Chief of the Pawnees and was in command at Summit Springs when they licked you fellows and Spotted Tail's brother was killed. He's come up here to get some horses that you stole from him in the summer.'

"The Indians at once began to look hard at me and to talk to each other at first in low tones and then louder, and what I liked less to crowd toward my end of the store. The more they talked the angrier and more excited they seemed to get. They began to get their knives out, and holding them in their hands as they talked, flourished them up and down in a way that made my blood run cold. I felt sure that they had learned who I was, and if they had, I knew I was in for trouble, but of course I pretended not to notice anything, and sat there warming my hands as if that was the only thing in life that interested me. I had taken in the surroundings pretty well, and knew just what I should do if they made a break for me. The stove was big and red hot, and they couldn't get over that, and, since I could see no signs among them of any firearms or bows, they would have to come at me through the narrow passage at the side of the stove. I had a six-shooter on, and I made up my mind if they came for me, I would pile up what I could around the stove, and then go through the window. In the willow brush 20ft. below I could easily, I thought, make my way to the river, get across it somehow, and get to my horse. Then no one could catch me.

"There was one Indian, who carried a big war club set with knife blades, who was especially demonstrative. He was a big, villainous-looking fellow with red and yellow streaks painted across his face, and in swinging his club and shaking it above his head his robe fell back, and I noticed that he had a black star painted on his left breast. I thought to myself, 'If it comes to shooting I'll take the first shot at that star.'

"Well, the crowd kept getting thicker and thicker, and madder and madder, and I kept on warming my hands and looking at the stove as if there wasn't an Indian in the store, but I made up my mind that something had got to be done pretty quick. The Indians crowded up as close as they could to the stove, but none of them tried to come round it to where I was, and I guess it was very lucky for me that they didn't. I don't know how long it all lasted, for as I sat there holding my hands out toward the stove, and seeming to pay attention to nothing but getting warm, I was too busy watching and listening to take much account of how the time went.

"I remember that I had just noticed a fellow at the back of the crowd shouting out something and flourishing a hatchet in the air, when the crowd of Indians parted before one of their number who shouldered his way through them. He was a big, fine-looking man, with a grave, kind face, a face that had lots of power in it. I didn't look at him then, but I could see out of the corner of my eye that he had nothing in his hand but a pipe which he was smoking. He came up to the end of the counter, nearer than any of the other Indians were to me, and I thought to myself, 'Old fellow, are you going to lead off?' He stopped there, however, and stood about four feet from me, leaning his elbow on the counter and drawing in long breaths of smoke and looking at me. The row had quieted a little bit when he appeared, as if the others were waiting for him to say or do something; but now it began again, and I saw those confounded knives flourishing about, and I just kept warming my hands. You bet I was warm enough by this time.

"The Indian with the pipe watched me for awhile, and presently, without saying anything, he reached out the pipe to me. I stretched out my hand without looking at him, took it and inhaled a few deep whiffs of the smoke, and then passed it back to him, and he smoked for a moment, and then spoke a few words to the other Indians, and gradually the talk became less loud, the knives were put in their sheaths, one by one the Indians fell away, the crowd dispersed, and the smoking Indian and I were left alone by the stove. Then and not till then did I see old Nick, who with his face gray with fear and excitement came up to me, and in his broken French-English began to tell me incoherently how scared he had been for me. Then the smoking Indian knocked out his pipe, put it in his tobacco sack, shook hands with me and spoke a few words and then walked out of the store."

"What was it he said to you?" I asked.

"I didn't understand; you know I can't talk Sioux," the Chief replied.

"No, but Nick could; didn't he interpret?"

"Well, yes," answered the Chief rather reluctantly, "Nick told me that the Indian had said I was a brave man and would be safe here now and that he hoped we would meet some time on the warpath.

"Well, sir, I was about as badly scared that time as I ever have been, and I tell you I gave it to old Nick for telling the Indian who I was. He was sorry as could be of course, but the old fool knew no better. He and I presently walked up to the agent's, who gave me an order for my horses, and I rode back that night to Randall. The next day I found that Col. M. and the quartermaster were both away and a young lieutenant was acting quartermaster. I went to him, but when I began to tell my story he waved me aside and told me that he was busy and that I would have to come in the afternoon. Well, I went in the afternoon and he heard what I had to say and told me to come again in the evening and that he would look into the matter. In the evening I went again, and by this time I was getting a little hot under the collar. I got still more so when he began to throw doubt on my story and to say that the horses did not answer my description. Finally he said that he could not give me the horses without more investigation, and I got up and said:

" 'Well you can do as you please in the matter, but I want you to understand that I don't propose to wait around here to suit your convenience. I would have you to know that I have got my horse in my own possession, and I propose to keep him and take him away. The other horse, as you will see by the papers, is not mine. It belongs to a poor man who can ill afford to lose it. You can give it to me or keep it, whichever suits you best. But I am going away to-night.' He stared at me a moment as if paralyzed, and then, without saying a word, wrote out an order for the two horses and handed it to me, and that night I rode away from Randall with both of them.'

Yo.

The Sportsman Tourist.

REMINISCENCES.—II.

[*Continued from page 478.*]

A YEAR or two later, in company with three others of my own age, I visited the same camp. We expected to find our quarters about as they were when I left them before, but to our disappointment the stove was gone and everything presented an uninviting appearance. The weather made fire a necessity, and we were obliged to construct a fire-place in one corner of the shanty. Completing the work as best we could, a fire was lighted and we congratulated ourselves upon our success.

During the first two days we got along reasonably well, then the smoke began to annoy us, growing worse toward evening, finally becoming almost unbearable. Outside the wintry blasts whistled through the pines, and when darkness settled around us we felt uncomfortable enough. In our haste to provide a fire-place we had neglected to properly protect the floor and walls of the shanty, and to our horror found that the fire was slowly but surely communicating with the building. In such a plight how could it be possible to sleep? and without a lantern it was out of the question to procure necessary material for repairs. The storm raged without, piercing every crevice of our habitation—and they were not few. There was but one way to avoid the dense cloud of smoke which filled our quarters—by lying on the floor. The cold increased, but fire must be kept burning or four young nimrods shiver through the long night. To provide for our safety, it was agreed that two of the party should lie down until midnight and two sit up with the fire.

I was again one of the unfortunates, taking first turn. Slowly and painfully the hours passed while the angry winds blew their cold breath down the rude chimney. Finally the time arrived when our sleeping companions must rise, and without any allowance for yawns or catnaps, we were soon occupying their beds and away to dreamland. Horror of horrors! scarcely had we fallen asleep when the cry of fire awakes us just in time to see fire and fireplace disappear through the floor. The camp was in a blaze and no water at hand. Stupefied by sleep and smoke, we gathered up hats, gum boots, etc., and in stocking feet made our way through thick darkness, briers and logs to the stream, a hundred yards away, quickly returning with these vessels filled. The fire had not made much progress, owing to the fact that the floor of our camp was some 2 or 3ft. above ground, to which both fire and fireplace had fallen. We succeeded very soon in putting the fire out, but passed the remainder of that long dreary night without closing an eye. The next morning two of the party visited the nearest mining village, where a cook stove was procured and hauled to camp. Thereafter we bade defiance to the storm and smoked our pipes in peace.

With succeeding years our party increased, but all were considered novices until after killing at least one deer. The muzzleloader finally gave way to the breechloader, and our camp was provided with all necessary modern conveniences. We became familiar with the territory over which we hunted, and began to count with older heads the number of the slain.

One morning I took my stand at a runout. The wind was piercing cold, at times blowing a regular gale. I had remained almost two hours, hearing no sound save that of the storm. Looking out over the broad expanse of low brush and fern I saw a deer running directly toward me. My hitherto benumbed senses were now aroused, and the storm, which a few moments before had almost driven me to camp, became a gentle breeze. On and on the deer glided, bounding gracefully over the brush, heedless of impending danger. A few more bounds and it is within range. I fire, and with increased speed the deer passes out of sight. The trail is followed and blood in profusion found, but snow flakes fly thick and fast and my anxiety increases, for the trail may soon be covered entirely and all trace lost. Rapidly I move along, trusting to the instinct of my dog, which is yet a comparative stranger to me. Within the space of half a mile from where the shot was fired the deer had lain down several times; after that the trail was difficult to follow. I knew little about the reliability of my dog, but before another half mile was covered I was in possession of my game and realized his worth. Before leaving camp the cook had been directed to provide two hooks and nail to a tree which stood near the tent, as I would need them before the close of the week. Upon my return the hooks were in place and one of them put in use.

The following morning our course led in an opposite direction from that of the previous day, everything seemed favorable to success, the ground was covered with snow and Old Sol kept himself hidden behind the clouds, giving Jack Frost ample opportunity to take a nip whenever he desired. The ground to be driven was covered with a dense growth of brush 8 to 10ft. in height, affording excellent hiding places for deer. We were picketed along the face of a ridge and across the ravine at a place where the drive was to end. Clark started with dogs at the end of the ridge, and their tonguing soon after was a signal to be on the lookout.

Time passed and the dogs drew nearer to the watchers. We were spaced several hundred yards apart, and could not see any distance on account of the brush. Suddenly the heavy report of a breechloader burst upon the air, followed closely by another, then came rolling along with the reports as they reverberated among the hills a succession of yells which would have done credit to a Sioux chief. My first impression was that one of our party had either shot himself or was engaged in deadly combat with some ferocious beast. I moved toward him with all possible speed, expecting to see the mangled and bleeding form of my companion.

As I drew near enough to catch sight of him I beheld a spectacle which has haunted my vision ever since. Standing astride of a fawn he had killed was Sam, with a bloody hatchet in one hand and gun in the other; fire flashed from his eyes; the snow and bushes were tramped down and bespattered with blood, presenting the appearance of a slaughter pen. Seeing the real situation I began to interrogate the excited chieftan, who said, "Here is one and over there lies another." The rest of our party were still at their posts, and I started out as directed to find "the other one," but I was unsuccessful, and returned to assist in dressing the fawn which Sam had about decapitated with his hatchet. Before this was complete the party assembled, and although thorough search was made we failed to find the second deer, but its trail proved very clearly that Sam had shot wide of his mark. In due time the fawn was taken to camp, and both hooks were now occupied. The hooks still remain, but the good old man who cut and placed them on the tree has since passed away. The doctor sleeps on the hillside. Yet with each returning season the remainder of our company bid adieu to home and business cares for a brief stay among the grand old mountains.

TYRONE, Pa.

Natural History.

THE BATS.—I.

BY R. W. SHUFELDT, M.D., C.M.Z.S.

IF the reader will refer back to my first paper in FOREST AND STREAM on the Rodentia, he will find that we have now passed through and quite fully illustrated that extensive order of mammals, and to here pursue our plan, I present *in extenso* the next order we have to deal with, as set forth by the Provisional "List" of the U. S. National Museum; this is the Order Chiroptera, a group which contains all the Bats.

This most interesting assemblage of forms is thus arranged:

ORDER CHIROPTERA. BATS.

SUBORDER MICROCHIROPTERA. THE TYPICAL BATS.

Family VESPERTILIONIDÆ. *The True Bats.*

Anthrozous pallidus (Le Conte) H. Allen. Pale Bat. United States west of the Rocky Mountains; Oregon to Mexico.
Vesperugo serotinus (Schreber), Dobson. Serotine Bat. All zoographical regions except Australia. In America, from Winnipeg to West Indies.
Vesperugo propinquus, Peters. Guatemala and Honduras.
Vesperugo albigularis, Peters. Mexico.
Vesperugo georgianus (F. Cuv.), Dobson. Georgian Bat. United States.
Vesperugo noctivagans (Le Conte), Dobson. United States, from Atlantic Ocean to Rocky Mountains.
Vesperugo parvulus (H. Allen), Dobson. Mexico to Costa Rica.
Vesperugo hesperus (H. Allen), Dobson. California.
Nycticejus crepuscularis, Le Conte. United States, from the Great Lakes southward to Mexico.
Atalapha noveboracensis (Erxeleben), Peters. Red Bat. Canada to Chili.
Atalapha cinerea (Beauvois), Peters. Hoary Bat. Nova Scotia to Chili.
Atalapha intermedia (Allen), Peters. Texas to Mexico.
Vespertilio nitidus, H. Allen. California Bat. United States west of the Rocky Mountains; California, Texas and Mexico.
Vespertilio nigricans, Max zu Wied. Mexico to South Brazil.
Vespertilio evotis, H. Allen. Pacific Coast west of the Rocky Mountains.
Vespertilio subulatus, Say. Little Brown Bat. North America east of the Rocky Mountains; Mexico.
Vespertilio carolii. Temminck. North America.
Vespertilio albescens, Geoffroy. Mexico and Brazil.
Vespertilio lucifugus, Le Conte. Blunt-nosed Bat. Hudson Bay to Brazil.
Natalus stramineus, Gray. Mexico to Brazil.
Natalus lepidus (Gervais), Dobson. Cuba.

Family EMBALLONURIDÆ.

Rhynchonycteris naso (Max zu Wied), Peters. Guatemala to Brazil.
Saccopteryx bilineata (Temminck), Peters. Guatemala to Brazil.
Saccopteryx canina (Max zu Wied), Dobson. Guatemala to Brazil.
Saccopteryx plicata (Peters), Dobson. Mexico and Costa Rica.
Diclidurus albus. Max zu Wied. Guatemala to Brazil.
Noctilis leporinus mastirus (Dahl), Dobson. Antillean and Brazilian subregions.
Molossus rufus. Geoffrey. Red Mastiff Bat. Mexico to Brazil.
Molossus nasutus. Spix. Guatemala to Brazil.
Molossus abrasus (Temminck), Peters. Guatemala to Brazil.
Nyctinomus macrotis. Gray. Cuba, Brazil, Paraguay.
Nyctinomus gracilis (Wagner), Peters. Guatemala, Panama and Brazil.
Nyctinomus brasiliensis. Is. Geoffrey. Kansas and California to Chili.

Family PHYLLOSTOMIDÆ. *The Leaf-nosed Bats.*

Chilonycteris macleayi, Gray. Cuba, Jamaica, Hayti.
Chilonycteris personata, Wagner. Guatemala, Venezuela, Brazil.
Chilonycteris parnelli (Gray), Peters. Cuba, Jamaica.
Chilonycteris rubiginosa, Wagner. Mexico to Brazil.
Chilonycteris davyi (Gray), Dobson. Mexico to Brazil.
Mormops megalophylla, Peters. Mexico to Venezuela.

Mormops blainvillei, Leach. Cuba, Jamaica.
Lonchorhina aurita, Tomes. Trinidad, West Indies.
Macrotus waterhousei, Gray. Waterhouse's Bat. California, Mexico and the West Indies.
Macrotus bocourtianus, Dobson. Bocourt's Bat. Guatemala.
Vampyrus spectrum (Linné), Peters. Mexico to Brazil.
Vampyrus auritus, Peters. Mexico and Brazil.
Schizostoma hirsuta, Peters. Locality unknown.
Schizostoma megalotis (Gray), Peters. Mexico to Brazil.
Schizostoma belmii, Peters. Cayaba, Cosmpata.
Trachyops cirrhosus (Spix), Peters. Mexico to Brazil, Bermuda.
Phyllostoma hastatum (Pallas), E. Geoffrey. Panama to Brazil.
Mimon bennettii, Gray. Mexico, South America.
Carollia brevicauda (Max zu Wied), Peters. Mexico to Brazil.
Glossophaga soricina (Pallas), Peters. Central and South America as far as Chili.
Phyllonycteris poeyi, Gundlach et Peters. Cuba.
Phyllonycteris sezekorni, Gundlach et Peters. Cuba and Jamaica.
Monophyllus redmani, Leach. Cuba and Jamaica.
Ischnoglossa nivalis, De Saussure. Mexico and Guatemala.
Glossonycteris lasiopyga, Peters. Mexico to Brazil.
Choronycteris mexicana, Tschudi. Mexico and Guatemala.
Choronycteris minor, Peters. Guatemala to Brazil.
Artibeus perspicillatus (Linné), Gray. Mexico to Brazil.
Artibeus cinereus (Gervais), Dobson. Mexico to Brazil.
Vampyorps lineatus (E. Geoffrey), Peters. Mexico and Paragnay.
Vampyrops vittatus (Peters), Dobson. Costa Rica and Venezuela.
Stenoderma achradophilum (Gosse), Dobson. Cuba, Jamaica.
Stenoderma falcatum (Gray), Dobson. Cuba.
Ctinoderma salvini, Dobson. Costa Rica and Colombia.
Pygoderma bilabiatum (Wagner), Dobson. Mexico and Brazil.
Sturnira lilium (E. Geoffrey), Dobson. Mexico and Chili.
Brachyphyllum cavernarum, Gray. West Indies.
Centurio senex, Gray. Mexico.
Centurio memurtrii, H. Allen. Mexico and Guatemala.
Desmondus rufus, Max zu Wied. Mexico and Chili.
Diphylla ecaudata, Spix. Guatemala, Ecuador and Brazil.

A glance at the above list will be sufficient to satisfy any one at all familiar with the order we now have under consideration, that although some sixteen or perhaps more of the species of bats therein enumerated actually occur in our United States fauna, they are but a small proportion of the representatives for the order at large in North America, and were even all these latter before us, they would by no means present any adequate idea of this extraordinary group of creatures as they exist in the world's fauna as a whole.

So that to more fully understand something about existing bats we must draw more or less generously upon foreign forms, and in doing so we will acquire a broader view of the subject and attain to some acquaintance of the entire order. This is what I propose to do in the present contribution, confident as I am that my readers will approve of such a course, the more especially as our modest little species give but a very faint idea of the truly wonderful forms, remarkable structure and widely varying types of their Old World and East Indian relatives.

To me the bats are among the most highly interesting animals we have now existing on earth, and their structure, as a whole, is still a perfect mine of curious departures from the more common mammalian plan, while their diversified physiognomies, often of a facies most exceedingly unique, taken in connection with the former, never fail to enlist at once the full attention and study of the naturalist and anatomist.

My friend, Dr. Geo. Dobson, F. R. S., one of the highest living authorities on the Chiroptera, has admirably classified this order for us, and by the subjoined scheme I can show the arrangement as follows:

Order.	*Suborder.*	*Families.*
CHIROPTERA.....	Megachiroptera.....	Pteropodidæ.
	Microchiroptera.....	Vespertilionidæ.
		Rhinolophidæ.
		Emballonuridæ.
		Phyllostomidæ.

This eminent authority also distinguishes the Vespertilionidæ and Rhinolophidæ as the Vespertilionine Alliance, and the Emballonuridæ and Phyllostomidæ as the Emballonurine Alliance.

Dr. Dobson characterizes the Megachiroptera as: "Frugivorous bats, generally of large size, having the crowns of the molar teeth smooth, marked with a longitudinal groove; with the bony palate continued behind the last molar narrowing slowly backward, with three phalanges in the index finger, the third phalanx terminated generally by a claw; with the sides of the ear-conch forming a complete ring at the base; with the tail, when present, inferior to (not contained in) the interfemoral membrane; with the pyloric extremity of the stomach generally much elongated, and with the spigelian lobe of the liver ill-defined or absent, while the cordate is well developed."

As will be observed by the above scheme, these fruit-eating bats all fall into one family, and they are restricted in their habitat to tropical and sub-tropical parts of the eastern hemisphere. There are some eight or nine genera of them, very different in appearance sometimes, as we may see by comparing figures 2 and 6 of the present article, while all have wonderfully interesting habits and structure. But we will refer to all this further along.

Dr. Dobson then characterizes the Microchiroptera as "Insectivorous (rarely frugivorous or sanguivorous) bats, of comparatively small size, having the crowns of the molar teeth acutely tuberculated, marked by transverse grooves, with the bony palate narrowing abruptly, not continued backward laterally behind the last molar; with one rudimentary phalanx (rarely two phalanges or none) in the index finger, which is never terminated by a claw; with the outer and inner sides of the ear-conch commencing inferiorly from separate points of origin; with the tail, when present, contained in the interfemoral membrane, or appearing upon its upper surface; with a simple stomach (except in Desmodontes), and with the spigelian lobe of the liver very large, the cordate lobe generally small. Inhabiting the tropical and temperate regions of both hemispheres."

The four families of this suborder are also presented above, but space will, of course, by no means admit of my showing the extraordinary characters that separate them, much less even to enumerate the host of genera which they contain.

We can now, however, with the above classificatory scheme before us, and with these admirable differentiating characterizations of the two suborders, easily locate any species to which I may please to refer in my account which follows, and this will fully meet my aims here.

A COPY OF AUDUBON'S BIRDS.—Among the volumes to be offered for sale by Messrs. Leavitt & Co., auctioneers, this week in this city, is a copy of the original edition of that monumental work the "Birds of America," by John James Audubon. Year by year copies of this work become more and more rare, and as they become scarcer they advance in price.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

MAINE'S GAME.

THERE is little doubt of good legislation for the better protection of fish and game in Maine. The Governor has recommended it in his message to the Legislature, and the members of that body will go about in earnest. Indeed it is a feature of earnestness that has characterized the deeds of the Maine Legislature in that direction all along. Witness the results. An interest greater than almost any other in the State. This interest has grown up under protection. The counting of noses at the State house has already been begun, on the question of favorable fish and game legislation, and to those in earnest on the question the outlook is very favorable. It is likely that better protection will be made for the trout nurseries; that is, the streams and the brooks where they are bred and where they grow to sufficient size to take care of themselves in the deeper waters. Some measures are likely to be adopted for the punishment of such marauders and robbers as have attempted to break up the efforts of the Commissioners in protecting certain breeding water of the landlocked salmon. The Commissioners are still against special legislation, but the usual number of bills for special protection of fishing water and hunting grounds will be introduced. The Commissioners will doubtless ask the Legislature for a better non-export law for Maine fish and game. The present 50lb. trout law is abused, and no doubt it is defective in that it permits of the taking out of far too great a quantity of such fish, provided the sportsman can catch them, or employ other men to do it. Again, the statement of the sportsman himself has mainly to be relied upon, for the reason that his fish are always packed in ice, and boxes weighing more than 100lbs. have to be passed as containing only 50lbs. of trout. Better laws as to the jigging of trout from the spawning beds will be asked for. And the admirable work done by the FOREST AND STREAM in the fall of 1887 in unearthing the truth of the jigging business that had been going on at the Upper Dam for several seasons, will not be forgotten.

The non-export law asked for will be doubtless especially designed to dam up the underground railroad from the Maine forests into the Boston market. This underground railroad is still open. Deer continue to be taken out of barrels and poultry boxes. The receivers chuckle over the idea, that in a barrel thoroughly headed up it is easy to get deer through from Maine, without danger of seizure. But after all they are really alarmed for that part of their trade. They will answer me no questions whatever concerning a deer which I happen to see at their place, with legs all cut at the joints; so that they will go into the barrels or boxes. Formerly deer came to this market with whole legs and antlers. Not a pair of antlers have I seen this winter on a deer that has come through this underground railroad. But one of these receivers of Maine game freed his mind the other day in a way that it came to me. He remarked that he was not getting half of the Maine deer that he should. He had not handled more than a couple of deer this season yet. He could occasionally get one or two by the Bangor boats. The shippers did not consider it quite as risky shipping by water as by rail. But on the whole the venison business was not good this winter, for the good reason that there was so little venison to handle.

By the way, at the present writing there is very little snow in Maine, even in the woods. I saw a gentleman the other day, right from the wilderness. He is lumbering in the Metalic Brook region, off Richardson Lake. He reports very little snow in the woods. The tracks of deer are surprisingly thick. Still, but few were killed in that section, even in the open season, for the good reason that they were not hunted so persistently as is the case in some parts of the State. The gentleman in question had been out himself one day. He soon struck a fresh track in the light snow, and this track quickly led to five other sets of tracks. Then the fun begun. The deer evidently kept well together. The hunters saw them several times, indeed were very near them the most of the time, but did not get a shot before night came on. One who has hunted deer in that region of cedar and spruce swamps, with the great abundance of ground hemlocks, will appreciate the difficulty of getting a shot at even five deer in a drove. But the gentleman laughed at his want of luck, with a chuckle and remarked that "The whole five are up there now, and they will stay there to breed next year; for the lumber camp folks will not disturb them, now that the law is on." In this he is probably right, for Messrs. Bearde & Wilson, who are the contractors for lumbering in that region, will not countenance the killing of deer in close time. Indeed, should the winter continue as open as it is now, there could be no crusting of either moose or deer in that State this season.

The lovers of deer hounding will probably again ask the Maine Legislature to grant an open season for this sort of hunting. Indeed, they say that "a single month will do." Modest, are they not? A single week would be sufficient to drive every deer in Maine over into Canada. No! It will never do! There is not a ghost of a chance that a law of that stamp can be got through the Maine Legislature, though it is understood that some of the New York deer hounding element is to try for it. SPECIAL.

CHARLESTON, Ill., Jan. 3.—Hunting has been tolerably fair in this vicinity this fall. The sportsmen report rabbits scarce, and ruffed grouse are about extinct. Pinnated grouse, quail and squirrel are in fair numbers. Foxes are more numerous than they have been for fifteen or twenty years. The largest bags of game that I have heard of this fall were made by Capt. Wm. A. Jeffries, Frank Vail, Charles Bishop and Douglas McCarty; thirty quail, five rabbits and one squirrel on 21st ult. They were six or eight miles northeast of the city. Scott Dowling was out for a day's shooting on 22d ult., and bagged twenty quail. Simeon and Arnold Ramsey were out on 28th ult., three miles west of the city, and bagged eleven squirrels, so they say.—J. B. D.

SHOOTING CLUBS OF CHICAGO.—II.

THE MINEOLA CLUB.

IT is well to be careful in making any statement of a sweeping nature, yet I believe I am correct in saying that there is not in the entire Western country, and probably not in the East, a private sporting club house, which in size and elaborateness equals that of the Mineola Club of Chicago. It is probable also that there is not anywhere in this portion of the country a body of gentlemen associated purely for the purposes of field sports whose wealth and whose importance in the commercial world is greater than that of the members of this club. For the most part they are the busiest of busy men, and their business is of magnitude. This fact alone does not constitute them objects of interest in a sportsman's eyes, nor yet does the fact of their magnificent and truly commendable building, although that is a worthy monument of sportsman zeal. The point of interest about the Mineola Club men is that they are sportsmen, regular and thoroughgoing, and giants at play as much as at work. When they go out for a good time, they have a very good time. They cover a lot of ground and have a lot of fun to the square inch. It is not on record that all of the Mineola Club ever went out at the same time to take a day out, but if such an event should ever happen it is probable that the well-made walls of their big play house, wide as they are, would not be big enough to hold them and the good time they would have. As a matter of safety, usually only ten or a dozen of them go off together to their home by the raging Fox Lake and celebrate their outing with a largeness, squareness and general perpendicularity of resolve not to let any fun get away, which is only equaled, as has been intimated, by their resolve when at home, not to let a moment of time escape.

The Mineola Club consists at present of sixty-nine actual members. Its membership is limited to seventy-five, all residents of Chicago. The club grounds are situated upon the west shore of Fox Lake, just at the foot of a beautiful wooded bluff. They are forty acres in extent, and afford a frontage of 1,800ft. upon one of the most picturesque portions of the lake. Taken in conjunction with the new building, whose erection was only undertaken this fall, and which will not be completed entirely until the following spring, the locality is one of the most charming to be found anywhere near this city, and the best possible comment on the growth in consideration which sports of the flood and field, and love of the outdoor air have attained in this section of the world.

The Mineola Club is the result of the union of two former Fox Lake clubs, the Union and Cedar Island clubs, and is really a very strong organization. It controls a very desirable portion of the lake as to situation, and is equally convenient with almost any of the lake clubs to the shooting grounds. The latter is a variable quantity, changing much as the notion of the birds changes. No one party or corporation can be said to control any great amount of the actual shooting territory of Fox Lake, the favorite positions being held solely by hunter's law, and open as much to the one club as to the others. The shooting is generally pretty well across the lake from the bluff, although sometimes the bay just in front of the Mineola club house is quite as good a point as any. There is plenty of feed in that corner of the lake, and on a recent trip to that country we saw as many ducks there as on any part of the lake. The "Hill," spoken of in last week's article as being at times an excellent point for pass shooting on the flight between Fox and Pistaqua lakes, morning and evenings, is also very near to the Mineola club house; and if one wished to shoot on Pistaqua Lake, or have a look at the little round pond which lies between the two big lakes, it is only a step across through the woods which slope back so gracefully in little sweeps and curves and abrupt attempts at declivities. Close at hand in the lake, just in front of the landing, the water is deep, and one is as apt to strike a big bass or pike there as anywhere, while the members and their ladies can in the fishing season sit within talking distance of the club house and catch perch, "sunnies" and other cheerful panfish, and rest their eyes with as pretty a little bit of nature as it often befalls one to see. There are grounds for trap shooting, often, doubtless, to be well patronized, and within the house, upon the basement floor, good billiard tables will be put up, immediately upon the completion of the interior. A bowling alley is in discussion, it being a question whether its noise would not prove unpleasant to those upon the floors above. No provision for pleasure has been left forgotten, and the shortest examination of the surroundings is enough to satisfy one that the owners of the grounds are after a pleasure spot, and know how to make it. The club is not specifically a duck club, or a fishing club, or a trap club, or a dancing club, but a pleasant combination of all of these. Its purposes are those of general sport. Its object is to keep a bit of nature in the family, and the result of this is this big caravansery for the boys and their wives and families. It is, of course, strictly to be remembered that the club is in nowise a hotel, and its privileges are not to be bought. It is as much a private house as any city residence, and unless one is fortunate enough to be a member or an invited guest he cannot go within the gates.

The dimensions of the Mineola club house are, for the main structure above, 155x115ft. The dining-room, situated at the side of the main building, is 25x50ft., and beyond this is a kitchen whose size is 20x25ft. It may be seen that there is plenty of room. Over 300,000ft. of lumber have been put into the building, and it has 7,500sq. yds. of plastering. Its cost when it has received its last touches will be between $25,000 and $30,000. The furniture is not yet in place. It will be rich and costly, in full keeping with the rest of the house, and will doubtless cost $5,000.

The dining-room is at the side of the main building, and lies in the sidehill, half a story higher than the main floor, and reached by a flight of broad and comely stairs. It is accessible also from the second floor by a half-flight, so that the ladies may descend from the sleeping apartments to the breakfast room as handily as in any first-class hotel. It may be taken as a matter of fact that the kitchen is well equipped and well supplied.

The total height of the building is 68ft., and it carries a jaunty vane and flag at a distance of 26ft. still higher: so that the total height from tip to toe is just short of 100ft. But it isn't the flagstaff that is the great feature of the club house, nor the dining hall, nor yet the kitchen;

CLUB HOUSE AND GROUNDS OF THE MINEOLA CLUB, FOX LAKE, ILL.

it is the wide and spacious, altogether glorious gallery or veranda that runs around it, clear back to the hill on each side. This veranda runs from 18 to 24ft. in width, and covers more than 10,000sq. ft. of surface. It has large round bays provided at the corners. From its second story a lovely vision of lake and wood is to be seen, and on its lower floor there is room enough for a ball, with any amount of corners for secret converse. I don't know, but I shouldn't wonder if in the "somer seeson, whenne softe is ye sonne," the stern business of the hunter and fisher will sometimes be forgotten, and if stalwart blazer and delicate tennis suit replace the costumes of the field and street, and if these two talk of something but stories of the imminent deadly breach, and if, in the twilight of a pleasant day, the outlines of blazer and tennis suit grow faint and indistinguishable from each other. For, mind you, this big Mineola house is a summer resort to all intents and purposes; the only difference is, not quite everybody can resort. It is a hotel without hotel bills, without unpleasant guests, without work or worry, and without reproach.

The main floor of the club house is arranged as follows: Opening from the veranda is a large entrance lobby, and upon either side of this is a large and finely furnished reception room; upon the extreme left are the rich and extensive parlors set apart for the ladies who may be visitors at the club, and upon the extreme right are the equally large but soberer parlors for the gentlemen. All this series of rooms can be thrown open into each other by means of sliding doors. In each of the parlors there is built a fireplace of heroic model, capable of consuming a vast log of wood, and by the crackling blaze of these cheerful reminders of the ruder camp, there will, I doubt not, be many and many a "flickering" of reminiscences of experiences in this and other countries, Back of this first series of rooms a wide hall runs entirely across from end to end of the building. At the extreme right, just across the hall from the men's parlors, is probably what will be the gun room, 14×28ft. in size, and commodiously arranged with lockers for the shooters' outfits. Upon either side of the dining hall stairs, which rise from the wide central hall, are sleeping apartments 12×14ft. in size.

Upon the second floor the same general plan is followed out. The corridor, on this floor slightly narrower, runs entirely across the building. There is a large front lobby, arranged with sliding doors, which opens directly out upon the great gallery, which is finished here, as below, with rafters and ceiling of dressed and oiled Georgia pine, giving a rich and pleasant effect. There are fifty sleeping rooms upon the second and third floors, each 12×14ft. in size. The rooms are furnished with large French windows, or sash doors, which open clear down to the floor, and out upon the veranda. From any of the front rooms a magnificent view can be had of the lake, and the early riser can see six miles of as pretty a morning scene as he will care to look upon.

The third floor has seventeen rooms, some of which are 12×16ft. Now comes in a cunning device of the builder. By a peculiar arrangement of the large dormer windows upon the hip roof these rooms, so close up under the roof as not to be thought desirable, are as well provided with light as any in the house, and each one has its big front of glass which can be thrown open to the breeze from the lake. These are really about the pleasantest rooms in the house. The corridor runs quite across this floor also.

The building is exceptionally well lighted, and, in short, is throughout architecturally adapted to its own purposes to a degree which hardly could be surpassed. There are eighty-four of the large sash doors, which open out upon the wide galleries. The open arrangement is calculated to insure perfect ventilation and coolness in the heated term.

There are six private boat houses belonging to members of the club. Most of the gentlemen own their own boats. As among the names of the members there may be recognized those of some of the best known shots of the city, it may well be supposed that in the matter of outfits nothing would be left wanting. The most popular boat in t his club appears to be the clinker, decked and combed.

The membership fee of the Mineola Club is $300, and the annual dues are $25. Assessments can not be levied for running expenses.

Chicago readers of FOREST AND STREAM will know many among the names of Mineola members as ones prominent in large financial transactions. Some twenty odd of them are members of the Board of Trade here, and among these there is at least one name whose association with the big wheat deal of last September has made it famous around the world—B. P. Hutchinson, better known as "old Hutch," who did so everlastingly squeeze the boys who didn't have any wheat. However rampageous the old gentleman gets on the Board, as a member of the Mineola Club he is altogether tractable and amiable, and shows no disposition to go long on the fish product of Fox Lake or to eat up the club house and scenery. C. L. Hutchinson, son of the latter named gentleman, is the president of the Board of Trade, and well known himself, it may be sure; so also are such men as C. J. Singer, N. B. Keam, Robt. Lindbloom, "Jack" Cudahy, Cyrus Dupee, J. J. Silberhorn, "Billy" Linn, Nat Jones, Ed Driver, A. H. Bliss, Charley Fenton, John Cantner, George Champlin, Charley Wright and many others of the list. Mr. A. M. Gilbert is an indefatigable and very successful member of the shooting craft and is often called "the lucky man." He won the "opening day" medal this year for the biggest bag of ducks on Aug. 15. Walter Hough is another persistent wooer of the fickle canvasback, whose name is often heard about the lakes and marshes of this section, as are Messrs. Felton, Saxton and others whom space fails to mention.

The present officers of the club are John G. Beazley, president; John Cudahy, vice-president; Chas. L. Hutchinson, treasurer, and J. C. McCord, secretary. The last-named gentleman has had the onerous task of supervising the construction of the club house, and that he has done his duty well is, I think, plainly apparent by a look at the results. The following is a complete list of the present membership of the Mineola Club: A. W. Wright, C. J. Singer, Geo. W. Champlin, N. B. Ream, W. B. Andrews, T. M. Baxter, Robt. Lindbloom, A. H. Bliss, J. C. Cantner, H. S. Heth, Jas. E. Boyd, N. S. Jones, W. S. Booth, H. I. Saxton, J. T. McCord, A. Browne, J. G. Beazley, J. G. Dwen, J. C. McCord, C. E. Felton, G. W. Haskell, R. M. Fair, Geo. O. Garnsey, F. B. Lawrence, J. B. Reeme, John Cudahy, Frank Clifton, F. L. Stevens, Geo. Smith, T. C. Edwards, J. O. Pierson, C. S. Wilcox, Henry Hosmer, W. C. Hough, T. E. Sullivan, Robt. G. Dwen, A. Silberhorn, Geo. P. Braun, A. S. White, A. V. Booth, E. A. Driver.

Mr. John Gillespie, for fourteen years identified with the gun trade in Chicago, and indeed the oldest and best known gun man of the city, severed his long business connection with the Spaldings on Jan 1. Spaldings are going to gradually reduce their gun department, otherwise they certainly would never have let Mr. Gillespie go. He controls the largest local trade of any man in Chicago, and if the gun dealers here let him go long without a good place they are simply standing in their own light, that's all there is about that. Mr. Gillespie built up his trade, as all trade now must be built up, by actual experience among shooters. They all know him.

Mr. John B. Ostell, who has conducted the fishing tackle department at Spalding's also left them Jan 1. Mr. Ostell is here from New York, and although not an old resident here, has built up a good trade. There isn't so much doing in tackle at this time of the year. I hope both these gentlemen will soon be doing business, if not at the old stand, at some other stand.

Mr. Fred Taylor, long a sporting goods dealer here, and late with the Western Arms & Cartridge Co., is still absent on the Indian Territory hunt. He has cattle interests in that country, and I am told will not return to his place with the latter named firm.

In sketch of Fox Lake Club, for statement that Dr. Baxter killed 14 ducks before he ran out of shells read that he killed 140. Where I wrote that "the only way to appeal to a Chicago man is through the medium of ideas and enterprise; if you have not these, stay away from Chicago." I was made by the types to give the kindly advice, "If you have not been there, stay away from Chicago." E. HOUGH.

DIMINUTION OF THE WILDFOWL.

Editor Forest and Stream:

Upon the Indians we must lay the most serious charges for slaughter of wildfowl. From Manitoba came lately confirmed reports that during the last fall wild duck and goose eggs were brought in from the lakes and other breeding grounds actually by whole canoe loads at a time. This is the last thing remaining to be done in the horridly complete extermination of our wildfowl. These eggs are shipped into United States markets from Winnipeg. Many go to New York. E. HOUGH.

CHICAGO.

Editor Forest and Stream:

I have long been wanting to speak my mind on the game law question, and when I read in your last issue a letter from "Ernest" headed "Ducks by the Barrelful," I could not hold back any longer. He says why in the name of heaven can't we have some laws to stop the sale of game, and I say why not. Why cannot the game clubs of this State circulate petitions to prevent the sale of grouse in particular? They are fast playing out in this part of the State. A few years ago every little brush had a brood of grouse, and now a party have to tramp hard all day to flush a dozen birds. And now I think if the sale of them could be stopped it would do away with all snaring and illegal modes of capture. Sportsmen think of it, and somebody take hold and start the ball a rolling. COUNTRY BOY.

ELLISBURG, N. Y.

FUN AND SPECULATION.—Pittsburgh, Pa., Dec. 26.—Messrs. Johnson, Sheppard, Bean, Connor and Dr. MacCord, a committee of the Keystone Gun Club, of Pittsburgh, Pa., visited Del Rio, Val Verde county, Texas, recently, and purchased a tract of land for $9,000, and are negotiating for more, which they intend to use as a hunting park. Del Rio is situated west of San Antonio on the Rio Grande River, and is noted for its grand scenery, delightful climate and excellent hunting. The Grand Cañon of the Rio Grande and the famous San Felipe Springs are within a few miles of the town. The gun club, besides buying the land for pleasure, believe it to be a good investment, as the country in the vicinity has been growing rapidly, and it is believed that the Fort Worth and Rio Grande Railroad will pass close by.

THE BEAR APPRECIATED.—New York, Jan. 3.—Permit me to congratulate you upon the excellence of your supplement, FOREST AND STREAM's grizzly. It so far ahead of the usual blur that most newspapers impose on their readers when they attempt illustration, that I cannot refrain from offering a word to show my appreciation of the way you have so well succeeded in giving your subscribers a really good thing. It seems rather a pity, though, that the little black "cuss" should have been allowed to appear in the foreground.—BIG REEL.

NOW AND THEN A BUFFALO.—As in this report contained in the Livingstone (Mont.) *Enterprise* of Dec. 22: "A buffalo bull and cow were killed a few days since by a couple of halfbreeds about twelve miles north of the Moccasin Mountains, in Fergus county. Their hides and quarters were brought into Lewistown and excited much attention, together with a general expression of regret that the ruthless hunters had not spared these remnants of the almost extinct monarch of the prairies. The same hunters also bagged a great number of blacktail deer, wildcats and wolves, also two or three mountain lions."

MASSACHUSETTS FISH AND GAME ASSOCIATION.—At a recent meeting, President Samuels in the chair, the Treasurer, Mr. Frederick R. Shattuck, presented a partial report showing an excellent financial condition and an improvement over any other year. The Nominating Committee reported the following nominations for officers, to be balloted for at the annual meeting held last night Jan. 9: President, Edward A. Samuels; Vice-Presidents, Charles Levi Woodbury, Walter M. Brackett, H. H. Hunnewell, John T. Stetson, Henry H. Kimball, W. Hapgood, B. C. Clark; Treasurer, Fredrick R. Shattuck; Secretary, Arthur W. Robinson; Librarian, John Fottler, Jr.; Executive Committee, J. N. Keith, D. F. Eddy, J. N. Roberts, John P. Woodbury, Ivers W. Adams, John Fottler, Jr., A. B. Bradstreet, Henry C. Litchfield, Geo. W. Wiggin, J. R. Reed, Samuel Hanson, E. E. Hardy. Membership Committee, Henry J. Thayer, Geo. Mixter, Waldron Bates; Fund Committee, B. C. Clark, Daniel T. Curtis, Samuel Hanson.

CARIBOU WEIGHTS.—*Editor Forest and Stream:* The article in Dec. 13 number stated that those caribou I killed on Moose River last fall averaged 1,200lbs. each. "Ebemee" is correct, as a caribou weighing 700lbs. would be a monster. In fact I never heard of any weighing that amount. I wrote that they weighed 200lbs. each. But the types made me say 1,200lbs.—CAP LOCK.

PHEASANTS IN MARKET.—Newark, N. J., Dec. 30.—Dec. 21, as I was passing through Centre Market, Newark, I saw six English pheasants hung up for sale. I think any man who will kill them at the present time for market would not be too good to go in the farmyard and shoot turkeys. We should have a law to protect them, if there is none.—E. W. H.

NEW YORK GAME LAWS.—The Supervisors of Suffolk county, N. Y., at their last meeting adopted the following: Resolved, That the Board of Supervisors of the county of Suffolk hereby respectfully request the Legislature of this State to allow the game and fishing laws to remain as they are now.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. This book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Camp-Fire Flickerings.

"That reminds me."

253.

LAST fall W. L. Hallett, W. H. Ferguson (proprietors of a large stock ranch near Lone Tree Lake in this vicinity), F. L. McFarland and Finley, of Denver, met at the hospitable ranch house of the first-named gentlemen for a duck hunt. In the middle of the afternoon the party might have been seen slowly filing across field to the shooting ground, loaded down with 4s and mud. When near the Welch Lake the leader suddenly ducked his head, motioning to his followers to stand. There, close to the shore, just over a little hillock, sat thirty as nice mallards as the eye could wish to see. A detour was made, a line formed, and then the strategy began. With guns all ready they made for the little mound, stooping lower and lower as they neared the top, until the stoop became a crawl, each showing his feverish anxiety not to be left in the rear. Then as they reached the crest they all rose, and with one grand rush the destructive fire went forth. So successful was the maneuver and so sure the aim not a duck escaped. There they still sat quietly bobbing up and down with the rise and fall of the troubled water, utterly oblivious of the terrible fusilade. You should have seen the suppressed look those four men gave each other. Then commenced the examination of guns to see who had put up the job. But the guns were all empty; each man had tried to get in the first shot. Well, they fell down, rolled over a few times, and swore they must never give it away. That kind of a cat is hard to keep bagged, but I would not give it this publicity had they not tried to work those same thirty wooden decoys on your correspondent; and they would have succeeded had not old man Gove (the owner) taken them in out of the wet. All of these gentlemen are model sportsmen, not pot-hunters, as their action would indicate.

LONGMONT, Colorado. H.

254.

A few weeks ago, on return from a walk on the Woolwich side of the Kennebec, the ladies of my establishment informed me that they had started up a pair of partridges (ruffed grouse) near the summer cottages on Sasanoa Bluffs. The next day it was the work of but a few moments to take my gun and skiff and sail across the river to interview them if possible. Walking up a soft and velvety path through a clump of trees, out jumped one from a tree just ahead of me, and before I had time to bring my gun to bear, out went another, as though he had an important errand abroad. I rushed forward to clear the trees for a shot, when I heard a low thud as of some partially soft substance striking the shingles of a house. I went up to the nearest cottage to examine, and there beside a small woodshed lay my partridge, dead, but still slightly kicking. He weighed twenty ounces, and I saved my cartridge. G. E. N.

BATH, Me.

THE U. S. CARTRIDGE CO., Lowell, Mass., have received the following letter from Mr. L. S. Carter, winner by 25 out of 25 live birds at Cincinnati, Sept. 8, and who won 18 out of 20 at the shoot Sept. 9, winning the American Field Championship Cup:

"HAMMOND, Ill., Oct. 8, 1888.

"*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I have found no shells that can come up to yours, and think your strong primer Climax paper shells superior to Eley's. I used your shells at all the shoots this season, and had no trouble with any of them. They are more durable, crimp better, and for wood and Schultze powder they are superior to any I have yet found. (Signed) L. S. CARTER, Now Champion Live Bird Shot of the World."—*Adv.*

CHARIOT RACE FROM BEN-HUR.

A realistic representation, beautifully engraved upon a handsome 1889 calendar, by John A. Lowell & Co., Boston, can be procured by sending six cents in stamps to P. S. Eustis, General Passenger and Ticket Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

OUR ANGLING PRESIDENTS.

THE United States has had several anglers among those who have filled the Presidential chair, and their angling abilities were as varied as their individualities or their political views. It has lately been proved that George Washington was an entered apprentice at angling, if not entitled to be called a fellow craftsman. Mr. Geo. H. Moore found that our first President actually recorded two or three fishing trips in his diary, and has reproduced the notes in his little book which he had printed for private distribution, in which he proved conclusively that Washington was an angler. It is worthy of note, in these degenerate days, when the funny man of the daily press delights in picturing an angler as an eligible member of the Ananias Club, that the father of his country usually recorded the fact that he fished on a certain date, but never mentioned the catch, except on one occasion, the only time we have any record of his fishing in salt water. The place was outside the harbor of Portsmouth, N. H., where the party—he modestly withholds the names—caught two codfish, whose weights are not given, a fact which that class of humorists to whom George and his hatchet are a well-spring of information will regret.

Thomas Jefferson is said to have fished in his youth, but we have no record of him as an angler in mature years, nor while he occupied the Presidential chair. The same might be said of many others who have received the first honors of the nation, especially those who were country boys, for the latter all fish; but it is only those who have a real love for the sport who keep it up through life and are entitled to be called anglers. Perhaps stern Andrew Jackson fished, but we can hardly imagine the dapper Martin Van Buren soiling his hands with either worm or shedder crab. If he fished at all it would have been with a fly, and fly-fishing was almost unknown in America in his day.

It is a fact that fishing for sport was not looked upon with a favorable eye by our grandfathers, and the man who did it was apt to be considered a waster of time at least, for in our new country the need of hustling about for dollars was painfully evident from the maxims handed down to us by Franklin, and therefore if some of our earlier presidents did fish they carefully abstained from referring to it.

Not until we come down to Chester A. Arthur do we find any record of presidential angling during a term of office, and here we find a perfect angler, as finished a fly-caster and as elegant a fisherman as might be expected of such a gentleman. We have personal friends who have fished with Arthur who say that as an angler he would compare favorably with any. The fact that he killed a 50lb. salmon merely proves that he was fortunate in getting such a strike, for there are plenty of men who could land such a fish if they had the chance, but the fact that he was generally successful in landing the salmon which he hooked, and that his favorite game was salmon and trout, which he always fished for with the fly, place him in the front rank of angling Presidents.

The present occupant of the White House is an angler, but looks more to results than to means, and being an indifferent fly-caster he does not disdain the humble worm, nor to troll the glittering spoon. The fact that he loves to fish gives him a chance to leave the mud flats of the Potomac and breathe the better air of the St. Lawrence or that of the balsam-laden Adirondacks. Mr. Cleveland is not as finished an angler as his predecessor, and but few men are.

Of the President elect as an angler we know but little. That he went bass fishing last summer is on record, but whether he went for the love of it, or to escape from politicians and reporters, we do not know. Neither do we know what lines he used, nor what his catch was, but if he reads FOREST AND STREAM regularly, as we are informed that he does, no doubt Mr. Harrison will develop any angling instinct that may be lying dormant.

As a means of escaping the importunities of office seekers and politicians in general there is no refuge for the head of the nation like angling. It enables him to take a vacation in the wilderness away from the cares of state and find temporary solace in the company of more primitive people than surround him in Washington, and to change the struggle for office in which he is the victim to a different contest in which he has a chance to be the victor, and to return refreshed in mind and body. By all means let our Presidents go a-fishing.

STRIPED BASS AT MONTAUK POINT.—A goodly number of fair-sized striped bass have been taken with rod and reel at Montauk Point during the past season. Within easy reach of New York city these bassing grounds should be better known than they are. For years past a few anglers cast their lines there with more or less success, and we personally know two who have fished there every season for years and have fair sport. As a rule the fish are larger than those taken further west, about the New Jersey coast and off Staten Island, and the angler can take the Long Island railroad to Sag Harbor, and then he is within about eighteen of Montauk, and can have a conveyance meet him to take him to his destination, where accommodations may be found. About this eastern end of Long Island the bass seem to linger and feed in the varying currents which center there, and the fishing, for bass at least, is better than at Orient, the other eastern point of the island. Bait is not easily procured there, and the angler should provide himself with the necessary menhaden, or lobster, before starting, although the former might be obtained at the oil factories at Promised Land, yet they might not always be fresh. Those of our readers who wish to try new bassing grounds next season may do well on the boulders at Montauk Point.

"OUTING ON THE BIG HORN."—The author of the sketch with this title, page 438, wrote that the Huron Islands were 200ft. above the level of the lake, not 2,000ft.

Fishculture.

THE VERMONT COMMISSION.

THE biennial report of the Fish Commissioners of Vermont for 1887-88 is at hand. They report with pleasure that experience has demonstrated the wisdom of the existing laws for the protection of fish in the waters of Vermont, and that these laws have been generally respected. In numerous instances farmers have so protected and replenished trout brooks and ponds, which had become so depleted as to be of no account, that they have actually realized more revenue from these than from many acres of cultivated land.

The Commissioners have received from all parts of the State encouraging reports from the fish planted in the different waters. Of the landlocked salmon planted in some of the smaller lakes, a year ago, there are reports of many having been caught, some weighing from seven to nine pounds. The trout planted in the small rivers and brooks show a large increase, the general report being that the trout streams are far better stocked than for many years past. Reports from Lake Champlain show that since the protective law has been enforced there has been a large increase of both the species of black bass, pike, shad, and in fact all the fishes native to these waters.

A grating has been placed across the outlet of Lake Bomoseen, extending across between the abutments of the railroad bridge, and good results to the stock of that lake are looked for. The unfortunate loss of 50,000 fry of different species, in the fire which destroyed the hatchery at Plymouth, N. H., interfered with the plans of stocking several waters. The necessity for attention to violations of the law having become so much less than formerly, the Commissioners propose turning their attention to stocking the smaller waters with suitable fish.

After making general inquiries in regard to the most economical way of procuring fry, the Commissioners do not recommend the establishing of a State hatchery. They think that they can buy what they want from private parties cheaper than they can raise them, and quote Col. McDonald in support of the view. The laws of the State require private persons who receive fry from the Commissioners to post notices on the banks of the waters stocked that all fishing therein is prohibited for three years, and as some persons are not willing to do this the Commissioners will decline to furnish them with fish. The yellow perch is recommended for stocking some waters.

The appendix contains a list of the ponds in the State, their locality, kinds of fish in them, their area and other information. The streams are also given in the same way, and the laws for the preservation and propagation of fish, game and birds concludes the report.

THE SAWDUST QUESTION.

Editor Forest and Stream:

I have read with interest the various communications upon the above-named subject, and with special interest that of Charles Hallock in this week's issue, because he refers to streams and conditions with which I am perfectly familiar; and I write from an invalid's room to briefly corroborate the facts stated by him. The adjoining township west of Plainfield is Windsor, a much larger township and containing many more streams, and trout streams, too. Adjoining Windsor on the south is the township of Peru, where I first saw daylight. This township also abounds in trout streams. These townships embrace the summits of what are now known as the Hoosac Tunnel Range, or spur of the Green Mountains, which cross the western end of the State of Massachusetts. A large portion of their streams have driven sawmills for a century past, and several of them had tanneries on their banks; and the same state of things, practically, as enumerated by Mr. Hallock, has existed there for one-third to one-half a century past to my personal knowledge.

MILTON P. PEIRCE.

COLUMBUS, Ohio.

THE MENHADEN SEASON.—The fishing season which has just closed has been a very satisfactory one to the menhaden men, judging from the newspaper accounts of the work. There are now about ninety steamers engaged in the work, and about as many oil factories are in operation from Maine to North Carolina. Very few sailing vessels are now engaged in this trade, the steamers being quicker and therefore more profitable. Maine factories have not done as well as those further south, and the greatest amount of capital invested in the business is now in the State of New York, Connecticut and Rhode Island coming next. The menhaden fisheries and oil works probably represent $5,000,000 invested, and they employ four or five thousand men. The steamers cost from $30,000 to $40,000 each. The past season has been the best for several years and the profits have been large, though the price of the oil has fallen.

THE GRAMPUS.—The U. S. Fish Commission schooner Grampus will soon start for the Gulf of Mexico on a cruise of investigation and research among the marine life of that region. She will be in command of Capt. A. C. Adams, a seaman of much experience. Her former captain, D. E. Collins, is now in Florida investigating the coast fisheries and gathering statistics for the Fish Commission.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.
April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.
May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.
Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6850.**

THE CHESAPEAKE BAY RETRIEVER.

Editor Forest and Stream:

A few days ago I noticed a paragraph in your journal asking for further light on the history and working ability of the Chesapeake Bay dog. Since that time I have examined your columns in vain for some extended article on the subject. My interest centered mainly in the origin of the breed, for with the working abilities of the dog I years ago familiarized myself. For quite a number of years I read everything I could find and questioned every breeder I met relative to the origin of this dog, with somewhat unsatisfactory results.

There is a legend of a famous dog that came from the northern seas and mated with an otter, resulting in progeny having the form of a dog and the coat and water action of the *Lutra vulgaris;* and possibly the peculiar under body coat of the Chesapeake and his movement in swimming and diving gave some color to the myth. But the query is, will the dog and otter mate? From the best data obtainable, and quite plausible, it would seem that the origin of the present specimen may be traceable to the following sources: About seventy years ago there was bred about the head of Chesapeake Bay a large reddish brown dog noted for his powers as a duck retriever in water and among floating ice: and at the beginning of the present century the breed was believed to have been at quite an earlier date brought from Iceland by a man named Harmon. Such is the tradition among many families on the upper bay.

Down the east coast of the estuary there exists a tradition, passing into authentic history, to the effect that about the year 1805 a gentleman named Law was aboard of a vessel called the Canton, which encountered an English brig bound from Newfoundland to England, and in a sinking condition. There were on the foundered brig two puppies, male and female, of either the Newfoundland or Labrador varieties. The dog was a dingy brown color and the bitch black. The dog puppy they named Sailor, and he subsequently came into the possession of Gov. Lloyd, while the bitch was named Canton, and became the property of Dr. Stewart, of Sparrow's Point. Their progeny became known and noted on both shores as the Sailor breed. It would seem then that at the time of the advent of the latter variety there had existed on the upper bay for years the breed above adverted to as of Irish descent, so that the true origin seems to remain in some obscurity; but may not the inter-breeding of the progeny of Sailor and Canton with the older dog, which I believe was known to some as the red Winchester dog, account for the diversity of type found in the present bay retriever?

In the May number of the *Century Magazine* of 1885 there is a short article on the breed under discussion, with an engraving of a specimen of the retriever. This writer contends that there were in reality two varieties, the long-coated and smooth-coated. Many fanciers claim that there should be only two types. However, the writer in the *Century* says he should have a broad head, sharp nose, small bright eyes, and small high-set ears, with a tightly-curled sedge-colored coat, mild in disposition and very intelligent. I think he is fairly correct, except as to coat, that is a mooted question. A great many owners and some few breeders concede three distinct types, which, while so diverse in appearance, possess in common indomitable duck retrieving powers as well as instinct and ability to withstand ice cold water.

While the origin of the dog will pass undoubtedly further into obscurity as the years roll on, it becomes less a matter of interest than the preservation of the few specimens of grand working dogs we now possess. It would seem that the Chesapeake stood at the apogee of fame and purity over twenty-five years ago, that the stock has been permitted to deteriorate in several localities, but that there are now sufficient "good enough" dogs, and I may say superb ones, to enable breeders to breed to a fair standard.

So usually careful and accurate a writer as the author of the "Sportsman's Gazetteer," describing the dog therein, says, "His color is either black with white breast and gray nose, or tawny yellow." "Generally he is fierce and the best of watchdogs," etc. It is probably true that both black, and black and white will occasionally show in some litters, but I presume no wildfowler would care to have a black dog around his blind, and white is not tolerated usually except perhaps in snowfalls. Then as to temperament, I have generally found them kind and tractable, although there are instances where in advanced age they become surly. They are, indeed, good watchdogs, and will faithfully guard their master's property under perilous conditions, defending against man and beast. They usually mind their own business and stay at home, and will not eagerly seek a row with another dog, but when once in a scrimmage they manage to take care of themselves. No doubt their temper is largely influenced by the mode of life meted out to them; still, I would trust their generosity sooner than I would a pointer under like conditions. At page 424 of the above-mentioned "Gazetteer" are quoted the standards formulated by the Maryland Fanciers' Association, dividing the dog into three classes, as follows: "First, the setter dog; second, the curly-haired dog; third, the straight-haired dog. The color of the first class is a tawny sedge, with very short hair. The color of the second class is a red brown. The color of the third class is a red brown. The bitches must show the color and approximate to the general points of the class to which they belong. In the three classes a white spot on the breast is not unusual. Measurements as follows: From fore toe to top of back, 25in; from tip of nose to base of head, 10in.; breast, 9in.; around forefeet, 6in.; around forearm below shoulder, 7in.; between eyes, 3¼in.; length of ears, 5in.; from base of head to root of tail, 35in.; tail, 16in. in length; around muzzle below eyes, 10in."

Several years ago, and I think it was during the winter of 1877, and while a bench show was in progress at Baltimore, several gentlemen, admirers of the Chesapeake dog, held a convention at one of the hotels in the above mentioned city for the purpose of discussing the origin and classifying as well as forming a standard for this dog I am inclined to believe the quotation in the "Gazetteer" is from the minutes of this meeting, as they are so similar. There were three Chesapeakes on exhibition there at the time, and they were large and powerful animals, weighing respectively: Rob, 6 years old, 90lbs.; Monday, 5 years old, 89lbs., and Turk, 18 months old, just over 79lbs. The committee, I am informed, approximated the weight and measurement of the three dogs and adopted a standard accordingly, requiring two-year-old dogs of each class to weigh not less than 80lbs., and bitches 65lbs. of same age. This was a pretty fair start, yet some people are curious enough to wonder how you can fit the standard to the three types if you desire to breed to perfection in each. We have to-day several fine dogs that may be considered proper to breed from, falling short of the foregoing scale, therefore as several years have elapsed since that maiden effort, and as the Mississippi Valley is devoting considerable attention to the rearing of this grand duck dog, cannot the wise ones get together and tinker up the old scale and formulate a new standard adapted to the different strains? A few years ago I believe the American Kennel Club appointed a committee to examine into the merits and demerits of the Bay dog and report a proper standard. Such a standard was formed in part, but I do not recollect that it was adopted.

It has been my pleasure to work with the short and the rough-coated dogs, and I confess that in point of ability each partisan stands on good defensible grounds. There may be some choice when the shooting is done in a section abounding in burrs, as the short-haired animal will not get so badly stuck up as his long or curly-coated compeers. I have also heard a stickler for fine reasoning assert that the shorter coated animal moves through the water with less resistance. However, we know the lesson taught by the pointer and setter. The former gets along better among burrs, but the setter goes through thorns and briers with less injury.

In point of color, sedge or dead grass is preferred for several reasons obvious to the reader who shoots ducks, but solid sedge is rare and accordingly prized. That the Chesapeake has a nose is patent to one who has seen him work. Let a duck hide on the opposite side of a clump or ridge of grass shutting out a view, and then you will note how that unerring nose pilots your dog to the game.

The Chesapeake, while still in the period of early puppyhood, takes naturally, or shall we say instinctively, to retrieving ducks, but some special training must be given him to cause perfect retrieving to your hand. Then, again, this breed seems to require instruction in retrieving other feathered game, such as plover, snipe and rail. It is not a bad plan to give him good yard instruction, teaching your pup to "down" or "charge," to "ho," to hide, hold up, and to "sneak" or crawl through cover, and of course to bring and carry for you. He will learn even quicker than your silky-haired setter, and when you have taught him everything you can think of and he becomes an accomplished dog, and I believe the more a dog is taught the wider become his reasoning and perceptive faculties, then you will pat that faded looking coat and swear he is a darling. And when you watch him, lying hidden in the wild rice, or beside you in the blind, the tip of his brown nose just visible as he keeps a sharp lookout for ducks, sometimes directing your attention to a stray incomer you have not seen, you will say he is the best companion you ever had; but when you see him at the command dash through icy cold water, clambering over and diving under driftwood and cakes of ice, after a winged duck, and when after a chase of a mile he gets her, and breasting the billows and current back places her in your hand so tenderly that not a feather is torn, gives himself a shake, but not close enough to wet you, ready for another plunge, then may you know him for the hero he is. Again, let off both barrels into a flock of flyers and tell him to "fetch 'em in." Mark his sagacity. He passes the dead ones, those sorely wounded, and goes straight for some cripple that is trying desperately to get away, and she has got to leave the water to escape him. If she dives, down he goes after her. So on, one by one, he brings them in, the dead ones nearest at hand last. Oftentimes in the haste and excitement of retrieving a half dozen or more ducks, he may neglect to place the dead ones in your hand, but bringing them to shore leave them and plunge in again. This may be reasoning, or an inherited quality, but if he is a thoroughbred, properly handled, he will bring the wounded to you, and after the batch has been secured he will fetch up the pile deposited on the shore.

There are some people cold blooded enough to say he is not handsome. Well, measured by the lithe shape of the greyhound, on the lovely low form of the field spaniel who may be fashionably black or brown and white, perhaps not. The standard of beauty and merit do not always coincide. Among equines look back at Flora Temple and American Girl, were they beauties except from a horsemen's standpoint? Well then, the Chesapeake with his sturdy compact body, bones and muscular legs and a coat which may sometimes look like a well worn old buffalo robe, might not be pleasing to Hogarth and may not be exactly Titianesque in coloring, but all the same to my eyes he is pleasing; his intelligence, fidelity, courage, adaptibility to his work make him "handsome is as handsome does." His outline at all points is good and he is a dog to command attention any where. Many claim the cocker to be an all-around dog. Well, he will put up grouse and woodcock, run a rabbit track and retrieve small birds and is a grand, sparkling little fellow, yet what he will do on a small scale the Chesapeake will do on a larger one with training. But this is not generally to his credit, and he had better remain what he is naturally, the grandest duck dog extant.

A fair specimen of a Chesapeake may be of either type, solid sedge or faded brown with thick inbody coat of fur impervious to water, standing about 23½in. at shoulder, possibly the rough coated would stand a little taller, and weighing not to exceed 75 or 80lbs. A large dog, while perhaps stronger though clumsier, tires sooner and is somewhat in the way in a blind or sneakbox.

I never knew of a cross with this dog and the spaniel, or a cross with the setter, but what the peculiarities of the coat were diminished. However, my experience in breeding goes but for little beyond specific cases of observation. Some fowlers cross the water spaniel with the setter, or the latter with the Newfoundland, and think they will get a good retriever as well as a dog for use in upland shooting. While there may be a few instances of a resulting good dog, the practice is reprehensible, as it destroys a distinct breed, two in fact, with very doubtful results. Fellow duck hunters, stick to the Chesapeake, don't dilute his blood, but use him well, and he will make you swear by him and not at him.

While he is a dog full of what we term "sand," yet his training when a puppy should be mild and devoid of harshness. There will be pups of inferior quality in some litters, as you will find in the most cherished strains of pointers and setters, and it does not always follow that the sire and dam will transmit their rare qualities to every puppy, particularly in a large litter. Magnificent specimens have been bred at Maxwell's Point and the ducking shores near Perryman's on the Chesapeake and can still be found there, as well as at other ducking shores on the bay. Also some fine dogs are being raised in Iowa and Wisconsin. Pages could be written filled with anecdotes of this retriever. He is incomparable as a duck dog, and the sight of an old shooting coat, gun or boat will drive him into ecstacy and excitement enough to please the most exacting, and when once you know him you will discard the handsome though strongly perfumed water spaniel, and the brave though unreliable Newfoundland when the wind and sleet stiffen your beard and the icy water chills the blood in ordinary man and doghood. He will prove a source of pleasure to your children, a domestic and cleanly dog around the house, a terror to chicken thieves, a protector for your wife, an autocrat among dogs and a friend who will never desert you.

CAYUGA.

SALISBURY'S PEDIGREE.

Editor Forest and Stream.

The bubble has burst and the Chicago editor and his Fleet street employee stand convicted of having circulated as vicious and malicious a falsehood as was ever conceived. I told your readers in your issue of Dec. 6 that there would be some dirty linen to be washed before I got through with this case. The evidence that I required to convict these fellows was the catalogues of shows held in 1878 and 1879. I knew that Carr had entered Salisbury at a number of shows with the pedigree he gave with the dog when he sold him to me; but it was not an easy matter to procure catalogues of shows held ten and eleven years ago, and for these I was compelled to send to England.

The enterprising *Stock-Keeper*, which is always ahead with every iota of news pertaining to dogs and kennel matters, stole a march on me and exposed the whole business, thereby to a certain extent depriving me of the pleasure I anticipated in exposing the crooked doing of the Chicago manipulator, Mr. H., alias "Our Special Commissioner," must be linked with his employer in this fraud until he shall have openly confessed having been made a fool of. In justice to this Mr. H. I will say that I have recently received a letter from an influential dog man assuring me that from what he knows of him "he is altogether too decent a fellow to train with the R. gang."

The *Stock-Keeper* tacitly indorses my statement that Mr. H. is not a dog man and evidently knows nothing about pedigrees. One need only read his articles to discover the truth of this. His dog show reports display on the face of them the same superficial knowledge that is so conspicuously prominent in the writings of other inexperienced reporters for the same sheet. He evidently was put up to do the dirty work for the cloven-hoofed Chicago editor; and having allowed himself to be used as a catspaw, he must bear a portion of the censure that will be piled on the head of the "gang." It is not improbable that "grandmother" W. K. T. and the Chicago clown together concocted the story and engaged Mr. H. to incorporate it in his English notes. A man like Mr. H., who was unknown in the days when Salisbury beat W. K. T.'s undersized, bad-loined, brindle ringtail, and was not on hand to gather up the many tears that were shed at bonnie Dundee, 1879, might be easily duped by a cunning and unscrupulous fellow like the Chicago Doctor. Future events will show whether Mr. H. is or is not "too decent a fellow to train with the R. gang." If he is a self-respecting person he will clear himself of suspicion, even if he do so at the expense (?) of forfeiting his unenviable position of "Special Commissioner" for a person whose character, reputation and knowledge of dogs are all on the same footing. In its issue of Dec. 21 the *Stock-Keeper* thus exposes the vicious libel, which may be heard of again:

"We publish this week a serious letter from Mr. Wade, in reference to the pedigree of the mastiff Salisbury. The charge to which our American contemporary has given currency is malicious and false. Mr. Mason has already, in suitable and indignant language, replied to the damaging accusation that has been launched against his character. That Mr. Mason would deliberately concoct a pedigree is an idea too improbable for a second thought. To do such a thing he must be a rogue and a fool; but his public actions emphatically prove him to be neither. The charge amounts to this: that a man named Carr sold Mr. Mason a mastiff (Salisbury), which he said had no pedigree. When the following number of the Kennel Club Stud Book was compiled an entry was found, signed by Mr. Mason, giving Salisbury the pedigree he still stands credited with. The insinuation is that Mr. Mason concocted this pedigree. Now let us turn the light of reason and facts on this dark charge. At the Birmingham show, in 1879, Mr. Thomas Carr, of 34 Hanover street, Keighley, entered a mastiff named Leo with these particulars and *with this pedigree:* 'Age two years and one month; by Monarch—Duchess; Monarch by Lion—Empress; Duchess by Exley's Victor—Beldam; winner of thirteen first prizes, five extra with cups, and two second prizes; £500.' To this is added in the catalogue: 'Not sent. Sold.' Now, this Leo is the same dog that was afterward named Salisbury and purchased by Mr. Mason. He is here entered by Carr himself with the very pedigree that Mr. Mason is supposed to have vamped. How, then, could Carr decline to give a pedigree when Mr. Mason bought Salisbury, seeing that it already stood in print in the Birmingham catalogue? Thus the evidence of one fact rattles down the whole erection of slander which was based on—what? That is the question we now put and wait a reply. It is more than a pity—it is a scandal—that the reputation of public men should be exposed to these groundless attacks; it is disgraceful to all concerned that a man's character has been assailed in this vindictive manner before all available evidence had been carefully examined. We are certain that the correspondent who is credited with the authorship of this charge is but the puppet in the hands of somebody. The correspondent's acquaintance with mastiff history is too recent to enable him to state such a case out of his own knowledge. He has, no doubt, written upon information received, and in the name of fair play we call upon his authority to disclose himself or know that all men call him coward. More than that, if the correspondent is now convinced of the falseness of the charge he has formulated, it is his duty as an honest man to give up his informant's name for public contempt."

CHAS. H. MASON.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream:

I am inclined to side with your correspondent "Tallyho" in his strictures on fox hunting as conducted by the Western Massachusetts Fox Club, though I will not offend them by characterizing their pastime as indecent and unmanly. Their practice of shooting foxes ahead of hounds seems hardly compatible with that manly and generous spirit of fair play which it is the duty and delight of all good sportsmen to encourage.

One plea urged in favor of this rather doubtful sport, namely, that a fox running the gauntlet of expectant guns has a better chance for his life than when pursued by a pack of hounds, is untenable. The hunt above referred to killed seven foxes in one day. Except in cub hunting one never hears of a pack of hounds accounting for anything like so many in that space of time.

I am informed that large portions of Massachusetts are totally unfitted for fox hunting proper, as riding to hounds would be out of the question, but that there is lots of country in the Connecticut Valley where the fox could be hunted in the usual way. In view of this, it seems to me that the Western Massachusetts Fox Club have no excuse for the shotgun method, which is, at the best, a slow and beggarly kind of hunting.

WEYMOUTH.

DENVER, Jan. 1.

THE COLUMBUS DOG SHOW.—We have received the premium list of the first annual exhibition of the Columbus Fanciers' Club to be held at Columbus, O., Feb. 5 to 8. In the dog department the challenge prizes are $10, with $10 and $5 in the important open classes and $8 and $4 in a few of the minor classes. There are ten cash specials of $5 each, eight of $10 and one of $20. In addition to these a large number of valuable specials are offered. Mr. John Davidson will judge the sporting and Mr. H. Goodman the non-sporting classes. The dogs will be benched and fed by Spratts Patent. Entries close Jan. 25. The address of the Secretary is Dr. Thos. R. Sparrow, Columbus, O.

DOG SHOW REPORTS.

Editor Forest and Stream:

Mr. Chas. E. Bunn owns a puppy out of Lady Beatrice. The reports of the New York and Boston shows led Mr. Bunn to suppose that Lady Beatrice was a good one.

The only description of this bitch in FOREST AND STREAM is that given in the report of the New York show, 1888, which is as follows: "Lady Beatrice, vhc., is too long in muzzle; it is, however, a blunt muzzle. Her head markings are not good, she has too much dewlap, and is crooked in forelegs and rather light in bone." A mastiff that is long in muzzle and crooked in forelegs surely is not a "good one." Mr. Bunn cannot find on record a single instance where I have described a long-faced and crooked-legged mastiff a "good one"; and he drew largely on the resources of his imagination in supposing that my opening comments on the Boston exhibit had special reference to Lady Beatrice, that won second in the open class for bitches. I said then, as I do now, that the mastiffs at that show were the best lot seen together in this country. It was the presence of such dogs as Minting, Lady Clare, Lady Dorothy, Ilford Caution, Ilford Coroner, Monarch and Crown Prince, and the improved quality of classes as a whole, that drew forth this encomium.

Because Mr. Bunn owns a puppy out of Lady Beatrice is no logical reason that his admiration for the dear little thing should be permitted to run away with his eyesight and his better judgment.

It is a strange argument that Mr. Bunn advances when he says that I described Ilford Caution as having four defects and Lady Beatrice five; and that on the strength of this statement, coming from an expert, he concluded that Lady Beatrice must be a very good one.

A dog may have one defect and yet be a bad one; he may possess a dozen defects and be a good one; and he may have six defects and be the best ever seen in America and one of the best ever bred. If Mr. Bunn will turn to pages 153, 154 and 155 of "Our Prize Dogs" he will find that Minting has six or seven defects, and that notwithstanding these he is "a big, grand, long, low, heavy-boned and very massive dog, showing true character and exquisite quality," and, further, that "he is one of the best representatives we (I) have ever seen of a noble and justly popular breed." Mr. Bunn will also find that this dog, with his several defects, was the subject chosen for the frontispiece.

According to Mr. Bunn's method of reasoning, Lady Beatrice with five defects should beat Minting, who has at least six; the value, the intenseness of the defects must not be considered in arriving at a just and correct estimate of a dog's quality and the position he shall occupy. Mr. Bunn will be likely to experience trouble in convincing anybody of the soundness or logic of his argument.

CHAS. H. MASON.

NEW YORK, Jan. 5.

ST. BERNARD CLUB CUPS.

Editor Forest and Stream:

Referring to the correspondence in your issue of Dec. 6 and 13, headed "St. Bernard Prizes," I take pleasure to inform you that the board of governors have reconsidered their action at the meeting of Nov. 12 (which limited the competition for the club cups to dogs having won a prize in their respective regular classes) and have decided to word the restriction as follows:

"A dog or bitch in the open or puppy classes, in order to be eligible for competition for the club cups, must have been awarded at least a very highly commended in its respective regular class at the show where the cup or cups are to be competed for. This rule does not apply to a dog or bitch in the challenge or champion class."

It is, of course, understood that dogs or bitches competing for stud dog or brood bitch cups, do not come under this rule either.

K. E. HOPF, President St. Bernard Club of America.

DOG TALK.

THE revised dog show rules of the English Kennel Club are as follows:

"Challenge Classes.—For all dogs and bitches that had qualified previous to Jan. 1, 1889, for competition in a champion class or challenge class and for winners of ten points in open classes at shows registered in or for the Kennel Club Stud Books.

"Open Classes.—No dog or bitch will be qualified to compete in these classes that has ever won ten points in open classes at shows registered in or for the Kennel Club Stud Books, or that had qualified previous to Jan. 1, 1889, for competition in a champion class or challenge class where challenge classes are provided for that breed.

"N. B.—In estimating the number of points a dog has won, a first prize gained at any show under Kennel Club rules previous to Jan. 1, 1889, by any dog not fully qualified to compete in a challenge class under the old rules will score two points."

The shows held under Kennel Club rules are divided into two classes, winners in those rated as first class will score two points, in the second class one point. The Club has designated as shows of the first class the Kennel Club winter and summer shows, Liverpool, Birmingham, Warwick, Manchester, Edinburgh, Bulldog Club, Collie Club, Pug Club, Fox-terrier Club and Toy Spaniel Club.

In the annual report of the Society for the Prevention of Cruelty to Animals, advance sheets of which have been supplied to us by the president, Henry Bergh, is given this statement of the Society's action with reference to the Hempstead rabbit killing:

"An attempt was recently made by a number of wealthy people to introduce into this country the so-called 'sport' of rabbit baiting, under the impression that through their influence such cruel and demoralizing exhibitions could be made popular and respectable. Though acquitted by a local jury, they have not been so successful before the bar of public opinion, and perhaps they begin to realize that, here in America, such acts are regarded with contempt and abhorrence by respectable and law-abiding people. The officers of your Society had a well-established precedent for their action on this question in the case of the People *vs.* Edward Burt, convicted for a similar offense, known as 'rat baiting,' and sentenced, at the Court of Special Sessions of this city, to serve a term of three months' imprisonment in the penitentiary. The three learned judges who pronounced that decision and sentence did not regard his act as the legitimate destruction of noxious animals, but saw in it only a low and cruel exhibition, created merely for the entertainment of the spectators. It seems hardly necessary for me to deny the silly statements which have lately been made, that we desire to interfere with any proper or manly sport, or to prevent the capture of game, or the extermination of noxious or destructive animals by means of guns, traps or other paraphernalia of the hunter's outfit. We should, however, regard it as a monstrous wrong to utilize some of those methods for the killing of animals when in captivity; for, under such conditions, justice and humanity demand that the creature shall be destroyed in the most merciful manner available. The hunter places a trap, armed with powerful springs and sharp steel fangs, near the haunts of the bear he wishes to secure. Surely this would be no justification for placing a captive animal in an arena, where such an instrument of torture had previously been concealed, in order that he might tread upon it and amuse an audience by his contortions.

"It has been stated that rabbit baiting tends to improve the breed of dogs. The same argument can be advanced in favor of dog fighting and rat baiting. Those who engage in such practices cannot be called sportsmen in any sense of that word; for the true sportsman is animated by a spirit of justice which prevents him from taking an unfair advantage of even a helpless animal. He fires at birds only while upon the wing; he seeks game in its native haunts, where it is afforded a reasonable chance of escape; and he often boldly encounters animals under circumstances where personal danger is incurred."

The Hempstead mode of killing rabbits (or hares, the common American species, "cotton-tails") is as follows: The rabbits are brought to the ground in crates. From the crate an attendant takes a rabbit and drops it to the ground in sight of two fox-terriers, which are held in slips 25yds. or 30yds. distant. Rabbit, terriers and the mounted judge start away together. The purpose is to determine the relative speed of the terriers, measured by the time it takes them to catch the rabbit; the first dog to reach the rabbit wins. The time actually required in practice is from 20 to 55 seconds. None of the rabbits get away. Within less than a minute after being liberated from the crate they are killed by the terriers, or by the club of an attendant deputed to dispatch them.

The second annual dog show of the Rensselaer Kennel Club, to be held at Troy, N. Y., the last week of February, promises to be far ahead of the one held last year. The managers are making every effort to accomplish this, and have already secured the promise of a large number of the most prominent dogs in the country. The premium list will be ready early next week. Three of the most popular judges have been secured, Miss Anna H. Whitney and Messrs. John Davidson and Chas. H. Mason.

The Boston boys are keeping rather quiet about their dog show, but we understand that nothing is being left undone to insure its success. A well known English judge of non-sporting dogs has been invited to judge some of these classes, and Mr. Peshall will judge pointers. We also hear that a bran-new setter judge will officiate there. Boston has always given a first-class show, and we have no doubt that the one this year will be no exception to the rule.

Mr. E. O. Damon, of Northampton, Mass., has recently imported from Ireland two well-bred Irish setter bitches. One of them is a prize winner at the other side, the other is a puppy and has never been shown. Mr. Damon has now a fine kennel of this breed and he will probably give the public an opportunity to inspect them at some of the coming shows.

The Pacific Coast Field Trials Club will hold their annual trials at Bakersfield, Cal., next week. The grounds have been strictly preserved, and quail are reported to be in abundance. The judges appointed are Messrs. R. T. Vandevort, Payne J. Shafton and I. N. Aldrich.

The Northern Ohio Poultry and Pet Stock Association will hold a bench show in connection with their exhibition at Akron, O., Jan. 14 to 19. Mr. John Bolus, of Wooster, O., will judge all classes. The address of the secretary is Nathan Morse, Akron, O.

Mr. W. Wade has purchased from Mr. W. C. Kennerly, of White Post, Virginia, a pair of black and tan foxhounds, and has sent them to a friend in England as representatives of the American foxhound.

The Salisbury pedigree business appears to be a sort of boomerang, and the lesson inculcated is that it is as dangerous to disseminate false charges as to cook up a pedigree.

Secretaries of all dog shows should send to this office a package of premium lists, as we frequently have calls for them, especially on the day that the entries close.

The annual field trials of the Pacific Coast Field Trial Club next month promise to be interesting.

The Indiana Kennel Club announce that their annual field trials for 1889 will begin November 4.

Mr. C. H. Mason informs us that he is hard at work on the second volume of "Our Prize Dogs."

We hear that Melrose, Mass., is the home of a young mastiff that will make some of the cracks take a back seat.

The Columbus dog show will be held under A. K. C. rules, the club paying registry fees for dogs not already registered.

MERIDEN DOG SHOW.

Editor Forest and Stream:

Inclosed is complete list of winners at the fourth bench show, held in connection with the Meriden Poultry Association's exhibition at the Polo Rink, Meriden, Jan. 1, 2, 3 and 4, 1889. The judging by Mr. E. Sheffield Porter, James E. Hair and Geo. W. Neal was satisfactory with the exception of awarding the special for the best dog or bitch to F. F. Dole's Royal Rose instead of St. Cloud, winner of first and special in the red Irish setter class, a noble dog on the bench and in the field, and pronounced by many good judges as the coming dog.

AWARDS.

MASTIFFS.—1st, H. Watrous's Pharaoh.

ST. BERNARDS.—1st, C. W. Glazier's Swiss Victor.

NEWFOUNDLANDS.—1st, J. E. Brainerd's Major; 2d, W. L. Davis's Rover.

GREYHOUNDS.—1st, Elm City Kennels' Sparrow Hawk.

DALMATIANS.—1st, W. L. Davis's Tony.

GORDON SETTERS.—1st, Gordon and Parker's unnamed.

IRISH SETTERS.—*Dogs:* 1st and special and 2d, St. Cloud Kennels' St. Cloud and Young Elcho; 3d, J. F. Ives' Dan. *Puppies:* 1st and 2d, St. Cloud Kennels' Young Elcho and Eachin.

ENGLISH SETTERS.—*Dogs:* 1st and special, Dr. J. E. Hair's Warwick Albert; 2d and special, Mrs. A. J. Callahan's Fairy King. Very high com., W. B. Hall's Gem's Roderigo. High com., A. J. Lee's Don Belton. *Bitches:* 1st, C. A. Ives' Mona II.; 2d, J. B. Robertson, Jr.'s, Grace; 3d, G. W. Hinman's Dixie B. Very high com, W. C. Russell's Princess Belton. High com., W. E. Miller's Speckle B. Com., W. B. Hall's Rhoda. *Puppies:* 1st, C. A. Ives' Mena III.; 2d, J. H. Seely's Nellie; 3d, W. B. Hall's unnamed.

POINTERS.—*Dogs:* 1st, L. E. Clark's Vanstone; 2d, Fleetview Pointer Kennels' Spot Dash; 3d, S. C. Paddock's Pants. *Bitches:* 1st, Fleetview Kennels' Belle of Naso; 2d, Mrs. O. C. Burgess's Minnie B.

FIELD SPANIELS.—*Dogs:* 1st, W. H. Moseley's Jerry; 2d, W. Scott's Pearl Lake Obo; 3d, G. Lamping's Nig. High com., E. A. Locke's Echo. *Bitches:* 1st, W. Scott's Black Flash; 2d, A. R. Crowell's Ideal Black Pearl; 3d, W. F. Murphy's Oleopatra.

COCKER SPANIELS.—*Dogs:* 1st, W. Scott's Carlos. *Bitches:* 1st, W. H. Moseley's Riette; 2d, W. Dougherty's Dora; 3d, Elm City Kennels' Belle Obo. Very high com., W. Scott's Olga. High com., C. S. Howland's Diana.

FOXHOUNDS.—1st and 2d, E. A. Birdsey's Racket and Music.

BEAGLES.—*Bitches:* 1st, Woodside Kennels' Fancy. *Puppies:* 1st and special, H. Dant's Music; 3d and very high com., Woodside Kennels' Ben and Twig.

FOX-TERRIERS.—*Dogs:* 1st and special, J. H. Shepherd's Shepherd Lad; 2d, T. F. Curry's Prince. *Bitches:* 1st and special, N. J. Winfield's Guess.

COLLIES.—*Dogs:* 1st, A. R. Kyle's Nebo of Nessel; 2d, A. D' Fowler's Shep; 3d, J. W. Anderson's Bruce. *Bitches:* 1st, A. R. Kyle's Flora Bell. *Puppies:* 1st, W. G. Hooker's Victor; 2d, W. T. Wells's Roderick.

BULLDOGS.—CHAMPION—R. B. Sawyer's Merry Monarch, also special.—OPEN—*Dogs:* 1st and special, R. B. Sawyer's Portswood Tiger. *Bitches:* 1st, R. B. Sawyer's Soudan.

BULL-TERRIERS.—*Dogs:* 1st, F. F. Dole's Snow Dick. *Bitches:* 1st and special, F. F. Dole's Royal Rose; 2d, T. C. Barry's Rose; 3d, T. Vernon's Vick. *Puppies:* 1st, F. F. Dole's Snow Dick; 2d, C. Fletcher's Turk.

PUGS.—*Dogs:* 1st, J. H. Seely's Peek-a-Boo. *Bitches:* 1st, J. H. Seely's Midget. *Puppies:* 1st, J. H. Seely's Tiny.

SKYE TERRIERS.—1st, W. H. Kieft's Sykie.

YORKSHIRE TERRIERS.—*Dogs:* 1st, C. Fletcher's Prince *Bitches:* 1st and 2d withheld; 3d, C. Fletcher's Pet.

BLACK AND TAN TERRIERS.—2d and 3d, W. Rutter's two unnamed.

J. F. I.

MR. W. R. DOCKRELL'S ADDRESS.—*Editor Forest and Stream:* I regret that Mr. Dockrell's present address was not given in Vol. I. of "Our Prize Dogs." When Mr. Mitchell Harrison filled in his blanks for the book he gave the address "London, England." This was insufficient, and I asked him to send me the address in full. Mr. Harrison owns a number of dogs bred by Mr. Dockrell, and, I believe, has had a lengthy correspondence with him. He should have known what the address was at that time, and there was no apparent reason why I should not accept as correct any and all particulars given by this careful recorder of all matters pertaining to the Chestnut Hill Kennels. Mr. Dockrell's present address will be duly entered in Vol. II. I am glad that it is the address that is wrong and not the descriptions and criticisms of Mr. Dockrell's old favorites. As the first volume of "Our Prize Dogs" is a magnificent success, indorsed by the press of two countries, and as very many of the most prominent and influential dog men in both countries have written me that they hope to see it continued and will subscribe to the next volume, I have decided to go ahead with Vol. II. Blanks for this will be sent out next week, and I hope that owners will be as careful in giving the minor details as in supplying the more important ones.—CHAS. H. MASON (New York, Jan. 5, 1889).

FOX-TERRIER PRODUCE STAKES.—Entries for the Fox-Terrier Club's fourth Grand Produce Stakes of $5 each, $1 forfeit to the fund, with $100 added by the American Fox-Terrier Club, fox-terrier brood bitches (smooth and wire-haired) to be entered, and their produce to be shown, will close Jan. 31. To prevent unequal competition between early and late puppies, the stake will be divided. The first division will extend to all produce of the entered bitches that shall be born between Jan. 1 and May 31, 1889, inclusive. The show of this division will take place at the Westminster Kennel Club Show of 1890. Half the added money and half the stakes will be given on this occasion. The second division will extend to all produce of the entered bitches that shall be born after May, 1889. The show of this division will take place at the American Fox-Terrier Club Show of 1890. Half the added money and half the stakes will be given on this occasion. Entries to me made to H. P. Frothingham, Sec., 2 Wall street, New York, from whom rules, forms of entry, and certificates may be obtained. Entrance fee, $1 for each brood bitch.

A HINT TO DOG SHOW JUDGES.—*Editor Forest and Stream:* As the show season is coming on allow me to make a suggestion to the show committees, viz.: that where they select judges who are large breeders and exhibitors, that they request them to exhibit their own dogs, not for competition, but for the benefit of the people. This, I believe, is largely done in Europe. For instance, at the forthcoming Westminster Kennel Club's show many would be very much disappointed to miss Mr. August Belmont, Jr.'s grand team of fox-terriers, also Mr. D. Baillie's collection, Miss A. H. Whitney's, etc. At the last Westminster show I heard many expressions of regret that Miss Whitney's fine lot of St. Bernards and pugs were not on view. I think that if this was brought before the notice of the various judges they would send their animals and give the public a chance to compare them with competing dogs.—C. J. C.

NEW YORK DOG SHOW.—The judges for the coming show of the Westminster Kennel Club, so far as they have been appointed, are: Miss A. H. Whitney, St. Bernards and pugs. Chas. C. Marshall, mastiffs. John Davidson, bloodhounds, deerhounds, greyhounds, English foxhounds, pointers, English and black and tan setters, and English retrievers. Max Wenzel, Irish setters. James Lackwell, spaniels. Martin Dennis and J. D. Shotwell, collies. E. S. Porter, bulldogs, bull-terriers, basset hounds and dachshunde. A. Belmont, Jr., fox terriers. D. Baillie, Newfoundlands, and all terriers except bull and fox-terriers. F. B. Fay, toy spaniels. N. Elmore, American foxhounds and beagles. J. Pierson, poodles, Italian greyhounds, Mexican hairless and miscellaneous.

NEW JERSEY KENNEL CLUB SHOW.—*Editor Forest and Stream:* I am sorry to announce that the New Jersey Kennel Club will not give a dog show this spring. The club had decided to give a show in Jersey City, and no doubt could have done so successfully, but unfortunately there is not a suitable building in the city. We anticipated giving the show in one of the defunct skating rink buildings, but on investigation found them small, not in a good neighborhood and with a tarnished reputation of prize fights, dance halls, etc. I hope a number of correspondents, to whom I failed to give information in regard to the above, will accept this as an answer.—GEO. L. WILMS, Sec'y (Jersey City, Jan. 7).

EASTERN FIELD TRIALS CLUB.—There was a meeting of the Board of Governors of the Eastern Field Trials Club at the St. James Hotel, New York, on the evening of Jan. 8. The "time limit" rule was changed so that after the brace has been down 45m. they may be ordered up as soon thereafter as a decision can be made. In the rule relating to the bye dog running a side heat the words "if practicable" were inserted. The resignations of Messrs. F. E. Lewis, R. C. Cornell and S. L. Boggs were accepted. The stakes for 1889 will be the same as last year, and the date for the beginning of the open stakes was fixed for Nov. 18, the members' stake to begin Nov. 13.

FOX HUNTING AT ITHACA.—*Editor Forest and Stream:* A fox chase held at Ithaca, N. Y. on New Year's day was quite an interesting affair. Foxhounds gathered from a radius of twenty miles and at least a thousand men were present. Fourteen dogs came to the mark when the time came to start. The trail was three miles over rolling land, giving the spectators a good view of most of the course. The race was won by Hornell-Harmony Kennels' Pride of Hornell, he leading from the start, following the trail closely and finishing well ahead of the second dog, Happy Jack, from Ovid, N. Y.—CLEM.

MASTIFF PUPPY WEIGHTS.—Minneapolis, Minn., Jan. 2.—I have a mastiff puppy, Eureka Chief (A.K.R. 6794). He will be 5 months old Jan. 6, and on Dec. 24 he weighed 87lbs. He is one of the most perfect puppies I ever saw. Can any one beat him for weight?—W. H. MCMULLEN.

NEW JERSEY KENNEL CLUB DOG SHOW.—The bench show of the New Jersey Kennel Club, announced to be held Feb. 12 to 15, has been indefinitely postponed.

AMERICAN KENNEL CLUB.

CONSTITUTION.

As Adopted Dec. 6, 1888.

ARTICLE I.

The name of this Association shall be "The American Kennel Club."

ARTICLE II.

The object of this Association shall be the protection of the mutual interests of its members and the adoption and enforcement of such rules as shall tend to uniformity, and the proper conduct of Bench Shows and Field Trials, and the publication of an official Stud Book and Kennel Gazette.

ARTICLE III.

All regularly organized clubs or associations in the United States or British American Provinces which have held Bench Shows or Field Trials, or are formed for the purpose of holding Bench Shows or Field Trials, or for the improvement of any breed of dogs, and associate members as hereinafter provided, shall be eligible to membership.

ARTICLE IV.

Any person vouched for in writing to the Secretary of the American Kennel Club by not less than two persons in good standing of any club, a member of this Association, shall upon the signing of a printed form of application to be furnished by the Secretary, and the payment of $5.00 annual dues, become an associate member of the American Kennel Club subject to the approval of the Advisory Committee.

ARTICLE V.

An associate member shall be entitled, upon the payment of his dues, to two free registrations in the Stud Book in conformity with the rules governing registration, and a subscription to the Kennel Gazette and Stud Book for one year.

ARTICLE VI.

The dues of the associate members shall be $5.00 payable on the 1st of January of each year to the Secretary of the American Kennel Club.

ARTICLE VII.

Any associate member failing to pay his dues within thirty days of their becoming due, shall be published in the list of delinquents in the Gazette, and failing to pay his dues within sixty days thereafter, shall cease to be an associate member; but the Advisory Committee may extend such time to the limit it may deem proper upon satisfactory excuse of such delinquency being given to the Secretary in writing.

ARTICLE VIII.

The associate members shall be entitled to delegates in proportion to their membership—one delegate for every hundred members.

ARTICLE IX.

The delegates of the associate members shall be elected by ballot at their annual meeting to be held in the City of New York during the first week in January of every year, and their names and addresses shall be regularly published every month in the Gazette.

SEC. 1. Such meeting shall be called by official notice in the Gazette one month prior to the date of said meeting, ten members to constitute a quorum.

SEC. 2. Voting for delegates by proxy or by mail to the Secretary of the American Kennel Club shall be allowed, but all other business shall be transacted by the associate members present only.

ARTICLE X.

The delegates representing the associate members shall have power to fill any vacancies occurring in their ranks, to serve until the next ensuing annual meeting of the associate members.

ARTICLE XI.

Each and every delegate of the associate members shall be qualified, without the concurrence of his colleagues, to individually present any grievance of an associate member to the American Kennel Club for consideration, and in all such cases the American Kennel Club shall assume original jurisdiction.

ARTICLE XII.

SECTION 1. The regular annual meeting of this Association shall be held during the spring of the year at such time and place as shall be designated by the President; thirty days' notice whereof shall be given and published in the Gazette.

SEC. 2. Each member of the Association shall have the right to be represented by one delegate duly authorized and his appointment certified to by his Club Secretary, excepting the delegates of the associate members provided for in Article VIII. Before such delegates shall be entitled to qualify in this Association, they must be accepted by the Executive Committee.

ARTICLE XIII.

SECTION 1. The management of this Association shall be intrusted to an Executive Committee consisting of one delegate from each club and the delegates of the associate members, and no delegate shall represent more than one club.

SEC. 2. The Association shall elect a President and Vice-President.

SEC. 3. The Executive Committee shall appoint a Secretary-Treasurer, who shall under the direction and supervision of the Executive Committee perform the duties pertaining to the office.

SEC. 4. Regular meetings of the Executive Committee shall be held at the time of the annual meeting, and quarterly thereafter, on such dates as may be designated by the President, twenty days' notice of which shall be given to members.

SEC. 5. The President may call a special meeting of the Executive Committee at such time as he may deem expedient, and he shall upon the written request of three members call a special meeting. At such special meeting no business shall be transacted other than that for which such meeting shall be called, and specified on the call, ten days' notice of which shall be given.

SEC. 6. At any regular or special meeting of the Executive Committee seven members shall constitute a quorum.

ARTICLE XIV.

The President shall preside at all meetings of this Association and of the Executive Committee. He shall have power to call a special meeting of the Association at any time, and must do so on the written request of five members; ten days' notice must be given of such special meeting.

The Vice-President shall in the absence of the President perform the duties pertaining to that office.

ARTICLE XV.

The Secretary-Treasurer shall keep records of all meetings of this Association and the Executive Committee, make all calls for such meetings, take charge and keep the roll of membership, and of all papers belonging to the Association, and shall collect all moneys belonging to the Association and dispense same under the direction of the Executive Committee, and do any other business proper to his office, or as directed by the Executive Committee.

ARTICLE XVI.

Applications of Clubs for membership shall be made in writing to the Secretary of this Association, accompanied by a copy of the applicant's Constitution and By-Laws, List of Officers and first year's dues, and an election shall be held at the next meeting of the Executive Committee, provided said application shall have been filed with the Secretary at least ten (10) days previous to said election. It shall require two-thirds of members voting to elect.

ARTICLE XVII.

The Executive Committee shall have power by a two-thirds vote to suspend for a stated period, or to expel any club or delegate whose members it may be deemed prejudicial to the welfare of the Association.

ARTICLE XVIII.

SECTION 1. The annual dues of Clubs shall be $10, payable at or before January 1st of each year. Failure to pay said dues shall forfeit all right to representation in such club, and may be suspended or dropped from the roll.

SEC. 2. The Executive Committee shall have the right to make one assessment during the year, not to exceed $10.

ARTICLE XIX.

This Constitution and By-Laws and Rules may be revised or amended after thirty days' notice has been given to all members of such proposed amendment, by a two-thirds vote at any meeting of this Association where at least two-thirds of the members are represented, or by obtaining a ratification within thirty days, through the Secretary of the Club of at least two-thirds of the members of this Association of any enactment of any revision or amendment of the Constitution, By-Laws or Rules, duly proposed and carried by a two-thirds vote of any meeting of the Association.

ARTICLE XX.

An Advisory Committee of five, of which the Executive Officers shall be ex-officio members, shall be appointed at each annual meeting, which shall have power to act upon cases of protest and appeal pending the final action of the Executive Committee.

ARTICLE XXI.

The Advisory Committee shall have power to reject any application for associate membership.

ARTICLE XXII.

The business management of the A. K. C. Stud Book shall be subject to the direction of a committee of three, elected by a majority of the members present at the annual meeting of the Club, and shall render account to the Association annually at such meeting.

RULES.

I.—The word dog where used in these rules includes both sexes.

II.—Every dog entered at any Show held under these rules must be the bona fide property of the person making such entry, on the day of closing the entries, and *must be registered* with the Secretary of the American Kennel Club, on official blanks to be furnished on application; such registry shall be published in the American Kennel Gazette. A fee of twenty-five (25) cents must in all cases accompany the application. In case a dog has not been registered as above required, previous to the date of entry to a Show, the owner must remit the fee (twenty-five cents) together with the Show entry, to the Secretary of the said Show, who shall mark the dog as registered in the Catalogue, and shall forward said entry on an official blank, properly filled out, together with the registry fee, to the Secretary of the American Kennel Club, within ten (10) days of the closing of the Show. The entry must clearly identify the dog to be exhibited by name, and, if known, its date of birth, name of its sire and dam, and the name of its breeder; should any of these particulars be unknown to the exhibitor it must be so stated on the entry blank and inserted in the Catalogue.

III.—Dogs already registered in the American Kennel Club Stud Book, shall be exempt from the registration required in rule No. 2, but in all such cases the Stud Book number of the dog must be given with the entry, to the Secretary of the Show, and must by him be published in the Catalogue. Registry in the Stud Book can be made only under the following conditions:

1. Where sire and dam are already registered, or are directly descended from dogs already registered in said book.

2. Where dogs possess an authenticated pedigree extending back three generations.

3. Where dogs (not eligible under the provisions as above required), having won not less than two first prizes in the regular classes at any Show recognized by the American Kennel Club.

NOTE.—(A dog entered in the *American Kennel Register* previous to January 1, 1888, may be registered free of charge in the Stud Book.)

IV.—If the name of a dog which has won a prize has been changed, the old name must be given on the entry blank and inserted in the Catalogue, together with a list of all prizes won by the dog, until such time as it wins a prize under its new name.

V.—If a dog has been entered without being clearly identified, as directed in Rules 2 and 4, it shall be disqualified and forfeit any prize which may have been awarded to it.

VI.—The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

VII.—A puppy is eligible for competition in the Open Class as well as the Puppy Class, but a separate entry must be made for each class.

VIII.—The authorities of any show may reserve to themselves the right of declining any entries they may see fit, or of removing any dog on account of disease, vice or other cause.

IX.—A recognized veterinary surgeon must be appointed at each Show held under these rules. Each dog received at a Show must be passed upon by him before being benched.

X.—A castrated dog or spayed bitch shall be disqualified, and forfeit any prize which may have been awarded it.

XI.—Total blindness, deafness or lameness shall absolutely disqualify. If the judge or veterinary surgeon is satisfied that the deafness or lameness is temporary, the dog shall be allowed to compete.

XII.—A dog suffering from mange or any contagious disease shall be disqualified and forfeit any prize which may have been awarded to it, and shall be removed at once from the Show building. The regularly appointed veterinary surgeon shall alone decide as to the mange or contagious disease, and his decision must be given in writing.

XIII.—A judge may disqualify a dog which in his opinion has been improperly tampered with, subject to the decision of the veterinary surgeon. Should the judge's disqualification not be sustained, the class must be immediately rejudged.

XIV.—Full discretionary power is given to the judge of each class to withhold any or all prizes for want of merit. The judge's decision will be final in all cases affecting the merits of the dogs, and appeals can only be entertained where misrepresentation or breach of the rules is discovered.

XV.—Should an appointed judge be unable to fulfill his engagement, the committee shall have the right to fill the vacancy in such manner as they see fit. All the separate classes of any one breed of dogs must, however, be adjudicated upon by the same judge or judges acting in conjunction.

XVI.—In any class where there is a limit of weight, the person in charge of a dog entered in such a class may claim of the Show Committee the right, at any time before the judging, to have his dog weighed, and the weight of the dog shall be registered and hold good at the time of the judging.

XVII.—Bench Show Committees may provide for the following classes:

Miscellaneous Classes	1
Selling Classes	2
Novice Classes	3
Puppy Classes	4
Open Classes	5
Challenge Classes	6

1. The Miscellaneous Class shall be understood to comprise all pure breeds of dogs, for which no regular class has been provided for in the Premium List.

2. The Selling Class must be for dogs to be sold for a maximum price, to be stated in the Premium List. An exhibitor may catalogue his dog in this class for any sum less than the maximum.

3. The Novice Class shall be understood to be for a recognized breed, for which a regular class has been provided, and for competition in which a dog shall not have won a prize at any American Kennel Club Show, or which has not won a prize in a recognized Show held in England or Canada.

4. The Puppy Class shall only embrace dogs of twelve months and under in age, excepting for the following breeds, which may be extended to eighteen months of age, at the option of Bench Show Committee: St. Bernards, Mastiffs, Deerhounds, Irish Setters, Great Danes.

5. The Open Class shall be for dogs of any age, which have not already qualified for the Challenge Class and for which no challenge class has been provided.

6. The Challenge Class shall be for all dogs having won four first prizes in the open classes. A dog having won three first prizes in this class shall have the privilege of the title of Champion, without further competition.

All dogs qualified to compete in a Champion Class previous to January 1, 1889, shall compete in the Challenge Class. The winnings referred to in these simple rules apply only to Shows recognized by the American Kennel Club, a list of which, together with these rules, must be published in the Premium List and Catalogue of each show.

XVIII.—In estimating the number of prizes a dog has won with reference to whether it should compete in a Challenge Class, or not, the number of prizes won shall be calculated up to 12 P. M. of the day preceding the closing of the entries of the Show. If a dog wins a first prize that will make it eligible to the Challenge Class, between the date of closing of entries and the day previous to the opening of a Show, the dog shall not be transferred to the said Challenge Class.

XIX.—In entering a dog in a Challenge Class, it is necessary to specify on the entry blank a sufficient number of first prize winnings to entitle him to compete in such classes, as required by these rules, and this record must be given in the Catalogue.

XX.—If a first prize winner is disqualified, the next dog in order of merit as placed by the judge shall be considered first, and the win shall count in every respect the same as if it had been the original award. An equal first prize shall be counted as a win for both dogs.

XXI.—No dog eligible for special prizes can be withdrawn from competition, unless it has been stated on entry blanks, "Will not compete for special prizes."

XXII.—No special prizes can be accepted or offered by a Show Committee after the regular judging has commenced.

XXIII.—The age of a dog shall be calculated up to and inclusive of the day preceding the Show. A dog whelped April 30th, shall not be eligible on May 1st of the following year to compete in a Class for dogs under 12 months of age.

XXIV.—An objection to a dog may be made by any exhibitor, or any member of a club, a member of this Association, but must be in writing, and be lodged with the Secretary within seven days of the last day of the Show. No objection shall be entertained unless accompanied by a deposit of $5.00, except in the case of objection lodged in the name of the American Kennel Club.

The Show Committee shall at once meet and decide upon any objection lodged during the Show, and from their decision an appeal may at once be taken to the local delegate or to any member of the Executive Committee of the American Kennel Club, who may be called upon by the Show Committee, provided any such member is not on the Show Committee. If the second decision is adverse to the appellant, the deposite of $5.00 is thereby forfeited to the Show Committee.

If the objection is lodged subsequent to the Show, it must be decided by the Committee within twenty days of its receipt. Five days' notice of the date and place of meeting for that purpose must be given to all parties in interest. From any decision rendered as provided for in the two clauses appeal may be taken to the full Executive Committee of the American Kennel Club. Such appeal must be sent to the Secretary within seven days of the decision being rendered.

XXV.—Any person who has been guilty of misconduct of any kind in connection with Dogs, Dog Shows or Field Trials, may be suspended by the committee of the show where such offense was committed. Notice of such suspension must be forwarded within twenty-four hours to the Secretary of the American Kennel Club. The Secretary of the American Kennel Club shall at once notify the President, or in his absence the Vice-President, who shall investigate the case, and if he sees fit suspend the penalty until the next meeting of the Executive Committee, when the committee must either remove the suspension or impose a penalty of disqualification for such a period as they may decide upon.

The disqualification of an owner shall apply to all dogs connected with the perpetration of a fraudulent act. The Committee of the American Kennel Club are, however, empowered to use such discretion in the enforcement of this penalty as shall protect innocent parties.

XXVI.—No person under suspension or sentence of disqualification can exhibit or take a prize or act as agent for any person at any Show held by a member of the American Kennel Club.

XXVII.—Entries made in the name of a kennel must be accompanied by the name of the actual proprietor or proprietors, but not necessarily for publication. The partners in a kennel will be deemed equally culpable in the case of fraud perpetrated in the kennel name.

XXVIII.—The Secretary of every Show must forward to the Secretary of the American Kennel Club a copy of the Premium List of the proposed Show as soon as sent to exhibitors, which must contain a list of officials under whose management the show is to be held. Each of these officials, except paid employees, shall be held personally responsible for the payment of all prizes within sixty days from the last day of the Show. The Secretary of the American Kennel Club shall upon evidence being produced that any such prize or prizes remain unpaid, issue notice of suspension of each and every official, and otherwise proceed as provided for in Rule 24.

The Secretary of every Show must also forward to the Secretary of the American Kennel Club a marked copy of the Catalogue certified to by himself within ten days of the closing of each Show.

XXIX.—The person presenting the identification ticket shall be recognized as the agent of the owner in the latter's absence, and his receipt for prize money shall be binding on the owner, unless notice to the contrary is indorsed on the identification ticket.

XXX.—All prizes offered by the Club or Committee in charge of a Show must be paid in accordance with the description given of them in the Premium List. Medals of silver or gold must be of the purity of the United States coin.

XXXI.—Show Committees may adopt such regulations to govern their Show as they deem fit, provided they do not conflict with any of the foregoing rules.

XXXII.—Only winnings under A. K. C. rules shall be permitted in catalogues, but it is optional with bench show committees to publish any wins, other than challenge classes, etc., as provided for in Rule 19.

Awards at the following shows will be recognized by the American Kennel Club:

Baltimore Kennel Club, 1878.
Boston, Massachusetts Kennel Club, 1878 to 1882, inclusive.
Boston, New England Kennel Club, 1885 to 1887, inclusive.
Chicago, 1876, 1883, 1884.
Chicago, Illinois Kennel Club, 1885.
Cincinnati, 1884.
Cincinnati Sportsman's Club, 1885, 1888.
Cleveland, 1882, 1884.
Cleveland Kennel Club, 1886.
Detroit, 1879.
Detroit, Michigan Kennel Club, 1887.
Fox-Terrier Club, 1886, 1887 and 1888.
Hartford Kennel Club, 1886 and 1887.
Hornell Kennel Club (Hornellsville), 1886 and 1887.
London, Ont., prior to 1885.
Manitoba Pet Stock Association, 1885.
Meriden, prior to 1885.
Milwaukee Kennel Club, 1886 and 1887.
Montreal, 1883 and 1884.
New Haven Kennel Club, 1884 to 1886 inclusive.
New Jersey Kennel Club (Newark and Waverly), 1886 and 1887.
New Orleans, 1883 and 1884.
New York, Westminster Kennel Club, 1877 to 1888 inclusive.
New York, Fanciers' Club, 1886.
National Poultry and Bench Association, Atlanta, Ga., 1883.
Ottawa, Province of Ontario, 1883.
Philadelphia, Kennel Club, 1879 to 1888 inclusive.
Philadelphia, National Breeders' Show, 1884.
Pittsburgh, Western Penna. Poultry Society, 1881 to 1887.
Pacific Kennel Club, 1888.
Rhode Island Kennel Club, 1887.
Richmond Co. Poultry and Pet Stock Association, Augusta, Ga., 1888.
St. John, N. B., 1886.
St. Paul and Minnesota Kennel Club, 1887, 1888.
St. Louis Kennel Club, 1879 and 1880.
St. Louis Gun Club, 1884 and 1885.
Syracuse Kennel Club, 1888.
Toronto, Ont., 1880 (Fair Grounds, 1884, 1885, Horticultural Gardens).
Virginia Field Sports Association, 1888.
Washington, 1883 and 1884.

In publishing the above list in the Premium Lists, it must be revised to include all Shows held by the members of the American Kennel Club, or shows to be given by them, previous to the closing of the entries of the show to be held.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Luck of Donald. By I. N. Cochran, Philadelphia, Pa., for liver and white pointer dog, whelped Jan. 4, 1888, by Donald (Bob - Sappho) out of Grace (Heath's Spot—Underhill's Jane).

Phyllis. By Chas. W. Shaw, Brookline, Mass., for tawny and white St. Bernard bitch, whelped Sept. 9, 1888, by Scotch Bonivard (champion Bonivard—Mirza) out of Madam (A.K.R. 4787).

Max, Bob and Gladys. By C. T. Brownell, New Bedford, Mass., for black and tan Gordon setters, two dogs and one bitch, whelped Sept. 1, 1888, by Rowland Ranger (champion Shot—champion Nell) out of Beulah (Tom—Cremorne).

White Duke and White Duchess. By F. F. Dole, New Haven, Conn., for white bull-terrier dog and bitch, whelped Dec. 20, 1888, by Sensation (Bulrush—Fancy) out of Starlight (champion Grand Duke—champion Maggie May).

Chesapeake Kennels.—Malvern, Ia., Jan. 3.—As Geo. E. Poyneer, of Williamsburg, Ia., has given up breeding Chesapeake Bay dogs, he has turned the name of Chesapeake Kennels over to me, and I now claim it.—Dr. H. H. SMITH.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Rural Dot—Little Duke, Jr. Rural Kennels' (Wakefield, Mass.) beagle bitch Rural Dot (Flute M., A.K.R. 1990– Bell, A.K.R. 1939) to W. E. Deane's Little Duke, Jr. (A.K.R. 2389), Dec. 31.

Dixie—Little Duke, Jr. W. E. Deane's (Somerset, Mass.) beagle bitch Dixie (Elmore's Flute–Thorne) to his Little Duke, Jr. (A.K.R. 2389), Dec. 19.

Wave—Sandy. Chesapeake Kennels' (Malvern, Ia.) Chesapeake Bay bitch Wave (Bob–Nellie) to their Sandy (Gowrie–Ruby III.), Dec. 31.

Belle of Maine—Beaufort H. G. W. Lovell's (Middleboro, Mass.) pointer bitch Belle of Maine (champion Graphic–Zitta) to his Beaufort H. (champion Beaufort–Zuba), Jan. 3.

Fly—Mainspring. J. P. Swain, Jr.'s (Bronxville, N. Y.) pointer bitch Fly (A.K.R. 4745) to J. T. Perkins's Mainspring (Mike—Romp), Dec. 20.

Gipsey—Young Toby. John Hooley's (Troy, N. Y.) pug bitch Gipsey to Chequasset Kennels' Young Toby (champion Toby—Topsy), Nov. 10.

Chartreuse II.—Duke of Lancaster. C. Van W. Fish's (Cleveland, O.) St. Bernard bitch Chartreuse II. (Bonhomme—Chartreuse) to Chequasset Kennels' Duke of Lancaster (champion Plinlimmon—Lady Burghley), Nov. 5.

Lola—Monte Rosa. A. Stucky's (Pittsburgh, Pa.) St. Bernard bitch Lola (champion First Choice—Bella) to Chequasset Kennels' Monte Rosa (Alp II.—Sombre), Nov. 2.

Marigold—Beauchamp. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Marigold (Alp II.—Sombre) to their imported Beauchamp (champion Beauchief—Berengaria), Dec. 25.

Heidel—Duke of Lancaster. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Heidel (imported Cæsar—Nun) to their Duke of Lancaster (champion Plinlimmon—Lady Burghley), Oct. 20.

Rural May—Leigh Belton. Rural Kennels' (Wakefield, Mass.) English setter bitch Rural May (Belthus—Daisy) to F. A. Patch's Leigh Belton (Yale Belton—Princess Lily), Dec. 18.

Princess Belton—Warwick Albert. W. C. Russell's (Bridgeport, Conn.) English setter bitch Princess Belton (Yale Belton—Polly Blue) to Warwick Kennels' Warwick Albert (Royal Albert—Maida), Dec. 9.

Daisy Druid—Warwick Albert. Warwick Kennels' (Bridgeport, Conn.) English setter bitch Daisy Druid (Ted Llewellin—Trusty Gladstone) to their Warwick Albert (Royal Albert—Maida), Dec. 26.

Bessie—Dash L. Chas. G. Rutter's (Lawrence, Mass.) Gordon setter bitch Bessie to Chas. H. Leonard's Dash L. (Glen II.—Nellie Horton), Dec. 29.

Warwick Vic—Warwick Obo. Warwick Kennels' (Bridgeport, Conn.) cocker spaniel bitch Warwick Vic to their Warwick Obo (Obo, Jr.—Black Garrie).

Jet Obo—Black Harry. Brown Cocker Kennels' (Waterbury, Vt.) cocker spaniel bitch Jet Obo (A.K.R. 4810) to their Black Harry (Black Pete—Althea), Dec. 24.

Miss Norah—Young Royal Diamond. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Miss Norah (Dutch—Norah) to his Young Royal Diamond (Royal Diamond—Mercedes Royal), Jan. 5.

Floss R.—Star. G. H. Reed's (Lancaster, Pa.) fox-terrier bitch Floss R. (Bacchanal—Sorry Clove) to J. R. Trissler's Star (Resolute—Coquette), Dec. 29.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Heidel. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Heidel (imported Cæsar—Nun), Dec. 27, three dogs, by their Duke of Lancaster (champion Plinlimmon—Lady Burghley).

Belle. E. Malley's (Bridgeport, Conn.) cocker spaniel bitch Belle, Nov. 30, six dogs, by Warwick Kennels' Warwick Obo (Obo, Jr.—Black Garrie); all black.

Starlight. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Starlight (champion Grand Duke—champion Maggie May), Dec. 20, nine (four dogs), by Mr. Goddard's Sensation (Bulrush—Fancy); two dogs and two bitches since dead.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Music. Black, white and tan beagle bitch, whelped March, 1888, by Major out of Dido, by Warwick Kennels, Bridgeport, Conn., to Henry Dant, same place.

Sir Anthony—Jennie whelps. Pointers, whelped Oct. 24, 1888, by Geo. W. Lovell, Middleboro, Mass., a liver and white dog to Geo. W. Hartshorn, Milford, Me., and a lemon and white dog to W. A. Dilks, Hammonton, N. J.

Portland Lily. Lemon and white pointer bitch, whelped March 31, 1885 (A.K.R. 4058), by F. F. Harris, Portland, Me., to Geo. W. Lovell, Middleboro, Mass.

Mikado. Liver and white pointer dog, whelped Nov. 18, 1885 (A. K.R. 3132), by F. F. Harris, Portland, Me., to G. W. Lovell, Middleboro, Mass.

Beaufort H. Pointer dog, age not given, by Beaufort out of Zuba, by F. F. Harris, Portland, Me., to G. W. Lovell, Middleboro, Mass.

Dandy. Pug dog, age and pedigree unknown, by Warwick Kennels, Bridgeport, Conn., to E. F. Hoar, same place.

Sam. Pug dog, whelped Aug. 20, 1884, by Young Toby out of Judy, by Chequasset Kennels, Lancaster, Mass., to A. P. Cassin, Atlanta, Ga.

Tina. Pug bitch, whelped July 13, 1888, by Santa Claus out of Almah, by Chequasset Kennels, Lancaster, Mass., to A. P. Cassin, Atlanta, Ga.

Daisy. Pug bitch, whelped June, 1887, by Othello out of Victory, by Chequasset Kennels, Lancaster, Mass., to C. E. Scott, Schenectady, N. Y.

Triste and Tea. Pug bitches, whelped June 24, 1888, by Phillibuster out of Tantrums, by Chequasset Kennels, Lancaster, Mass., to C. E. Scott, Schenectady, N. Y.

Chequasset Maud. St. Bernard bitch, whelped Oct. 12, 1888, by Beauchamp out of Lady Hanley, by Chequasset Kennels, Lancaster, Mass., to Geo. Q. Dow, Epping, N. H.

Chequasset Abbess. Smooth St. Bernard bitch, whelped August, 1887, by Duke of Lancaster out of Myra, by Chequasset Kennels, Lancaster, Mass., to W. Millard, Sycamore, Ill.

Od'ascep. St. Bernard dog, whelped Oct. 12, 1888, by Beauchamp out of Lady Hanley, by Chequasset Kennels, Lancaster, Mass., to C. Van W. Fish, Cleveland, O.

Chequasset Orson. St. Bernard dog, whelped Oct. 12, 1888, by Beauchamp out of Lady Hanley, by Chequasset Kennels, Lancaster, Mass., to W. C. Freeman, Cornwall, Pa.

Chequasset Argus (formerly Chequasset Oskar). St. Bernard dog, whelped June 17, 1888, by Chequasset Max out of Heidel, by Chequasset Kennels, Lancaster, Mass., to L. H. Buhrman, Cincinnati, O.

Chequasset Ottilie. St. Bernard bitch, whelped Aug. 24, 1888, by imported Beauchamp out of Marigold, by Chequasset Kennels, Lancaster, Mass., to M. L. Stover, Amsterdam, N. Y.

Chequasset Arni. St. Bernard dog, whelped June 17, 1888, by Chequasset Max out of Heidel, by Chequasset Kennels, Lancaster, Mass., to Miss E. E. Dana, Morristown, N. Y.

Nora. Black, white and tan English setter bitch, whelped Jan. 8, 1886, by Count Noble out of Lit, by J. S. Hudson, Covington, Ky., to I. N. Cochran, Philadelphia, Pa.

Yale Belton—Queen Blue whelp. Black, white and tan English setter bitch, age not given, by Warwick Kennels, Bridgeport, Conn., to J. M. Hunter, Pittsburgh, Pa.

Gus—Dora Gladstone whelp. Black, white and tan English setter bitch, whelped June 4, 1888, by Chas. York, Bangor, Me., to E. A. Hight, Lynn, Mass.

Gladys. Black and tan Gordon setter bitch, whelped Sept. 1, 1888, by Rowland Ranger out of Beulah, by C. T. Brownell, New Bedford, Mass., to C. E. Bardwell, Holyoke, Mass.

Don. Red Irish setter dog, whelped 1884, pedigree unknown, by G. W. Lovell, Middleboro, Mass., to H. D. Morris, Boston, Mass.

Black Pete (A.K.R. 3071)—Phyllis (A.K.R. 5093) whelp. Black cocker spaniel dog, whelped Nov. 20, 1888, by Brown Cocker Kennels, Waterbury, Vt., to Henry Whiting, Ellsworth, Me.

Black Pete (A.K.R. 3071)—Jet Obo (A.K.R. 4810) whelp. Black cocker spaniel dog, whelped July 20, 1888, by Brown Cocker Kennels, Waterbury, Vt., to Chas. H. Benedict, Montreal, Can.

Black Harry. Black cocker spaniel dog, whelped Oct. 24, 1886, by Black Pete out of Althea, by Fleetfoot Kennels, Delhi, N. Y., to Don C. Turner, Waterbury, Vt., and resold by him to Brown Cocker Kennels, same place.

Royal Madchen. White bull-terrier bitch, whelped October, 1887, by Royal Diamond out of Mercedes Royal, by H. A. Harris, North Wilmington, Mass., to J. W. Newman, Melrose, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

G. W. A., Boston.—My pointer bitch, eight years old, has an irruption, or scaling off of the hair, on her hip joints and a little of the same trouble on her sides. Mange cures do not seem to relieve her and her companion dogs do not seem to catch the ailment though she has had it some months. What do you suggest as a remedy for his troubles? Ans.—Keep bowels clear. Give 5 drops of Fowler's solution of arsenic night and morning. Keep this up for 3 weeks and then omit one week and begin again.

R. J. H., Lynn, Mass.—I have a valuable St. Bernard dog, 15 months old, which I would like to enter in the N. E. K. C. bench show next April, but owing to his want of appetite I cannot get any flesh on him. The only food he will eat with any relish is clear meat, which I cannot afford to give him. If meat is mixed with other food he does not like it, and will only eat enough to keep alive; yet he seems to be in perfect health, except that his nose is often hot and dry. He is very large, standing over 29in., but weighs only 90lbs. Please advise me what to do for him and oblige a constant reader. Ans. Feed no raw meat. Give cooked meat sparingly mixed in with corn meal mush served cold. Exercise regularly. Keep bowels open and give 5grs. of quinine in pill form night and morning.

CONNECTICUT.—An English setter bitch 2½yrs. old had her second litter of puppies Nov. 17. Puppies have been perfectly healthy and have grown nicely. About Dec. 22 bitch appeared to become nearly paralyzed, and although about the coldest day this season, she stood panting with fever, but wagged her tail and appeared not to be in pain. Later she lay down exhausted, and next day appeared nearly well except weak. Gave her white of egg at first for poison, but concluded it was not that, and have not given any medicine. Have taken her on short hunting trip since, and after an hour's run same symptoms came on again; legs refused to go and appeared weak and tired out, but no panting. Since whelping milk has flowed nearly all the time, but lately has but little color to it and nearly stopped. Have gradually weaned the puppies. She was a little too fat before whelping, and is in good order now, but hair appears dull and she acts far from well and is not improving, although puppies are about weaned. What ails her and how shall we treat her? Ans. She may have some spinal trouble, but probably it is due to the weakness and anæmia incident to whelping. Nutritious diet, tonics and stimulants will bring her around. Give 5 grains of quinine each morning and a 2-grain pill of the citrate of iron and strychnine every evening. You can conceal the pills in a morsel of meat. Do not feed raw meat and not a great deal of cooked. Keep the bowels open by oil or syrup of buckthorn.

SUBSCRIBER, Denver, S. C.—In my kennel of running dogs I frequently notice some of them that seem to have some kind of skin disease, the symptoms of which are about as follows: The first thing noticed is a reddish, chafed appearance of the skin on inside of arms and thighs and lower parts of body, which gradually extends to other parts of body, causing the hair to fall out These symptoms are attended by an itching sensation which causes the dog to scratch to such an extent that in places the skin becomes raw. A kind of yellow gummy substance exudes from the skin which has an offensive, doggy smell when dogs are heated. Both old dogs and puppies are affected by it, and it seems to be contagious. I first noticed its appearance last summer in a couple of bitches that were weaning pups. Have had some success with various external remedies, such as a mixture of common tar and lard well rubbed in after thoroughly washing the dog with warm water and soap. Also train oil and sulphur used as above, and sulphur and lard, etc. Have also given internally from three to four drops of Fowler's solution of arsenic two or three times a day in food. The dogs are regularly fed and housed every night in dry kennels. Their bedding consists of hay or straw frequently changed. Barring the above symptoms the health and general appearance of dogs are good. Can you tell me from above description what will cure it most successfully without injury to the dog? Ans. Eczema or mange. The tar, sulphur and other remedies you mention are all good. Zinc oxide ointment is good, diachylon ointment is good, and a mixture of the two latter is often beneficial. The parts should be carefully sponged with warm water and castile soap first. Fowler's solution should not be used for more than three weeks, as arsenic collects in the system. After omitting a week it can be commenced again.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SECRETARY SHEPHERD'S REPORT.

NEW YORK, Jan. 8, 1889.

Mr. President and Life Members of the National Rifle Association:

Your Secretary submits the following report of the transactions of this Association for the year 1888:

The annual meeting of the life members was held at the armory of the 22d Regiment on Jan. 10, when the following-named members were reëlected Directors for the term of three years, viz.: Major Shorkley, Captains Witthaus and Brown, Mr. Jas. Duane and the undersigned; and for a term of two years, Capt. Nesbitt. Gen. Bartlett was elected for one year, but declined to serve, and the vacancy has never been filled. The reorganization of the Board of Directors took place at a special meeting held the same evening, when Gen. Woodward was elected President and the Secretary and Treasurer were reëlected. No change has taken place during the past year in our list of Active Directors, but we have lost from our Honorary roll a very prominent member, Mr. David W. Judd, who died on the 6th of February last.

The Board has held eleven meetings since my last report, and at the meeting of Dec. 12, when thirteen Directors were present, it was unanimously voted to introduce a bill at Albany with the view of turning over to the State our property at Creedmoor, conditional on an appropriation of $25,000, which sum is to be used to purchase the West range and such other land as may be needed to secure in the future the use of the present property as a rifle range, and to make the repairs and improvements that are now absolutely required and for which the Association has not the necessary funds.

The leases of the present office in Temple Court and of the ground at Creedmoor known as the West range were both renewed for one year.

The fall meeting was commenced on Sept. 10 and continued through the week; the attendance was not as large as we should have liked to see, and the meeting resulted in a loss of nearly $400. The matches for the qualification as Marksmen of the members of the National Guard show an increased interest every year, and notwithstanding a very large reduction in the price of entries, the net result has been to put into our treasury the sum of $1,760. The match shot on Election Day showed over 420 competitors, representing every infantry organization in the First and Second Brigades.

I have also to acknowledge the receipt of valuable prizes from Messrs. Tiffany & Co., Benedict Bros., and the staffs of the First and Second Brigades.

The Treasurer's report shows the largest balance on hand at the close of the year that we have had since 1873, with the exception of the year 1882. Respectfully submitted,

JOHN S. SHEPHERD, Secretary.

CHAMPIONSHIP OF NEW YORK.

JAMES S. CONLIN announces that he will start a rifle match for the purpose of definitely fixing upon a champion of the city in off-hand shooting for the present year. The match will be shot at long gallery range, and will commence Jan. 14, and continue every day until midnight Feb. 16, 1889, open to all comers, entrance fee 50 cents, entries unlimited, any 10lb. rifle using short .22-cal. cartridge, no restriction as to trigger pull, sights according to the rules of the N. R. A. of America, ten consecutive shots off-hand on one Conlin's ready-measurement target.

The competitor's signature must be written upon the target before shooting. Immediately after the score has been completed the target shall be placed in a sealed box. At the close of the match the box shall be opened before a committee, who shall measure the targets and decide on the winning scores. The committee to consist of three gentlemen not interested in the match, and to be appointed by Jas. S. Conlin. All matters not herein provided for to be decided by the rules of the N. R. A. of America. All disputes to be settled by a referee, to be mutually agreed on.

First prize, for the best aggregate score of three targets	$25.00
Second prize, for the best aggregate score of two targets	15.00
Third prize, for the best target	10.00
Five prizes of $5 each for the second, third, fourth, fifth and sixth best targets	25.00
	$75.00

BOSTON, Jan. 5.—All the regular matches were open for rifle shooting to-day at Walnut Hill and well patronized by the large number of shooters present. The weather conditions were good, with wind from 2 to 3 o'clock. Following are the scores:

20 Shot Rest Match—200yds.

WILMINGTON, Del., Jan. 1.—New Year's Day was celebrated by the sporting and military riflemen at Healdmoor Rifle Range. Being general monthly badge day it attracted a good attendance of active riflemen and visitors. The monthly badge of the Wilmington Rifle Club was won by J. F. McCafferty. Lieut. Floyd was the winner of the military badge and J. Bacon won the beginners' monthly badge on a good score. The following are the scores at 200yds., standard American target:

Continuous Match.

H B Seeds	8	6	8	5	5	7	7	7	8	7—68
J E Newman	6	7	5	5	10	9	4	9	8	5—68

ST. JOSEPH, Mo., Dec. 29.—At the holiday shoot of the St. Joseph Rifle Club, at their range above the city to-day, the following scores were made:

200yds.—Off-hand.

Dr R S Dinsmore, average 79 3-5	84	77	71	84	82
J E Eberly, average 74 2-5	77	84	70	72	68
E T Smith, average 69¾			63	70	75
George Essig, average 67			67	69	65
J W Batcheller, average 62	60	62	62	64	
Perry Moores, average 57 4 5	63	67	65	39	55
J H Eberly, average 57¾	56	64	54	55	
W H Brown, average 54¾	47	54	62	56	
Fred Arnhold, average 42¾	56	31	40	44	
W A Michaels, average 38			45	31	
Geo Arnhold, average 30	22	37	17	44	

EXPERT PISTOL SHOOTING.—On Dec. 6 Mr. Jas. Conlin, the veteran gallery man, inaugurated two of the best contested off-hand matches that have been shot in many a day, the one in the famous White Elephant rifle range, on the Massachusetts Rifle Association target, and the other in his world famous gallery on the northwest corner of Thirty-first street and Broadway, which was shot on the new expert's target at the French range of 82½ft. At the White Elephant range the match on the Massachusetts target was shot at the long range, and was one of the closest contested of the large number of matches that have been fought on this popular range. The match was for three handsome medals, two gold and one silver, which were won in the following order, with the list of some of the best scores made in the match:

Chas C Hiscoe (first prize)	243	F G Loeb	222
H A Buck (second prize)	241	J Bertrand	221
W K Benedict (third prize)	240	O Cleveland	221
W C Althouse	235	T Takino	220
D S Jacobus	230	C S Lake	216
A M Reynolds	226	H C Radford	213
D Bacon	223		

The possible in this match was 252.

The match on the expert's target was won after a very hard struggle by G. Snellen, of Our Own Rifle Club, of Newark, N. J. He is one of the strongest indoor shots of the day, but Mr. Hiscoe is to be highly commended for the strong fight he made for the first place, this being the second match in which he ever participated, having won the first in the Massachusetts target match at the White Elephant. Below will be found the scores, the possible being 300:

G Snellen	279	Major D Crocker	254
Chas C Hiscoe	279	Peter De Nyse	252
B Walther	274	F A Young	248
Alfred Brenon	265	E Castel Bert	241
Alexander Stein	263	J B Miller	236
H A Buck	261	J H Cornell	220
H C Starkweather	259	S T Crosby	216
W K Benedict	259	Raymond Rudd	70
Gus Zimmermann	257	Robert McNeil, Jr	70

ST. LOUIS, Mo., Jan. 5.—Mr. F. A. Fodde made the top score at the last shoot of the St. Louis Pistol Club. The attendance was very light, and the scores also were the same. The club uses a .22-caliber Stevens gallery pistol for all its shooting, and a 20yds. standard American target:

F A Fodde	8	8	9	8	8	8	9	9	9	10—86
M Summerfield	10	8	9	8	10	7	8	8	9	6—83
L V D Perrel	9	5	8	9	9	5	8	10	10	9—82
E Mohrstadt	6	7	8	9	7	9	9	7	6	10—80
O Neuhaus	8	8	7	8	9	10	8	4	10	6—78
W J Lord	6	5	9	9	9	8	5	10	6	9—76
W C Mackwitz	8	6	9	6	7	7	10	7	9	6—75
A E Bongel	7	8	8	7	8	7	8	5	6	10—74
L H Race	7	6	7	7	9	5	6	4	7	7—67

UNSER FRITZ.

NATIONAL RIFLE ASSOCIATION.—The annual meeting of the National Rifle Association was held last Tuesday evening at the Twenty-second regiment armory, General John B. Woodward, president, in the chair. Among those present were Secretary Captain J. S. Shepherd, Gen. G. W. Wingate, General C. F. Robbins, Major George L. Fox, Major H. C. Brown, Messrs. John H. Peet, James Duane, J. H. Brown and T. J. Dolan, Colonel Bodine and Captains G. Henry Witthaus, Leslie C. Bruce and L. T. Baker and Major George Shorkley. The president reported that "The same cloud hangs over the range at Creedmoor as was the case in the beginning of 1887. By the efforts and exertion of the officers of the Association the threatened proceedings on behalf of the property holders in the rear of the butts to enjoin the firing have been temporarily avoided, and the Poppenhusen estate has granted us another year's lease of the western short range targets which stand upon the ground hired by it. This has been accomplished with the understanding that the plan adopted last year of turning the range over to the State would be carried out during the present session of the Legislature. I trust and believe this will be the case, for it is clear that if it is not done Creedmoor will be very badly crippled. In fact, it is very doubtful if it can be longer maintained, as we cannot expect to retain the Poppenhusen property, and even if we did, the Association is without means to make the repairs to the butts and buildings which are indispensable." The following members were elected directors for the ensuing three years: General George W. Wingate, General B. C. Ward, Colonel John Ward, Colonel James G. Story and Bernard Walther. Mr. Walther is the president of a German rifle club, has won two medals from the Association, and was elected a life member.

ORILLIA, Ont., Jan. 1.—The third and last championship rifle match between Orillia and Aurora was shot over the Orilla range to-day, and resulted in the former winning by six points. Orillia has won two out of the three matches shot with Aurora. According to the matches shot, Bradford is first, Orillia second and Aurora third, but the order may be changed before the 1st of May, when the year closes. The score was:

Orillia.		Aurora.	
T Reid	92	E Braund	89
J D Fortier	88	J C B Johns	86
J Delaney	83	E C Lyons	80
W W Wood	80	R Mosley	79
G E Whiten	76	H Ross	78
C Fortier	70	M Fleury	76
C Wood	71	W Machell	76
R Strathern	70	A Neily	74
H Bingham	59	Dave Eade	61
C Crocket	55—760	Dr Lloyd	55—754

WILMINGTON, Del.—The following is the score of a 100-shot revolver match, shot by E. J. Darlington, at Healdmoor Rifle Range, Jan. 1. The match was shot without any preliminary practice, which accounts for the reduced size of the first score. The shooting was 50yds., standard American target:

E J Darlington	6	7	5	7	7	5	5	7	5	9—63
	10	8	6	5	9	9	9	6	6	8—76
	5	7	6	6	7	10	7	8	9	7—72
	6	6	6	9	10	10	6	8	7	9—77
	9	10	7	8	9	5	6	7	6	8—75
	9	5	6	7	9	5	7	5	7	7—67
	9	9	7	8	7	9	10	6	9	6—80
	8	10	6	7	8	5	9	5	7	8—73
	7	10	7	5	6	7	6	5	10	10—73
	8	8	8	7	8	9	8	7	8	6—77—723

COVINGTON, Ky., Jan. 2.—Benjamin J. Robertson, a pistol shot here, succeeded in making 456 out of a possible 500 on a standard American target. The shooting was done under the following conditions: Fifty consecutive shots at 50yds., fair off-hand shooting, using a Stevens pistol, Gould model, 22-cal. The score, by strings of 10 shots, was as follows: 95, 91, 91, 90, 95, total 462. The shooting was done without any preliminary practice.

BROOKLYN, N. Y., Jan. 1.—The first match of the Queens Amateur Rifle Club was shot on the Athletic ground at that place to-day. The conditions were 10 shots off-hand, distance 120yds., at a 100yd. Creedmoor target, using .22-cal. rifles. The score:

Thos Lloyd	5544544324—40	Jesse Kelsey	5454404433—35
W L Wood	3443443445—38	Charles Doty	4443433432—34
Charles Rose	4343534453—38		

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

MIDDLESEX GUN CLUB.

THE members of this club gathered at their grounds, Dunellen, N. J., on Jan. 1, to inaugurate the year with some friendly bouts at the trap. As every one knows, the weather was delightful and unusually mild for this season of the year. The qualifications of New Year's eve had their effect on the morning attendance, which was rather slim, many of the shooters no doubt finding bed a very comfortable place. The few who were there were repaid for their exemplary habits by their early ride out to the grounds in the bracing air, and by some well-contested sweeps. In the afternoon the tired ones had brushed the cobwebs from their eyes and summoned energy enough for the trip, and several live-bird sweeps were shot. The birds were above the average, and it was by no means easy to make a clean score. The inanimate targets were shot from Keystone traps and under Keystone rules, superintended by Mr. Neif Apgar, who ran one team race of 25 birds each, 100 birds in all in 14 minutes. Both traps and rules were very satisfactory to the contestants, and very few were broken in the traps. The club has adopted the Keystone traps and rules for future use. Below are the scores:

Sweep No. 1, at 10 birds, $1 entrance, 2 moneys:

E D Miller	1111111111—10	Apgar	1001101110— 6
Tee Kay	0111010011— 7	Douglass	0110001010— 4
S G Smith	1111111110— 9		

Miller first, Smith second.

Sweep No. 2, same conditions:

Miller	1101111111— 9	S G Smith	1011111011— 8
Tee Kay	1110111001— 7	Apgar	1111111011— 9

Miller first on shoot-off, Smith second.

Sweep No. 3, same conditions:

Craft	1111101111— 9	Apgar	1101111110— 8
Tee Kay	1111011111— 9	S G Smith	0111101011— 7
Miller	1111101111— 9		

First divided, Apgar second.

Sweep No. 4, same conditions:

Craft	1111110111— 9	Apgar	1101111011— 8
Tee Kay	1011010111— 7	S G Smith	1110011111— 8
Miller	1111111111—10	D Terry	1111111111—10

First divided, Craft second.

Sweep No. 5, same conditions.

Lindsley	0011101111— 7	Miller	1111111111—10
Zeizler	0111111110— 8	D Terry	0000 w
Apgar	1011111101— 8	Craft	0111111011— 8
Tee Kay	1101111011— 8		

Miller first, Zeizler and Apgar second on shoot-off.

Sweep No. 6, same conditions:

Miller	1101111111— 9	Lindsley	1111111111—10
Tee Kay	1011111111— 9	Apgar	1111111111—10
Sigler	1111111111—10	S G Smith	0111111110— 8

First and second div.

Sweep No. 7, same conditions:

Miller	0111111101— 8	Apgar	1001111111— 8
Sigler	1111111111—10	Tee Kay	1101110111— 8
Lindsley	1100111101— 7	Sigler first, second div.	

Sweep No. 8, 10 bluerocks, Keystone rules:

Miller	1111111111—10	Apgar	1110110111— 8
Sigler	1111111111—10	Tee Kay	1101111101— 8
Lindsley	1111101111— 9		

Miller and Sigler first, Lindsley second.

Sweep No. 9, same conditions:

Apgar	0111111111— 9	Lindsley	1111100110— 7
Miller	1111111111—10	S G Smith	1101111111— 9
Sigler	1111111111—10	D Randolph	1001000101— 4

First and second div.

Sweep No. 10, entrance $5, at 5 live birds, Middlesex rules:

E D Miller (30)	01212—4	Lindsley (29)	10221—4
Sigler (30)	10212—4	S G Smith (29)	000 w.
Forrest (30)	01102—3	Dan Terry (30)	01110—4

Two moneys; ties div.

Sweep No. 11, at 5 live birds, entrance $5, two moneys:

Miller	11102—4	Lindsley	20111—4
Sigler	11120—4	S G Smith	000w.
Forrest	12001—3	D Terry	02110—3

Ties div.

Sweep No. 12, at 5 live birds, entrance $5, two moneys:

Miller	10100—2	Lindsley	10111—4
Sigler	11102—4	Terry	10210—3
Forrest	21200—3	J D Voorhees (29)	21000—2

Ties div.

Sweep No. 13, at 4 live birds, $3 entrance, two moneys:

Forrest	1010—2	Sigler	0102—2
Terry	1011—3	Lindsley	0010—1
Miller	1210—3	Dickens (30)	0011—2

First div., second shot off and divided by Sigler and Dickens.

Team match, at 25 bluerocks from Keystone traps, between Tee Kay and Apgar and Craft and Terry, the former team winning by one bird. The trapping and handling of targets here was very rapid and the match was shot in 14 minutes:

Tee Kay	1111010011101110011111101—18
Apgar	1111111111111111111111011—24—42
Craft	1111111111110111111011111—23
Terry	0100111111111101000111111—18—41

Sweepstake match, at 10 bluerocks, Keystone rules, entrance $1, four moneys:

Miller	1011111111— 9	H Craft	1111111111—10
Brantingham	1111111110— 9	Squires	0011001011— 5
Tee Kay	1011110011— 7	Trust	1000000111— 3
Manning	0001011011— 5	Ayers	1010111101— 7
Lindsley	0110111111— 8	J Robinson	1100111111— 8
Teipel	0101101111— 7	Franz	1111101010— 7
Sigler	1111111111—10	W Terry	1111111001— 8
Forrest	1101100100— 5	Emory Robinson	0101011010— 5
Apgar	1111111111—10	D Randolph	1011001111— 7
D Terry	1100110001— 5	Dickens	0111111101— 8
S G Smith	1011110111— 8		

First and second divided.

Ties on 8 shot off at 5 single rises:

Lindsley	11111—5	Terry	1101w.
S G Smith	01110—3	Dickens	010w.
Robinson	11110—4		

Lindsley wins third.

Ties on 7 shot off at 5 birds:

Tee Kay	11111—5	Franz	0111w.
Teipel	1011w.	Randolph	0111w.
Ayers	1010w.		

Tee Kay wins fourth.

Sweepstakes match at 10 bluerocks, Keystone rules, entrance $1, four moneys:

Sigler	1111111111—10	Forrest	0101000100— 3
Miller	1101110100— 6	Brantingham	1111101111— 9
Trust	0 0100110100— 4	Franz	1011101111— 8
Tee Kay	0111110010— 7	W Terry	1011011011— 6
Craft	1101111111— 9	J Robinson	1001111110— 7
S G Smith	1111010011— 7	Clark	0110011110— 6
Ayers	1101111111— 9	Teipel	1111001111— 8
Manning	0011111011— 8	D Terry	1011001111— 7
Apgar	1111111111—10		

First, second and third divided. Ties on 7 shot off at 5 birds:

Tee Kay	11111—5	Robinson	10 w
S G Smith	11110—4	Terry	0 w

Tee Kay wins fourth. F. M.

A NEW TUCKER SYSTEM.

SOME time ago we gave illustrations of the practical working of the S A. Tucker pool system of shooting at the trap. While plain enough to most shooters, there were some who seemed unable to get the exact idea and to whom the system seemed complicated. To refresh the memory of our readers, and also for the benefit of those who may not have seen this system spoken of, we now give the plan again. The system was devised by Mr. Tucker as a means of regulating one of the worst abuses of trap shooting, viz., the pooling and dropping of birds by the expert shots to secure all the money at the expense of the amateurs. It provided for a certain number of tie birds to be added at the end of a shoot, the total score determining the relative positions of contestants, but the tie birds—the last 3, say, in a 9-bird race, or last 4 in a 10-bird race, or last 5 in a 12-bird race—to be the vital or deciding birds; thus, if a man killed straight, of course he was in for first money; if no one killed straight, the men were then placed, total scores of course being equal, by their score in the tie birds. Thus see illustration in a 9-bird race:

A	11111	111—9	First.
B	11110	111—8	Second.
C	11111	101—8	
D	11100	111—7	Third.
E	11110	101—7	
F	11111	001—7	
G	11000	111—6	Fourth.
H	11110	100—6	

In this case, first is won by the clean score, second by B, third by D and fourth by G, because their tie birds, the last three, were killed straight, the principle being that the man who holds up best to the end is the best man and entitled to the victory. Several matches have been shot under this system and success was the result in each case; but as some shooters do not seem to get the exact idea, and as others claim that a chance still exists for experts to place themselves by dropping birds before the tie is reached, Mr. Tucker has now devised a new scheme, which entirely does away with this objection. We give it to our readers herewith. The new idea is to shoot all pool matches in specified divisions, all the birds in all the divisions having the value of tie birds. Thus, a match at 9 birds would be shot in three divisions of three birds each, which divisions would be numbered 1, 2 and 3, commencing at the first birds shot at, or there may be three or four divisions of 3 or 4 birds each, making the total any number desired, to please the contestants. The total score in every match of course classifies the shooters, but the division of the money is to depend on a certain one of the tie divisions, which is to be determined by the throw of a die or the drawing of numbered wads from a hat, by the referee. The total scores being equal, the man who has killed the greatest number of birds in the tie division so designated is the winner, and there shall be no further shooting off, in the event of one or more contestants tieing, but the management shall pay the winners in the several classes. The simplest way of conveying the idea is by an illustration as below. In a nine-bird race, in three divisions of three birds each, say the following scores were made:

	No. 1.	No. 2.	No. 3.	Classification.
A	111	111	111—9	First.
B	101	111	111—8	
C	111	101	111—8	Second.
D	010	111	111—7	
E	111	110	101—7	Third.
F	111	101	011—7	Third.
G	101	011	101—6	
H	111	100	110—6	Fourth.

In this instance the wad drawn or die thrown by the referee indicated division No. 1 as the tie for the final settlement of moneys. A, having killed straight and being the only one in his class, wins first. C wins second money, having killed a clean tie in the 8 class. E and F also killed a clean score in the 7 class, and the management divides third money between them. H, with a clean tie score, is winner of the 6 class. While the expert shots have a small percentage by reason of their superior skill, they are utterly unable to pool and drop birds for places, to crowd out the amateur, as no one knows until the entire match has been shot which division will constitute the tie for the settlement of the winnings. Under this arrangement the amateur has no combination to fear and his chances of winning are far greater than under the present system, where pooling and dropping of birds for places is carried on to such an extent as to drive the weaker shots out of all contests.

This plan is at least worthy of a trial, and its effect will undoubtedly be to increase the number of contestants at any tournament where it is in operation. We would like to see it thoroughly tested and commented upon in our columns.

WELLINGTON, Mass., Jan. 2.—The sixth contest in the series of the Boston Gun Club occurred to-day at the club range. In the shoot at 25 birds, 10 peorias, 10 clay and 5 macombers the score was: C. E. Savage and E M. Whittle 22 each, G. H. Savage 17, Gay 16, Lee and Flanders 15, Wild, Newton and W. Kirkwood 14, D. Kirkwood 13, R. E. Whittle 12. Winners of other events were: Five peorias, G. H. Savage and G. E. Savage; five pigeons, D. Kirkwood and G. H. Savage; five peorias, D. Kirkwood; five pigeons, D. Kirkwood; three pair peorias, Flanders; five pigeons, D. Kirkwood, five peorias, D. Kirkwood; five peorias, novelty match, E. M. Whittle; five macombers, D. Kirkwood and C. E. Savage; ten peorias, C. E. Savage; ten pigeons, C. E. Savage; three pair bluerocks, Lee and C. E. Savage; five macombers, G. H. Savage and Gay; seven peorias, O. E. Savage and D. Kirkwood, seven pigeons, Gay.

WHAT IS A PROFESSIONAL TRAP-SHOOTER?

THE following question has been submitted to us for decision: "A bets that a professional pigeon-shooter is a man who shoots a pigeon match where admission or gate money is charged to see the pigeon match. B says any man who shoots for any money is a professional, without regard to whether gate money is charged or not; shooting for money in his opinion constitutes or makes any man a professional. Who is right?" Ans. Under a literal interpretation of this bet, neither one wins. A is clearly wrong, as at many tournaments an admission fee is charged, in which the participants do not share, and hence should not be termed professionals. B is also wrong; his opinion would make every trap-shooter in the country a professional through contesting in sweepstake matches for any amount from 25 cents up. If it is meant that a man is made a professional through shooting for or sharing in the gate money, we believe such shooters should be so classed.

The question of what constitutes a professional is a vexed one in trap-shooting matters, and one on which a variety of opinion is expressed. We have submitted the problem to two prominent trap-shooters in this city, men of long experience, and whose decisions would be taken as final if called for at a match. One decides that a professional shooter is not made so merely by competing for or sharing in gate money; that a professional is one who depends for his living solely on his skill with the gun, such men as Carver, Bogardus, Brewer and others. This would limit the number of professionals in this country to a very few. But the other one claims that any man who shoots for or shares in the gate money is a professional, also that any man who is connected with a gun firm or any other line of sportsmen's goods, and derives all or part of his living from his ability to shoot at the trap and thus advance the interests of his goods should be so classed. This is a very broad view and would bring many under the head of "professionals," who are now not even classed as "experts."

Our distinction of a professional is that he is a man who shoots for or shares in gate money, or one who throws out an open challenge, which as a rule carries the feature of shooting for gate money with it.

This is only one of the many disputed questions in trap-shooting, which remain open simply because no recognized organization exists for their settlement. These questions would properly come within the scope of the new American Shooting Association, from which so much was hoped at its birth, and of which so little has lately been heard. If in no other way, this organization could render trap shooters a great service by ruling on such questions as above mentioned, and in formulating a complete set of laws which should cover many points at present in doubt.

Of late we have been called on to decide several questions arising in competitions at the trap, which are not covered by any rule, and which should be so provided for. There are, of course, many complications which may occur, impossible to foresee and rule upon, and in such cases the judgment of the referee is tested, and as it might be called, a "law of emergency" is made. To a certain extent these laws of emergency act as precedents and future rulings are based on them, but while the decision of a referee is final, still it does not always mean unanimity of opinion among the shooters, who in many cases hold different views, and in fact may be more capable of deciding a knotty point than the referee. Thus there might exist several different laws of precedent covering the same point. How much more satisfactory then, if some recognized rule governing such cases existed.

For instance, a few days ago a correspondent asked a decision on the following question: Six men in shooting a sweepstake at three birds, the purse to be divided into two moneys, each kill or break two birds. On the shoot-off four kill one apiece and the other two none. Do those two get second money? So far as we know this is not covered by any rule except one of precedent, by which it was decided that as all the competitors in the match had tied, the purse was made into one money, to be divided equally or to be shot for, as mutually agreed, either until one man had won or enough had been shot out to give the winners a satisfactory divide. A variety of opinions might be held on this point, which is likely enough to arise with other complications, but how easy to have a written law fully covering it.

This is only a sample of the bothersome points on which trap-shooters are so frequently obliged to decide without the aid of any positive rule, which responsibility we know they would be very glad to throw on to some recognized organization for the adjudication of such questions.

Since writing this, we have been advised that the bet quoted above was not as to what constituted a professional, but was simply a question whether a man is a professional by virtue of shooting in a match for any sum of money, this affirmation having been made by A's opponent and objected to by A. Clearly the simple act of shooting for money does not make a man a professional, so A wins the bet.

N. J. A. C. GUN CLUB.

THE Christmas shoot of the above club was well attended, the day was all that could be desired, and the shooting fair, taken on the whole. This new departure of the Athletic Club has "taken" wonderfully well, and the interest shown by the attendance and the increased entries in the shoots is extremely gratifying to the committee in charge. The most minute affairs are conducted with regularity and precision and the shooting done with the utmost despatch, so that none of those tiring delays occur which are of so great annoyance to the shooter. A team will soon be selected to do battle with outsiders. It is proposed to select five men with substitutes to uphold the honor of the club. Any other organized club wishing to "do up" the Jersey Athletic boys may communicate with them at Bergen Point, as mentioned in last week's paper. Following are the scores:

Sunderman	1111111011101011—12	Vredenburgh	1111111101101101—12
F. S. Paret	1100110111110001—10	Virden	0110010011011111— 9
Cook	1160111101010000— 8	Parker	1111100100011011— 9
Berdan	1001110111110111—11	Anderson	0011111111011110—11

Tie for first, hunting shoes: Sunderman, 010—1; Vredenburgh, 110—2. Tie for second, silver match safe: Berdan, 1100—2; Anderson, 0111—3.

Parker	1C11010110010— 7	Vredenburgh	1110110010101— 8
Sunderman	1011111110010— 9	Kissam	1101111101111—10
Cook	1111110111010—10	R Paret	1111001010110— 8
Davis	0011110000101— 6	Anderson	0010011011000— 5
Virden	0100001101110— 6	W Paret	0011101010111— 7

Tie: Cook 0 Kissam 2; Kissam wins first. Victoria gun case.

Virden	11110110101—7	S L Davis	0110 0111—5
Sunderman	10110111 1—7	Voorhees	0110011 1—6
Hatch	0 10000001—3	Schuyler	1001000000—2
Bigoney	1010010010—4	Wilmerding	0101000110—4
Anderson	1 1 1101100—6	Cook	101111111—8
R S Paret	1010110001—5	Kissam	0110011111—6
R Paret	0110011015		

Cook wins first. One cartridge vest.

Parker	100—1	Cook	110—2
Davis	011—2	W Paret	111—3
Kissam	100—1	A Vredenburgh	111—3
Anderson	100—1	Sunderman	111—3
Harris	100—1	J Paret	008—0
Bedan	111—3	Rockwood	000—0
R S Paret	100—1	N Day	110—2
Virden	011—2		

Tie.—Bedan 0, W. Paret 0, A. Vredenburgh 1, Sunderman 0. Prize, a framed picture.

Vredenburgh	1101110111101110—11	Bigoney	0100010010010000— 4
Parker	1010010101110111— 9	Wilmerding	1001111110010000— 8
Sunderman	1100111111101111—12	Davis	1010110011111101—10
Kissam	0111111100111112	Cook	1010010011001100— 7
Virden	0111111100101001—10		

Tie.—Kissam 111—3, Sunderman 010—1. Kissam wins first match match for the Committee's challenge cup.

DR. CARVER'S MISFORTUNE.—A telegraphic dispatch from Minneapolis announces that Dr. Carver's manager, Geo. D. Jackson, has decamped with all the Doctor's funds, including the receipts of his recent great endurance shoot in that city, leaving Carver stranded without money. It will be remembered that during the shoot Carver's guns were attached for a small sum, which was paid by one of his admirers. Now, a second attachment has been made by another creditor, and altogether the Doctor's plight is a sorry one. The embarrassment will probably be only a temporary one and the Doctor will no doubt soon "bob up serenely" in other fields.

MIDDLESEX GUN CLUB.—At a meeting of the Middlesex Gun Club of Dunellen, N. J. the following officers were elected for 1889: Seymour G. Smith, President; W. L. Force, Secretary; Andrew Lutkins, Treasurer; Board of officers, S. G. Smith, W. L. Force, Andrew Lutkins, W. Fred Quimby, Nief Apgar, H. F. Stevens, Thos. H. Kellar, Jas. H. Force, A. Worden and E. M Robinson.

SHOOTING IN CLEVELAND.

THE first week of the year has been a very busy one indeed among the trap shooters along the Lake side. The following will give the narrative of each day's work:

CLEVELAND, O., Jan. 1.—A big gathering to-day at the range on the West Madison avenue meadow marked the first public tournament of the West End Gun Club, and everything passed off according to programme. There was no hitch in the arrangements, or delay in getting off any of the events except the big club contest, which went off rather slowly, owing to the fact that the men became interested in the sweepstake and prize contests which were taking place at other sets of traps. Three sets of traps were kept busy all day, and there were no delays because of poor trapping at any of them. Standards were used in all the events. The shooting began early in the day and nightfall drove the sportsmen from the traps. The weather was most agreeable for trap shooting, and excepting the humidity of the grounds and the narrowness of the island there were no disturbing elements at the club's first public shoot. The object of the tournament was to get money with which to erect a commodious club house and improve the range, and in this respect the shoot was also successful.

The glut shoot was held during the forenoon. Ten members each shot at 20 single standards. C. Coulter and W. Bell tied on 15, and in the shoot-off Bell won the trophy.

The event of the day, however, was the tri-club shoot, and the Rockports, who were once besore a close rival of the West End boys for the medal, surprised them by easily taking the honor. They had no close competitors. The shooting was commenced about noon, and it was nearly dusk when the trophy was awarded to the best shooter in the winnig team. W. Bentley carried away the coveted honor. The conditions were, 25 single standards per man, 10 men in a team, and the following scores were made:

Rockport Club.

Smith	1011101111111100111110101—19

Sweepstake events, 6 singles, entrance 50 cents, 3 moneys.

1. North 4, L. O. Jones 4, Valentine 3, Upson 5, Green 5, A. B. Jones 4, Story 4. Bell 3, Eaton 6. McCracken 6, Eaton and McCracken divided first, Upson and Green second, North, Story and L. O. Jones third.

2. Upson 4, Bell 3, Arnold 4, Valentine 5, L. O. Jones 3, A. B. Jones 3, North 5, Eaton 3, C. Jones 4, Coulter 4, Hendershot 4, Green 4, Held 4. North and Valentine divided first, Valentine and Hendershot second and L. O. Jones third.

3. Upson 5, A. B. Jones 4, North 4, Green 4, L. O. Jones 4, Valentine 4, Bell 4, Williams 3. Upson first, A. B. and L. O. Jones second and Bell third.

4. L. O. Jones 3, Hendershot 3, Valentine 6, Green 6, North 4, Haycox 5, Upson 6, Bell 5, A. B. Jones 3, Story 3, Arnold, Jr. 4. Valentine, Green and Upson divided first, Bell and Haycox second, Arnold, Jr., and North third.

5. North 6, F. Andrews 4, L. O. Jones 6, Haycox 5, Arnold 6, Story 3, Arnold Jr., 3, A. B. Jones 5, Green 4, Upson 4, Valentine 3, W. Bell 3, Held 4, Auld 6. North, L. O. Jones, Arnold and Auld divided first, Haycox and A. B. Jones second, W. Bell and Green third.

6. Nine singles, entrance $1, 4 moneys: North 7, L. O. Jones 5, Auld 8, Holt 4, Snyder 4, J. C. 5, Hendershot 7, Arnold 5, Haycox 6, Valentine 3, Willard 4, A. B. Jones 4, Story 4, Bell 5, Upson 8, Gault 6, Green 7, Andrews 4, Roach 7, Malle 7, Held 9. Held first, Auld second, Green and Hendershot third and Valentine fourth.

7. D. A. Coulter 6, C. Coulter 6, Bassett 7, George 5, Valentine 4, Bell 6. Upson won first, Bell and Bassett second and George third.

8. Six singles and 2 pairs, entrance $1, 4 moneys: North 9, Roach 6, Held 5, Upson 8, Andrews 6, Green 9, Valentine 10, Haycox 8, Hebbard 8, Bell 9, Auld 8. Valentine first, Bell, Green and North second, Upson third and Haycox fourth.

Prize contests, singles, entrance 50 cents: 1. Nine singles—Green 6, Auld 7, Haycox 7, Valentine 7, Upson 9, Held 8, J. O. Jones 5, Coulter 7, Bell 7, Kohn 7, Bassett 4, Held 5, North 9, George 5. Upson and North first, Held second, Kohn, Bell, Coulter, Auld, Haycox and Valentine third.

2. Six singles—Holt 4, Upson 6, Hendershot 4, Green 3, L. O. Jones 4, Auld 5, Hebbard 3, Roach 3, Weaver 4, George 4, Snyder 3, J. C. M. 3, Offutt 5, Held 5, Worffle 3, D. A. Coulter 3, J. L. Kohn 5, Haycox 4, North, McCracken 3, C. Jones 3, A. Williams 5, Shadduck 3.

3. Six singles—Auld 5, Colwell 3, George 3, B. Andrews 3, Kohn 4, Weaver 4, Offutt 3, Bassett 5, Held 3, Gault 6, L. O. Jones 6, Valentine 4, Hurd 3, Sandford 4, Upson 5. Gault first, Upson second and Weaver third.

Jan. 1.—The Forest City Shooting Club, which is a new-comer in the list of trap-shooting clubs, celebrated the new year by holding a club shoot this morning. Only six members took part, yet the score made by the participants would compare favorably with the scores made by older clubs in regular badge shoots. The conditions were 25 single bluerocks, Chamberlin rules. The score follows:

F Deda	1111101111011011111101111—25
J Sicha	0111010011110011111111111—19
J Deda	1110101111101111100001111—18
J Beranek	1111110110000111000101011—15
F Wolf	0011011100101111101010100—16
A Barsa	1110102110111110111110111—20

Jan. 3.—The county badge shoot occurring at the same time scarcely a half mile away did not deter the East Enders from holding their regular badge shoot this afternoon. Some of its members entering the county contest and others attending as onlookers decreased the attendance to six, but those on hand, reinforced by Messrs. Arnold and Moser, conducted the shoot according to pragramme. The conditions were 25 single standards per man, 3 traps, 18yds. rise. The badges were won by Messrs. Sweetman and Nicklous. The scores follow:

Sweetman	1111111101011110011111119—20
Nicklous	1101101111101010111110111—19
McCracken	1100110011101101011111100—16
C McHenry	0100110100111001111101111—16
C F Knight	0101010010010011101000000— 9
Johnson	0111100111010000001001101—11
Arnold	0000000001110101011000001— 8
J Moser	0001001000101111001000000l— 8

Another gun club, the Blue Rock, has been added to the list, increasing the number of clubs in and adjacent to Cleveland to 11. The infant club has completed its organization, provided itself with traps, and secured convenient shooting grounds on Detroit street. The club held its first badge shoot on Jan. 1.

There are no end of challenges flying about from one end of Ohio to the other. One of the latest and broadest is: The Union Gun Club, of Sandusky, challenges any other club in Ohio to shoot a team match with from 15 to 20 men, standard or bluerocks, Chamberlin rules, meeting the team half way for the expenses of the shoot, or for from $100 to $500 a side.—R. VALENTINE, Captain Union Gun Club.

Jan. 3.—The twenty-fifth contest for the quarterly badge was held on the Cleveland grounds to-day, R. E. Sheldon, the previous winner, having charge of affairs. The list of competitors included eighteen shots. The long list of entries and shortness of time from when the first shooter stepped to the score to nightfall prevented the completion of the shoot. The competition never was stronger. Only 35 birds per man, excepting for one or more shooters, were thrown from the traps, leaving 15 each for the contest to-day. The conditions were 50 bluerocks per man, 5 traps, 18yds. rise. The traps worked admirably and few targets broke in them. The weather also was favorable. No wind of consequence was blowing, and the sun shone on the shooters' backs.

The first shooter was called to the score at 1 o'clock, and the eighteen contestants in turn shot at 5 singles until they had been to the score seven times around. Darkness interfered with the continuation of the shoot, and after an exchange of opinions, not wholly fraternal, the shooters agreed to finish the shoot to-day. Some favored continuing it at least another round, others urged that they be allowed to complete their scores irrespective of what the leaders might do in the matter, and the remainder wanted the shoot discontinued altogether until to-day.

The present holder of the badge, R. E. Sheldon, first stepped to the score, and out of a total of 35 birds he shattered all but one, his eighth. Cogswell, a young shooter, whose face is frequently seen on the Cleveland grounds, was the last man to take his turn before the traps, and the white flag went up only once. The Kirtlands are represented among the leaders by Prechtel and the East by June, both having 33 to their credit. Messrs. Wheal, North, Upson and Calhoun have each broken 31, while Forester is lonesome with 32. The scores follow:

Cleveland Gun Club grounds, Cuyahoga county badge shoot, 50 single bluerocks, 5 traps, 18yds. rise, entrance $3, 18 entries, badge to winner, 50 per cent. of net receipts to previous winner, 30 and 20 per cent. to second and third, unfinished:

Sheldon	34	J Held	28
C F Wheal	31	J Bishop	24
J Coryell	27	W Roberts	30
M Silsby	27	D A June	33
Brown	27	L O Jones	29
Paul North	31	J Prechtel	33
D A Upson	31	C Andrews	27
C E Calhoun	31	Forester	32
W A Bassett	28	Cogswell	31

Jan. 4.—When the hour appointed for resuming the county badge shoot arrived this morning, fourteen of the eighteen contesting sportsmen were on the Cleveland grounds ready to renew the struggle for the coveted trophy. Each had fifteen more birds to shoot at, and the remainder of the targets were rapidly thrown from the traps and shot at, leaving Mr. Sheldon in quiet possession of the trophy, which he has won on seven different occasions. The twenty-fifth quarterly shoot was notable in that fourteen out of the eighteen scored 40 and over, while the other four did not return to complete their scores.

Referee, A. Jenks; scorer, Kelsey. Badge winner, R. E. Sheldon, of the Clevelands. First money, 50 per cent. of net receipts, R. E. Sheldon, the previous winner; second money, 30 per cent., June, of the East End; Cogswell, of the Cleveland; Prechtel and Alexander of the Kirtland; third money, 20 per cent., C. F. Wheal, of the Cleveland, and Paul North, of the East End. Sheldon shot a 10-bore Lefever weighing 9¼lbs., and using Peters's cartridges, containing 4drs. of powder and 1¼oz. of No. 8 shot.

The record of the badge now stands:

No.	Winners.	Clubs.
1	Dan C Howers	Cleveland Gun Club.
2	J A Prechtel	Kirtland Shooting Club.
3	C M Roof	Kirtland Shooting Club.
4	J Wightman	Cleveland Gun Club.
5	C E Calhoon	Cleveland Gun Club.
6	R E Sheldon	Cleveland Gun Club.
7	R E Sheldon	Cleveland Gun Club.
8	C E Calhoon	Cleveland Gun Club.
9	C E Calhoon	Cleveland Gun Club.
10	C M Roof	Kirtland Shooting Club.
11	J A Prechtel	Kirtland Shooting Club.
12	Dan C Powers	Cleveland Gun Club.
13	R E Sheldon	Cleveland Gun Club.
14	W R Huntington	Cleveland Gun Club.
15	R E Sheldon	Cleveland Gun Club.
16	E H Gault	East End Gun Club.

Briant	1111001000111011111101111001—20

Miller wins first, Keystone trophy. Ties on 26, at 5: Conover 3, Haines 4, Brantingham 4; second tie, Haines 2, Brantingham 4, and wins second, $10 in gold. Ties on 25: A. Sickley 4, R. Williams 3; A. Sickley wins third, leather gun case. Ties on 22, Lindsley 4, Manning 4; second tie, Lindsley 5, Manning 4; Lindsley wins fourth, $7.50 in gold. George Pudney wins fifth all alone, leather shell case. Ties on 20: Roll 5, Snow 4, Sayre 4, Briant 4. Roll wins sixth, $5 in gold. 12-BORE.

SPRINGFIELD, N. J., Jan. 8.—*Editor Forest and Stream:* The Union Gun Club of this place held its first monthly prize shoot on its grounds here yesterday, and although the day was showery and with a high wind, the boys who turned out had a most jolly time. Shooting was commenced about half-past ten and kept up until dark. Thirteen sweeps were shot besides the regular shoot, consisting of clays, bluerocks and Keystones. Considerable double shooting was indulged in, and some of the boys are getting to be quite expert at double birds. Judge Miller, the winner of the Keystone trophy, shot his old 12-gauge Parker gun, and by the way he chaws up everything he points at all hands seem to think that the old gun is still pretty good. Notwithstanding the bad weather quite a number of people came to look on. At noon a hot lunch was served. The next shoot comes off on the first Monday in February. We have 26 active members on the list, and nearly all of them are able to get there when they call "Pull." Following are the scores:

WALNUT HILL, Boston, Dec. 30.—In giving results of the Gold Coin match just closed at Walnut Hill and the names of prize winners, I failed to state that the Victory medal, which was offered to the competitor making the highest average in the several competitions in the match, was won by Manlius Knowles, of Lowell, Mass. Please, therefore, add to the list of prize winners previously furnished as follows: Manlius Knowles, for highest average made in the match, bronze Victory medal of the M.A.R., first of the kind ever offered for competition to shotgun men, value $10.—J. N. FRYE.

CANADIAN TRAP NOTES.

TORONTO, Dec. 29.—A very interesting shoot took place on Stark's athletic grounds this afternoon. The object was to test Mr. Stark's new target bird, which he is manufacturing here. To arouse keen competition and insure a thorough and fair test Mr. Stark supplied guns, ammunition and gave handsome first, second and third prizes for the best scores, which resulted as follows:

Van Vlack	1010111111101111111—17
Townsend	1001010101111011111101—15
Wakefield	1100100111111111111—16
Morley	1111100111101111110—16
F Mallett	1010011100111001011—12
Stewart	1100111100000100109— 9
Walton	1100110111111101011—15
McDowall	1100101101000011111—13
Rice	1111011010111111111—17
C Riggs	1101010110111111110—15
Carruthers	1011110111011011111 16
Pearson	1111111010101110110—15

Rice first, Van Vlack second, Morley third. For comparison the Peoria and Canadian birds were thrown in turn from the traps, and the decision arrived at was that Mr. Stark's effort to place a perfect bird on the market is rewarded, and his new bird is indeed matchless, in fact as well as in name.

TORONTO, Jan. 1.—One of the most successful shoots ever held at McDowall & Co.'s grounds took place on New Year's Day. There were a great number of competitors, representing all the clubs of the city. A large number of spectators were also present, who seemed to enjoy the sport fully as much as those who contested for the prizes. The weather was all that could be desired, except that a strong wind blew across the traps. The shoot began at 10 A. M. and lasted until darkness set in. Twenty-one matches in all were shot, and the prizes were pretty evenly distributed, the Owls taking the lion's share. The following are the scores. In each shoot there was one prize, at 5 Peoria blackbirds at 18yds. rise.

Shoot No. 1.—Humphreys 3, White 3, W. Heatherington 2.

Shoot No. 2.—Rice (first) 3, Moffatt 3, G. Smith 3, Morley 5, Humphreys 3.

Shoot No. 3.—W. Heatherington (first) 4, J. Humphrey 4, Mitchell 4, Morley 3, Rice 3, White 3.

Shoot No. 4.—Rice 4, Charles 4, Kily 4, Kemp 3.

Shoot No. 5.—Mitchell (first) 4, White 4, McClary 4, Kemp 3, Rice 3, J. Humphrey 3, Jones 3.

Shoot No. 6.—W. McDowall 5, Kily 4, Jones 3, Charles 3, McClary 3.

Shoot No. 7.—W. McDowall 5, Besty 4, Jones 4, Charles 4, Morley 3, Kily 3.

Shoot at Macomber Birds.—Jones 5, Kemp 4, Charles 4, Kily 3.

Shoot No. 9.—Charles (first) 4, Bennett 4, Moffatt 4, Besty 4, McDowall 3, McClary 3.

Shoot No. 10.—Bennett 5, Charles 4.

Shoot No. 11.—W. McDowall (first) 5, Charles 5, Rice 4, Morley 3, Bennett 3.

Shoot No. 12.—Kemp 4, Charles (first) 4, McDowall 4, Jones 4, G. Hetherington 3, Sawden 3, Rice 3.

Shoot No. 13.—Morley (first) 5, McDowall 5, Sawden 4, Kemp 3, Sawden, Jr. 3.

Shoot No. 14.—Kemp 5, Sawden 5, W. Hetherington 4, O'Ben 3.

Shoot No. 15.—Morley 4, Beatty (first) 4, Jones 4, Rice 3.

Shoot No. 16.—Charles 5, G. Hetherington 4, Moffatt 4, Jones 4, Charles 3, Kemp 3.

Shoot No. 17.—Dick 5, J. Barrett 4, Besty 3, Beatty 3, Jones 3.

Shoot No. 18.—Rice (first) 4, Jones 4, J. Barrett 4, McClary 4, Mallett 3.

Shoot No. 19.—Sweep for money prizes:

Shoot No. 21.—Dick 7, Montgomery 6, Bennett 4.

TORONTO, Jan. 1.—The Toronto Gun Club held a very successful shoot at the Woodbine to-day. The fine weather and the birds were favorable for the sport, and the New Year may be said to have been auspiciously opened by the marksmen of the Toronto Club. Following are the scores:

Sparrow sweep, 5 birds: E. Reid 5, J. Forman 4, A. Elliott 4, R. Kipp 3, F. Martin 3, P. Wakefield 3, F. W. Martin 3.

Turkey sweep, 5 birds: E. Reid 5, F. Martin 4, R. Kipp 4, D. Black 3, H. Elliott 3, P. Wakefield 3, J. Townson 3, E. Leroy 3, J. Forman 3, G. H. Briggs 2, G. Pearsall 2.

Third Sweep, 5 birds: E. ReRoy 4, P. Wakefield 4, A. Elliott 3, G. H. Briggs 3, T. Baylis 3, F. Martin 3, E. Reid 3, J. Forman 3, F. W. Martin 3, G. Pearsall 2.

Fourth sweep, 5 birds: J. Townson 5, G. Pearsall 5, A. Elliott 4, P. Wakefield 3, E. LeRoy 3, E. Reid 3, F. Martin 3, J. Forman 2.

Fifth sweep, 3 birds: J. Townson 3, D. Black 5, E. LeRoy 3, F. Martin 2, G. Pearsall 2, P. Wakefield 2, A. Elliott 2, T. Baylis 2, E. Reid 2, J. Forman 2.

TORONTO, Jan. 5.—The members of the Owl Gun Club held their annual supper this evening at Mr. J. F. Scholes', a splendid affair it was. There were nearly a hundred guests present, President J. R. Humphreys sat at the head of the table, and opposite him in the vice-chairs, were Messrs. J. C. Unwin and J. Lennox. The chairman had on his right Mr. G. Pearsall, president of the Toronto Gun Club, and on his left Mr. Jeff Worden, representing West Toronto. Besides, there were present: George Warin, S. Staneland, G. H. Briggs, C. A. Riggs, Capt. A. J. Tymon, John Murray, A. Elliott, George Oakley, J. Townson, R. J. Charlton, R. Nolan, J. Melrick, A. R. Lockhart, A. Austin, T. Best, D. J. O'Halloran, Pete Clark, J. Wilson, J. Worden, G. Pearsall, J. G. Unwin, J. Lennox, and many others. Messrs. Parson and Worden responded for the sister clubs. "Field and Athletic Sports" brought Mr. J. Wilson to his feet. He gave some capital hints how gun club rules should be modified in favor of the birds. Mr. J. Worden also made a pleasant speech, as did Messrs. J. F. Scholes and Geo. Warin. In proposing the health of the press President Humphrey referred in most complimentary terms to the absence of a well-known sporting press man, Mr. H. J. P. Good, and hoped his voyage to England would restore him to perfect health. The proceedings were very enjoyably interspersed with songs and on the whole the evening was most enjoyably spent.

OTTAWA, Dec. 29.—The St. Hubert's Gun Club held their usual shoot this afternoon, and the members are getting into form which will put some of them in the first flight before long. President P. Thompson has presented the members with a very handsome and chaste silver cup for competition during the season. The club have arranged to shoot eight handicap sweepstakes at twenty birds each, one sweep each Saturday. The best five scores will then be taken in each sweep for the cup aggregate. The handicap is framed with the intention of giving the junior and green shots encouragement, and they all receive a most liberal start, some getting eight birds out of twenty. Such old shots as Messrs. Throop, Rothwell, Trudeau, Martin, E. and G. White, J. Deslauriers and Dalton are placed at scratch, and the top-weights can just go fast enough to make the handicap a most interesting one. The club have added several handsome prizes, and these will be keenly competed for. The shooting resulted as follows:

Sweep. 20 birds each; 18yds. rise; 5 traps: R. G. Dalton 17, J. Deslauriers 16, A. Throop 15, P. Trudeau 14, G. White 12, E. King 11, E. White 8, E. Lemieux 7.

Second sweep, at 10 birds. Same conditions: A. Throop 9, G. White 8, R. Dalton 8, P. Trudeau 8, S. White 5, J. Deslauriers 5, G. Trudeau 8, S. White 5, J. Deslauriers 5, E. King 5, D. McPhee 5. In shooting off ties White took second prize and Trudeau third.

Jan. 1.—The St. Hubert Gun Club took advantage of the fine New Year's day to hold a sweepstake shoot, when some of the members cracked the Ligowskys at a lively rate. The following sweeps were shot:

First sweep; 10 Ligowski clay pigeons; 18yds. rise; 5 traps: A. Throop 9, E. King 6, G. Trudeau 9, W. McIntyre 4, G. White 8, J. Deslauriers 7.

Second sweep. Same conditions: A. Throop 10, E. King 5, S. White 6, J. Deslauriers 6, G. Trudeau 10, G. White 4.

Third sweep. Same conditions: G. Trudeau 9, G. White 8, J. Deslauriers 6, E. King 6, S. White 6, W. McIntyre 4.

MONTREAL, Dec. 29.—The fifth handicap club competition of the Montreal Gun Club, for the Greener gun, took place to-day, but the busy holiday season left only a small field of entries. Each of the five competitions have been won by different gentlemen, viz., W. McCraw, A. Lockhart, E. A. Crowley, N. Parker, and to-day's was won by J. Paton in shooting off for first. The handicaps and score follow:

	Handicap.	Total.		Handicap.	Total.
J Paton	2	16	A Alexander	3	13
Cowley	4	16	W Lumsden	scratch	13
R James	2	15	O Leger	2	9
W Mack	4	15			

There were afterward four sweeps at 5 birds, in all of which the leaders tied; first money being eventually won by Messrs. R. James, Taylor, Cowley and Lumsden.

NEW JERSEY GUN CLUBS.

ON Wednesday, Jan. 2, a meeting of representatives from the gun clubs of New Jersey was held in parlor F of the Astor House, New York, pursuant to a call issued by Mr. W. Fred Quimby, president of the Jersey City Heights Gun Club. The meeting was called to order at 3:30 P. M. by Mr. Quimby, who in a few well chosen remarks introduced the object of the gathering, to wit, that some concerted action be taken to legalize the sport of shooting live pigeons from the trap when conducted in a proper and humane manner, and to prevent the annoyance and interference of certain parties with the rights of trap shooters. Mr. Quimby claimed that the sentiments of the meeting and of all trap shooting clubs was totally opposed to any needless cruelty in the conduct of their sport, and that action should be taken to remove the stigma of brutality or cruelty which at present in some quarters rests on those who shoot live birds from the trap.

Mr. Quimby was then chosen chairman of the meeting, and Frank Mason secretary. A call of the roll was made and the following clubs were found to be represented:

Jersey City Heights Gun Club—Messrs. M. L. Lindsley, Geo. B. Eaton and Al Heritage.

Middlesex Gun Club—Messrs. T. H. Kellar, W. L. Force and S. G. Smith.

Essex Gun Club—Messrs. R. H. Breintnall and W. R. Burnett.

Midway Gun Club—Mr. A. D. Bailey.

Montclair Gun Club—Mr. Wm. Sigler.

Union Gun Club—Mr. E. D. Miller.

Mercer Gun Club—Mr. A. R. Kuser.

New York Suburban Shooting Grounds Association—Messrs. Chas. Richards, P. G. Sanford and T. P. Richards.

N. J. Fish and Game Protective Society—Mr. Percy C. Ohl.

West End Gun Club—Mr. Phil Daly, Jr.

Letters of acceptance and sympathy with the object of the meeting were read from the Riverside, the Eureka and Kingston Gun Clubs, whose representatives, however, did not appear. The chair then declared the meeting open and after an informal discussion the following motion was made and carried: "Resolved, That a committee of three be appointed by the chair with full power to take such measures as they may deem suitable to promote the sport of trap shooting and to remove all features of needless cruelty from the sport of pigeon shooting from the trap, and to take such other measures as they may deem necessary to prevent the suppression of or needless interference with the shooting of pigeons from traps when properly conducted without needless cruelty. Such committee to have power to call upon the various shooting clubs throughout the State for subscriptions to defray their necessary expenses and to make expenses."

On motion, Mr. Quimby was made a member of the committee ex-officio. The chair appointed Messrs. A. D. Bailey of the Midway Gun Club, W. L. Force of Middlesex Gun Club and William Gomery of Essex Gun Club, as such committee. It was suggested that some arrangement should be made for supplying the committee with funds to carry on the work and a motion was made that the roll be called and the amount each club would guarantee be placed opposite their names. This was done and between $600 and $700 was pledged. Clubs not represented at the meeting will be given an opportunity to add their share.

It is understood that each club will do what it can through its members by personal appeals to their representatives in the Senate and House.

When this business was finished the chair remarked that the meeting was open for discussion on other points of interest to shooters, and Mr. A. D. Bailey suggested that a N. J. State Association of sportsmen would be a good scheme, and proposed that such an organization be started. It was learned, however, that such an association was now in existence, and is in a flourishing condition so far as finances go. It had held no meeting for three years, from one cause or another, but could be easily resurrected. This was deemed advisable, and a motion was made and carried: "That the secretary of this meeting be requested to correspond with the president of the N. J. State Sportsmen's Association, Dr. W. N. Pindell, and ask him to call a meeting of that association to be held at Newark, N. J., at as early a date as possible."

Mr. Percy C. Ohl called the attention of the meeting to some proposed changes in the N. J. game laws, and the following motion was made and carried: "Resolved, that it be taken as the sense of this meeting that the game laws of New Jersey should be amended so as to allow the shooting of quail, grouse, and rabbits throughout the State, only from Nov. 1 to Dec. 5 inclusive."

On motion the meeting then adjourned, subject to call of the chair. F. M.

The committee mentioned above met on Saturday, the 5th inst., and drafted a bill to be presented at the New Jersey Legislature, allowing the shooting of live birds from the trap. The chairman of this committee will be pleased to hear from any clubs in the State who were not represented at the meeting on the 2d inst., who are in sympathy with its object and would like to lend their assistance.—M.

NEWARK, N. J., Jan. 1.—The New Year's day shoot of the East Side Gun Club, at Fisher's Woods, resulted as follows: First event, 5 live pigeons, Hurlingham rules, 25yds. rise: Lauhenstein, H. Langgaff, Perment, Schneider, Reinhart, 4 each, divided first money; Gundell, Schilling, Becker, 3 each, divided second; G. Beach 2, third; Jordan 1. Second event, same as above, all ties divided: Richard, Heinrich, 5 each; Hilsers, Fahrer, Hassinger, 4 each; Schork, Koegel, Humphrey, 3 each; Lona, Walter, 2 each; Barufke 1. A match was shot between F. Perment and T. Richard, each man shooting at 25 bluerocks. Richard was the victor, breaking 20 to his opponent's 18. Perment also shot a race at 5 live birds against M. Barufke, and killed his 5 straight, Barufke getting but 2.

The Mutual Gun Club had an interesting contest at live pigeons and also one at clay-pigeons in Wiedenmayer's Woods to-day. The first resulted as follows, each man shooting at 15 birds, Hurlingham rules: Hassinger killed 12, first; Ostrander, Pfau, 11 each, divided second; Gould 8, third; Ernstberger 7, Koehler 6, 15 clays: Koehler 11, first, Ostrander 10, second; Hassinger, Pfau, 9 each, divided third; Gould 7, Ernstberger 6.

The New Year's shoot of the Roseville Gun Club was a very successful affair, and all the events, eleven in number, were well filled. Five bluerocks were shot in each event, and the records were as follows: First event—Greene 4, Wheaton 3, Simms, Davenport, Parsons, 2 each, Kitchell 1. Second event—Simms, Parsons, Whaton, 4 each; Huff, Wheaton, Newhouse, Al. Whaton, 3 each; Kitchell, Greene, Shipley, 2 each. Third event—Whaton, Huff, Wheaton, 4 each; Newhouse, Kitchell, Al. Whaton, Simms, Greene, 2 each; Parsons, Gantz, Shipley, Smith, Backus, 2 each. Fourth event—Newhouse 5, Kraus, Whaton, Simms, 4 each; Davenport, Al. Whaton, Huff, Parsons, 3 each. Fifth event—Whaton, Kraus, 4 each; Al. Whaton, Huff, Parsons, Simms, Smith, 3 each; Backus 2. Sixth event—Hopkins, Kraus, Simms, Backus, 3 each; Condit, Parsons, Huff, 2 each; Badgeley 0. Seventh event—Badgeley, Simms, Huff, 4 each; Condit, Backus, Hopkins, 3 each; Kraus 2. Eighth event—Badgeley 5, Whaton, Backus, Huff, 4 each; A. Whaton, Condit, Simms, 3 each. Ninth event, 10 bluerocks—Badgeley, Simms, Whaton, 7 each; Condit, Van Ness, Hopkins, Huff, Minion, 6 each; Parsons 5. Tenth event, 5 bluerocks—Condit 5, Simms, Kraus, 4 each; Hopkins, Whaton, Thorn, 3 each. Eleventh event—Havenstrike 5, Badgeley, G. Huff, Simms, 4 each; Condit, Newhouse, Van Ness, Thorn, Whaton, Kern, Dey, 3 each. Each event had from six to seventeen entries, with three moneys.

CINCINNATI, Jan. 4.—A match under strict English Hurlingham rules took place to-day on the grounds of the Independent Shooting Club between Al Bandle, of this city, and an unknown hailing from Virginia. Bandle's recent wonderful scores with a 10-gauge gun was the cause of bringing forth the remark from some of the doubting ones to "wait and see what he can do with a 12-gauge, 7½lb. field gun." The Unknown, who is an advocate of that gauge, issued a challenge to shoot at 50 birds each, for as many dollars a side, with guns according. Bandle readily accepted, and his work in the match shows what a magnificent shot Bandle has become. The birds were of the best—many equal to any English bluerock England's experts boast of. A heavy fog and damp, muddy ground to stand upon, made it disagreeable for some 400 spectators in attendance. Scores—40 single live pigeons each, for purse of $50, strict Hurlingham rules, birds from five ground traps, boundary 80yds.:

Unknown.....2222121210210121000001221000112212022121—28
Bandle.....1010221222101111112111112102111212112120—35

The Unknown's 15th bird fell dead out of bounds. Referee, Ed Taylor; trap puller, A. C. Dick; official scorer, W. E. Limberg; time of match, 1h. 10m.

FALL RIVER, Mass., Jan. 5.—John Congdon, of Newport, and E. H. Wheeler, of Marlboro, shot a clay-pigeon match this afternoon, 250 birds each, for $250 a side. Jacob Marz, of Portsmouth, was judge for Congdon, J. T. Whalen, of New Bedford, judge for Wheeler, and B. C. Sherman, of Portsmouth, R. I., referee. Wheeler won the match, breaking 218 birds to Congdon's 202.

NORWICH, Conn., Jan. 7.—On Jan. 1, which was an ideal day for shooting or any other outdoor sports, the Norwich Shooting Club held a tournament, rather an impromptu affair, and had a most enjoyable time socially, and crowded more fun and real jovial sport into the short space of time, from 9:30 A. M. to 3:10 P. M., than the same small number of shooters ever did on a like occasion. We had with us Messrs. Baldwin, Webb and Ross, of the Willimantic Gun Club, E. L. Hooper, of Hartford, and F. L. Harvey, of Windsor Locks, all of them true sportsmen and able to contribute their share to the general fund of enjoyment. Our Mr. Pattison set up a good lunch and hot coffee, which was free to all, shooters and visitors alike, of which we had a goodly number. One and all expressed their great satisfaction with the day, the shooting, the lunch, and all the surrounding circumstances, and parted with a fixed determination to be on hand when the next occurs. I send you the scores of the different events, also the scores of our regular practice shoot Jan. 5. Our next shoot will be Jan. 12, for gold badges.

Ten Keystones, 5 traps, 18yds., National rules, 25 cents entry, ties divided:

Mitchell	0101110000—4	Baldwin	0010100110—4
Harvey	0001100100—3	Yerrington	1111011011—8

C M Hathaway	1111111111111010001110111—20

Ten bluerocks, 3 traps, 18yds., sweepstakes. Ties for first, 3 birds and miss and out:

A D Kittle	1111100000—5	C M Hathaway	1011111100—7
T S Hammond	1100111111—8	Dr Allen	1111010111—7

On shoot off Allen won first money.

Ten bluerocks, straightaway, 18yds., sweepstakes:

T S Hammond	1010010100—4	C M Hathaway	1011111011—9
Dr Allen	1111011111—9	A D Kittle	1001111101—7

CHAS. A. KITTLE, Sec.

WALLINGFORD, Pa., Jan. 1.—A handicap shooting match for a silver cup took place at Wallingford, Delaware county, to-day, in which ten well-known shots participated. Live pigeons and clay-pigeons were used as targets, and the traps were both sprung by electricity instead of by a cord, as is usual. In the appended score the first column of figures gives the number of yards rise at live birds, while the second column indicates the handicaps for clays. Each man had 25 shots, 10 live and 15 clays.

FRANKFORD, Pa., Jan. 5.—The beautiful weather we enjoyed on Christmas Day enticed a good many members and spectators to the North End Gun Club grounds. Sweepstake shooting and friendly matches were largely indulged in, with a corresponding increase to the club cash box, and the bang, bang of the guns continued from noon till dusk. The great attraction, however, was in the monthly prize shoot, 16 of the members participating; and nine useful prizes were awarded. Targets, 25 bluerocks. The following scores show how the favors went:

W M Pack	1010110111111111111110111—21
H Ridge	1011111110101010011111111—19
Sam Richards	0111010110010111C0011111—16
Dr Monaco	1111111110411111C0900111—19
J Wolstencroft	0111101111011111111101101—20
John Crowther	0111011010001111010101010—15
Elmer Ridge	0010011010011111100000111—14
W H Pack	1111101101111010111101101—19
A L Lumb	1101110101011111101010101—17
W Wolstencroft	1011111111111111101111111—22
Geo Elmer	0111011111010100111110101—18
J H Jacobs	1101111101100111011101110061—17
F L Lee	0111011110010111111111111—20
J W Lumb	1111101100111001110000000—14
O Bockins	1101111000111001101000111—15
I Buzby	0011111100010110110010011—15

W. Wolstencroft walked off with first, a fine leather gun case; Pack took second, 500 shells. The ties being shot, Wolstencroft got third, a leather shell case; Ridge fourth, can of Schultze powder; Geo. Elmer fifth, a gunning coat; A. L. Lumb sixth, can black powder; S. Richards seventh, a corduroy hat; J. Crowther eighth, a hunting flask (empty); Elmer Ridge ninth, bag of shot.

New Year's day opened clear and bright, but a pretty stiff breeze in the morning was quite a factor in preventing high scores. In the P. M., however, the wind went down somewhat, and some very good shooting was done. In the morning W. M. Pack and W. Wolstencroft shot a match at 100 bluerocks for the price of the birds, resulting as follows:

W M Pack	1111101111111111111111111—24
	1110111010111111111111110—21
	0111101111111111111111101—22
	1111111100111100110111—20—87
W Wolstencroft	1111100011111111111111111—24
	1111111111111111111111111—24
	1101011101111111111111101—20
	0111111111110101111111101—21—89

In the afternoon sweepstakes and friendly matches were indulged in. The following score at 15 bluerocks for $2 each is a sample:

J Crowther	1101111111101011—12	A H Peiffer	1100011001100111— 9
H Ridge	1111110111111111—14	L H Peiffer	0111010000010— 5
W H Pack	1101111101111101—12	S Richards	0111111111101100—11

At another set of screened traps W. H. and Jas. Wolstencroft and W. M. Pack shot 100 Keystones each for a club record, and it may be safely said that such an exhibition was never made before by amateurs. W. Wolstencroft used a Scott hammerless of about 7¼lbs., J. Wolstencroft a special Winchester, and Will Pack a special high grade Winchester for the first half of the match, but was compelled to change to a lighter gun, as he had been shooting steadily all day, and it began to affect his shooting. If he had changed earlier in the match his score would have equalled the best, for with his new 7lbs. Buckley he made a run of 45 straight. W. Wolstencroft shot in grand form, unfortunately missing his first. He broke every blessed one of the rest; he was as cool as a cucumber, but when at the score he kept the trappers busy. All things considered, probably Jas. Wolstencroft's score ranks with the best. In the fall of 1887 he unfortunately lost the use of his right eye, compelling him to learn to shoot left handed, and by hard work he gained his object, as former scores published in your valuable paper will testify. Lately he has been compelled to wear glasses, and Tuesday was the first day that he shot with them on, handicapping him more than one has an idea of. In spite of this his score will win nine times out of ten. The genial secretary of the club, A. L. Lumb, made a very acceptable referee, but was only called on once, for the birds were either missed clean or ground up. Mr. E. Ridge and H. Jacobs judged. Following is the score:

W H Wolstencroft	0111111111111111111111111—24
	1111111111111111111111—25
	1111111111111111111111111—25
	1111111111111111111111111—25—99
Wm M Pack	1111111011111101111111111—23
	1111111011111111111111111—24
	1011111111111111111111111—24
	1111111111111111111111111—25—96
Jas Wolstencroft	1111111111111011011011111—22
	0101111001111111111111111—21
	0111111011111111111111111—23
	1111111111111111111111111—25—91

CINCINNATI, Jan. 3.—The regular shoot for the Independent Gun Club's great trophy—the Muldoon medal—to-day was largely attended. H. F. Robinson, who has won the same medal not less than a baker's dozen times before, again landed in ahead of all the other entries. At the start it looked like a walk-over for Schaller, but at the fifteenth bird Robinson, by extra good work, scoring his five bird straight, again put him in the race, and on the finish of his last five birds by repeating, landed winner by one bird. The scores were:

Twenty single American clay birds. National rules:

F Nagle	1101010100011110110—11
Mack	0000110001111111111—12
Maynard	1011110011111110110—14
P Schaller	1111111011111010010—14
T Honing	0111111100111101011—14
Snider	1111111001110000011—12
H F Robinson	1100101111111111111—15
Eckenroth	0000011C0110010100—8
Jackson	0001100110100C0001111— 7
C Reif	1110011100101101111—14
F Becker	0011111111100111100—14
Cline	0000100001100100100— 5

Sweepstake shoot, ten single clays; entrance 50c.:

Nagle	0111011000—5	Reif	1101110001—7
Mack	0000100111—4	Snider	0111001011—6
Maynard	1100111010—7	Eckenroth	0000010C00—1
Honing	0011100111—6	Jackson	1100010003—3
Schaller	1101010001—5		

Ties on 7 div. first. Ties on 6 div. second.

Sweepstake shoot No 2, same conditions as No. 1:

Wick	1110111110—8	Honing	1010101111—7
Reif	0110100110—5	Maynard	0101110111—7
Robinson	0111011110—7	Nagle	0111011160—6
Snider	0010111001—4		

Wick got first money; ties on 7 div. second.

WELLINGTON, O., Jan. 1.—The Berea Gun Club came down to-day and held a match here with the home team. The teams shot at 25 standard targets thrown from 3 traps. A high wind prevailed, but notwithstanding a large crowd witnessed some good shooting. Wellington team will go to Berea soon. The scores follow:

Berea Team.

M Chick (Smith)	1111111111011111111111111—24
W Dick (Wellington)	1111011111111111111111111—24

WELLINGTON, Mass., Jan. 5.—A large number of gunners faced the traps at the grounds of the Wellington Club to-day, and, although the weather conditions were not favorable for good scores, some good shooting was done. Following are the winners in the several sweepstake matches: 6 bluerocks, Snow, Bond, Stanton and Schaefer; 6 clay-pigeons, Stanton; 6 bluerocks, Stanton; 6 macombers, Bond; 6 bluerocks, Schaefer and Snow; 6 clay-pigeons, Bowker and Baxter; 6 bluerocks, Stanton; 6 clay-pigeons, Stanton and Lade; 6 bluerocks, Stanton and Savage; 6 bluerocks, Melcher; 6 macombers, Sanborn; 3 pairs clay-pigeons, Herrick; 6 bluerocks, Stanton, Lang and Sanborn.

CLAREMONT, Jersey City, Jan. 1.—The fine day brought out a large number to the Suburban Shooting Grounds, many of whom preferred to use the set of targets reserved for practice and private matches. The large number of new shooters present show that these grounds will be well patronized as they become better known. The following are the principal sweeps:

Sweep No. 1, losing side pays for bluerocks, 9 singles:

Peck	1010111111—7	Douglas	1111011110—7
Mort	0110110011—5—12	Tell	0101110000—4—11

Sweep No. 2, 10 bluerocks; entry $1:

Purrington	1111111111—10	Sherriff	0010111101—6
Richards	1111000111—7	Peck	1110001001—5
Mort	1110011110—7	Douglas	0011010110—5

Richards second.

Sweep No. 3, same conditions; ties div.:

Collins	1111111111—10	Peck	1111111010—8
Purrington	1111101111—9	Richards	1111111010—8
Sherriff	1110011010101—9		

Sheriff was allowed 5 extra birds.

Sweep No. 4, same; ties div.:

Sherriff	1111010110011—10	Palmer	1111000101110010—8
Tell	0101110110111101—10	Daly	0110010111—6
Collins	1111010111—9	Purrington	0011100111—6
Mort	0111100111—9	Richards	1110010111—7

Sweep No. 5, same:

Peck	1111111111—10	Purrington	0110110110—6
Mort	1111110011—8	Richards	1100111000—5
Collins	0111111100—7	Tell	1110100001—5
Palmer	1111100000010010—7	Daly	0011010000—3

Peck first, Mort second, Collins third.

Sweep No. 6, same:

Purrington	1111111111—10	Peck	0111011111 - 8
Collins	1111111111—10	Richards	1110110011—7
Daly	1111111111—10	Gill	1011101100—6
Mort	1111011111—9	Tell	0111010110—6

On shoot-off Daly 5, Collins 5, Purrington 6.

Sweep No. 7, same, ties divided:

Mort	1111111111—10	Tell	1110110011—7
Daly	1011111111—9	Richards	0111010110—6
Purrington	1111111011—9	Peck	0111100000—4
Collins	1001011111—7		

Sweep No. 8, same:

Purrington	1111111111—10	Gill	0011111110—7
Peck	1111001111—8	Tell	1001010010—5
Richards	0010111111—7	Collins	1011100100—5
Daly	1101011110—7	Mort	1100011000w.

Tie won by Richards, 5 to Daly's 4.

Sweep No. 9, same:

Daly	1111111111—10	Mort	1011011011—7
Purrington	1011011111—8	Collins	1111071101—7
Richards	1110101111—8	Gill	0011001011—5
Leder	0111011101—7	Peck	1001101 0w.
Tell	0101011111—7		

Purrington second, Leder third.

Sweep No. 10, 4 singles and 2 pairs ties; div.:

Richards	1111 11 11—8	Peck	1101 00 00—3
Collins	1110 11 11—7	Leder	0101 00 10—3
Mort	1111 10 11—7	Tell	0100 00 10—2
Purrington	0111 00 00—3		

OMAHA, Dec. 29.—The shooters are taking advantage of this pleasant midwinter weather to keep their hand in. There were several fine shoots on the club grounds this afternoon, the scores of which will be found subjoined.

The first event was a 100 bluerock race between Frank Parmelee and George W. Ketchem, which resulted as follows: Ketchem 96, Parmelee 89.

Following this came live bird shoot, 5 birds each, modified English rules, entrance $5. The score:

Hardin	11111—5	Brown	11110—4
Blake	11111—5	Hunt	01111—4
Gwin	11111—5	Converse	01011—3
Ketchem	11101—4	Dumont	00101—2
Parmelee	11510—4	Field	10101—3
Ellis	11101—4	Hockenberg	10011—3

Hardin, Blake and Gwin divided first money; Parmelee shot out the tie for second, and field for third. Another similar match was won by Hardin, Hunt, Ellis and Gwin clinching second, and Dumond and Blake third. Hardin, who had his shooting clothes on, also won a 25 bluerock race by a score of 21, among ten entries, and divided first in three additional live bird shoots.

Third event, sweepstakes, 5 pair, half Keystone and half Macomber targets:

Rumsey	10 10 00 00 01—3	Addington	11 10 11 11 00—7
Field	10 01 11 10 11—7	Moore	11 10 10 10 10—6
Gady	10 00 10 00 10—3	Smith	00 10 00 00 00—1
J Coles	10 00 01 00 00—2	Shepley	11 11 00 10 10—6
Homer	10 11 00 10 11—6	Colville	10 01 01 11 10—6

Addington first, Moore second.

Fourth event, 10 single Macomber targets:

Rumsey	1011111001—7	T Coles	1001010010—4
Field	1100111001—6	Addington	1100111111—8
J Coles	1101110101—7	Anderson	0001010000—2
Homer	0101101111—7		

Addington first, Homer second after a shoot-off.

Fifth event, 10 single Macomber targets:

Rumsey	0100000110—3	J Coles	1110001100—5
Field	1110111001—7	Colville	0001110011—5
Gady	0000001010—2	Addington	1011101011—7
Homer	1111000010—5	Moore	0111010111—7

Moore took first, Colville second.—UNSER FRITZ.

ST. LOUIS, Mo., Jan. 1.—*Editor Forest and Stream:* New Year's Day was a most delightful one for a trap shoot, and several members of the St. Louis Gun Club took advantage of it at Compton Avenue Park. The Macomber tin target was used and proved quite satisfactory. It is the cheapest target, because it can be gathered and made to do service many times. The only disagreeable feature of the shoot was the small supply of the Macombers which the club had, and the members were obliged to do duty as retrievers very often. When the twenty-five or thirty were thrown and shot at, all hands hied to the field and picked them up, when the shooting would be proceeded with. They were thrown from a Keystone trap with perfect results. It was the first meeting of the clans since the opening of the game season, and very naturally all had experiences to relate of hunting trips which they had been on. One had had this occur to him, and another something else. Some of them related how a young puppy had acted when his first covey of birds, while others told of some peculiar thing done by an old dog. To one not interested in field sports, of course, the conversation would have been very boorish, but to confirmed "cranks," such as they are, it was "mighty interesten" and was thoroughly relished by all. Field shooting, generally speaking, had been so very unsatisfactory of late in this part of the country that many of the gentlemen hoped for the opening of spring that they could once more meet regularly at Compton Avenue Park and indulge in their shoots.

First event, sweepstakes at 10 Keystone targets:

L M Ramsey	1000110100—4	J Addington	1111111101—9
W E Field	1011111110—8	G Anderson	1000000000—1
H Gady	1010111111—8	Col Moore	0111111101—8
J Coles	1111101011—8	T Coles	1001010111—6
W Horner	0001101011—8		

Addington first, Col. Moore second.

Second event, 5 pair, half Keystone and half Macomber:

Rumsey	10 00 10 00 01—3	Addington	11 10 01 11 11—8
Field	00 10 11 10 11—6	Moore	00 11 01 10 00—4
Gady	10 00 00 01 11—4	F Smith	00 00 00 00 00—0
J Coles	10 11 00 10 10—5	J Shepley	10 10 11 11 11—8
Horner	11 11 10 10 01—7		

Addington took first after a shoot-off, Horner second.

PHILADELPHIA, Jan. 1.—The newly-formed Galena Gun Club had its first shoot to-day at South Broad street and Pennsylvania Railroad. Dark coming on the ties were not shot off:

	First Round.		Second Round.
J McAfee	1111010110—6	J McAfee	01110100 1—6
F Apker	1001101110—6	F Apker	0100111101—6
R Little	0011010110—5	D Beriman	1001000111—5
W Walter	1110110001—6	E J Ford	0000110001—3
D Beriman	1110000110—5	W Avil	1011000001—4
E J Ford	0110001110—6	W Walter	1011011010—6
W Avil	0011110111—7	R Little	0111101101—7

THE UNKNOWN GUN CLUB held its annual dinner and smoking carnival on the last evening of December, at Gillen's Hotel, in Myrtle avenue. One of the events of the evening was the presentation of a gold-headed cane, valued at $60, by the members to the president, Henry Knebel, the vice-president, Mr. Toufford, making the presentation speech, and the secretary, H. N. Stillwell, followed by giving his interested friends several humorous selections. Henry Knebel, Jr., received the club medal, valued at $80, emblematic of the highest season's score. The party toasted the health of the lucky father and son as a fitting climax to the evening's festivities. At a meeting held Jan. 3 officers were elected as follows: President, Henry Knebel, Sr.; vice-president, J. Arkhurst; secretary, R. W. Stillwell; treasurer, H. Van Staden, Sr. Henry Knebel, Jr., having headed the list of shooters during the past year was presented with a gold badge. Vice-President J. Arkhurst, the oldest member of the club, made the presentation, which was accepted by Mr. Knebel in a few well-chosen remarks. Messrs. H. Knebel, Jr., Van Staden, Cahill, Munsees, Dittlesan, Plate, Rampper, Bohling, Chichester, Haas, Skidmore, Brower, Gillmann, Henry Kuebel, Sr., Hilmer, Behrmann and Hopkins were also winners of prizes, which consisted of all kinds of smoking articles. At the close of the meeting a fine repast was served.

BROOKLYN, Dec. 31.—The regular monthly shoot of the Glenmore Rod and Gun Club for the Midas Diamond Badge, was held at Dueller's Park, on the Jamaica Plankroad, on Wednesday afternoon, Dec. 26. To make the shoot more interesting Michael J. Burke, the president of the club, put up a special prize, to go to the winner of the badge for the last three months by members of the club. On this occasion there were fourteen shooters on hand, and a lively contest was the result. F. Howard Reid was the winner of the badge and the special prize, while William J. Bennett captured the leather medal. The score was as follows:

James Bennett, 30yds	1001100—3	F A Reid, 25yds	0111111—6
William Levens, 26yds	0110110—4	M J Bourke, 26yds	0110100—3
Lee Helgans, 30yds	1001110—4	P H Reid, 25yds	1111111—7
Emil Schiellein, 26yds	1011111—6	W J Bennett, 23yds	0000011—2
Peter Sutter, 28yds	0111000—3	J Van Wicklen, 29yds	1001111—5
Charles Magee	1100011—4	W R Selover, 30yds	1001110—4
Joseph Ochs, 25yds	1011010—4	J D Bennett, 26yds	1010111—5

Referee, John J. Garrity. Scorer, William J. Bennett. Then came the match of the day. It was between two sides, one of which was captained by Peter Sutter and the other by Charles Magee. Each side was to shoot at 40 birds, the loser to pay for six bottles of wine. At the conclusion of the match it was found that there was a tie, each side killing 30 birds. The matter was amicably settled, however, both captains doing the honors.

SOUTH OYSTER BAY, L. I., Dec. 29.—South Oyster Bay has a splendid array of crack shots among its young men, and a club was formed last Thursday evening to be known as the Bluerock Gun Club. The first pigeon shoot of this club occurred this afternoon, with the following result:

Frank Kilrain	0100110001—4	H Shepard	1001101110—6
E Barteau	1111101111—9	P Kilrain	1111111100—8
D Quilfeldt	1011011101—7	W Wilson	1101111100—7
J Whit Hendrickson	1111110011—9	G Schard	1101110100—6

Barteau and Hendrickson shot off twice each. The first round both hit one and missed one. The second shoot-off Berteau hit one and missed one, and Hendrickson was declared the winner, having killed one bird, and the other flew to within three feet of the boundary before it dropped, and it is thought both birds were hit from the second barrel of his gun, as both flew near together.

EATON, N. Y., Jan. 6.—Eaton sportsmen met in a friendly contest on New Year's Day for the club badge. They have been in competition for this badge for some months, and it has been won by nearly every member, Doctor and Professor excepted, who can't quite get there with their new hammerless guns. There have been some remarkably good scores, but at the last shoot all seemed a little off. The quick shooting of Morse is often applauded as he knocks down his nine straight. Kingbirds, one trap, three angles, 18yds.; following is New Year's score:

Richardson	0111111100—7	Short	0010001100—3
Briggs	1100101111—7	Hamlin	0000101100—3
Bell	0101110111—7	Curtis	1001111011—7
Morse	1100101111—7		

In shooting off ties Briggs won.

ZIONSVILLE, Pa., Jan. 5.—To-day the money was placed in the hands of the stakeholders for the long talked about match between two of Lehigh county's best shots, Mr. Leon W. Mazurie of Dillingersville and Albert Neil of Zionsville; 100 clay birds, 3 screened traps, 13yds. National rules, for $100 a side. There has been a great deal of money put up by friends of the shooters as to the results of the match, so all are waiting patiently for the match to come off, Jan. 12. Although Mr. Mazurie is known to be the best field shot in these parts, and this being his first attempt at the saucer shooting, his friends say although he very seldom fails to kill his grouse or quail he puts up, the clays may get nine rattled at first. I shall mail you full accounts of the match in due time.—UNSER JACOB.

SPECIAL RACING APPLIANCES.

Editor Forest and Stream:

I beg leave to say a few words in reference to what has appeared in your paper, editorially and otherwise, about rigs for racing canoes. I think it would be interesting to your readers to know what the general opinion is among the fraternity, and I see no better way of ascertaining it than for a number to express their views pro or con, with your permission, through the medium of your paper.

The standing sail seems to be the principal object of attack in the articles to which I have referred, and after that the outrigging deck seat. I have never used either of them, but at the same time I think them both perfectly proper and legitimate appliances. It is admitted that under certain conditions the standing sail is faster than any other rig. That in itself to my mind justifies its use. You do not condemn racing; it is a vital, inspiriting and enjoyable part of canoeing. Well, what is the chief object in a race? It is to win, to reach the goal first; and the sail or whatever description that best helps to achieve this result is the one to use. It seems to me that for one to object to the sail with which another wins a race, is about as reasonable as it would be for him to object to the prize going to the winner because he had the fastest boat. As for the element of safety, if the standing sail really is more dangerous to use than any other, I do not think it should be considered in a canoe race. That should be left entirely to the discretion of the one who uses it. Every canoeist in a race takes his chances of a capsize, and all are supposed and should positively be able to take care of themselves in such an event; otherwise they have no business in a race, irrespective of what rig they carry.

Eliminate the risk from canoeing and you emasculate it. You metaphorically turn your bicycle into a tricycle; to reduce it to a positively safe basis, all your sails standing or otherwise would have to be cut down more than half, and even then there would be complaints from some of the sizes of other sails, or they might claim that an unfair advantage was obtained by their competitors sitting on deck or leaning out too far, and that brings me to the deck seat. Admitted that the sailor keeps the canoe up, and not *vice versa* (and no experienced canoeist will dispute this), any device which increases the sailor's control over his craft seems to me perfectly legitimate and to be commended; and for that reason I would as soon think of attempting to regulate the distance to which a man may "lay out to windward" as to condemn the use of the sliding seat.

In expressing the above views I speak only for myself, and I am not largely interested in advocating the cause of the racers, who, I presume, are much better able to plead their case than I am. At the same time I hope the Association officers will not be misled into condemning the devices that have contributed so largely to the fast records of the races, without being pretty positive that they are in sympathy with a large proportion of the lay members.
RELTAR.

[While we can agree with our correspondent in the two general propositions—that racing is good and that the object of racing is to attain the greatest speed—there are in practice very serious qualifications attached to each proposition, which have evidently been overlooked by him. Racing is a benefit to canoeing in that it is a very interesting and exciting branch of the sport that can be indulged in by those who cannot take time for cruising; it is in its nature more striking and prominent than cruising, and does much to attract popular attention to canoeing and to make new recruits, being necessarily public, while cruising is essentially a quiet and secluded sport. The spirit of rivalry engendered by racing has been a most valuable factor in the improvement of models and rigs, as well as in leading each club to new efforts to outnumber and outsail its fellows. So far, then, as racing is subservient to the recognized aim of canoeing—the production of safe, strong, fast and serviceable canoes, and the promotion of general work afloat (sailing, paddling, camping and cruising)—it must be recognized as a desirable feature. As soon, however, as it leads to the building of canoes that are unfit for any purpose but racing; to the use of sails which cannot be used for cruising, and further act directly to discourage all improvements which would be of use to the cruiser; and when these boats are sailed by men who never touch a paddle, who care nothing for cruising or camping, and whose only aim is to win as many prizes as possible in one of the two divisions, sailing or paddling; then it becomes evident that racing has gone too far. Those who have attended the last two meets will be able to form their own opinions as to just how far in this direction canoe racing has gone; but it is certain that even if all three of the above extremes have not yet been reached, they soon will be. Racing, then, is good so long as it aids and does not hinder general all-around work in canoes, not only by a few experts, but by all who are in need of just such a form of relaxation. Admitting then that racing is desirable, there remains the second proposition, that the end of racing is the attainment of the greatest speed. However true this proposition may be in theory, there are the cold facts to face in the records of nearly all sports; that unrestricted competition soon leads directly to the death of racing. Yachting has shown this in scores of instances; a great deal of the racing about New York for many years was done in open boats, with unlimited crews and sail, and as many sandbags as the crew was reckless enough to carry. The double result is seen too plainly to-day; not only has the racing itself entirely died out, but it has left its marks on the entire fleet of small yachts in the creation and perpetuation of hundreds of bad and dangerous models, derived directly from the old racing craft, though not intended themselves for racing. The same experiment has been tried among the hundreds of small craft on the Delaware, until the absolute necessity of some limits on sail and crews was beyond question. The history of yachting about Boston would tell a similar story, while on the other side of the water there is seen the unfortunate result of the let alone policy in the dwindling down of the grand fleet of yachts that raced but half a dozen years ago to two or three racers sailing alone. The history of canoe racing is too brief as yet to find an instance there, but if the progress of the last three years continues in speed and direction there will be a very conspicuous landmark for coming canoeists to take warning by. Under the present rules there have appeared craft that a man cannot sit inside of, little else but floating decks with sails that could not be folded or rolled up, even on shore, and that would capsize the boat as soon as they were stepped unless held up by some one on the float. Granting that with a sliding deck seat these machines can be held up by sheer strength and skill, and unless capsized by an unseen puff they will outsail such canoes as our correspondent, an old boating man, cruiser and racer, has used; we think that he will agree with us that such machines are a harm and a disgrace to canoeing. It is always a difficult task for a man to retain certain cruising essentials in his canoe, and at the same time to design a faster boat than a man who aims solely at speed, and the former has a right to look to the Association which he alone formed, and which nominally regards his interests as of the first importance, for protection from the racing machine. As long as his boat must race in competition with the latter, so long must she partake to a greater or less extent of the nature of the other, to the detriment of her cruising qualities. One correspondent brings up the question of safety; there is always sufficient spice of danger about sport on the water to make it enjoyable, and no prudent sailor will neglect the least detail which adds to his chances in case of an accident. To serve its main purpose a canoe should as far as possible be a lifeboat, strongly and staunchly built, and fitted with at least two compartments as large and as tight as possible. In racing, however, this honest craft must sail against an open shell of the lightest possible construction, without mast tubes, bulkheads, hatches, and with a few bladders beneath the deck to comply nominally with the rules. It would be impossible to rule that a canoe must carry so little sail that she could not capsize; but it is only fair that a boat which is used by her owner for all the many purposes of legitimate canoeing should be protected from a shell that is only launched from a float for short runs over the club course. We have already expressed our views as to the standing rig and deck seat, and have not space to go into the details of the question now, but we will be glad to hear the views of canoeists on either side.]

OTTAWA C. C.

Editor Forest and Stream:

The following were the events in our sixth annual regatta: Seven-mile tandem—The course for this race was down the Ottawa River; the current, though not very strong at this time of the year, makes the time somewhat better than it otherwise would be. This race excited a good deal of interest among the local boating men; the Ottawa Rowing Club sending a strong team in Messrs. Ross and Badgeley, the latter having been one of the winning crew in the same race in 1887. The canoes were all within the A. C. A. limits except the ones used by Messrs. Dey and Rogers, which was 17×27 and very light. Rogers, however, is only a boy of 15. Dey, too, is I believe only 18. He is one of the Dey brothers, boat and canoe builders of this city, and he himself built the canoe used in the race. All the crew except the Messrs. Stewart used the doubleblade paddles. The following were the entries and the time:

Omime, F. H. Gisborne and C. G. Rogers	53.00
Volunteer, W. Dey and V. Rogers	53.30
Yvonne, P. D. Ross and W. Badgeley	54.15
Clarabel, A. O. Wheeler and W. H. Cronk	54.30
Dalinda, W. C. E. Stewart and R. Stewart	Time not taken.
Stella, S. Short and E. W. Gilbert	Did not finish.

Single-blade Single Paddling, 1 mile with turn:

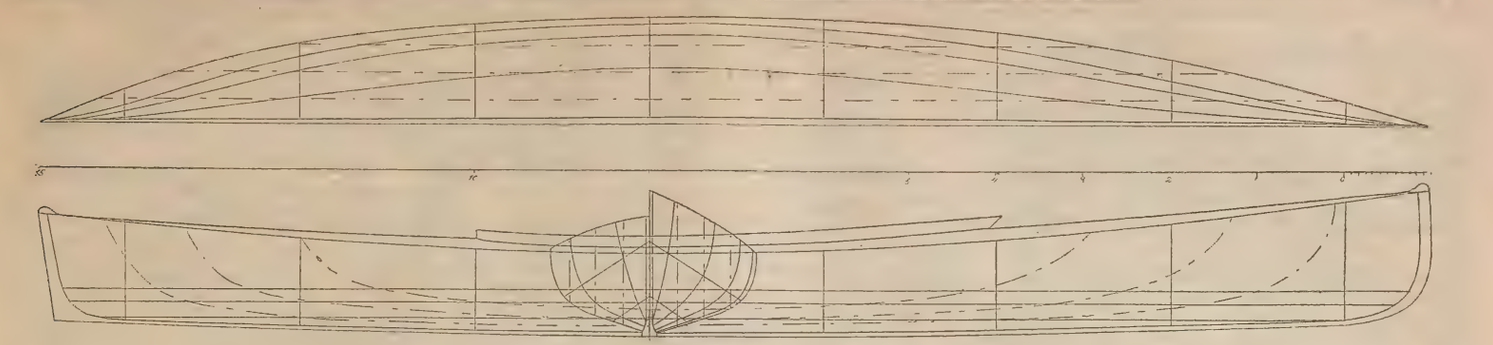
Omime, H. Howard	1
Volunteer	2
Clarabel, A. O. Wheeler	3
Irene, R. W. Baldwin	4

The Irene was the only fully decked canoe in the contest.

Tandem Paddling Race, 1 mile with turn:

Omime, Gisborne and C. G. Rogers	1
Volunteer, Dey and V. Rogers	2
Clarabel, Howard and Wiggins	3

Tug of war, four men in a canoe, two-minute heats.—This was one of the events of the season, the Ottawa Rowing Club sending a splendid crew, which, as events proved, swept the field. The first tug was between this crew, composed of P. D. Ross, E. F. Taylor, Dr. Hurdman and F. H. F. Mercer, and a crew composed of W. C. E. Stewart, A Hemming, A. F. Jarvis and H. N. P. Chesley, all members of the canoe club and of the Government Post Office Department. The Rowing Club men were, however, too strong, and soon had the other in tow. The two other canoe club crews were broken up by the absence of two of their men, and a crew was hastily made up consisting of R. W. Baldwin, F. H. Gisborne, H. Howard and C. Wiggins. The new crew were given a bad start, and it was some little time before they were able to rectify it; however, they stuck to it, both crews plowing up the water, and finally the rowing club crew began to move astern. Hours seemed to have passed, when at last the fastenings of the two canoes gave out and the rope slipped off. The judge, that genial and veteran sportsman W. Pittman Lett, was then appealed to—surely time was up and who had the best of it. With a twinkle in his eye he said, "Twas too good a tug to stop, you've paddled a few seconds over fifteen minutes, at the end of the two the Rowing Club had the advantage."



Gunwale race, 100yds.:

Musette, Henri Roy	1
Irene, R. W. Baldwin	2
Joe, G. Rogers	3

Team race, 1 mile with turn, three or more to a crew:

Joe, Rogers (G.), Dey and Rogers (V.)	1
Howard, Gisborne Baldwin and Wiggins	2

The Landsdowne Cup Race—Sailing twice round a triangular

DESIGN FOR SAILING AND PADDLING CANOE, 16x29½.

course with half mile sides. Great difficulty was experienced in getting these races off. Twice the race was started, and on each occasion it was not nearly finished when the time limit was up. Even when the race was actually sailed the wind was so light (with occasional dead calms) that it seemed as though another attempt would have to be made. Toward the close of the race the wind freshened and the sailing became ticklish work, for it was almost dark, and the canoes had to be steered by the lights on the shore. Any one who has tried sailing in a canoe race will well understand that no inconsiderable amount of nerve is required for such a performance as this. The race lay between Irene, Iolanthe and Musette for some time, sometimes one and sometimes the other being ahead, but at last Irene managed to keep her lead, with Musette second, and finished a quarter of a mile ahead. The entries were as fallows;

Irene, R. W. Baldwin.....1
Musette, Henri Roy.....2
White Wings, Capt. King.....Did not finish.
Nixie, P. B. Squires.....Did not finish.
Dolphin, P. A. Maingy.....Did not finish.
Iolanthe, W. M. L. Maingy.....Did not finish.

We made the mistake this year of having our regatta too late in the season. We propose having it in the coming season before the A. C. A. meet instead of waiting until after the men are back from their holidays, when the weather is too uncertain and the days are too short. FRANCIS H. GISBORNE, Sec'y Ottawa C. C.

RACING FOR CRUISERS.

A WELL-KNOWN cruiser writes us as follows regarding our reports of the A. C. A. meet: "Your articles on the meet have altered my conception of canoeing very materially. One sentence of yours, to the effect that the racer who was not a cruiser, and the cruiser who was not a racer, were alike not canoeists; hit me hard, and I have made up my mind to go in and race for all I am worth, as in the past I have cruised as hard as I could. I have neither the skill nor the nerve to make a winner, but although I shall race to try to win, that is to take the most out of my boat and out of myself, I am not going to race only to win. On that basis I want to see the Association make it impossible for any one but a canoeist in a canoe to win at the meet, or anywhere else, and I do think that the rules should be altered in accordance with the alterations in the conditions governing canoe racing." If all who are dissatisfied with the present rules were to look at the matter in this light, the trouble would soon disappear.

THE IMPROVEMENT OF CANOE SAILS.

Editor Forest and Stream:

In your article under the above heading, after expatiating on the number of "standing, non-stowable abominations" at the late meets, you say that there can be no doubt of the harm which these sails have and still are doing to legitimate canoeing, and especially to racing, and that the question is how to get rid of them. The method suggested is to let good-natured gentlemen like Com. Burchard, of the New York Club and the Division Regatta Committee, offer good prizes for the best lowering rigs, and then let all this good missionary work be knocked on the head by offering the Association $300 cup and championship of America to men who carry what you call standing, non-stowable abominations; for canoeists as a rule are an enterprising lot of fellows, and it is that spirit that has led to the adoption of the standing rigs by so many of our best men. A can beat B by about 50yds. B says, By gosh, I'm going to get a standing rig which 'll make that much difference, and he gets a standing rig and does up A, who in turn says I'll have to get B's style of rig or I'm busted, and hanged if I'll be busted as long as I've got cash in my trowser pocket to buy a new suit, and C, D, E, F and all the rest of them have to do the same thing to keep up with the crowd. The point I wish to make is that if B is headed off by a rule prohibiting standing rigs, he will immediately set to work to get a better lowering one, and C, D, E, F will follow suit, and there will be no need for private individuals to go down into their dips to offer prizes for lowering rigs; you will immediately get all the best brains (in that line) of the Association at work on the question of the best lowering rig, not for Com. Burchard's prize, but for the highest prize they have a chance of securing, as that is what the enterprising canoeists look for.

The point I wish to make is you will never get the brains of the Association at work on the best lowering rig until they are compelled to do so to win our highest races. It would be no hardship to any one to abolish standing rigs for the Association races this winter, as there is not a canoeist in the racing line but gets a new suit of sails every winter, and it is as easy to get a lowering suit as a standing one and probably no more expensive, but, if he is not compelled to, is it likely that he is going to get what he knows to be a slower sail, when his object is to get as well to the front as possible? The second point I wish to make is this, that if the "standing non-stowable abominations" (please observe that I'm not the daddy of that name) are to be done away with any time, now is the time to do it, the first year it should have been done, the second year some of us argued that it be done, but it was pooh-poohed. Now every one in the Association barring probably half a dozen are ready and anxious to see the evil abolished when it can be done without injury to any one, and if done the canoe that would win with the standing sail would win with a lowering one. If as you say, "It was the duty of the Association to limit or prohibit such sails in the first place," how much more is it their duty to do so now when there are probably only about half a dozen opposed to it in the whole Association. I do not think any one would advise running an association of 800 in the interest of 6, 16 or even 26 members of the same, and yet, comparatively speaking, that is what is being done at the present time.

The idea to offer special prizes for cruising craft, etc., without hiker seats and standing rigs will never accomplish the desired result of doing away with what is objectionable in our races. As has been said before, canoeists are an enterprising lot, and no canoeist with any sand in his anatomy will go into what will likely be called the "pot-bellied disgruntled cruiser's race" when there are higher races to enter for. Another feature is that every one admits that the present A. C. A. programme is too large, and this would be lengthening it still more without accomplishing the good that is sought for. The only practicable way of getting at a thing of this kind that requires remedying is not to tinker with the branches or divisions, but go right to headquarters and pull it up by the roots, and when it is done we will all be wondering why the dickens it took us so long to do it.

TORONTO, Dec. 30. WILL MACKENDRICK.

[We will be glad to hear from all of our readers who agree with Mr. MacKendrick that the changes under discussion should be made at once, especially from those who now use the standing rig but would like to see it ruled out.]

NEW YORK C. C.—A party of canoeists spent New Year's Eve at the house of the New York C. C., cooking supper there and afterward going out for a paddle on the Bay at midnight. Next day Messrs. Vaux, Nadal and Howard sailed over to the Brooklyn C. C. house for a New Year's call. Com. Wilkin was found afloat in his canoe, and others of the club were at the club house.

A. C. A. MEMBERSHIP.—Central Division: C. S. Smith, Rochester, N. Y. Atlantic Division: Gabriel Reevs, Robert O. Kirkwood, Paul B. Rossire, Talbot Simpson, John G. Reevs, Yonkers; J. Henry Sipp, Paterson, N. J.; Alex. Arnois, Clarence Castello, Philadelphia, Pa.

A SAILING AND PADDLING CANOE.

THE design given herewith is by Mr. C. E. W. Armstrong, of Boston, for whom the canoe is now building. The leading dimensions are 16×29½×11in., and it is proposed to carry 105ft. of sail. The weight of the hull will be inside of 75lbs., the planking being lapped with a nearly flush seam. The centerboard will be of $^{3}/_{32}$in. steel, 35in. long, the after end placed 9in. from midship section. The canoe is intended for cruising as well as racing and should be very easy under paddle as well as fast under canvas for cruisers.

A NEW STYLE LAPSTRAKE.—Mr. H. M. Sprague, of Parishville, N. Y., has received a patent on a new method of making a tight seam in boats. A thin strip of rubber, specially prepared, is laid between the planks, in varnish, seeming to make a very tight joint, especially around all nails and fastenings. The weight is but ½lb. greater on an ordinary canoe, and the cost about $5.

LONG CRUISES IN STEAM LAUNCHES.

Editor Forest and Stream:

In requesting Mr. Lovejoy to give the dimensions of his steam launch Dot, in which he made his interesting trip "Through Okeechobee to the Gulf," it was not because I desired to have one built, but merely to satisfy the curiosity of an old steam launch man; and just here I desire to thank Mr. Lovejoy for his kindness in offering to assist me in the construction of a boat.

I claim to be a pioneer in adopting the steam launch for pleasure cruising, having abandoned a 40ft. sailboat six years ago, and replaced it by a 21ft. launch. In this boat four of us made a very pleasant trip from Pittsburgh to Louisville and return, thence up and down the Monongahela and Allegheny rivers, spending three months in fishing, hunting, camping, and having a good time generally. The boat, however, was too small for cruising, and in November of the same year I sold her for $50 more than she cost in the spring. Being so thoroughly delighted with our first experiment, we decided to form a co-partnership, "pool our issues," and purchase a launch especially adapted for cruising. Consequently we ordered one 30ft. long, 7ft. beam, with hard wood awning deck, 4 H. P. engine and boiler, cockpit inclosed with canvas curtains, etc. She was delivered in the following spring, 1883, and on May 3 we started on a four months' cruise. Leaving Chicago via the Illinois Canal, we steamed down this waterway to the Illinois River, thence to the Mississippi, and after two months of unalloyed pleasure and jolly times generally we landed at New Orleans, where we intended spending two or three days. We had received no mail since leaving Chicago, when the clerk at the St. Charles glanced at our names on the register, looked at our blue flannel shirts and slouch hats, and sized us up generally, he slowly murmured, "I guess this mail is for you," and forthwith dumped about a bushel of letters and papers upon the counter.

Three days, a week, two weeks, three weeks passed, and we were still unwilling to leave that hospitable city and the many charming friends we had made. In the mean time the launch was not idle. Day after day and night after night, decorated with flags, Chinese lanterns, etc., placed there by fair hands, and laden with New Orleans' handsomest daughters and gallant sons, the little craft made many pleasant excursions to various points of interest. But we started "up river" finally, and after innumerable stops of a day or two, now visiting interesting towns or cities, again camping in beautiful woods on the river bank, fishing and hunting, we arrived at St. Louis on Thanksgiving Day and tied up for the winter, brown as berries and fat as 'possums. Three days were spent at the Lindell discussing our trip, the route for next year, etc., when with a cordial handshaking we separated for our respective homes—Charley to Chicago, Jack to Pittsburgh, Frank to his bachelor apartments at the Lindell, and I to Philadelphia.

Arriving home I found that my only living sister was slowly but surely succumbing to that fearful disease which had already robbed me of two brothers and a sister, and that for her to remain in the city during the winter would certainly mean death. Consequently, after repacking my trunk, we started for that bourne from whence but few consumptives return alive, viz., Florida. The trip was not an enjoyable one to me, my mind constantly reverting to three previous journeys made under similar circumstances; how my poor brother's eyes sparkled at the thought of being restored to health, and how soon, alas, those hopes were dispelled, for in three short months I brought back in a casket all that was mortal of him who was most dear; how, in eighteen months after this, I made the same trip with another brother and sister, the former surviving but six weeks, the latter three months.

Two weeks at the St. James in Jacksonville, sister growing gradually weaker, although she was not confined to bed, the outlook for a pleasant winter was not very promising. Suddenly the thought occurred to me, "if out-door exercise has done so much for me, why will it not benefit sister?" I immediately telegraphed Frank to send the steam launch, and two weeks afterward she arrived all OK, and next day who should drop in but Frank! I had written him concerning my sister's health, my sojourn in Florida, etc., and he "came down just to help kill time, you know." We had the launch overhauled, a snug cabin built abaft the engine, and after loading her to the muzzle with provisions, fishing tackle, guns, ammunition and what not, we started for a cruise on the St. Johns—my sister, aunt, Frank and myself. It would require more space to describe our seven weeks' wandering than is allotted to the average newspaper correspondent, hence I will only state that we navigated both the St. Johns and the father of all crooked rivers, the Ocklawaha, to our heart's content. The only drawback was sister's occasional complaint of inhaling the smoke and dust from the coal, and we set our wits to work to overcome it. After a week's discussion we decided to replace the entire machinery with an oil-burning outfit, but upon our return to Jacksonville and while relating our experience, and dilating upon the pleasure in general of owning a steam launch, a jolly old colonel from New Orleans was so well pleased with the boat that he determined to purchase her. He took her to New Orleans, where I saw her last summer, and has run her thousands of miles since he bought her.

During our outdoor life my sister improved wonderfully, especially after Frank one day accidentally (?) dropped overboard a dozen bottles of cod liver oil, both plain and emulsified, leaving her no medicine whatever. The following summer I accompanied her to Colorado, stopping off a day at St. Louis to visit Frank. Two days after our arrival at Manitou I observed a familiar form emerge from a 'bus, and to my delight there was Frank, "just run out to help spend a few weeks, you know." We returned East in October; my sister was almost the picture of health, and concluded to settle down for a year or two and become acquainted with our friends. The winter passed with occasional letters from the boys, a flying visit or two from Frank and spring came. How I longed to be once more meandering along quiet streams, yanking the festive pickerel from his lair 'neath yonder lilypad, or bringing down a squirrel, a pheasant, or a quail, or lying lazily in a bunk in a launch, listening to the plash, plash of the water against her sides until—by thunder! I'll buy another boat. And I did. The dimensions were the same as the last, the only difference being an oil burner instead of coal. She was supplied with large oil tank, fresh water tank, keel condenser, life compartments, was coppered to waterline—a complete boat. We started from New York and spent the summer among the Thousand Islands, Lake Ontario, etc., and returned late in October, after spending an unusually pleasant time. Frank could not go on account of business, he said; but as he made five trips from St. Louis to Philadelphia during our absence, always calling upon my sister, I began to suspect the nature of his business. I was not left long in doubt, for upon our arrival at Kingston, Canada, I received a long letter from sister and one from Frank, and—well, Frank being "one of the boys," handsome, accomplished, well fixed financially, of course I could not object. And I didn't. The wedding took place on the following January, and I gave them the steam launch as a present. They live in St. Louis, and when I was there last summer we all enjoyed a ride in the boat.

In a steam launch a coal burner is objectionable for a great many reasons, and I would not have one. An oil-burner is better, but they have their faults, and I do not like them, hence I intend trying something different next spring—a gas engine. I have placed an order for a 33ft. launch, one which I think will be complete in every particular. This is my favorite mode of traveling, and I intend continuing until I have traversed every river and canal in this country. There is more pleasure, more comfort and less expense connected with it than any other, and now that I can utilize gas instead of steam, I think I have "struck it right."

PACIFIC.

THE CORINTHIAN MOSQUITO FLEET.—*Editor Forest and Stream:* Will you please correct a statement made in your issue of Dec. 27, in which you say in reference to the Corinthian Mosquito Fleet that, "The headquarters will be at New Rochelle, N. Y., the sailing ground being on the west end of Long Island Sound." Let me say that the organization is not a club, but an association, to which gentlemen living between New London and Staten Island may join for the purpose of entering their small craft in regattas that may be held at either end of the Sound or even in the Bay.—THEODORE LEDYARD, Sec'y (New Rochelle, Dec. 31).

YACHT BUILDING ON THE PACIFIC.—Capt. Turner is now building at his yard at Benicia a keel sloop for a San Francisco yachtsman. She will be 40ft. over all, 14ft. extreme beam, about 12ft. 9in. at l.w.l., 5ft. hold and 5ft. draft, with an iron keel of 2,500lbs. She will have a large spread of canvas. The sloop Pilgrim has been sold by Mr. Eckman to Messrs. Gray & Emerson, and he will build a 27ft. c. b. sloop. La Paloma, a sloop recently built at San Pedro, and said to be a miniature Mayflower, will be in San Francisco waters next season. She is owned by Mr. Banning.

LYNN Y. C.—*Editor Forest and Stream:* At the annual meeting of the Lynn Y. C., on Jan. 1, the following officers were elected: Com., E. C. Neal; Vice-Com., H. L. Parker; Fleet Captain, Louis Coté, re-elected; Treas., Jos. W. Atwill; Sec., Walter Hawkes; Meas., A. W. Hay. Board of Directors, F. E. Baker, H. K. Wheeler, E. B. Newhall, W. E. Neal, B. W. Rowell. Regatta Committee, R. M. Benner, W. E. Gordon, Allan Mansfield, J. Q. Farwell, G. F. Putman. Membership Committee, J. H. Tufts, F. E. Newhall, W. A. Estes.—WALTER HAWKES, Sec.

DEATH OF SIR WILLIAM PEARCE.—The death is announced of Sir William Pearce, the shipbuilder and yachtsman, and one of the firm of Elder & Co. the great Clyde shipbuilders, whose shops he entered as a boy. Sir William Pearce began his yachting about ten years since in the 60 tonner Daphne, afterward going in for steam. He built the Torfrida, 168 tons; Bondicea, 435 tons; Lady Torfrida, 623 tons; and lately a second yacht of the same name, of 735 tons. Mr. Hans Sloane Stanley, a well-known English yachtsman, owner of the schooner Star of the West, also died last month.

A NEW REGISTERING LOG.—A French inventor, Mr. Jules Michel, has lately perfected a new form of registering log, which records on paper the speed of the vessel. The log proper is suspended permanently along the side of the vessel about the mid length, and is connected by a flexible tube with a registering apparatus placed in any part of the vessel that may be convenient.

HUDSON RIVER Y. C.—Officers: Com., Joseph Stilger, Vice-Com., William Lutters; Sec., Edward R. Wilson; Treas., Richard V. Freeman; Meas., Harry Norton; Steward, John F. Hufnagle; Trustees, John E. Drew, H. F. Allen, J. K. Tucker, E. A. Barnes and John Kelly; Finance Committee, Harry Norton, Albert Hastorf and Christ Walden.

CHANGES OF OWNERSHIP.—Vandal, the compromise sloop designed in 1886 by Burgess, has been sold by J. S. Fay to Henry Stanton, owner of the Portia. Vandal was the first Burgess boat with a board below the cabin floor. Gypsy, sloop, has been sold to Florida owners.

NEW ROCHELLE Y. C.—Echo Island, on which the house of the New Rochelle Y. C. is located, has been purchased by Mr. Oliver Iselin, owner of Titania, who proposes to build a residence there. The club will be obliged to seek new quarters.

ANOTHER NEW SCHOONER.—Mr. A. Cary Smith has an order for a centerboard schooner of 65ft. l.w.l., similar to the Harbinger designed by him in 1883 for Mr. Forbes. The new yacht will be built of wood.

THISTLE.—The latest news from the Clyde confirms our statement that no alterations have as yet been made to Thistle; nor are any likely to be made. She has been prepared for the winter, and will lie afloat.

SEAWANHAKA C. Y. C.—The annual meeting will be held at the club house on Jan. 12, at 8:30 P.M. The annual dinner will take place on Jan 26, also at the club house.

A PILOT'S LICENSE FOR STEWARD OLSEN.—Niels Olsen, the popular steward of the New York Y. C., has lately received a license as master and pilot of steam vessels.

KATRINA AND TITANIA.—The agreement for three matches between Katrina and Titania has been concluded.

THE COLLINGWOOD FISHING BOAT.

THE Collingwood fishing boat, the peculiar craft of the fishermen of the Georgian Bay in particular, and the Canadian fishermen in general, is perhaps the largest and most powerful boat ever designed and developed for use solely upon fresh water, and she is certainly strong, speedy and seaworthy to a degree that entitles her to respect and fame. Although as a general rule the boat of the local fisherman is marvelously well adapted for the work it has to do, it is only under exceptional circumstances that the local fishing boat censes to be but a variation of the common type and rises to the dignity of becoming entitled to be classed as a distinct species. The Collingwood fishing boat is certainly, by virtue of her peculiar lines, sharp stern, deck and rig, a distinct type, and although she approaches closely in all these particulars to the canoe yawl, she is nevertheless indigenous in the strictest sense of that term, having been developed in the locality, the name of which, for the lack of a better, she bears without being affected to any appreciable extent by exterior influences.

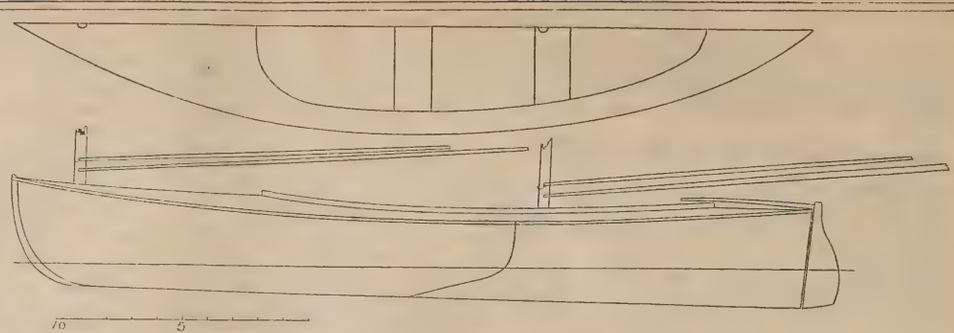
The conditions under which she was developed, the general characteristics of the Georgian Bay and of the Great Lakes are, however, exceptional enough to justify all the individuality she possesses, and to tax them seriously upon occasions. Nowhere else in the world do the winds find as large areas of fresh water to exert themselves upon as they do in Lakes Superior, Huron and Michigan, and nowhere else are such tremendous seas piled up upon fresh water.

The Georgian Bay in particular has certain characteristics in this respect which are not of the variety it is pleasant to trifle with. It is not only the largest of fresh water gulfs, and by virtue of the purity of its limpid water and the infinite variety of its rocky and wooded shores, one of the most beautiful bodies of water in this continent of beautiful waters; it is perhaps the most dangerous of the water stretches of the Great Lakes, and that is saying a good deal. Not even Lake Superior itself, that fierce destroyer which gives not up its dead, can surpass the furiously angry and broken sea which the Georgian is quite willing to organize, in a most disorderly fashion, to please a nor'wester, and the greatest of the Great Lakes is too majestic to go off in a tantrum of the most vicious description merely because a thunder cloud has dared to cast a dark shadow on its bright waters. This bay has also acquired the most undesirable habit of beginning a summer day as placidly as a fish pond and finishing it one seething, heaving mass of foam-clad waterhillocks.

Lake Huron has a good deal to answer for in this connection; it is too anxious to pour in a great rolling sea through the "Gap" between Cabot's Head and the Manatoulins, without consulting the wishes of the Georgian, and the bay, feeling aggrieved, promptly loses its temper and rages at the Lake seas in a manner somewhat trying to the nerves of the sailormen, who, for their sins, are trying to make way against this watery commotion. In spite of all its tantrums, however, a right glorious cruising ground is this Georgian Bay, and even the Thousand Isles are tame compared to the beauties of the Christians and the Manatoulins and the deep fiords of its southern and eastern coast. It must be confessed, however, that if these same coasts are not iron bound, they are rock bound to a degree that makes it unpleasant to attempt to cultivate anything approaching a shore acquaintance between them and the planking of a boat. Unless, therefore, the man who goes down to the Georgian Bay in a boat wishes to dispense with a coffin, he needs a craft under him that will not only ride a broken sea like a cork, but will go to windward in a smother of foam and stand up under sail enough to make her do it in a gale.

The fury of the autumnal and even the short lived summer gales on the Lakes is phenomenal, but as a species of compensation therefor, they frequently relapse into a placid and breathless calm, which is as trying to the sailor's temper as the gale is to his seamanship and endurance. As the fishermen must get to their nets in a calm, as well as when there is a chance of storm, the craft which he uses upon these waters must not only be able to carry her canvass, and if needs be weather a gale; but must not be either too big or too heavy to do fairly well under an ash breeze, and that not stronger than can be supplied by two men and a boy at most. The Collingwood fishing boat was designed to meet these varying conditions, she has been developed in accordance with them, and if she does not do so to a degree that renders improvement impossible, she is so superior to any other type or class of boat in use on the Lakes, that by comparison she does so perfectly. She is very fast and powerful, a regular wind jammer, and whether under sail, or when picking up nets, is very dry. Although big enough to face either Superior or Huron, without being dismayed, and to carry her gear and berth her crew, she is easily pulled, and more easily handled by her normal crew of two men.

The dimensions of a typical Collingwood fishing boat are as follows:



Length, extreme	32ft.
L. W. L.	31ft.
Beam, extreme	8ft. 3in.
Depth, amidships	35in.
bow	59in.
Draft of water	18in.
Distance from stem to foremast	2ft. 6in.
mainmast	21ft.
Length, foredeck	10ft.
cockpit	18ft.
Size of centerboard	7ft. x 3¼ft.
Ballast	3,000lbs.
Lenght of foremast	34ft.
boom	18ft. 6in.
yard	15ft.
Area of sail	412 sq. ft.
Length of mainmast	32ft.
boom	21ft.
yard	14ft. 6in.
Area of sail	357 sq. ft.

These boats are invariably clinker built, the planking being of clear white pine, three-quarters of an inch in thickness, and they are strongly framed, the timbers being put in about five inches apart. Their lines are long and easy, and they have a good deal of dead rise, but carry their beam well down for all that. The bow and stern lines are nearly alike, and they take their greatest beam about the center. In some of the older boats the rule, "a cod's head and a mackerel's tail," has been followed to a modified extent, the fore body being fuller than the after, but this is the exception, not the rule. Hollow lines are carefully avoided, and, in fact, with the exception of the dead rise which these boats have, the problem of combining stability and speed under arm power, has been worked out in their lines in much the same manner that it has in the Canadian canoe. Their decks are not mere after thoughts or painful excrescences, but a very important part of their being, and treated as such. The cockpit is large, but the cockpit rail is high, and the covering board is wide enough to justify its being called a deck. As it goes far enough aft to allow of a simple tiller on the rudder head being used from within the cockpit, rail, the cockpit tapers almost to a point at the stern, and is something of the shape of an extremely long and small ended egg. Taking them all around, they are not only fast and powerful, but they look it, and their long, clean lines, fine sheer, and good proportions make them graceful and beautiful as well.

Their rig is peculiar to themselves, at least upon the Great Lakes. They carry no sail forward of the foremast, which is invariably a very substantial stick, and as it is unstayed it needs to be. The sails are cut on the lines of the ordinary fore and aft mainsail, the universal sail upon the Lakes, the only modification being that in some cases the gaff is well peaked, and the sail is therefore unusually narrow at the head. The material used is a heavy canvas, 22in. in width, and the use of tanned canvas is not uncommon.

The first boat of this type ever produced was not a Collingwood fishing boat in the present sense of the term at all; she was merely a 22ft. sharp-sterned centerboard skiff. Her builder, Mr. Wm. Watts, of Collingwood, designed her upon the lines of the ordinary sharp-sterned skiff, of Canada, to satisfy the demands of the local fishermen, who wanted an able and weatherly craft to use in the off-shore fisheries. This was about 1860, and as at that time there were plenty of fish to be had about the south shore of the bay this open craft filled the bill very well. As time went on and the number of the fishermen increased the fish—salmon trout and whitefish—decreased in quality, and the Collingwood men found themselves compelled to go further afield; across the bay at first, then out into the Great Lakes. This created a demand for a more powerful, more seaworthy craft, and about ten years ago Mr. Watts turned out a decked double-ended craft of about 30ft. keel. This boat was so much superior to anything else the fishermen could get hold of that a great number of them were built in a few years, and the details of their rig and fittings were gradually worked out until the present type became decided. During her short lifetime a good many modifications of form have taken place, always in the direction of increasing power and speed under both sail and oar and her seaworthiness. They are now used not only by the Collingwood fishermen, a rather large colony, but by all the bay men and by the Canadian fishermen on the Great Lakes generally.

The Goderich men have a breed of hulking square-sterned

COLLINGWOOD FISHING BOAT.

craft, half decked, and generally schooner rigged, which they cling to with great pertinacity. There is a great deal of rivalry between the men using the sharp and those who use the square-sterned craft, and several very exciting match races have been sailed between champions of the two varieties, resulting in the complete victory of the double-enders on nearly every occasion. Nor is the fame of these boats confined to the Great Lakes. A goodly number of them are being used by the whitefish netters of Lake Winnipeg. Although built as a fisherman's boat, and used mainly as such, the chances seem to be that before very long the yachtsmen of the Lakes will take up this type and use it extensively as a means of catching what is of more value than fish—health and pleasure. The select few who have discovered the beauties of the Manatoulins and the Christian Islands, and of the Georgian Bay generally, now use them as pleasure craft, almost to the exclusion of any other type. A few of them are to be found also among the miscellaneous collection of cathoats, skimming dish sloops and open sailboats that make up the small fry of the yachting fleet, and their good qualities are having their due effect. As she is far better adapted to the conditions which the yachtsmen as well as the fishermen have to deal with on the Great Lakes than any other form of boat in use thereon, the more popular the type becomes the better it will be.

RETAW.

A CRUISE ON LAKE SUPERIOR.

(Concluded from page 488.)

AT earliest dawn the skipper is on deck in very scant attire, and hurrah! it is blowing half a gale from the north and off shore, just the thing we want for our run in the big lake. He is so eager to get off and make the most of it that he gets the boat under way without waiting to get more than half dressed, and is nearly frozen to death in the icy wind, and has run ten miles and got clear of the Nipigon Archipelago, and is plowing the open lake before he can get the other two up to relieve him at the helm and get him a cup of coffee. Oh that sail, with that bleak iron-bound coast on the weather beam, to "looard" 200 miles of open water. The sails straining at their sheets and the little craft lying well down and tearing through the wind-tossed water with a wisp of spray ever and anon blowing across her fore deck. I have had many a sail, ay! and paddle too, along that same coast since then, in winter and summer, fine weather and foul, until I know every dent and crease in the rocky coast, and every rock and shallow as well as I do the furniture in this room, but probably never again shall I feel the same zest and awed, subdued excitement that held me spellbound all that morning. There was a majesty and hugeness about the great mountains and the vast expanse of water, which I have become used to since, and which never affects me now in the same way.

Toward noon the wind dropped a little, and as the sun came out between the hurrying lead-colored clouds we began to feel less cowed and awestricken. Abreast of us to leeward were the Slate Islands, of which more anon, and away ahead a blue cloud hung on the water, which a reference to the chart showed us must be the Pic Island. We still had a fine fresh breeze, and with all her rags hung out Winnie was jogging along with unabated speed, and at 2 P. M. we ran into the smooth channel between the Pic Island and the mainland and had our lunch. An hour later we hove to to allow Munro to land on a barren reef to get some gull's eggs, but it was too late in the season and the eggs were bad. He brought them away, though, greatly to the disgust of the mother bird, who sailed over us shrieking "cuss words" in gull language for a long time. "Fill away again!" and off we go for the extreme northeast corner of Lake Superior, where the chart shows a land-locked harbor, and an hour later we enter it, and beating slowly up it, with great mountains ahead and alongside and a broad strip of sandy beach showing underneath them, we pronounce it as beautiful as it is safe and commodious, and christen it Port Munro, which name it bears to this day. The whole of this northern coast is wild and picturesque, and well worth seeing, but this particular corner is something more.

The Pic Island is nearly 800ft. high, and some of the mountains on the mainland are much higher than that. Some (as the island) are almost bare; others are wooded to their very tops, long fiords and bays run far in among them and beautiful trout streams come tumbling down into them. At the time I write of the solitude and loneliness was impressive and awe-inspiring, and it is scarcely less so now, but three or four times a day the camper will hear the scream of the locomotive whistle and see the train rattling along to the Pacific Ocean, sometimes hanging half way up the face of a bold bluff, whose foot is washed by the waves of the lake, anon disappearing into a short tunnel and again reappearing for a moment only to curve around the foot of the mountain and follow the valley of some little stream inland and emerge again on the lake shore a couple of miles further on. The Rocky Mountains and the Selkirks are no doubt more imposing and magnificent, but for variety, richness of coloring, unexpected turns and changes from high to low, interspersed with glorious views of the great oceanlike expanse of Lake Superior, the fifty or sixty miles ride along the lakeshore and in and out among the hills, between Pays Plat and Peninsular Harbor is unique in its way, and more than one tourist has pronounced "that morning's ride along the north shore" as the "best of the whole trip from ocean to ocean." I spent nearly three years on the coast, locating and building the railway, and I never tired of it, and look back now upon it as the most beautiful spot on earth that I am yet cognizant of.

The next morning was given up to a ramble through the woods and up the valley of the stream which emptied into the bay, and it was getting late in the afternoon ere we beat out of Port Munroe and met the southerly swell rolling in from the lake, the wind was almost dead and we had a tedious drift round the cape and the Red Island into the sheltered basin of Peninsula Harbor, but we got round at last and brought to under the Peninsula, in a harbor large enough to accommodate all the vessels on the lakes, and to give them room to swing to a long range of cable. The woods were mostly burnt on the mainland, however, and the scenery was not to be compared with that of the harbor we had left, but we had a comfortable, quiet night and went on our way next morning rejoicing.

The wind blew very softly from the south, and the thirteen miles beat to the mouth of Pic River took us nearly all day and was tedious and uninteresting, but we have to off the bar at last and went off with the canoe to investigate the depth of water and the chances of getting in for the night. After taking a few soundings and getting some advice from an entering fishing boat, we concluded to risk it and got in with the slightest possible bump as a large swell dropped us into the succeeding trough and rushed forward after its predecessors to try and climb the land dunes back of the beach. A quarter of a mile up the river we came to opposite the Hudson's Bay Company's post, and a number of Indians and half-breeds gathered on the shore to have a look at the first keel boat many of them had ever seen. An Indian's curiosity is, however, always kept within bounds, and there was no excited talk or crowding around of canoes, and our canoe was left perfectly unmolested while we were on shore strolling about.

A desolate God-forsaken looking spot is this Pic post, dry sand everywhere, drifting with every gale that blows and stretching away to the bare rocky hills a half mile back from the river. In the course of a walk we came across some bones half buried in the sand which looked astonishingly human and a few rotten planks around testified to the burial place of some old voyager before the days of steamboats whose last rest had been disturbed by a freshet in the river and a sand storm. Higher up among the sand dunes was a more recent grave of a young man whom I had known and who had perished by drowning. Sadly we turned back to the past and after a chat with the good-natured little Orkneyman who kept the post, and the purchase of a little flour and pork, paddled out to the yacht and went to sleep lulled by the monotonous roar of the surf on the bar. Next morning we awoke to find a fresh southerly breeze blowing, and hurriedly getting our stores on board, Winnie's nose was turned homeward and close hauled she leaped triumphantly over the great rollers, and went surging majestically out on the large sea outside. Our time was getting short and we must get back as soon as possible, so we stood boldly out to sea toward a faint blue cloud which proclaimed the whereabouts of the Slate Islands, nearly thirty-five miles away, and which lay on the air line between ourselves and Nipigon Bay.

It was a glorious sail right out into the expanse of blue water, and our spirits rose as we left the land behind, and rose that ahead under the pressure of the spanking breeze on our beam. At noon we had the Pic Island under our lee, and were counting on an early arrival in port, when, oh, misery! the wind began to fall off, and finally left us rolling heavily in the trough of the great swell, five miles from our haven, with the boom swinging about and taking charge of the deck and the canvas slatting about in an exasperating way. The throat halliard finally chafed through and let the sail down by the run, and it required considerable tenacity on the part of the crew to cling to the swinging mast and reeve it again, but he managed it at last, and received the plaudits of the rest of the ship's company.

Darkness began to cover the face of the deep, and still no wind, and the swell rolling on unabated. We could distinctly hear them thundering against the cliffs of Bottle Point, seven miles away. With the canoe's paddle we managed to keep the boat drawing gradually ahead, but it was midnight before we slid quietly into the harbor, and rounding a little sandy spit, which we could just make out in the starlight, let go, and turned in thoroughly tired out.

Sunday had come round again and it was late before there were any signs of life on the Winnie, but when we did come on deck the sight was worth the whole trip to come and see. The morning sun was shining brightly, and a light breeze just ruffled the water of the harbor and kept the Winnie bows to the land. In front was the sandy beach we had rounded the night before, curving to right and left and forming a perfect semicircular cove. North and south were rocks and precipices, as usual, but clothed in soft green and brown with only enough of the red rock showing to make a contrast. And behind us stretched the main channel which divides the two islands, dotted over with smaller islets and rocks between which we could catch glimpses of great expanse of water beyond. Sail is got on the boat and by noon we have worked clear of the islands and are reaching for the entrance to Nipigon Bay. We should have saved time by keeping straight up the lake outside of Battle Island Light and St. Ignace, but we did not care to repeat the experience of the previous night, and preferred a longer round in sheltered waters. The breeze freshened and came more aft as we entered the bay, and before dark we had threaded the islands and were abreast of Pays Plat. Still the breeze held fair, and we ran on and on through the night, in spite of ominous looking thunder clouds and occasional flashes of lightning in the west.

Two P. M. found us off the entrance to the Nipigon Straits, and there the breeze left us and we were obliged to let go in about eight fathoms in the open bay, leaving the cabin boy to keep an anchor watch. About 4 the storm burst upon us, but the tired skipper and crew knew it not, and the faithful watch, although half scared to death, would not wake us so long as the anchor held.

The storm was succeeded by a dead calm, and it was 11 A. M. before the south wind came in and enabled us to beat into the Straits. All day we beat backward and forward, and 4 o'clock found us at the outer entrance abreast Fluor Island. A second thunder storm killed the wind for the day, and we took shelter behind a little island and made snug for the night.

Morning brought us a gentle breeze and the Winnie worked out through the inside channel, past our friend of Lamb Island, past the great haystack-looking rock which the old voyageurs christened the Roche de Bout, through the devious channels of the Archipelago of the same name, and at last lay becalmed close to the Amygdaloids, but not for long. A new breeze came up right astern, and with the boom away out to port we bowled along faster and faster as it freshened, past the Amygdaloids and Point Magnet, through the channel inside Porphyry Point, across Black Bay, and as dusk was coming on we bore down on Silver Islet and rounded to opposite the wharf.

Here, also waiting for daylight, is our old friend the Kate Marks, and Munro paddles off to her for news of home and friends. He finds everything right and returns to the yacht, and we prepare to turn in. "Hallo! has the Kate shifted her position?" "No, but we have." The anchor is got in and the stock is found to have unshipped. We soon beat back to our berth, but we had a narrow escape from being blown out of the harbor and against the bluffs of Thunder Cape while fast asleep.

Morning finds the breeze almost dead again, but we work out and around the cape and into the Welcomes. A mile out from Prince Arthur's Landing we lie almost becalmed again, and are boarded by a reporter of the *Daily Sentinel*, eager to get a local item. "Puff," with scarcely a minute's warning, down comes a half gale from the northwest, and with rail under the Winnie covers the last mile of her 500 in something like nine minutes, and sweeps up to her buoy as if she had been making the same time all through, instead of idling nearly a whole day away on the 23 miles from Silver Islet. Crew and boat are sound and whole, and ready for another cruise as soon as they get the chance.

The Winnie has waxed old since then, but it is an honorable old age, unsullied by a single piece of cowardice or bad behavior. She plowed the waters of Thunder Bay often after that, and though she found the bottom more than once, it was not because she could not claw off a lee shore or because she was cutting across lots to avoid a gale. She has been succeeded by the Sylvia, a boat with some claims to speed and beauty, besides possessing the honest, trustworthy character of her predecessor, and which has already earned a reputation for herself as a cruiser. If any of your readers who has the sailor spirit about him (no matter about the experience) wants to take a cruise next summer in new waters, let him correspond with me and I will try to help him. If he has a good honest boat of his own let him fetch her along; he will enjoy himself better in his own than in a strange craft, but let him launch no centerboard skimmer on Lake Superior, or he will surely rue it. True, our fishing boats are almost without exception centerboards, but they are not skimmers, but good wholesome 4-beam boats carrying ballast, and even they have come to grief over and over again and drowned many a gallant, hardy fisherman. To poke about the coast and enjoy the fishing and camping a good staunch Mersey canoe would probably be the best thing, as harbors are numerous, and he can enter the mouths of many streams and rivers which are closed to the deep-draft yacht, but if one wants to enjoy sailing first, and is not particular where he fetches up so that he is safe and comfortable, a good honest deep-draft cutter, yawl or schooner is the thing for him, and he will find variety, excitement and ozone-laden air such as even the Maine coast cannot afford him, and better sport with rod and gun.

HENRY K. WICKSTEED.

DAYLIGHT LAND.

THE Experiences, Incidents and Adventures, Humorous and otherwise, which befel Judge John Doe, Tourist of San Francisco, Mr. Cephas Pepperell, Capitalist of Boston, Colonel Goffe, the Man from New Hampshire, and divers others in the Parlor Car Excursion over Prairie and Mountain. All of which I saw, and one of whom I was. As recorded and set forth by W. H. H. Murray. Illustrated with one hundred and forty designs in colors under the supervision of J. B. Millet. 8vo., 350 pages. Boston: Cupples & Hurd. Price, paper $2.50, cloth $3.50, cloth gilt $4.00.

W. H. H. Murray is characterized by a literary style all his own. There are a poetry of conception, a richness of diction, a studied elegance of phraseology, a flow of rhetoric and an occasional outburst of rhapsody, which taken alone would hardly be distinctive, but when to these we add the gift of the story teller, the quaintness of the American humorist, the artist's eye, the poet's appreciation of nature, the fire of patriotism, the shrewdness of the American citizen, with one eye for the beautiful and sublime, and another for the almighty dollar, we have the picture of an author so unique that this country has never succeeded in duplicating him, and no other country ever could.

In "Daylight Land," Mr. Murray has found a subject fitted to the display of all his varied talents, and it is not too much to say not only that he has put his best work into it, but that he wrote it under the conditions most favorable to the production of good work, namely, under the exhilaration produced by the free imbibation of the pure oxygen of the everlasting pine-clad hills. Judge Doe and his friends are as frolicsome as a lot of school boys on an outing, and animated with all the generous enthusiasm of youth in the morning of life, and the author has the happy faculty of taking the reader in the parlor car with him and making him feel like one of the company, entering into their fun and laughing heartily at their stories, and, in fact, breathing the same exhilarating atmosphere with them.

And the scenery through which they pass, the line of the Canadian Pacific from Thunder Bay to Vancouver island, is unmatched for grandeur and sublimity and for the exhibition of human skill as displayed in hewing a pathway through it, and in spanning its foaming torrents with those structures which the author rightly characterizes as standards of civilization. As a narrative of the trip of a small party of congenial spirits across the continent, of the incidents they experienced and the stories they told and listened to, the work is one of fascinating interest heightened by the charm of literary style, and the descriptive writing is rhythmic, and full of beautiful imagery, but one must look deeper still to grasp the kernel of the author's thought, the spirit of the scene which he has striven to animate. The sublimity and poetry of the scene are for our holiday enjoyment, but after one has laid down the book comes the realization suggested by the author, that all the vast region traveled over will be the scene of empire in the approaching century, the home of unborn millions of our own and kindred peoples, and recalling the picture of two of the party tossing for corner lots in Vancouver, and the author's remark that "what San Francisco was Vancouver is—an oak within an acorn, a vital root well placed but only just sprouted," we pass from the poetry of the scene to the realization of its value as an investment. The book is a model of fine workmanship, and paper and type the finest at command, while the delicately-tinted illustrations, one hundred and forty in number, are of the highest artistic excellence. The narrative and its setting are worthy of each other, and we anticipate for the work a high measure of popularity.

HUMPHREYS' SPECIFICS.—We have for our private use a case of Humphreys' Specifics. Indeed, we have used them for a long time, and can recommend them heartily to our readers. They save much in time and money, for we take them at the first symptoms of disease, and are generally a successful prevention of long and severe attacks of sickness.—*Baltimore (Md.) Farmer and New Farm.*

Answers to Correspondents.

KAHKAHLIN.—1. What is the sturgeon of the big fresh-water lakes? "Forester" does not mention it. 2. What is the Florida tarpon? Perhaps "Forester" refers to the sturgeon when he says Great Cat Fish, or are these two different fish? Ans. 1. It is a true sturgeon which does not go to salt water. 2. It is a large fish, *Megalops thrissoides*, which is related to the herring family. The catfish is so different from the sturgeon that it is not possible that they should be confounded. As the sturgeon never takes the hook, "Forester" probably did not think it worth mentioning, as he only wrote of fishes which afford more or less sport with hook and line.

ST. BERNARD, Vineland, N. J.—Will you kindly inform an amateur how the pedigree of Pontiff (A.K.R. 792) and Rector (A.K.R. 793) would read if extended and not abbreviated—in the following respect: Are Bernard and Bernardine the father and mother of Bernie, or of Leo? If, in such entries, the parenthesis was used, as in the case of Murdock's Wonder in Rector's registry, it would assist the novice; but in even that case Bailey's Tiger and Muckley's Duchess should be in parenthesis, and the word "by" after "Juno" should be left out. Ans. Bernard and Bernardine are sire and dam of Bernie. Juno was by Bailey's Tiger and out of Muckley's Duchess.

PEEKSKILL, N. Y., Oct. 10, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I am filling orders every day for Schultze and American Wood Powder, using your Climax shells, and they are dandies I assure you. In fact *they are the best.*
—*Adv.* (Signed), W. H. PIERCE.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

STANDARD WORKS.

FOR ALL THE YEAR AROUND.

Antelope and Deer of America.

By HON J. D. CATON, LL D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1 50.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Charley's Wonderful Journeys.

By C. F. AMERY. Profusely illustrated. Inimitable fun and most delightful fancies Cloth, handsome gold stamp. Price $1.50. See advertisement.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Uncle Lisha's Shop.

The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.
DAVIES & CO., London, England.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories.

Audubon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

Nighthawk	7 10			Great Auk	10 00

Forest and Stream Publishing Co., 318 Broadway, New York.

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the Fort Benton Fur Market. The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of The Dun Horse will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting. Under the title,

A Breath from the Maine Woods,

will be described the angling experiences of a Boston party at Moosehead, by "W. A. B.," whose sketches of a fisherman's life in Maine have been received with so much favor.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora.

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *feræ natura*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our Shooting and Fishing columns will be our

Special Correspondence from the West,

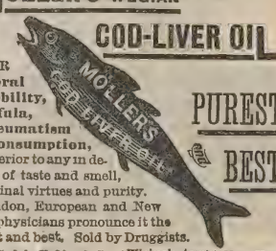
keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters, all of which will make the FOREST AND STREAM

A Journal for Western Sportsmen.

The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity. There will be a series of papers from the pen of Mr. J. E. Gunckel, of Toledo, O., entitled,

The Sunset Club,

A continuation of the witty reports of that famous club already known to fame.



The Trap Forest and Stream Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

WANTED.—LIVE DEER AND WILD TURkeys. Address giving full particulars, P. O. Box No. 3350, New York City. jan10,4t

For Sale.

SHOOTING TO LET ON MODERATE TERMS for one year or longer, on St. Simon's Island, Georgia, with small, comfortably furnished house. Over 8,000 acres. Plenty of deer, ducks, partridges and other game, besides best fishing on the coast in season. Situated ten miles from Jekyl Island and Brunswick, with which latter place there is daily communication by boat. Post and telegraph office on the island.
Address LANGHORNE WISTER, Esq., 257 Walnut st., Phila., Pa., or JAMES DENT, Esq., Evelyn Post Office, Glynn Co., Georgia.

SEA TROUT.—PERMITS FOR THE SEAson's fishing on Tracadie, the best sea trout river in New Brunswick, Canada, will be given on application to the subscriber, who will give all needful information as to the obtaining of men, supplies and board at the mouth of this river, which is 40 miles long. Reference as to its character, J. H. Phair, Esq., Fishery Commissioner, New Brunswick, Fredericton, Can. EDWARD JACK, Fredericton, New Brunswick, Canada.

Ferrets vs Rats.
The best breeds of both young and old Ferrets for sale at ADOLPH ISAACSEN'S "Sure Pop," 92 Fulton Street, New York City. A complete book on Ferrets and Rat Exterminating sent by mail for 15 cents.

Chester White, Berkshire and Poland China Pigs, fine setter dogs, Scotch Collies, Foxhounds and Beagles, Sheep and Poultry, bred and for sale by W. GIBBONS & CO., West Chester, Chester Co., Pa. Send stamp for circular and price list.

For Sale.

LIVE QUAIL AND ENGLISH PHEASANTS for sale. Please send orders as early as possible, which will be booked as received.
E. B. WOODWARD, Commission Merchant,
174 Chambers street, New York.

LIVE WHITE HARES (*Lepus Americanus*), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at $3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. J. G. RICH, Bethel, Me. dec16,tf

FOR SALE.—BEAUTIFUL PAIR HEALTHY young black silver Anticosti foxes. For particulars apply with offers to H. POPE, Gaspé Basin, Canada, P. Q. 1t

BARGAIN.—A .45 SHARPS RIFLE, NEVER used but for a little target shooting. It was specially selected at the factory by an expert. Will sell at a bargain. Address R. G. HOBBS, Urbana, Ill. jan10,3t

MANHATTAN HAMMERLESS SHOTGUN, 12, 28, 6⅝, new three months ago; in perfect order; a fine gun. Address HAMMERLESS, 8 Prospect street, Pittsfield, Mass. 1t

In the Stud.

IN THE STUD.
The undersigned offers the services in the stud of the English setters
PRINCE NOBLE
(A.K.C.S.B. 8242),
GUS GLADSTONE
(A.K.C.S.B. 8210),
At a Fee of $20 Each.
J. J. SCANLAN,
Fall River, Mass.

IRISH SETTER AT STUD.
IMPORTED
PATSY.
Blood red, winner of three 1sts and four cups. Shot over two seasons; carefully broken; splendidly bred and most typical in color, formation and strain. Fee $25.
E. O. DAMON,
Northampton, Mass.

St. Bernards
BREEDING KENNELS
OF ROUGHCOATS AND SMOOTHCOATS.
104 Premiums in 1887.
Puppies and imported stock on sale. Champions Otho and Hector at stud.
THE HOSPICE KENNELS,
K. E. HOPF, Prop. Arlington, N. J.

St. Bernards.
IN THE STUD.
Champion "RIGI."
Young stock for sale sired by Rigi.
WENTWORTH KENNELS,
P. O. Box 264, Utica, N. Y.

THE GRAND ST. BERNARD
MERCHANT PRINCE
IN THE STUD. Send for particulars.
Choice young stock at reasonable prices.
CHAS. G. WHEELOCK,
Arlington Heights, Mass.

AT STUD.
Fee, $25.00
THE IMPORTED BULLDOG
PORTSWOOD TIGER
P. O. Box 1029. For particulars address RIVERVIEW KENNELS, Birmingham, Conn.

IRISH RED SETTER
CHAMPION GERALD.
IN THE STUD
TO FIELD BROKEN BITCHES ONLY. Fee, $25.
Gerald has been heavily shot over two seasons in the South. PARK CITY KENNELS,
P. O. Box 2,057. Bridgeport, Conn.

THE FIELD TRIAL WINNER
Nat Goodwin
(Roderigo—Bo Peep).
Fee $25. 1t
I. N. COCHRAN,
131 S. 22d st., Philadelphia, Pa.

IN THE STUD.—Champ. Red Cocker Spaniel
LITTLE RED ROVER.
For terms and list of winnings write to THEO. J. HOOK, Rome, N. Y. Rover was formerly owned by the Brant Cocker Kennels. dec6.3mo

Yorkshire Toy Terrier.
The English bench winner Bradford Harry. Described in all show reports as "best Yorkshire in America." Photos 50c. Pedigree and winnings free. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

IN THE STUD
Black, white and tan Llewellyn setter dog GUN (champion Gladstone—May B). For terms inclose stamp to CHAS. YORK,
9 & 11 Granite Block, Bangor, Me.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 17, 1889.

VOL. XXXI.—No. 26. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE BOONE AND CROCKETT CLUB.

THE Boone and Crockett Club is doing a good work. As will be remembered, this association, which was founded only about a year ago, is made up of American riflemen who use the arm in hunting big game.

The objects of the club as announced in its constitution are these:

(1) To promote manly sport with the rifle.

(2) To promote travel and exploration in the wild and unknown or but partially known portions of the country.

(3) To work for the preservation of the large game of this country, and, so far as possible, to further legislation for that purpose and to assist in enforcing the existing laws.

(4) To promote inquiry into, and to record observations on the habits and natural history of the various wild animals.

(5) To bring about among the members the interchange of opinions and ideas on hunting, travel and exploration, on the various kinds of hunting rifles, on the haunts of game animals, etc.

The club has as yet made no formal statement of what has been accomplished toward forwarding these objects, but from what is known of its members we may feel sure that some work has been done, and that before very long some results of the club's labors will be announced. It is not of this phase of the club's influence that we purpose now to speak. There is another, and an unconscious work that it is doing which is perhaps not less important.

Among the members of the Boone and Crockett Club are a number of men whose large wealth enables them to indulge to the fullest extent their fondness for hunting. In the past the worst enemies that the great game of the West has had, excepting, of course, the "skinners" and the meat hunters, have belonged to just this class. Whether English or American, these wealthy young fellows who are fond of the delights of hunting have gone West, hired their retinues of guides and packers, and have started off on butchering expeditions. Such men had not the excuse of the meat hunter nor of the "skinner," each of whom carried on his revolting work for actual material gain, while the wealthy hunter did his slaughtering in pure wantonness. The English sportsman, so-called, has, perhaps, rather more to answer for in this line than the American, but we believe that there is not much to choose between the two. A great many of those who offend in this way against the laws of sportsmanship and decency, do so through thoughtlessness and ignorance. This does not excuse their offenses, but it renders it less difficult to make them understand that their murderous practices are unworthy of gentlemen or of sportsmen.

The Boone and Crockett Club is composed of men of social standing, whose opinion is worth regarding and whose influence is widely felt in the best classes of society. This club discountenances the bloody methods of all game butchers without regard to occupation, wealth or social status, and no man who is guilty of slaughtering game can expect consideration from, or fellowship with, its members. These members are not slow to express their views about the folly and the wrong of wanton butchery, and their opinions on sport are therefore spread among that very class which in the past has given most offense in this respect. That within the last year or two a considerable change of sentiment has been brought about among men who have heretofore been very destructive to game seems quite certain. Those who used to boast of their slaughter are now ashamed of it, and it is becoming a recognized fact that a man who wastefully destroys big game, whether for the market, or only for heads, has nothing of the true sportsman about him.

As the Boone and Crockett Club increases in age and influence this feeling will become more general, and those who in the past have desired only to kill will come to see that there is something higher and better in big game hunting than the mere shedding of blood.

CREEDMOOR'S ENLARGED SCOPE.

IF Mr. Bernard Walther, who has just been elected a member of the Board of Directors of the National Rifle Association, shall take full advantage of the opportunity afforded him, there is no reason why the range at Creedmoor should not in the near future see a ready comparison of all manner of rifle shooting. To date, the National range managers have frowned down the sort of arms preferred by the German-American shooters. The ten-pound limit of weight and the three-pound trigger pull for rifles demanded by the rules of the Association shut out the weapons used by the members of the various Schützen bodies. The election of Mr. Walther would go to show that the rule is to be relaxed, and it would require very little effort on his part, we think, to so modify the rules that those who prefer the heavy rifles and the quick pull would find opportunities and facilities for practice at Creedmoor.

Mr. Walther may speak as a fairly representative man; he has leisure and ability. He knows precisely what riflemen want in the way of facilities, for he stands in the front rank as a marksman, and he has had such a wide experience as a member and officer of shooting societies and clubs that he can speak with authority for a very large *clientèle*.

Despite the fears of those who imagine that should Creedmoor pass under State supervision it will become a forbidden ground to certain shots, we incline to the belief that it will rather be the other way. One of the first things the Inspector General of Rifle Practice should order is a shooting house at the 200yds. range. Properly arranged it would make a safe place for any sort of shooting, and it would be a novel and a welcome sight if a company of the old style muzzleloading rest shooters should pay a visit to Creedmoor and find there proper facilities for a trial of their peculiar fashion of burning powder behind bullets.

What Creedmoor has needed and what it has not heretofore had is such an arrangment of butts and firing points as would permit shooting of any sort. There is no reason why it should not have been a popular place for trap-shooting contests, but if it should be objected that this was not within the line of the Association's work, it must be acknowledged that no objection could be lodged against giving facilities for a style of shooting which has so many enthusiastic adherents as that followed in the German shooting park. The expense, even of an extended accommodation for this style of shooting, would not be very great, and on such a public range as it is proposed that Creedmoor shall be, it would seem proper and just that all fashion of rifle shooting should find encouragement.

FREE-FOR-ALL MATCHES.

EARLY last fall the New York *Tribune* thought it would do a semi-generous act in offering prizes for a test at rifle shooting. To make the trial as fruitful as possible it threw the contest open to everybody, and more than a hundred went in for glory and cash. When the returns came in the shooting expert of the *Tribune* was staggered. He had expected to find some good shooters among them, but he had not expected to find such a batch of perfection as came trooping in for first place. When a perfect score off-hand is made at Creedmoor or any other regular record range, it is a matter for comment and wide talk, but here were a half-dozen farmer lads who went behind the barn, paced off 200yds., and then, with seemingly no effort at all, placed 10 shots in an eight-inch circle.

The generous donor of the prizes was in a quandary and tried to make the public share in the expressed belief that the shooting had not been a test of the elasticity of the shooters' consciences, but a *bona fide* test of the steady arms and clear eyes of the marksmen. When asked to step forward and make a public exhibition of their skill, the phenomenal shooters largely declined and crept behind trifling excuses.

The odd part of this experience is that the *Tribune* is going to repeat it. This time there are to be rules and regulations to insure honesty as well as other equal conditions. Perhaps this time there may not be a long trail of doubt following the announcement of alleged results, but it will be exceptional if the *Tribune* can reverse the general experience and throw down a free-for-all purse and not evoke a great deal of very queer scoring in the returns. The intent may be good, but the *Tribune* is throwing strong temptations around very recklessly, while so far as scores go its results are utterly valueless.

SNAP SHOTS.

SHOOTING, fishing and land speculation are not impossible combinations; in fact there are many practical examples of the union of sport and profits realized or anticipated. Our columns last week noted a club of Philadelphia sportsmen who have just completed negotiations for some Texas property which is now adapted for shooting preserve purposes, and in the future, the investors hope, will advance in value and yield returns on the investment. There is a certain Adirondack club which has taken up some of the choicest bits of all that charming region; and while now content to raise a revenue by levying toll on those who travel the public road, and by taxing parties so much per night for the privilege of camping out in the wilderness, it is generally understood that the club enterprise is nothing more nor less than a land speculation. The promoters of this scheme have designs on the Legislature at Albany; they ask special privileges on the ground that they are a game-protective and forest-guarding association; but they ought not, simply because of these pretensions, to be given favor above other land speculators, who make no claims to philanthropy.

The feeling that game should have a fair show is at the basis of very many tenets of the sportsman's creed, which would otherwise be fanciful and meaningless. What is the root of the regard for angling skill with fine tackle but the pitting of skill against clumsiness? For the greater the skill the greater the presumption that with the finer tackle the fish has more chance to escape.

This is the season when legislatures convene and mongerers of all manner of cranky notions come to the front. In Connecticut a granger has bobbed up with a proposal for a law to provide that all owners of dogs when having the canines registered shall file a bond for $500 as surety for damages which may be caused by the dogs.

We have more correspondence on the New England fox hunting, which is interesting and will be published next week.

The Sportsman Tourist.

A BREATH FROM THE MAINE WOODS.

ONE June evening a white gull flew across Moosehead Lake from the direction of the outlet, crossed the Spencer Narrows and held its course up the bay till it disappeared in the fast gathering twilight toward the twin peaks of the Spencer Mountains. If, as it winged its silent way, it looked down through the trees, on a wooded point near the Narrows, it saw three young men sitting in the door of a camp, who were enjoying a siesta after a day devoted to the angler's art.

The stalwart, broad-shouldered one was our guide Bill; the tall and slender one was Harry; the third was the Scribe. We were at the lake again after a year's absence, and as we sat there in the twilight, with no other human being within a dozen miles of us, we could hardly realize that a twelvemonth of busy mercantile life had been added to the "flood of years" since we last looked on the landmarks, which seemed like so many old friends. The sun had gone down directly behind the great rock façade of distant Kineo, which towered majestically above an intervening headland, and over the brow of a great cliff hung a mass of billowy clouds, which reproduced the brilliant colors of the solar spectrum. A gale had been blowing all the afternoon, and out on the broad bosom of the lake the white caps were tossing their snowy plumes, while the surf beat heavily on the shore, its hoarse sibilant voice mingling with the softer tones of the swaying foliage. Across the water familiar mountain outlines showed darkly against the amber sky—Old Squaw, the Miseree Mountains, and Bald Mountain. From the other side of the point, the further shores were already shrouded in darkness, and the two mountains literally united the earth and sky, for their summits were lost in the clouds which hung over them.

The twilight deepened, the shadows in the forest became blacker, and the dark mantle of the night settled down over mountain, lake and forest.

One by one the stars appeared, and over Kineo, where the sunlight had died so grandly, hung the slender silver crescent of the new moon.

We had come to Moosehead intending to spend a few days at the outlet, and go nowhere else. Our plans for a journey down the West Branch to Chesuncook and Ktaadn had been frustrated, and as a compromise, a few days at the outlet were decided on.

The thought of letting the summer pass without at least a short outing in the woods was not to be entertained; so one June afternoon found us once more standing on the dam, intent on alluring the speckled trout from their native element. It seemed like old times, and the rushing water as it foamed over the dam brought with it a flood of memories of other days, and for the moment the trout were almost forgotten, as I gave my thoughts free rein and my eyes drank in the charming scene about me. It was good to be once more breathing God's pure air, untainted by the city's smoke and dust, and to be looking again down the noble stream, starting here on its long journey to the sea. But the struggles of a trout which Harry had just taken from his hook gave tangible proof that we were there again, and soon my leader, with its seductive flies, was falling softly toward the swiftly moving water.

We had been told that not many fish had been taken at the outlet this season, but still we hoped that they might begin to rise now, and with the proverbial patience of an angler, we fished till supper time, and then continued it till dark. We caught a few fish, but not enough to make the sport exciting, and they were not large enough to inspire much enthusiasm. Our luck was not nearly as good as it had been at the same time the previous year, but the season was later in every way; the ice did not go out till later in the spring, and the fish came later.

Ten days after we were at the dam some friends fished there, and with good success, the trout being plenty and rising well. As we reeled in our lines that night, preparatory to returning to the house, we felt rather glum at the prospect of remaining several days, and there would be no boat till the third day, so we felt that we were anchored there for that time at least, but we philosophically decided to make the best of it and trust for better success on the morrow. As we walked back I said to Harry, "Instead of coming here we ought to have had Bill meet us with the canoe and gone into camp somewhere, and then we wouldn't have been tied down to one place." "I know it," he replied, "but it's too late now, and perhaps we couldn't have had Bill anyway."

We went back across the dam, discussing the rather dubious prospect, and decided to go to bed early and turn out at daybreak to try our luck again. We had nearly reached the house when we saw a man sitting on the grass, who quickly arose to his feet at our approach and came toward us. As his six feet of stalwart manhood assumed the perpendicular, I recognized the very man of whom I had spoken, my old guide, Bill. I was doubly glad to see him—for his own sake, and because now we could probably get away. He said he had come down through the woods from Kineo, to clear the telegraph wire from the obstructions which had fallen on it during the winter, and he had had a hard day fighting his way through the brush and wading through mud and water, which he had found waist deep in some places. His canoe he had left at the mouth of Moose River, opposite Kineo, and he was going up in the morning on a small towboat. This was welcome news to us, and to say I was glad to see him but feebly expresses it. We were all tired and went to bed at an early hour, to dream of the big trout we were to catch in the new location we were going to, but which we had not as yet decided on.

The next day opened propitiously, and after an early breakfast, though not so early but that we again tried the dam and caught one fish apiece, we went aboard the tug. She was a staunch little craft, very powerfully built, but with no deck. Her owner was aboard with a couple of ladies, whom he invited for the sail. Harry sat with them in the stern sheets, and Bill and I went forward, where we could talk and plan undisturbed.

It was a beautiful morning; the sky was blue and cloudless, and the lake unruffled be the slightest ripple, except where now and again a fish would leap. We sped swiftly by the pleasant, silent shores and islands, and, though the journey was without incident, I enjoyed the smoooth, restful motion, and found pleasure in gazing away over the water at the blue mountains, and the green slopes of the nearer hills.

Once the majestic bulk of Ktaadn burst upon our view, dim, vague and shadowy; but the intervening hills soon closed in upon it, as if the ancient abode of the Indian deities was not to be seen by mortal eyes, except as a fleeting vision. It seemed symbolical of all that is mysterious and romantic in the history of the wilderness, and then came to mind many of the legends which cluster around it in the folk-lore of the Algonquin races.

We passed the steamer Moosehead towing a raft of logs to the outlet, and as Bill said that Cy, our other guide of the previous year, was on her, I hoped to get a glimpse of him, and was disappointed that he wasn't visible.

We decided to go to Spencer Bay, as Bill said a permanent camp had been built there last fall. Our outing must necessarily be a short one, and I wanted to go where we could enjoy the pure, unadulterated essence of open-air life. I felt as every one does at times whose life is spent among the busy, hurrying scenes of a great city, that I wanted to get away from it all; to get away from myself even, as far as that self is a component part of metropolitan affairs, and find rest and quiet such as only nature can give. So Spencer Bay, the most solitary part of Moosehead Lake, was decided on. When we arrived at Kineo we all went ashore, except Bill, who went over to Moose River after his canoe. While he was gone we bought our supplies, and tried to engage a steamer to take us to the camp, but there was only one at the wharf, and she was having some repairs done to the engine, so that she could not go before night. This was bad, as we did not want to loose half a day, but when the tug came back, the captain, a jolly Scotchman, said kindly, that if the owner was willing he would take us down, and to our satisfaction that gentleman said he should not need the boat for the afternoon.

After Bill brought his blankets and camp utensils we loaded them and our own dunnage, and then started for our destination, with a rowboat which we had hired towing astern.

Since morning a stiff breeze had sprung up and out in the lake a heavy sea was running, though the day was clear and bright. The captain of the boat we had tried to hire said he should not care to go to the bay in such a gale, but our own captain laughed and said he would take us down all right. Our crew consisted of one man, a Frenchman, who could speak no English; but having some little knowledge of French myself, I found that he had formerly been an engineer in the French navy, and, though he spoke no English, he knew five languages. Once out of the cove at Kineo, our brave little vessel pointed her bow to the southeast and away we went. What a sail that was! The wind was blowing half a gale and dead against us; the waves were running high and the air was full of spray, blown from the crests of the whitecaps.

The sky was blue and the atmosphere very clear. The boat breasted the sea nobly, and under the guidance of the skillful hand on the wheel slid over the waves as if she knew what we expected of her, though we were wet through with spray. The engineer put her through for all she was worth, and stood all the way with his eyes on the waves and his hand on the throttle, so that when we went over a wave he would shut off steam till the propeller was in the water again. Then she would bound on with renewed energy, as if she had been gathering strength for a spring. It was glorious and exhilarating in the extreme, and as I stood there with my hand on the weather rail, the wind and spray dashing in my face, while I looked across the heaving bosom of the lake spangled with whitecaps, at the mountains and forest surrounding all, I felt as if new life was being infused into my veins. I drew in great breaths of the pure air, and watched the tossing water and passing shores, till it seemed as if the wild spirit of the mountain wind had imbued us with its own erratic freedom. I realized only the sense of motion, and felt like calling "Faster! faster!" to the stolid man who stood there by the engine.

The buildings at the base of Kineo became smaller and smaller, and the mountain itself appeared to be gradually sinking into the lake, as we left them behind us, and so we steamed on for a dozen miles, till we shot through the Narrows into the smooth water under the lee of the point, on which our camp was situated. We put our things into the boat, bade our Scotch friend and his French companion, "Good-bye" and "Au revoir," and went ashore.

We watched the craft which had rendered us such good service, till we could no longer see her, and then carried our belongings to the camp, the link which joined us to civilization was broken, and we turned joyfully toward the primitive life of the woods. The camp was a frame structure, with a kitchen and living room, and a loft above in which to sleep.

A path led to the lake on one side, and to Spencer Bay on the other. Several wild cherry trees were in blossom, and the flowers of the trillium gleamed everywhere under foot. Silvery birches, mysterious pines, and gloomy hemlocks cast their protecting shade over our sylvan dwelling, and extended their branches as if in welcome. We were in the wild woods. Looking in one direction, our gaze was lost in the dim vistas of the forest; in the other we saw the long blue reaches of the lake gleaming through the trees, as the blue sky gleamed through the foliage overhead.

Leaving Bill to put things to right, and build a fire, we took our tackle and went out to catch some trout for supper. Harry had hardly put his line overboard before he exclaimed, "I've got one," but alas for his hopes, instead of the speckled trout he expected to see, a plebian sucker was the prize. I slid the net under. The expression on his face as he took the captive from the hook, and tossed it overboard, was one of disgust, but when he pulled in the second sucker, and then a chub, he joined in the laughter I indulged in at his expense, and we moved to another locality. I was using flies, but could not get a rise, and while we were out we did not see a fish break water. However, by using bait we caught enough for supper and breakfast, and returned to camp.

After our meal I strolled down to the shore alone, to watch the sunset, as I like to do sometimes when in the woods, for there are times when one likes to have nothing, not even a companion, to distract his attention from the enjoyment of the scene before him; when conversation seems to disturb the calm repose and sweet serenity of nature.

How still the woods were at the close of day! The wind had gone down with the sun, as if it and the water would go to rest, as all animate things seemed to have done. The water in the lake was high, and penetrated beyond the eyes of the timber. I walked along a fallen log till I got beyond the outer fringe, and then stood there till nightfall. The water lapped restlessly among the submerged trunks, and a large log which had drifted in, creaked as it rubbed and ground against the standing trees. Otherwise the silence was undisturbed. A white speck which I could see at the head of the bay, some five miles away, I knew was the steamer Governor Coburn, the largest boat on the lake, which had gone up to tow a raft of logs to the outlet in the morning. The Spencer Mountains were of a deep purple color, and in the gray twilight appeared larger than ever. As I watched them, masses of clouds began to drift across them, moving slowly toward the east. At times the two peaks would tower above the vapor which hid their bases, and again would be obscured in turn, as it moved and shifted in the air currents.

Then for a moment the whole bulk of the mountains would stand out, or a smaller cloud would drift across like a shadow. I likened them to two great giants, standing mute and immovable, as the legions of the clouds passed them in review. As I looked across the dark water of the bay at those two mountains looming up beyond, an idea formed in my mind, that in this same way we look across and into the future, at the heights of ambition which we aspire to climb. When I first thought of this comparison there were no clouds on the mountains, and I thought how clear the way seems sometimes, and nothing seems to block the road to the goal we are striving to win, and everything is bright and propitious.

But the clouds were closing in again, and the mountains were growing dimmer in the fading light, as the clouds of adversity came between us and our desires. But through rifts the summits could still be seen, and I knew, though I could not see them, that the slopes which led to them were still there. Some of the clouds were beautiful, as they caught and reflected the last rays of the sunlight, but I knew that those same clouds were only vapor, and I thought how often the roseate clouds of hope changed to the cold gray mist of disappointment before we reach the consummation of our plans. The further shore was now entirely lost to view, obscured by the dense masses of clouds which covered everything, and I walked back to camp, the last thought of my revery being, that the sunlight would surely come again on the morrow and dissipate the vapory curtain, revealing again the green slopes and sparkling water, and I was thankful that in life as in nature, after darkness and storm are always light and calm, and every cloud, look black as it may, has the sun shining on the further side.

Natural History.

WASHINGTON NOTES.

WASHINGTON, Jan. 16.—The winter climate of Washington, always agreeable, is exceptionally charming this year. Cyclones avoid us, and the temperature is beneficent with warmth and sunshine. Yesterday I took a walk out to the new Rock Creek Park (to include 2,000 acres of broken woodland) and counted no less than fifty equestrians, male and female. It is the fashionable suburban drive now, for vehicles as well, out to the Casino, past Dr. Hammond's new Sanitarium, to the bridle paths which wind through the dells of what can be made the finest park in America, and about the purlieus of Mt. Pleasant, which is fast filling up with fine residences.

It will be remembered that Senator Hoar, of Massachusetts, in congratulating the American Historical Society the other day upon its selection of Washington as its place of meeting, referred to the fact, now becoming generally recognized, that Washington is fast acquiring the advantages, facilities and conditions which will make it inevitably, and almost immediately, the center of the Republic's activities in science, literature, art and education. We have here already the Smithsonian Institution and the National Museum as a nucleus, with all their various ramifications in the interest of scientific investigation; the Agricultural Department with its subsidiary branches in botany and economic ornithology; the embryo Zoölogical Garden, which is to contain 123 acres; the collection of historical paintings and statuary at the Capitol, with scores of monuments scattered about the city; and soon we shall have the permanent exposition, the great Catholic University, to excel those of the Old World, the contemplated park of 2,000 acres, the Potomac Flats improvement park of another thousand acres, the Military and Naval Museum, and the new Congressional Library of 2,500,000 volumes as an inexhaustible reservoir of thought. Then there is a multiplicity of historical, geographical, literary and scientific societies and clubs already gathered like moths around the ever increasing light, and these in turn attract the students of the country and the wealthy æsthetics who make their residence here; so that it is easy to see that Senator Hoar's predictions are likely to be verified within the time of the present generation.

At the regular annual meeting of the Regents of the Smithsonian Institution on Jan. 9, Chief Justice Fuller, of the U. S. Supreme Court, was unanimously elected chancellor to fill the vacancy caused by the death of Chief Justice Waite. Memorial resolutions on the death of regent Dr. Wm. Gray were passed. Dr. Welling reported that the Smithsonian receipts for the year were $44,386, and the disbursements $39,546. The total amount of funds administered during the year, in addition to the Smithsonian's income, was a trifle over $250,000, consisting chiefly of appropriations by Congress for building, repairing, exchanges, ethnology, national museum, etc. The regents favored the proposed Zoological Park (123 acres) and passed a resolution requesting that separate and ample provision be made in the new Library of Congress for the deposit of the more than a quarter of a million of titles now in the Smithsonian, which are constantly and rapidly increasing in number. Arrangements were also made to accommodate in the Smithsonian building the books, collections, etc., belonging to the American Historical Association recently incorporated by Congress.

The first regular meeting of the second session of the

Geographical Club was held on the evening of the 8th at the home of its president, Mr. Wm. Hornaday, when the following officers were elected for the ensuing year: Wm. Hornaday, President; Mrs. F. E. Upton, Vice-President; Dr. Geo. A. Stout, Secretary; and Messrs. O. B. Brown, Charles Fairman and Mrs. F. Young, Entertainment Committee. This club comprises gentlemen as well as ladies.

Prof. Lester F. Ward lectured on the same evening before the Anthropological Society on "The Sociological Position of Protection and Free Trade." His views in favor of protection were ably combatted by President J. C. Welling, and the subsequent discussion between members was carried on with manifest interest.

Dr. Wm. H. Gardner, post surgeon at the Washington Barracks, is delivering a series of lectures on "Accidents and Emergencies," with a view to instruct the men at arms. The first lecture, given last week, was on hemorrhages, and this will be followed by several others. This is part of a plan to provide each officer and enlisted man with a manual and outfit, after the vogue of the German army, containing in a compact form the quickest and simplest means of rendering surgical assistance in time of need. Such a *vade mecum* would be of almost equal value to gunners and other sportsmen who are alike exposed to sudden accidents. I remember that a manual of this kind was published in 1874 and distributed, to the number of 50,000 or more, by the Mutual Life Insurance Company of New York. Perhaps they can be had now.

The new and beautifully illustrated catalogue of Field Books and Natural History, works just issued by the Forest and Stream Publishing Company, attracts attention here. It indicates how rapidly this field of literature is broadening, and also serves as a practical guide to students who are interested in the various specialties treated. As the bibliography includes no less than 322 titles, it is apparently comprehensive enough to serve the needs of all sportsmen who require a library of reference, especially as the authors selected are among the best informed and most reliable among us. It looks as if the Forest and Stream Publishing Company were destined to take the lead as promoters of standard sporting literature. Verily the work which Mr. Hallock, its founder, began fifteen years ago, is assuming enviable proportions.

Some of your readers will be interested to know through the *Century Magazine*, if they were not already informed, that U. S. Fisheries Commissioner Col. Marshall McDonald, who is Prof. Baird's valued successor, was military instructor at the Virginia Military Institute, at Lexington, during the war. Obviously he is equal to scaling fish as well as breastworks.

I notice through a French paper that a troop of Cossacks and Circassians are exhibiting at the Jardin d'Acclimatation in Paris, *à la* Buffalo Bill's Wild West Show. They have their tents, horses and accoutrements with them, and show off their well-known riding feats to the intense satisfaction of spectators.

The weather in Montreal seems to be cold enough to insure the building of the customary ice palace. The ice blocks are over a foot in thickness, and the construction of the edifice is already far advanced.

Mr. James Green, of Green & Cunningham, real estate brokers in this city, who recommends the Climax U. S. cartridge in FOREST AND STREAM, is, with his partner, Mr. Seymour Cunningham, a member of the Capital City Gun Club, and one of its best wing and saucer shots. He ran the Marlboro field trials for setters last month in Maryland. The club has a club house and ample shooting area on the flats at the foot of Twenty-second street.

EL MAHDI.

BIOLOGICAL SOCIETY OF WASHINGTON.—The annual meeting was held Jan. 12 in the assembly hall of the Cosmos Club, 70 members being present. The minutes of the secretary show that 54 papers were read during 1888 by 25 members, the highest number by any one person having been 6. Although the number of papers was smaller than in 1887, the discussion was much more general and thorough. The largest attendance during the year was 49, and the smallest 21. The society has 40 honorary members, 51 absent members and 118 active. The results of the balloting for officers for the current year were as follows: President, Lester F. Ward; Vice-Presidents, C. Hart Merriam, Richard Rathbun, Charles V. Riley, Frank Baker; Corresponding Secretary, F. A. Lucas; Recording Secretary, J. B. Smith; Treasurer, F. H. Knowlton; Additional Councilmen, Geo. Vasey, Tarleton H. Bean, R. E. C. Stearns, F. W. True, C. D. Walcott.

SOME RECENT PAPERS BY CHARLES GIRARD.—It may not be generally known to American zoölogists that Dr. Charles Girard, the assistant of the elder Agassiz and the associate of Baird, in his reports upon reptiles and fishes obtained by Government expeditions several decades ago, is still living and writing at Neuilly sur Seine, France. In *Le Naturaliste*, Paris, May, 1888, he has a brief sketch of the blind fishes of the American caves, accompanied by a figure of the species found in Mammoth Cave, Kentucky. In the October number of the same journal he notices briefly the subterranean fishes of North America. He has also published, in English, a "Systematic Catalogue of the Scientific Labors of Dr. Charles Girard," containing ninety titles. Loyal to the memory of pleasant associations he signs himself "Dr. Ch. Girard (de Washington.)"

CALIFORNIA ACADEMY OF SCIENCES. — The officers elected for 1889 are: President, H. W. Harkness; First Vice-President, H. H. Behr; Second Vice-President, George Hewston; Corresponding Secretary, Frederick Gutzkow; Recording Secretary, J. R. Scupham; Treasurer, I. E. Thayer; Librarian, Carlos Troyer; Director of Museum, J. G. Cooper. Trustees, Chas. F. Crocker, D. E. Hayes, S. W. Holladay, Geo. C. Perkins, E. J. Molera, Irving M. Scott, John Taylor.

JACK SNIPE IN JANUARY.—Granville, O., Jan. 7.—I was out with my gun the 3d of this month, and crossed a wet piece of ground near a spring, and to my surprise, a jack snipe flew up. I then looked for more and found four. I write to know if it's not unusual and remarkable for them to be here at this season of the year?—G. C. P. [Yes, quite unusual, but it fits well with the summer weather of the present winter.]

AN ALBINO SWALLOW.—Toledo, O.—Mention in issue of Dec. 27 of a white teal duck reminds me that I have a snow white swallow which I killed.—G. H. W.

"THE SUPER-SENSE OF ANIMALS."

Editor Forest and Stream:

My reading of the article entitled "The Super-Sense of Animals," in your issue of Dec. 20, came pat on top of an anecdote that had just been told me by Mr. Jas. Cadman, a civil engineer, well known in the eastern provinces of the Dominion.

When engaged in locating a railway in New Brunswick, he was compelled one night by a very severe snow storm to take refuge in a small farmhouse. The farmer owned two dogs—one an old Newfoundland and the other a collie. In due time the farmer and his family went to bed, the Newfoundland stretched himself out by the chimney corner, and Mr. Cadman and the man with him rolled themselves in their blankets on the floor in front of the fire.

The door of the house was closed by a wooden latch and fastened by a bar placed across it. Mr. Cadman and his man were just falling asleep when they heard the latch of the door raised. They did not get up immediately, and in a short time the latch was tried again. They waited a few minutes and then Mr. Cadman rose, unfastened the door and looked out. Seeing nothing, he returned to his blankets, but did not replace the bar across the door. Two or three minutes later the latch was tried a third time. This time the door opened and the collie walked in. He pushed the door quite back, walked straight to the old Newfoundland and appeared to make some kind of a whispered communication to him. Mr. Cadman lay still and watched. The old dog rose and followed the other out of the house. Both presently returned, driving before them a valuable ram belonging to the farmer, that had become separated from the rest of the flock and was in danger of perishing in the storm. Now, how did the collie impart to the other dog a knowledge of the situation unless through some super-sense unknown to us?

I told Mr. Cadman of another instance of canine sagacity that had come to my own knowledge. Where I boarded many years ago was an old dog, quite too old to be of any service. This dog would never leave the house or yard with any person except my wife, but whenever she went out he was certain to follow her. One day she started to visit a friend living about ¼ mile away. It was early spring and there had been a freshet, but the water had partially subsided and the stream had slightly frozen over again. My wife attempted to cross a little brook, the bridge across which was overflowed, on the thin ice. The old dog placed himself in front of her, and by vigorous barking, a thing very unusual with him, and even by taking hold of her dress, tried to prevent her from risking herself on the ice. He did indeed prevent her from crossing at that point, but she thought she might crawl along safely by holding on to a fence that crossed the brook a little further up. In consequence she broke through and got a good wetting, simply through disregard of the repeated warnings of her guardian, who really seemed to have a better appreciation of the strength of the ice than she had. He would go on himself without hesitation, but objected to letting her try it.

Some time afterward this dog's master remarked in his hearing that he was growing so feeble and helpless that it would really be necessary to kill him. The poor creature, altogether contrary to his usual habits, left the house and went away some distance into the woods, quite alone. A few days afterward he was found lying dead under the largest tree in the vicinity.

These are only dog stories, and the world is full of them, but they come in so *apropos* in connection with the article I have referred to, that I could not resist the temptation to mention them. G. DE MONTAUBAN.

QUEBEC, Dec. 26.

DECEMBER ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One wildcat (Lynx rufus), one prong-horned antelope ♀ (Antilocapra americana), one badger ♀ (Taxidea americana), one prairie wolf ♂ (Canis latrans), one song thrush (Turdus musicus), one starling ♂ (Sturnus vulgaris). Presented—One Indian elephant ♂, Bolivar (Elephas indicus), one white-cheeked cebus (Cebus lunatus), one common quail (Ortyx virginianus), one great horned owl (Bubo virginianus), three menobranchus (Menobranchus maculatus), one horse snake (Chilomeniscus ephippicus), and eight Dekay's snakes (Storeria dekayi). Born—Twelve spotted salamanders (Salamandra maculosa.)

Game Bag and Gun.

A WATER HAUL.

TOM thought, and I thought, a hunting trip to Arkansas (how do you pronounce that name?) would be about the proper thing. That most delightful part of every such expedition, the planning of it, was enjoyed to the full. There are no freezing mornings nor drizzling days in the outing as you look forward to it. The game is always plenty when you make out the programme for a trip through forest and along stream.

When we reached Cairo and had purchased our supplies, including a little sheet-iron stove, which looked exactly like an inverted wash boiler, with a sliding door at the end, with hole cut for skillet and with the pipe deftly packed inside, proving afterward a great treasure in the tent on a rainy day, we sallied out along the streets. Several deer hanging here and there before the markets were the most attractive things we saw, and we carefully inquired where they came from, studying where the fatal shots pierced them, for we wanted to know where to place our bullets when we found deer in the woods.

Meredith, a lumber station on the Cotton Belt route, and nearly due east of Little Rock, was our objective point. All night long the train crawled toward it, and when we looked at the track the next day we were glad it had not attempted to make more than twelve or fifteen miles an hour, for it would have gone into the ditch surely at a higher speed. The conductors we found accommodating, but the other trainmen were far from it. They all seem to be working the traveling public, especially hunters, for tips. We had to do our own baggage hustling and fight to keep from being charged extra on our baggage because it was in the shape of camp outfit. This road advertises for the patronage of hunters and ought to treat them better.

We reached Meredith Dec. 28, and that afternoon took our first plunge into the woods. We did good stalking. The novice, hunting game where stealthy approach is required, sometimes does as well as the older hunter in approaching the game because less confident of success. We did splendidly until a doe rose up before me about 40yds. distant and hurried away to the left. If I had not heard all my life so much about buck ague I would have killed that deer. I felt that I ought to be excited, but I was not. The deer improved the time to hustle some trees between us. Perhaps I had buck paralysis. Certainly I was a little too deliberate, but have a faint idea that when the loggers get one of those trees to the mill the big saw will snag itself on a chunk of lead intended for the doe that got away. It was by all odds the best shot, in fact the only decent shot I had during the week. Going on a little further, cautiously peering through the brush, we sat down on an old log. Before long we heard a tremendous racket behind us, just beyond an old fallen treetop and caught a glimpse of a vanishing deer, his white flag waving. Too late for that deer, but not for a skunk crawling about among the leaves in another direction. Through him I sent a ball, hoping to be able to secure his beautiful skin. I never saw as finely marked a specimen, but soon abandoned the idea of taking his coat. The neighborhood was too odorous. Cannot some reader of FOREST AND STREAM tell me some way to destroy the horrible smell and render it possible to skin these truly beautiful animals? Some one suggests that by being careful the scent bag can be cut out. But this is usually emptied by the animal while dying and fumigation is necessary. To have brought home enough skunk skins for a floor rug would have been to have secured a handsome souvenir of the trip, for no skins are finer for the purpose.

Few dogs are used in that neighborhood for hounding deer, but one day a Mr. Edwards took his three and went with us for a drive. But he did not know where the runways of the deer were and the dogs hindered rather than helped us. They ran several deer into the dim distance and on one trail gave us some fine music. Tige, the old dog, struck it and went tearing away making the woods ring with his magnificent bass notes, closely followed by Fly with her alto and Spring with a fine tenor. It was a magnificent trio, such music as I had often wished to hear.

Hardly a day passed, as we roamed through the woods that we did not catch a fleeting glimpse of a deer or two. The only chance of shooting them was to let drive at moving bushes, or the place we guessed the game might have reached through the dense thicket. There is no sport in such shooting. It is all mere chance work. Tom carried a Winchester .38, and I had my new 3-barrel Daly, the shot barrels 12-bore and the rifle .38. This mongrel seems to me the ideal gun to carry through ordinary cover. It might not be just the thing for elk or grizzlies, but in a country where you may jump a deer, or start a mallard, or put up a turkey it just about fills the bill. No gun could perform better than mine has so far as I have been able to test it at a target and in the woods, and I am in love with it. However, Tom and I rather thought the best gun for Arkansas brush would be a gun that would shoot rope and enough of it to wrap around a ten acre brush patch and corral the game that is hustling through it somewhere, but you can't tell exactly where.

Big gray squirrels were in abundance. We stood one morning where at least a dozen were in sight. We killed only a few where we might have killed many. One big swamp rabbit, a monster, and a mallard duck, completed our bag of game. We saw some bear signs but not a single turkey. If we killed a deer we did not know it. We called the hunt a water haul.

Hoping to retrieve our fortunes a little on ducks and geese, we came north to Paw Paw Junction, and Dave Wilkerson took us four miles up Little River to an island about 40ft. square, just a dot of land, where we camped, surrounded by the boundless overflow, forming the finest duck range I ever saw. Here was abundant smart weed, wild rice and celery. The lotus was also very abundant. It was too late, of course, for the flower, but the huge leaves and big flat seed pods—the latter so attractive to the mallard's eye—were to be seen everywhere. It is the same as that I have seen growing in the little lakes all along both the Illinois and Mississippi rivers, and locally called "yawkernut." One day a Japanese student in my library picked up one of these seed pods, and, as he rattled the iron-hard nuts in their dry little beds, cried, "The lotus! the lotus! that is my people's emblem of immortality." The one who wrote about some locality in northern Illinois as the only American habitat of the lotus was writing about a widely distributed plant, very much the same here as in other countries.

The two days we spent on Little River were bright and very warm, and out of consideration for us, perhaps, the wildfowl were probably up about our old shooting grounds on the Illinois River, where we wished we were, too. Not a bird did we even get a chance to kill, and so we turned our faces homeward. I was rather sorry we had not camped and watched on the levee at Cairo, for a few days later a deer swam the Ohio River at that point, rushed up the levee, and in the confusion plunged through a plate glass window. We might have got that deer.

It was a water haul. However, if we secured little game we got plenty of ozone, tired muscles, improved digestion, and lived for a while, as men should now and then, the care-free life of the tent and the wilderness.

RICHARD GEAR HOBBS.

KEARNEY, Neb., January.—Having occasion last month to take a trip among the sandhills of the Loup River, I found pinnated grouse in small bunches, and large coveys of quail. The chickens frequent the draws that open upon the river, while quail are to be found in the thickets or upon upland timber claims. Back from the railroads the quail have not been hunted to any extent with dogs, and they run at a lively rate at sight of a pointer. Geese have almost entirely disappeared; but on the evening of Dec. 13, a large flock of snow geese (brant) and a few Canada geese passed over town. In the Wood River Valley quail shooting is better this season than for several years past. In the vicinity of Kearney, jack rabbit hunting is becoming a favorite pastime with young ladies and gentlemen who enjoy a cross country chase. If the fad continues the "Wild West" will soon produce riders who will rival those of the Long Island and Essex county hunts.—SHOSHONE.

HONESDALE, Pa.—There have been quite a good many grouse shot and sometimes a stray duck has been shot. I saw a woodduck (male) bought of a farmer, that and two grouse for a dollar. The duck was a perfect beauty in full plumage and not a bit cut by the shot, he has been mounted and the owner is very proud of his investment. —A. P. T.

BEAVER, Pa., Jan. 7.—Weather very mild. Coldest day to date 6° above. Plenty of quail and ruffed grouse left for breeding. On Wednesday, Dec. 26, temperature 57°, in the garden saw five pairs of bluebirds, and on the evening of the 5th inst. saw a bat flitting around a natural gas lamp, temp. 47° F.—G. A. S.

DIMINUTION OF THE DUCKS.

Editor Forest and Stream:

"Earnest's" remarks in your issue of Dec. 27 concerning the slaughter of ducks in Arkansas by market hunters suggests an equally potent cause for the diminished number of ducks in this locality. The marshes about Sandusky Bay and those bordering on the shore of Lake Erie for miles to the westward abound in wild rice and celery and all conditions favor abundance of game.

These marshes are largely owned or leased by clubs, who protect the game from the market hunter, but not from the punter. In fact the market hunter is a thing of the past in the vicinity of these clubs; he has found it more profitable to punt (shoot) for the club men. His marksmanship has become his best stock in trade, and his ability to punt a hunting boat a second consideration. The laws of most, if not all, of these clubs prohibit shooting on club grounds except by members, and only permit the punter to shoot when necessary to recover game after it has been brought down in a crippled condition. In some clubs this law is rigidly enforced, while in others it is openly violated, and game is slaughtered in the same ruthless manner that "Earnest" complains of.

The fact that these gentlemen do not market their game is no justification. The pleasure of the sportsmen should not be wholly dependent upon slaughter, and most certainly not upon the slaughter caused by another hired for the purpose.

The market hunters, doubtless, have much to answer for, but many of the club men of the Sandusky marshes are their worthy coadjutors in the work of game extermination. GARGANEY.

CLEVELAND, O., Dec. 31.

Editor Forest and Stream:

We see many different localities complaining of a small flight, which induces me to report from this section, seldom heard from. We have had the best of shooting all this fall, and near by too. Almost every lake, slough and marsh w ascovered with the feathered tribe. This is due either to the fact that the flight is moving westward or it is because there was more water here this fall. Many large bags were made, mostly by local sportsmen, and as the birds were shot at but little they were easily bagged. Spring shooting is usually light and poor. But we will all look forward to fall with stubble and geese.

W. E. C.

EUREKA, Dakota.

Editor Forest and Stream:

In your issue of Dec. 27 I read with interest a piece signed by "Earnest," who says he saw ducks at a station in Arkansas by the barrelfull. I want to tell something that I saw. While living in Arkansas in the fall of 1884, on the line of the K. C., S. & M. R. R., I know of parties who shot ducks for the Memphis market. These men when the season opened were too poor to buy shot and powder, but their ammunition was furnished them by the market men, who share the spoils. These duck murderers used No. 6 guns, and did most of their work at night in a boat, and they slaughtered ducks by the carloads. This sounds like exaggeration, but there are many express messengers who will vouch for it, and say that when their train got to Memphis their car would be loaded with ducks. This was not only on one or two trips, but every day for weeks, and it has been going on for years. Just make a calculation of what this would amount to, and who can wonder that our duck shooting is a thing of the past? This is not only in Arkansas, but in the Indian Territory and some of the Southern States. A party of six went from this town last fall to Tennessee to shoot ducks for the St. Louis market. I had the satisfaction of telling one of them (who boasted that he could make $6 a day) that I hoped from the bottom of my soul they would not kill a duck. They came back after a three weeks' stay without having killed a duck, and offering their stock of ammunition at half price.

Now, brother sportsmen, there must be something done to stop this marketing game. The time is coming when the law will stop it; but are we going to sit by and keep our arms folded and wait untill the fast diminishing game is exterminated? There is no man with half a mind who cannot see that is only a question of a very short time when all our grand days of sport will be a thing of the past; deer, turkey, chickens, ducks and quail will all be a thing to talk about as we now talk about the buffalo that are gone forever. After a while we can tell our boys of what we have done, but cannot show them how we did it. Through your columns I want to beg every sportsman in this country to put his shoulder to the wheel, and let us save our country from this calamity. We must stop this market man, and thereby we will stop the market hunter. There are thousands of men who agree with me; let us hear from some of them. MISSOURI.

SEDALIA, Mo.

Mr. F. M. Gilbert, the "funny man" of the Evansville (Ind.) *Tribune*, a sportsman and game warden of the First District of his State, writes as follows in his own paper:

"Our State sportsmen are just at present all worked up over the various 'game bills' which will be sprung at Indianapolis when the Legislature convenes. Mr. Godfrey, of Seymour, is taking quite an interest in matters and has written to sportsmen all over the State. To him the following letter was sent this morning, which it is to be hoped will reach the eyes of many sportsmen, and that is the only reason for the publication of a private letter:

EVANSVILLE, Ind., Jan. 3, 1889.—*H. W. Godfrey, Esq.:* DEAR SIR—Both Major Mattison and Mr. Ed Grill spoke to me this morning regarding you. As you probably know, I have been game warden here (First District) for several years, and have studied the situation carefully. I do not object to spring shooting, but I do object to market shooting, and am now turning heaven and earth to get a bill to prohibit the sale of game of any kind for five years in this State. Stop the fellows who kill for the money that is in it, and then the true sportsman will have game for many years to come. I have shot for thirty years and never sold a feather in my life, and never expect to. If you will aid me in this bill I will be very grateful. Yours, F. M. GILBERT.

"What started the sportsmen of the State into action is the fear of a bill to prohibit the shooting of ducks in the spring (which means the stoppage of all duck shooting in this district) and the fear of the bill of Mr. Foster, of Madison county, who is trying to stop the killing of quail for five years in this State. This is the veriest nonsense. If the present law is observed we will still have some quail for many years, but if the bill passes, we who love a little sport might as well give away our guns, for quail are the only game left. We want to still be able to get a day in the fields once in a while, and we want to take our boy out just as soon as he is old enough. We would far rather have him able to go out one day in the week and take his ten-mile walk over the fields in the fresh, life-giving country air, and be able to cut down right and left, and come home at night tired to death, but still fresh enough to go around and give each of his friends a nice mess of quail than to see him a champion billiard or pool player, a fine progressive euchre player, a brilliant pianist, or the star waltzer of a fashionable hop. There are forty worse places a boy can be than trudging over the fields with a gun on his shoulder.

"But we wander. To get back to business we make the plain and positive assertion that the market shooter, the man who hunts for the miserable blood money that he can get out of it, is to blame for the scarcity of game. Who runs us out of his fields, where we could get, say three or four quail out of a covey? The farmer, who drives the whole covey into a net, pinches their heads and then brings them into town and sells them to a grocery. Who has killed off the tens of thousands of ducks that used to visit us? The market shooter who kills for the St. Louis and Chicago markets. He isn't satisfied with a pair of ducks to take home to eat. He wants a thousand to sell. And while we are on the duck question let the reader note the following, which appeared last week in the FOREST AND STREAM, under the head "Ducks by the Barrelful."

Look at the buffalo question! A few years ago there were millions. Think of it, millions! Now there is one little band of less than two hundred in the whole of North America. Did the 'sportsmen' kill them to eat? No; they were slaughtered by dastardly hounds who wanted their skins to sell. Millions and tens of millions of pounds of splendid meat left to rot on the plains that these fellows might get a dollar a piece for the hides. Look at Arkansas, formerly a very paradise for hunters. The big game is being wiped out at an incalculable rate, to supply St. Louis and Chicago markets. The resident no longer kills a deer for his family to eat. He kills a dozen if he can and stands over each carcass and wonders what it will bring him in the market. And now to get nearer home. Where have all the quail gone? Ask of the hundreds of dozens that have at times absolutely festooned the fronts of our retail grocery houses, who get them by the box and even barrel. Were they killed by our sportsmen to eat? No; by fellows who wanted what money they would bring on the market. We can make laws and laws and our quail will diminish year by year till they will be a thing of the past. The only thing to do to preserve them is to prohibit the sale of game."

MASSACHUSETTS ASSOCIATION.

THE first meeting of the Massachusetts Fish and Game Protective Association for 1889 was held at Hotel Thorndike on Wednesday evening, Jan. 9, and notwithstaading the severe storm 69 members were present.

An excellent dinner was served at 6:30 by Landlord Damon, at the close of which, after a recess of five minutes for the members to swap fish and bear stories, President Samuels rapped them to order and called for the secretary's report, which was read and accepted. Treasurer Shattuck presented his annual report showing the total receipts to have been $1,036.78, the total expenses $513.04, leaving a balance of $523.74 on hand.

The following names were presented for membership and referred to the membership committee: Messrs. Leonard W. Ross, Wilder M. Bush, W. O. Witherell, Jas. D. Keith, Geo. H. Lang, H. C. Anderson, Jas. T. Wildman.

The annual dinner committee reported that they had engaged dinner at S. Young's Hotel for the 24th inst., and that the Governor and many other prominent gentlemen identified with the interests of the Association would be present.

The nominating committee, through Chairman Brackett, presented the following ticket for the officers of the Association, which was elected: Prest., Edward A. Samuels; Vice-prests., Charles Levi Woodbury, Walter M. Brackett, Hollis Hunnewell, John T. Stetson, Henry H. Kimball, Warren Hapgood, Benjamin C. Clark; Tres., Frederick R. Shattuck; Sec., Arthur W. Robinson; Librarian, John Fottler, Jr.; Ex. Com., John P. Woodbury, Ivers W. Adams, John Fottler, Jr., James Russell Reed, Samuel Hanson, Edward E. Hardy, Augustus B. Bradstreet, John N. Roberts, Henry J. Thayer, Isaac N. Keith, Henry C. Litchfied, George W. Wiggin; Membership Com., Henry J. Thayer, George Mixter, Waldron Bates; Fund Com., Benjamin C. Clark, Samuel Hanson, Daniel T. Curtis.

The secretary read a communication addressed to President Samuels by Mr. Walton C. Taft as follows, in brief:

"It has occurred to me, after quite a number of years connection with this Association, that to a very great extent the work which we agree to perform has been in the main unsatisfactory to the public. We hold out the assurance that we will investigate any reports of violations of the game and fish laws, if notice is sent to our Association, and that action will be taken and the violators punished. That as the society was made up of busy men who devoted only their spare time to this work, it appeared reasonable to suppose that better results could be obtained by men who could devote their entire time to the cause. That as the State provided commissioners and paid their expenses for enforcing the game and fish laws, in a measure the Association was usurping their prerogatives. That the law could be better enforced if the Association would collect information of the violation of the laws and report the same to the commissioners for their action, and that the Association would gain many new members who are not with us now because of their doubts of our ability to carry out what we promise. The success of the Maine commissioners was cited as a proof of favorable working of the policy as proposed. That the Association was hampered when it tried to obtain changes in the existing laws by a prejudice that existed in the minds of the farmer representatives, that we were asking for selfish laws for our personal benefit. That the Association would be more successful if they would consult with and suggest to the commissioners, and allow them to make the recommendation to the Legislature."

The letter evoked considerable discussion. Mr. H. J. Thayer thought the suggestions good, and wished that instead of spending money for the work the commissioners were paid to do, the Association should introduce new species of fish and game, and disseminate literature relating thereto. Mr. Warren Hapgood objected to the letter, stating that the Association was and had been doing a good work, that it had been very successful and that he should dislike to see the present policy abandoned. Com. Brackett spoke in brief of the work of the commissioners and thought that more satisfactory results could be obtained if the suggestions made by Mr. Taft were carried out. Mr. W. M. Brackett spoke in the same vein, and the discussion was brought to a close by a motion that the whole matter be referred to the Board of Management for their action.

DEER SHOOTING IN NEWFOUNDLAND.

Editor Forest and Stream:

Permit me a few lines in reply to Dr. Tobin's letter published by you on Dec. 20. I took the statement of your Little Bay Mines correspondent as truthful. Assuming it was true, let any sportsman say if it was legitimate sport to kill so many deer and permit them to lie in their tracks and rot.

Turning now to Dr. Tobin and his friends. Their party reported they had killed the number stated in their "bogus telegram." It proves to have been a "hunter's yarn" to be taken *cum grano salis.*

Accept his own version that they killed sixteen stags besides hinds, the number of which he does not mention, they were for food, however, and their slaughter justifiable. The stags, he says, were unfit for human food, but he ruthlessly butchered them and left them lie to rot. He and his party entered the country early in September. The rutting season does not commence until the first week in October and lasts three weeks or less. Stags are splendid venison the first three weeks in September, and after the season is over they are good food though not fat.

The open season for shooting deer is from the 15th of July until the 1st of March. They carry their antlers until the end of December. Is it too much to ask a gentleman and sportsman to refrain from shooting them during the three weeks they are unfit for human food? I know by experience it is expensive getting deer out of the country. Of course a sportsman does not want the venison to take home. It would not keep good, but he can find numbers of poor settlers who rarely taste fresh meat, to whom it would be a treat, nor would they complain if it were "a little strong." It would be more becoming were the Doctor to frankly admit that it would cost us lots of money to get these deer out to the settlements, and for this reason they left them where they fell.

The Doctor's ungenerous *tu quoque* to the Newfoundland fisherman, calling them the "butchers" will not save him in the estimation of true sportsmen. These poor fisher folk do kill deer with sealing guns, they do use large shot, they do wound many which they never recover. I am sorry it is so, but they use the only weapons they have. They kill to provide their families with food. It is almost the only fresh meat they touch throughout the year. They never kill for the fun of the thing, nor to get a pair of antlers. Butchers that they are, they never bury the meat nor let it lie and rot.

The Doctor's ideas and mine are somewhat different about a "sportsman's paradise." Thousands of deer come from that part of the island every January in their southern migrations. At the "Lobster House," near Grand Pond, I venture to assert that from a well chosen camp-lookout, no day would pass without seeing more or less caribou. However, let that pass. I am not anxious to advertise the country, nor do I feel churlish toward any sportsman who visits the island and takes good sport without wantonly destroying a noble game. B.

HARBOR GRACE, Newfoundland.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

I have read with great interest the communications on this subject. I am somewhat surprised that so little is said in favor of the ordinary rim-fire .22 long cartridge. I do not controvert what "Iron Ramrod" says as to its trajectory, but I draw a different conclusion. As I understand "N. Orleans," one of the chief points of his inquiry was for a gun that would kill a duck from one to two hundred yards, but would not send the bullet far enough to be dangerous to persons or domestic animals on the other side of an ordinary lake or stream. I should unhesitatingly recommend to him a well-made rifle using the above cartridge. I carried a little gun made by the Bay State Arms Company in my camping trips in the mountains of California, and found it quite adequate for grouse, jack rabbits, squirrels, etc. It does not drive the bullet with the force of a .22 central-fire single-shot Winchester, but with a little practice one can make due allowance for trajectory. I have often killed ground squirrels and hares at 100yds. and over, and once shot a mud hen by a lucky calculation of wind and elevation at what could not have been less than 250yds. For close work, 50yds. and under, the short cartridge can be used in the same gun, which is cheap and effective. My work was all done with open sights. Not having used the Lyman sights, which "Iron Ramrod" recommends, I do not know whether allowance for distance can be readily made in aiming with them or not. An advantage of the cartridge I mention is, that the report is so slight that if you miss, your game will usually give you the second shot.

I most heartily add my testimony to the enjoyment that can be had from the use of those smallbore guns. I have made many a close and successful shot with them, which, though the quarry was often small, gave me as much satisfaction as the work with the larger bores, the opportunity for which, in the nature of things, comes less frequently. AZTEC.

MEXICO, Dec. 18.

LITTLE FALLS, N. Y., Jan. 2.—Very open winter. Ground bare, except on the hills. Reports of good snow on foothills of Adirondacks, about twenty miles north. Two deer—or else one twice—have made their appearance in the outskirts of the town. One, two weeks ago, chased by boys with a sheep dog, made for the river and swam across, and was no more heard from, unless the deer found a few days ago in a barn yard about two miles from town was the same. This one seems to have discovered that hay is good, for it has visited several barnyards; and as, although boys chase it, no one fires at it, it is said to be getting quite tame.—PISECO.

PROTECTION IN CENTRAL NEW YORK.

UTICA, N. Y., Jan. 12.—*Editor Forest and Stream:* The Black River Fish and Game Protective Association, organized last month by gentlemen particularly interested in hunting and angling in the counties of Oneida and Herkimer, held its annual meeting in Holland Patent, Jan. 10. The following officers were elected for the ensuing year: President, Dr. D. A. Crane, of Holland Patent; Vice-President, Fred B. Spriggs, Utica; Secretary, Wm. E. Wolcott, Utica; Treasurer, Herbert A. Pride, Holland Patent; Directors, Mortimer M. Mayhew, Marcy; Friend Bristol, Bion H. Kent, Remsen; Frank C. Wolcott, Trenton; Wm. L. Fowler, Simeon R. Fuller, Herbert A Pride, Holland Patent.

On motion of W. E. Wolcott, who is secretary of the Utica Audubon Society, the following clause was ordered inserted in the Constitution: "This association is opposed to the destruction of song birds for millinery or other purposes, and the influence of its members individually and collectively will be exerted for their protection."

S. R. Fuller submitted the following, which was unanimously adopted:

Whereas, It is the sense of the association that the opening season for deer ought to begin on the 15th day of September and end on the 1st day of December, and we believe that from the 15th day of August to the 15th day of September is entirely too early for the opening of the season during which they may be killed, for the reason that all deer, especially does, are in poor condition during that time; and whereas, many fawns die from the lack of care and sustenance when deprived of the mother, and many deer are wounded and die that are never recovered—in proof of which we cite the report of ex-Game Agent Brinckerhoff of 1882, in which he states that a record kept for some seven years showed that on the Fulton chain of lakes the proportion of deer killed between the 1st day of August and the 15th day of September, is one buck to ten does; also the fact that at North Lake, the first week of the present season, of nine deer killed only one was a buck; and the report of ex-Agent N. C. Phelps for 1885, which says that two Bisby Lake guides saw some twenty or thirty carcasses of deer rotting on the Canachagala Stillwater during the floating season; and whereas, the proposition to prohibit the killing of does, but allow the killing of bucks, as advocated by some, while good in theory, would be impractical and ineffectual, for the reason that the carcasses could be easily mutilated so that the sex could not be identified; therefore, we believe that the only effectual remedy is to prohibit the killing of all deer previous to the 15th of September. We believe in extending the open season through the month of November, for the reason that the deer are then in the best condition, and venison will keep and not be wasted during that month, as it is during August and a part of September. And to show that we are not alone in this opinion is the fact that no other State (with the exception of New Hampshire) or Territory in our latitude allows the killing of deer in August, or prohibits it in the month of November. We believe that the open season for partridges and woodcock had best begin on the 15th of September, and close on the first day of November, for the reason that until September 15 partridges have not attained their full growth, and are yet together in broods, making their killing easy and unsportsmanlike. Under the present law, woodcock are being rapidly exterminated, and the shorter the season for them the better. We also heartily indorse the resolutions offered in the Board of Supervisors of Oneida county by Mr. Salzman, of Forestport, prohibiting any one person from having in possession, or corporation carrying more than 10lbs. of speckled trout belonging to one person, and never that amount unless accompanied by the owner. The foregoing being the sense of this association.

Resolved, That our members of Assembly and Senator be respectfully requested to use their influence and their votes to amend the game laws of this State so that the open season for deer shall begin the fifteenth day of September and close the first day of December; and the open season for partridge and woodcock open on the fifteenth day of September and close on the first day of November throughout the State.

The association will be incorporated. The resolutions offered in the Board of Supervisors of Oneida county by Chairman F. X. Salzman, alluded to and indorsed in the above, were unanimously adopted by the board. They were worded as follows:

Whereas, The waters of this State inhabited by the speckled or brook trout are many of them becoming rapidly depleted, because of the large quantities of these fish caught to be sold in the market; and

Whereas, In justice to those who angle discreetly and with a view to preserving the species, as well as to those who have aided in stocking the waters, we deem it wise and prudent to limit the taking of said trout to such numbers or quantity as may be readily consumed by the angler and his family; therefore,

Resolved, That we, the Supervisors of Oneida county, believing in the proper and efficient protection of this game fish, do hereby petition your honorable body to pass a law prohibiting any person from having in possession more than 10lbs. of dead speckled or brook trout at one time, and prohibiting any person, corporation, association or company from carrying or transporting, or having in possession for the purpose of transporting, more than 10lbs. of said fish belonging to one person, and never that amount unless accompanied by the owner. Also, that any person, corporation, association or company violating any of the provisions of said act shall be deemed guilty of a misdemeanor, and in addition thereto liable to a penalty of $25 for each pound of fish in excess of the amount stated.

Resolved, That the clerk of this board submit a copy of these resolutions to our representatives in the Legislature of this State.

The sportsmen of Oneida and Herkimer counties are thoroughly aroused to the vital importance of more efficient and thorough protection for fish and game.

An organization has been formed in Forestport, Oneida county, N. Y., known as the Forestport Gun Club, and articles of incorporation have been filed. The directors are Philip C. Hovey, C. F. Weeks, H. W. Boyce, F. J. Stanburgh, Frank Sprague, J. K. Abbott and R. E. Boyle. This association has for its prime object the protection of fish and game. PORTSA.

HOW BEARS ARE SHOT.

Editor Forest and Stream:

"Kelpie," in your last issue, is both interesting and amusing. While my experience with bears is not very extensive, I can tell of one at least that received a head shot. In May of 1887 Col. E. Hutton, of Huttonsville, and my old guide, Isaac Cool, of Webster county, West Virginia, were in the Ganley region looking out land and showing a Philadelphia party a tract that the Colonel had for sale. They stopped at my cabin on the north fork of the Ganley, altitude 3,400ft., and on the night of the 14th there fell a nice tracking snow. Now, they had but one gun with them, and it was the Colonel's day to carry it. Poor Cool's heart was heavy, for he thought they might jump something. After breakfast they started for Elk River, and on the right-hand prong of Leatherwood, about a half mile from the cabin, Cool struck fresh bear sign leading right up the creek. He asked for the gun, but I suppose the Colonel did not hear him, for he did not get it. They had not gone 200yds. when Cool saw the bear above them in a thicket of "rip-shin," standing looking over a log, and he called the Colonel's attention to it; but the Colonel could not see from where he stood, and, knowing that the bear would not stay there always, he reluctantly handed the gun (an old Marlin) to Cool, who took rapid aim and fired. Down went bruin. They ran up the mountainside about 70yds., looked over the log and found the bear making frantic efforts to regain his feet; so Cool, brave fellow, fearing he might get away, jumped upon the log and placing the muzzle behind his foreleg fired again. The autopsy, which was held on the spot, showed that the first shot had taken effect just under the eye, ranging back, knocking out and breaking off several teeth in the upper jaw, crashing through the "little bones" of the neck (second and third cervical), passing on through the muscles and out at the back of the neck. When the result of that shot was discovered there was some talk of "wasting lead." They had but seven cartridges in the outfit when they left the cabin.

The Colonel sent the hide and head on to Philadelphia, and it now serves as a rug in his pleasant home, a mile above Huttonsville. The rug is the finest I have ever seen of its kind, glossy black, and the fur 4in. long.

G. A. S.

BEAVER, Pa.

CHICAGO AND THE WEST.

BLINDS AND WRINKLES.

CHICAGO, Ill., Dec. 7.—Chicago sportsmen have in different ways done a great deal toward contributing to the comfort, convenience and success of other sportsmen. Prowling around the resorts of the shooters of this city, I have fallen upon a number of devices contrived by Chicago people, which have already taken or will soon take places among the little indispensables of the sportsman's kit.

The other day I was down to the English Lake Club, and I happened to notice that the shell boxes of all the boys had the same kind of a fastening, a sort of snap-hook, similar to a harness-snap, such as can be caught into a ring or staple of any kind, and easily detached again by pressing in one side, which works on a spring. Examining these neat little hooks more closely, I found that each was also a shell-extractor, the base of the hook being arranged for the purpose which it subserves perfectly. This invention was evidently one "made on the ground." These duck clubs hunt by means of boats. Their shell boxes are made of stout tin, and serve as boat seats. By means of this little catch, the shooter is provided with a perfectly secure fastening for the lid of his box, less troublesome than a padlock, and one which in case of a tight shell is always right at hand, and never lost in the other pocket. Mr. C. E. Willard, now of the Blatchford Cartridge Co., is the inventor of this simple and handy little contrivance, and by inspection of the article in hand it seems that Mr. Willard has applied for a patent upon it.

Down at the Cumberland Club I saw pasted up a little cut and descriptive card of "Gammon's Decoy Reel and Weight," and at once recognized an idea I had seen in practical working in all the sporting goods houses and on the ducking marshes. It consists of a bar-weight, run along the bottom of the decoy in the usual way, except that it revolves upon a swivel in the middle and has at each end a knobbed post, around which the line is passed. In taking up the decoys one does not have to wrap laboriously from tail to head, and may be have the whole icy business slip off just as the job is completed. He simply straightens out the line, gives the reel a whirl on its pivot, and the deed is done well and quickly, so that nothing remains but to fasten the line in the little catch provided for it. Nor is this all, for this is one of the things which work both ways. In putting out the decoys the shooter does not unwind the line at all, but simply unfastens the end and throws the decoy overboard just as it is. The ground-weight dropping down through the water runs the line off the reel, which whirls on the swivel. When the line is long enough to reach the bottom it stops unwinding; This handy affair was evidently the work of a man who had suffered from cold fingers on a duck hunt. I had to think a moment before it occurred to me that the inventor was nobody else but Mr. C. D. Gammon, an ardent and successful duck shooter of this city and a member of different clubs.

Mr. J. M. Clark, of the John Wilkinson Co., has got out a style of lancewood bait-casting rod, which is thought by many to be superior to about anything of that kind seen in these parts. It is a short, well-wound and well-balanced rod, with features the casting angler would appreciate.

Speaking of rods: perhaps we have many of us seen the "serrated ferrule?" It is made with projecting teeth, or legs, which run down along the end of the joint, and are wrapped like a guide. This adds greatly to the strength of the rod, and they say that a serrated rod never breaks at the joint—which, as any angler knows, is the weak place in most rods. It is also claimed that this ferrule gives a stiffness and imparts a regularity in the arc which cannot otherwise be gained. Well, it was a woman invented that. She was a workwoman, up in Spalding's fly-tying room. I may be mistaken, but I believe Spaldings took out a patent or a caveat on this idea, and they have made thousands of dollars out of its practical application. Nobody ever heard of their giving the woman anything for the invention, however. If they have not, now is a good time. It is not too late.

Another Chicago invention, whose final completion and perfection I have been watching with a great deal of interest, is one which I think is destined to make something of a stir among the shooters. I refer to the Hunter cartridge loading machine, which is this month put before the public for the first time. The inventor, Mr. Geo. D. Hunter, was for thirteen years in the draughtman's and mechanical departments of the Vandalia Railway, and was also general foreman of the Belt Railway of Chicago. He has patented a number of railway appliances, among others a spark arrester, which remunerated him handsomely. He just sits around and invents things. Mr. Hunter is not so much of a shooter himself, but his brother, J. H. Hunter, of Washington, D. C., is a great trap shot. One day the two brothers were talking together while loading some shells by hand, and J. H. commented on the fact that no machine seemed to exactly fill the bill for the individual shooter who wanted to load his own shells. George D. said if that was all, he would sit down and invent one that did. And I believe he has done it. The machine loads a wonderfully neat shell. The shell bush is so tight that wads of almost any size can be crowded into a paper shell without bulging it, and the latter can be forced out of the bush easily. One shell is crimped while another is loaded. The rammer works against a solid rubber cushion, so that the powder is not crushed, though great power can be applied at will; and yet so close to the rammer is the fulcrum pivot that the loader can be used on the lightest kind of a table without any rocking motion. The loader is a neat little affair, and so small and light that it can be carried in one side of any grip, and taken along on a shooting trip. The mechanical principles are new, and the whole concern, the invention of a skilled machinist, is so perfectly workmanlike that it is fun to play with it. Mr. Hunter tells me he has put over $11,000 into this little machine and the machines necessary for its manufacture. He will soon get that back, for he has a good thing. Moreover, he has a lot more sense than these other fellows have who have been spoken of, and is, I see, advertising his article in FOREST AND STREAM. Nothing like helping yourself while you are helping your fellow sportsmen.

In regard to those duck blinds I promised to write about; a description of them will be right in this same line. Only an observer of the methods of our duck shooters would need a book instead of a column to tell it all—and that would be a better and more practical book than anybody has ever worried out yet about duck shooting.

The Fox Lake "canvas blind" is said to be the invention of Ed Howard, though I presume George Beckwith or some other old pusher of that district may have helped him. It is made of burlaps, or coffee sacking, in full width about 3ft., I believe. This material is of just about as good a color as you could find for a shooting coat. Shooting on that lake is done from a boat, anchored in water from 4 to 10ft. deep. The blind is made to entirely inclose the boat, and is constructed of two sides, each of which folds in the middle. To construct one side, take two light slats, each half the length of the boat, and nail these end to end along the top of the burlaps for that side. Take two more slats—an inch and a half by three-eighths is heavy enough—and nail them on the bottom edge. You can then double the whole side over upon itself, and roll it up into small compass. Make the other side of the blind in the same way. When your pusher goes out with you, he has six long and slender poles in his boat, long enough to stick down in the mud and project from the water about 3ft. or so. As this blind is most valuable in open-water shooting, and as the water is often quite deep, the poles should be nearly as long as the boat, or 10 to 14ft. Two of these poles are thrust down into the soft mud of the bottom, and tied together at the top with a string. The bow of the boat is run in under these poles, and two more are then put out at the stern in the same way, and then one on each side of the middle of the boat. The ends of the top slats of the blind are now tied to the poles at bow, stern and middle, the blind being allowed to unroll and fall down into the water. About this time you begin to notice that the blind breaks the wind off from you a very great deal. The chief remaining trouble is that it flaps in the wind. You obviate this by inserting on each side, and at intervals just close enough to make all stiff and taut, short sticks called "spreaders." These sticks are just long enough to go from the top to the bottom slat, and are provided with brads or nails in each end, which you jab through the burlaps. The blind now is tightly stretched, and shows but very little motion. You now push your boat out at the rear, put out your decoys, and then, coming back in again, tie the tops of the stern poles together just as you have the bow poles. The effect is to draw the blind together tightly at both ends, leaving but a small slit at bow and stern, which will be found useful in watching an incoming flock. From the outside the blind now presents the appearance of a long, cigar-shaped mass of indistinct coloring. The waves wash up at its bottom, so that it seems to blend with the water. No motion within is perceptible. Within the blind all is warm and cosy; the boat is anchored stiffly, and the side-poles prevent much rock. The tops of the walls are drawn in a little, and are just so high that one needs to stand on his knees to see over the top. Slits are cut for peep-holes on the decoy side of the blind. The cover is perfect.

A great many redheads and bluebills are shot from these blinds on Fox Lake. Sometimes a few flags or bunches of grass are fastened along the sides, but this does not seem to make much difference with the ducks named. Redheads and bluebills, especially the latter, are notoriously good decoyers. I do not know how such a blind would work with mallards, which are shyer, and more suspicious of anything bulky or unnatural. With these birds it is a good rule to have a blind as light as possible, and to keep perfectly motionless. The canvas blind is, however, a practical and very comfortable one for deep-water duck shooting.

I was talking with Mr. John Taylor about this canvas blind. Mr. Taylor is the superintendent of the English Lake club grounds. He said the canvas blind did not work on their marsh. He showed me a "willow blind," which he said was better. This was of Mr. Taylor's own make, and consisted of a long roll of peeled, dried willow rods, about four feet long. These were fastened together, top and bottom, by twine strings which ran the whole length of the roll. The blind could be rolled up or unrolled, just like a Venetian blind. It was built in sections, and could be used about a boat, or upon an open meadow. Composed of a single row of willows, about a quarter of an inch apart, any movement made would be more or less plainly visible; the blind, however, was described to be fairly effective. The peeled willow rods soon assume a gray and weather-beaten appearance. A blind of this sort is very portable and very durable, and is handy in the spring, when cover is light.

Mr. Taylor showed me another blind which, though not so durable, was in his estimation much superior to the willow blind. This was made in just the same way as the latter, except that in place of the willow rods tall marsh grass or "cane" is used. I should think this would make an excellent blind. It is stretched on short stakes. The blind I saw was 34ft. long, enough to go quite around a boat, yet it was rolled into so small a roll as to take up very little room in a boat.

Mr. Reed, of the Hennepin Club, went down on the marsh not long ago with a contrivance he called the "Koshkenong blind." He thought a good deal of it, but the boys said it was no good. It was made of the light galvanized wire fence netting, and intended to be stretched about the boat, while the netting is covered with grass and reeds stuck through the meshes. Theoretically, this should be a good blind, but practically it was said to be too mathematical on the corners to suit the mallard duck.

Mr. W. W. McFarland, of the Cumberland Club, by some held to be as successful a duck shot as we have here, has a blind of his own which he pins his faith to. It is simply a piece of fish net, of light twine and a mesh of 2¼in. By means of light adjustable posts, Mr. McFarland stretches this net loosely about the comb of his hunting boat, covering the projecting ends of the boat with loose rushes or grass. Into the netting he weaves a light cover of grass or reeds. The body of the blind has, therefore, nothing solid or stiff about it, but undulates and changes in the wind just as the natural marsh grass does. I don't see how anything could be better than this.

The fact of it is the art of blind shooting consists of keeping still. At English Lake I saw a sort of semi-blind called the "hay coat," which is capable of as good results as anything. It consists simply of a cape made of hay, tied and squared at one end and worn over the shoulders, being fastened by a sort of gathering string, tied in front. It was Mr. Chas. Willard, I believe, who, covered by one of these coats, stood out in the middle of a bare marsh, and assisted by no decoys, using only a duck call, shot seventy-six in one afternoon, many of them mallards. He kept still.

Mr. Kinney, vice-president of the Mak-saw-bas, has a coat which the boys all laugh at as "Kinney's overcoat." It is simply a coffee sack, provided with arms, and is as good a shooting coat as any.

The English Lake members have a great many Green Bay boats. Some of them got to thinking, however, and it seemed to them that the Green Bay model was not perfect. Its bottom was made of two boards, and after a short use invariably began to leak. Its bow-rake also was so short that it did not ride down floating rubbish, and stuck into the water too far for a good poling boat. The result was that Mr. Taylor had Wm. Hine, I believe of Logansport, Ind., a skillful carpenter, build a boat which lacked these objections. Hine never builds two boats alike, but has got out better and better ones right along, and now practically supplies that club.

Mr. Geo. T. Farmer, of the Cumberland Club, has two dugouts, one of which he always uses when he goes out on the marsh. He ignores the graceful modern boats. I wondered at this a little until yesterday I heard that Mr. Farmer was long ago a scout and trapper in the employ of the Northwestern Fur Company. That explains it.

The best duck decoys I ever saw belong to Mr. W. B. Chatfield, of the English Lake Club. They are imported. They are made of rubber, covered with velvet, and painted into so life-like a representation that they would deceive the keenest eye. They are inflated by means of a tube and key similar to that used on a football. They cost $37 a dozen. The only trouble about them is that when the pop-eyed rustic lets go his Zulu into the fleet he is apt to spoil $37 worth of decoys.

CHICAGO, Jan. 7.—Late dispatches bear the following melancholy news of a well-known gentleman and sportsman of Chicago: "EL PASO, Tex., Jan. 4.—Dr. F. Sidney Papin, the wealthy son of Dr. Papin of Chicago, who arrived here for the benefit of his health in the fall, and three weeks ago, accompanied by his wife and a number of friends, started on an overland pleasure trip through Mexico, Arizona and into California, died in Mexico of consumption Tuesday last." Dr. Papin is the gentleman of whose proposed extended pleasure trip mention was made early last fall. Mr. Chas. Carhart, of this city, was named as one of the party, which is now disbanded by the deplored occurrence.

Mr. F. A. Howe, president of the Yellowstone Club, is in nowise daunted by the recent statements of "Ren" in regard to the yield of wild rice, and reiterates that he has yet to hear of the first wild rice bed that will yield anything like a bushel to the acre, although he also has seen what appeared to be a considerable quantity of rice brushed into the boat in the course of a day's shooting.

I saw a grand lot of Canada geese on South Water street yesterday, and on asking where they came from was told they got in from Montana. The common idea would be that Canada geese would be far south of Montana at this season. The weather is all knocked out of gear, out in this country, and the oldest inhabitant has taken his goose-bore and emigrated. E. HOUGH.

BOONE AND CROCKETT CLUB.

THE second annual meeting of the Boone and Crockett Club was held in this city at the University Club, Jan. 9. This association, which was organized only about a year ago, has now a membership which includes some of the very best sportsmen in America. Its good influence has already made itself felt in more than one direction, and there is every prospect that as it grows older it will exercise a great power for good all over the country, and especially in sections of the West, in which for a long time the influence of the game laws will scarcely be felt. A business meeting was held at 7 o'clock P. M., and after the reports of committees had been received and some new members elected an adjournment was had to the dining room, where about a great round table the members enjoyed themselves until a late hour. Among those present were: Gen. B. H. Bristow, Hon. Theodore Roosevelt, Mr. A. Bierstadt, Mr. Archibald Rogers, Mr. Rutherford Stuyvesant, Mr. Elliott Roosevelt, Mr. Arnold Hague, Mr. J. J. Pierpont, Mr. Wm. Milne Grinnell, Mr. W. A. Wadsworth, Mr. H. C. DeRham, Mr. John G. Roosevelt, Mr. Thos. Paton, Dr. J. West Roosevelt and Mr. Geo. Bird Grinnell.

ORLEANS COUNTY, N. Y., GAME LAW.—An act has been passed prohibiting the catching of fish of any kind, except minnows, in any streams in Orleans county save with a hook and line, or rod held in hand, or trolling from boat. The penalty attached is $100. In response to a petition from sportsmen of the central and eastern towns, the Board has enacted the following game law: No person shall within the county of Orleans, kill or expose for sale, or have in his or her possession, after the same has been killed, any woodcock, between the 1st day of January and the 1st day of September in each year. Any person violating the provisions of this ordinance shall be declared guilty of a misdemeanor, and in addition thereof shall be liable to a penalty of twenty-five dollars, for each bird so killed or had in his possession; such penalties to be recovered and such misdemeanor to be punished according to the provisions of Chapter 534 of the Laws of 1879, and the several acts amendatory thereof and supplementary thereto.

DEER'S VITALITY.—Grand View, Tenn.—*Editor Forest and Stream:* I notice in your issue of Dec. 27 an article by Mr. C. H. Ames, where he relates an occurrence told him by a man from Bangor, Me. The substance of this was that a deer had run 192yds. after its entrails had dropped out. That a deer should get ripped open by its own act would be an unlooked-for occurrence, but that it had run the distance above mentioned leaves considerable room for wonder. Many years ago I was informed of a circumstance somewhat similar in some respects to the one in question, and heretofore I have had some hesitancy about relating the fact, because it appeared so improbable. The man King, whose name has been mentioned before in an article published in the FOREST AND STREAM, lived near a deer lick, where he killed several deer every summer, bringing home the saddles and skin and leaving the forequarters for his neighbors. The lick had got the name of Old King's meat market. His lick watching one night continued until night had closed in. Although a starlit night, it had become like Egyptian darkness in the thick woods, when the roar of the old smoothbore was heard by the boys at home. They immediately started with a lantern, meeting the old man just as he was groping his way out of the woods into the clearing, and in answer to their eager questions, he told them that he had shot at a venture at the slight sounds made by a deer as it walked over some loose stones, and that he heard the deer run after he had fired the shot; and it would be useless for the boys to go up to the lick, for he was pretty sure that he had not touched a hair. However, the boys did go up to the lick early the next morning and found a deer's paunch, and the small intestines were strung along for several yards, and the deer was found some 50yds. distant, as paced by the boys. The examining committee reported that an ounce ball (King never used anything lighter) had ripped open (crosswise) the lower part of the belly, and, as a matter of course, the whole mass fell out when it made the first jump. Sometimes a deer will run some distance after being shot through the heart, while others that have been shot precisely in the same manner may fall in their track, or very near it.—ANTLER.

PEN NAMES.—*Editor Forest and Stream:* The little correspondence on "Elk Hunting Ethics" you published lately, gives me an opportunity to say what I have often felt like saying before, viz.: That I believe it would be more satisfactory all around if every person who writes for the press would do it over one and only one signature. This first occurred to me several years ago, when I found in a Western paper, devoted to field sports, etc. (especially *et cetera*), an interesting account of a fishing trip, written by "The Sergeant." I had not read far before I soliloquized: "That's a well written article, but whom does it sound like?" A little further on I struck an expression that gave the thing away as written by one of FOREST AND STREAM'S most valued contributors, and then I wanted to kick myself for not recognizing him before, in spite of the strange *nom de plume*. I was not altogether pleased, either, that my old friend had compelled me "to penethrate his *incognatio*," as Jimmy O'Brien said; for, like the Turks, I hate trouble. Coming back to the starting point, if Mr. Shields had written his article for *Harper's* and his "Rustling in the Rockies" and "Saunterings in the Snowies" over the same signature any of us who had read the last named article would have been slow to harbor for an instant the thought that their author could possibly be a pot-hunter, and had it not been for Mr. Hough (may his fingers be able to drive the pen for the next seventy-five years) my feelings in the matter still have been about—well, in equilibrium.—L. I. FLOWER.

SHOOTING AND FISHING IN FLORIDA.—Peekskill, N. Y.—We occasionally see the question asked through the columns of your valuable paper, where can I go for the winter and find good shooting and fishing? If any desire to spend a few weeks in a good quail section, and where ducks, jack snipe and fish are abundant, and where the climate is simply perfect, let them try Merritt's Island, on the east coast of Florida, a large, narrow island lying between the Indian and Banana rivers. Sportsmen or others who simply desire to avoid the severe cold weather of the North, can be accommodated with good rooms and plain, home-like comforts at a very moderate price, in the immediate vicinity of the shooting and fishing grounds, by Mrs. W. G. Martin. Mr. Martin is an experienced hunter and fisherman, has spent ten years of his life on the east coast, and is familiar with all of the best shooting and fishing grounds. From personal experience I believe this to be the healthiest and most comfortable climate on the globe. The weather is warm but you are constantly fanned by a most delightful ocean breeze, and it very seldom rains during the winter months. You go direct to Titusville at the head of the Indian River, then by steamer. Fare from New York to Titusville and return, first class, $52. I will be glad to furnish any further information necessary as to the country, route, etc. Mr. W. G. Martin's address is Merritt, Florida.—W. H. PIERCE.

CHICAGO, Ill., Jan. 9.—As I look out on Lake Michigan frequently I notice small flocks of ducks, but a visit to the river or small inland lakes discloses not a solitary duck, mudhen or any other living thing that swims. I observe, however, a greater number of geese flying over than I have ever seen so late before. Three weeks ago a gang of twenty-two were rising on Calumet Lake, fifteen miles southward. Late in the afternoon they rose and flew eastward. Dec. 30 a flock of fully a hundred flew over the city also going in an easterly direction; and day before yesterday, Jan. 7, another flock of fully one hundred come over the town from the east, this gang flying westward.—H. R. B.

THE ORITANI SNOW SHOE CLUB officers for 1889 are as follows: Honorary President, Erastus Wiman; President, G. M. Fairchild, Jr.; Vice-President, J. E. Learned; Captain, Wm. P. Ellery; Vice-Captain, W. A. Shortt; Secretary and Treasurer, Wakeman Holberton, 18 Vesey street, New York; Whippers-In, W. J. Weldon and Prof. Wells. The organization is in a flourishing condition; fourteen members were elected at the annual meeting. The only thing the Oritani Snow Shoers lack is snow shoeing; their chief weather clerk is on the lookout for a blizzard.

PENNSYLVANIA.—Auburn, Susquehanna County, Jan 7.—The shooting season just closed has been an average one. Woodcock were conspicuous by their absence and squirrels very scarce. Rabbits were plentiful and ahead of the merry little beagles gave excellent sport. The last quail disappeared from this section several years ago. Ruffed grouse were found in good numbers, but were never more difficult to bring to bag. I have always noticed that when beechnuts were plentiful they were always wild and strong of wing, and when flushed go long distances, and the sportsman who made a good bag this fall might well feel exultant. My best work resulted in a bag of six grouse made inside of six hours; and my score for the season was thirty-four—all but three of which were killed within one and a half miles of my door. Within that area at least fifty birds remain, and with the open winter and abundance of food they should winter well and rear large broods another season. I inclose quills from the tails of three different birds that fell to my gun, showing quite a variation in color.—BON AMI. [The great variation in the coloration of the ruffed grouse is well known, and has often been commented on.]

BUCKSHOT LOADING.—Can't we have something more on this important subject? I have tried the plan recommended by "Dentist" with good results, but found that to get in even two shot of good killing size made a very heavy charge for a 12-gauge gun. Is it considered safe to load buckshot in a chokebore gun? Is there a wire cartridge manufactured with shot large enough to be really destructive to deer and other large animals? My gun has a cylinder barrel, which is excellent for field shooting with small shot, but it scatters buckshot intolerably. What is the matter?—AZTEC.

DEER IN WELD, ROXBURY AND CARTHAGE, MAINE.—The subscriber will promptly pay $25 to the first person or persons, who shall furnish evidence that will lead to the conviction and punishment of any person killing deer in either of the towns of Weld, Roxbury and Carthage, within the close time of 1889, which close time dates from Jan. 1, 1889. The subscriber is authorized to make the above offer by a friend of the law and deer.—S. M. LOCKE, Roxbury, Maine.

ITHACA, N. Y.—Messrs. O. Z. and O. H. Devenport, accompanied by Monroe Harvey, an old Pennsylvania deer hunter, all of this county are now on a prospecting and hunting trip to Seattle, W. T. The three men are longing for the biggest kind of a bear scrimmage, and in anticipation of such an event, carry with them a Marlin .32-cal., a Winchester .38-cal., and a double gun of Bonehill make. FOREST AND STREAM will hear from them.—M. CHILL.

MINTO, Dakota.—Two gentlemen, residents of Inkster, passed through here last month with three moose, the result of a weeks' hunt in the Roseau Lake country, Minn. One of the animals in particular was a "whopper." We had no snow until the middle of December, consequently deer hunting did not begin until then on the Red River, twelve miles east of this place. Three were killed there on the first hunting Friday last.—J. F. T.

AN OLD-TIMER.—Quebec, Dec. 21.—Our well-known sporting grocer, Adam Walters of Quebec, completed his one hundred and second year on Jan. 5. He is still hale and hearty, looking as if he were only sixty instead of a centennarian, and is still capable of bringing down a caribou, and catching the big fish of Lake St. Joseph, and also telling a real "Camp-Fire Flickering" story as of yore.—*

NEW YORK LEGISLATURE.

[Special Correspondence of Forest and Stream.]

ALBANY, Jan 14.—Thus far in the Legislature only three bills have been introduced of interest to the field covered by the FOREST AND STREAM. The first, by Senator Ives, provides that if the members of any club so elect they may decide that memberships in the club may be taken by heirs at law. The bill is said to come down from some of the clubs in the Adirondacks where large amounts of money are expended in real estate and improvements, so that a membership need not be a loss in case of the death of a member.

The second bill, by Mr. McAdams, of Oneida, amends the general game laws so as to prohibit the spring shooting of ducks. The close season is made from Feb. 1 to Sept. 1, instead of from May 1 to Sept. 1. In the waters of Long Island the close season still continues to Oct. 1.

Mr. Baker, of Oneida, has introduced the following bill: Sec. 1. Every person who shall trespass on any land within this State owned by any private individual, firm or corporation, by cutting or carrying away any trees or timber growing thereon, shall forfeit and pay to such owner or owners the same penalty or penalties as are now recoverable by law for like trespasses upon lands known as the Forest Preserve, or lands owned by the State of New York; and all remedies or proceedings in actions to prevent, or to recover damages for like injuries or trespasses, and to enforce execution upon judgments therein, which may be had or taken by law by or on behalf of the people of the State, against persons trespassing in such manner on lands owned by the State, may be had or taken by or on behalf of the owner or owners of any lands upon which such trespasses shall have been committed, against the person or persons committing the same.

LEFFINGWELL'S "WILD FOWL SHOOTING."

Editor Forest and Stream:

For several consecutive years it has been our great enjoyment to engage in wildfowl shooting in river and bay, and we have never found other sport equal to it. We have tried our guns in various States and along all the line of sea coast from Maine to Corolina, and enjoyed our share of pastime, after deer, prairie chicken, partridge, quail, squirrel, rabbit and woodcock, but have never found any sport equal in interest and result to that of wild fowl shooting. We have never yet met with any work descriptive of such sports that entirely satisfied us, until now we have before us Leffingwell's superb work on fowling. In it he gives in vivid and graphic style his experiences in shooting all sorts of wildfowl; and so in musing over his descriptions we can live over again and enjoy the pleasures and successes of many past years.

This is a work not only interesting to brother sportsmen, but also to the general reader, and his amusing and picturesque chapters on "Sculling for Fowl," "Shooting Mallards in a Storm," "Out for a Lark," "In the Marshes," "A Morning With Nature" and "Canada Goose Shooting" should be decided favorites with most readers. The book gives scientific and practical descriptions of wildfowl, their resorts, habits and the mode of hunting them. The work is indorsed by the FOREST AND STREAM and many other leading publications and is certain to be the greatest authority in all matters of fowl shooting. ISAAC MCLELLAND.

GREENPORT, Long Island.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. This book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Sea and River Fishing.

FOX RIVER ASSOCIATION.

CHICAGO, Ill., Jan. 12.—There was held at the Sherman House parlors in this city on last Wednesday, Jan. 9, a meeting of sportsmen, which in interest and significance was probably the most notable one of its kind ever convened in this State. This meeting of the Fox River Fish and Game Association is really the second formal assemblage of the organization, which is but barely a year old. Its origin is due to Mr. Geo. E. Cole and Mr. Chas. F. Hills, who, when commenting upon the growing scarcity of fish in the Fox Lake district on a fishing trip only two seasons ago, asked each other the question, if the scarcity was not due to the absence of lawful fishways in Fox River, and added the further question whether a joint effort on the part of the sportsmen's clubs would not be amendatory of this and other evils apparent in violation of the fish and game laws. To the efforts of this organization and of the men composing it is due an improvement in the fish and game supply already evident, and this fact is mentioned in a Fox Lake article sent in for publication before this date.

With these men not much talking was done. In a few days the following certificate of organization was duly filed:

STATE OF ILLINOIS, } ss.
COUNTY OF COOK. }

We, the undersigned, Charles F. Hills, John Wilkinson and Henry L. Hertz, citizens of the United States, propose to form a Society under an act of the General Assembly of the State of Illinois, entitled "An Act concerning Corporations," approved April 18, 1872, and all acts amendatory thereof, and for the purposes of such organizations, we hereby state as follows, to wit:

1. The name of such Society to be the Fox River Fish and Game Association.

2. The object for which it is formed is to assist in the enforcement of the fish and game laws of the State of Illinois, in the Fox River region.

3. The number of its Directors to be ten (10).

4. The names of the Directors selected for the first year are: Charles F. Hills, J. C. McCord, Andrew Lovell, D. F. Barclay, J. W. Lyke, E. C. Howard, Henry L. Hertz, F. I. Pearce, Geo. E. Cole and John Wilkinson.

5. The location of said Society is in the City of Chicago, in the County of Cook and State of Illinois.

CHARLES F. HILLS, [SEAL.]
JOHN WILKINSON, [SEAL.]
HENRY L. HERTZ, [SEAL.]

In a few more days there issued over the great seal of the State of Illinois a due charter, stating that, compliance with certain mentioned conditions having been made,

Now, Therefore, I, Henry D. Dement, Secretary of the State of Illinois, by virtue of the powers and duties vested in me by Law, do hereby certify that said The Fox River Fish and Game Association is a legally organized corporation under the Laws of this State.

In testimony whereof, I hereto set my hand and cause to be affixed the great Seal of State. Done at the City of Springfield, this seventh day of February, in the year of our Lord One Thousand Eight Hundred and Eighty Eight, and of the Independence of the United States the One Hundred and Twelfth.

HENRY D. DEMENT, Secretary of State.

SEAL.

Here, then, was a corporation able to sue and be sued, and empowered to raise moneys by such means as it chose; empowered, therefore, to hold up the empty hands of our State Fish Commission, which, though certainly intelligent and willing, had no money wherewith to act, though fully cognizant that action should be had, and that quickly.

Members poured in from all the big clubs of Chicago, and from every vicinity of Fox Lake, from Elgin, from Sycamore, and all through the northern part of the State. Funds were raised. Not a moment was lost in theorizing, but at once the association figuratively ascended the neck of two or three stubborn and purse-proud dam owners along Fox River. It has already shown these dam owners that it also has all the money it wants for a fight, and all the determination it needs to win. Reference to recent suits was made in FOREST AND STREAM of Jan. 3. The work has begun, and begun well. It will soon be merry all along the line.

What this work has been and what it will be in the future year, may be seen by a careful examination of the following report of the proceedings of the meeting above mentioned. At this writing there remains time for only the briefest comment.

The assemblage gathered at the Sherman House last Wednesday was a surprise to me, and one to make a sportsman or sportsman's paper glad. A meeting of the directors of any heavy mercantile or political movement would not present a body of men the equal to it in personal appearance, in dignity of parliamentary action, nor in the lesser qualities of wealth, success, and social and business prominence. It was a collection from the leading business men of this section, men who have never allowed any man or corporation to impose upon their private interests, and who are now in body resolved that no man or corporation shall impose upon the rights of the people of Illinois in the matter of fish and game.

The meeting was called to order by the president, Mr. Chas. F. Hills. Mr. Wilkinson, the secretary, was absent on account of illness, but sent in the following letter to Mr. Cole, which was read before the meeting and spread upon the minutes. It may be seen that FOREST AND STREAM, the only paper to take any intelligent action in this section upon the lines of work in hand by this big association, has received due appreciation for its efforts:

CHICAGO, Jan. 9, 1889.—*Geo. E. Cole, Esq.:* DEAR SIR—I find that I shall be unable to attend the meeting of the Association this afternoon, as I am confined to my house. I send you for Mr. Hills my report as treasurer for the year, and also the records of the Association.

I also inclose an extract from a late number of the FOREST AND STREAM, which I cut from an article on Fox Lake:

> There are some matters which should receive the strong attention of those interested in the continuance of Fox Lake as a pleasure ground. One of these is fishing through the ice during the winter; it is destroying the fish at a terrible rate. Another is the continual harrying of the ducks in the open water, and the incessant "coasting" them up along the shores in the morning. Not a boat ought to go out on the lake before full daybreak, and each boat ought to go directly to its own stand, and leave the edges of the lake alone. Shooting on the middle of the lake should be stopped entirely. Thus the ducks would have given them a chance to feed and a chance to rest, and would not be so apt to entirely desert the region, as they may soon do unless a change is made. To try to row up on a bunch of ducks in the open lake, and by repeated firing of heavy charges to perhaps scratch down one out of fifty shots, is not sportsmanlike, and sportsmen should endeavor to have it stopped. Let each shooter keep to his blind or flyway, and the total result will be very much greater. The ducks must have some chance, or they cannot be expected to stay.—*Forest and Stream, Dec. 27.*

I think it would be well to read this extract at the meeting, as it calls attention very strongly to matters for which there should be some remedy. I think that we have a law forbidding duck shooting after sunset and before sunrise; if this is a law, it certainly ought to be respected; although we know that little attention is paid to it at Fox Lake. There are various matters referred to in this article concerning which it would be impolitic to attempt to have any new laws made, but our Association ought to be strong enough to influence public opinion in this respect, certainly among all members of the Association. Every hunter must appreciate the force of these remarks, and know that they are justified by the many unwise practices on Fox Lake. It seems to me that it would be a good plan for our Association to have placards printed to be posted in the various hotels and club houses, which should urge upon all people who come to the Lake the necessity of abstaining from doing many things which are gradually tending to ruin our fishing and shooting. In these placards, I would call attention very strongly to the dangerous habit of rifle shooting on the water. This is a practice which is indulged in very generally, and which will lead to some fatal accident if it is persisted in. I presume that there are very few among us who have not heard the whistling of rifle bullets fired from some boat, club house or hotel. No one can tell where his bullet is going to glance to after it strikes the water, and it always does glance; if the water is rough, it may glance to the right or left, or go straight ahead. My house on the Island was struck by bullets several times during the last two seasons.

As long as people delight in fishing, I think that fishermen will always vie with each other to see who can catch the most fish, without regard to quality or size. In this way thousands and thousands of fish are killed every summer on our lake which are entirely useless for food because too small, and which should be thrown back into the water as soon as caught. The true angler never does such things, and I think that our worthy president sets a good example in this respect. Every member of the Association ought to do what he can to prevent this indiscriminate slaughtering of fish.

I hope that you will have a good meeting this afternoon, and I regret very much that I cannot be there. Yours truly, JOHN WILKINSON.

The report of the directors was then read and adopted, and this, although it is long, I trust may be printed in full, as it covers very clearly the past and future of a work than which none is of greater importance to the sportsmen of this region. If once read by a sportsman it will convince him that the day of talk is past and the time of action now at length at hand.

REPORT OF THE DIRECTORS OF FOX RIVER FISH AND GAME ASSOCIATION TO THE MEMBERS OF THE ASSOCIATION, JAN. 9, 1889.

Gentlemen—Your Directors submit the following as a report of the work of this Association since our first annual meeting, with results accomplished, and suggestions as to the desired amendments to our fish and game laws.

On the opening of the spring of 1888, acting in harmony with the Board of Fish Commissioners, steps were taken to induce the owners of dams on Fox River to provide the same with fishways as provided by law. During the months of April and May our efforts were confined to interviews with dam owners, and the selection of a suitable device that would accomplish our purpose, and afford a free and unobstructed passage to fish, and at the same time be economical, safe to, and easily constructed by dam owners. Very little progress, however, was made with dam owners, and it was found necessary to select some point and make a determined fight. The city of Elgin was selected as being an important point, easy of access to the officers of the Association, and their attorneys. In order that no complaint might be justly made of partiality, a person was sent the entire length of the river, and every dam owner was personally served with notice as provided by law.

Although the Fish Commissioners were empowered by statute to construct fishways in dams where owners failed to provide same, no provision was made for funds to pay for such construction in the first instance. In view of this difficulty the Fish Commissioners were powerless to act, and to provide for this deficiency this Association directed their attorneys to draw up a guarantee in writing which was executed by the officers of this Association, by which the Association undertook to advance the necessary costs of fishways, constructed by Fish Commissioners, to be reimbursed out of recovery to be had against dam owners. Armed with this guarantee, the Fish Commissioners accompanied by a committee of your directors proceeded to Elgin with their attorneys and induced the Elgin Hydraulic Company to construct a fishway in their dam without a contest, and the same is now in successful operation. A fishway was also put in at the Algonquin Dam by the owners.

About this time a determined effort was made by the Association to have the canal commissioners provide a fishway in the State dam at Dayton. Your attorneys drew up a petition to the canal commissioners, which was signed by leading citizens and forwarded, accompanied by strong personal letters. After persistent and continuous effort the canal commissioners have been induced to provide said dam with a fishway, and the same is now in successful operation.

There is now in successful operation a fishway in Dayton, Yorkville, Elgin and Algonquin. There are no fishways in the dams at Aurora, North Aurora, Batavia and Conova; the condition of the dam at Montgomery is unknown. At St. Charles and Carpenterville dams are provided with what is known as the "Shaw fishway," a device of no practical use and not filling the requirements of the law. In November, the dam owners unprovided, having renounced all intention of complying with the law, suit was commenced against the owners of Carpenterville dam, and after a contested trial they were fined. Notice of appeal has been given in this suit. Complaints have been made against the owners of dams at Geneva, Aurora and North Aurora, four suits, which are set for trial Jan. 9, at Elgin. These complaints should be followed up by complaints every fifteen days until the owers comply with the law.

We have been advised of several isolated instances of violations of law, but owing to defects in the provisions of the statute their prosecution would have been attended with so much uncertainty and expense in time and money, we have thought best to content ourselves with threats of prosecution until some more effective law is passed. In comparing the fish and game laws of this State with those of sister States we find that the prohibitory phraseology of our statute as to acts prohibited is sufficiently strong, but there are many acts prohibited elsewhere which are not covered by our statute. In providing what shall be evidence of violation and enforcement of penalty our statute is lamentably defective and the duties and powers of Board of Fish Commissioners are confined to the mere hatching of fish. Owing to this deficiency, the question of whether a dam is provided with a lawful fishway becomes a question of fact, to be decided by a preponderance of testimony. Having in view the facility with which wealthy and powerful individuals and corporations can establish facts by testimony, the difficulty met in the trial of these cases can be appreciated. At the trial of the Carpenterville case nearly twenty witnesses were sworn, and an architect was employed to make a diagram and actual measurements of the dam and so-called fishway. Under this statute of law, owners put in all kinds of devices, of course, in most cases of no practical benefit, and produced witnesses to swear that they have complied with the law. This difficulty would be all disposed of by a suitable amendment hereafter suggested. Another evil, and quite as important and difficult to remedy under the present statute, is the possession by parties along our rivers and lakes of unlawful seines, spears and other instruments. It is practically impossible to prevent their use where people are allowed to have them in their possession.

In many States the Board of Fish Commissioners is created by statute, a body corporate with ample powers. We therefore divide our suggestions into three heads to be reached by amendments to present law.

First—The acts to be prohibited.
Second—The evidence of violation of statute.
Third—The penalty and manner of enforcing same.

First—The killing of game is sufficiently prohibited by statute, except the killing of game during the spring season, and that question having many advocates, pro and con, we leave it to the best judgment of the Association, without recommendation. The killing of fish from Nov. 15 to April 15 should be prohibited, and at all times within four hundred (400) yards of any fishway. The killing of fish by gaff should be prohibited. The having in possession any seine, spear, or other unlawful device for the taking or killing of fish, except as hereinafter provided, should be made a misdemeanor. Dam owners should be required to place and "maintain" therein, instead of "place therein."

Second—The evidence. The Board of Fish Commissioners should be made the sole judge of the sufficiency of fishways, and dam owner be required to have their fishways inspected by the Board, and procure from the Board a certificate of inspection, under the corporate seal of the Board. Such certificate to be revocable whenever said dam owner shall fail to maintain such fishways to the satisfaction of the Board of Commissioners. A failure to obtain said certificate to be *prima facie* evidence of the violation of this Statute. The having in possession upon the shore of any river or lake in this State, of any seine, net, spear, gaff, or other unlawful instrument for the taking or killing of fish by any person, to be *prima facie* evidence of violation, etc.

Third—Enforcement and penalty. Give Board authority to appoint fish wardens with power to arrest without warrant. Board to have general supervision over the propagation, cultivation and preservation of game and fish. Board to inspect fishways and issue certificates of inspection; to revoke certificates upon failure of owner to maintain, and to enforce provisions of the law. Board to have control of the expenditure of all moneys appropriated for the propagation and preservation of game and fish. Board to report annually to governor, that report to be printed and distributed.

Remarks.—The suggestions above made may seem to you to take too wide a range, and require too voluminous amendments, or in common words, "be asking too much."

A careful examination of the game and fish laws of New York, Connecticut, Maine, Minnesota, Nebraska, Iowa and Wisconsin, impress upon us that our enlightened people are waking up to the necessity of calling a halt on the further depletion of our immense and admirable game and fish preserves, and that this great State can ill afford to be behind in this good work.

If properly presented, we have no doubt that our Legislature will give us the laws we require.

Without some sufficient law your efforts can only meet with partial and indifferent success, and afford unsatisfactory returns.

We advise the vigorous prosecution of the delinquent dam owners, and believe that they will soon come to terms, as there can be but one result.

In our work thus far, we have been assisted and aided in every way in his power by S. P. Bartlett, present Fish Commissioner, and, although hampered by want of authority, he has clearly proved that his heart is with us in the work. Respectfully submitted, GEO. E. COLE,

For the Directors of Fox River Fish and Game Association.

With the view of raising funds to meet the immediate demands, it was agreed to fix a life membership in the Association at $10. Before the meeting adjourned a sum of $130 was raised in this way. The annual dues were left unchanged. The meeting resolved to instruct the board of directors for the ensuing year to prepare a bill as much in conformity with the Wisconsin game laws as possible, and make all honorable efforts to have it passed by the present Legislature. It is known by sportsmen of this country that the Wisconsin game law is exceptionally strong, allowing no blind shooting beyond the cover, no sneakboxes, and no shipments of game out of State. We need such a law here. The question of spring shooting was left for further consideration and report. The Association is as active on game matters as in fish protection.

Mr. W. K. Reed, of the Hennepin Club, spoke at some length on the game laws, after which the following gentlemen were elected directors for the ensuing year: C. F. Hills, George E. Cole, John C. McCord, James G. Dwen, Henry L. Hertz, Clarence A. Knight, J. C. Burkett, J. W. Lyke, John Wilkinson and G. E. Hawthorne. Mr. Cole was tendered a hearty vote of thanks for his services during the past year.

The Hennepin Club is an Illinois River organization. It is swinging into line on this work. Mr. R. B. Organ, president of the Mak-saw-bas, a Kankakee River club, was also present. The Kankakee country is going to swing into line. The whole State is apt to follow. It is now only three days after the meeting of the Association, but already the brief daily despatches have attracted attention. This morning Mr. Hills, president of the Association, showed me a letter from an Illinois River club, which by permission is printed below, so that yet other clubs may see and follow the Sandwich Club in what will doubtless be a large membership contributed to the Association:

SANDWICH, Ill., Jan. 10.—*Mr. Chas. F. Hills, President Fox River Fish and Game Association, Chicago, Ill.:* DEAR SIR—I see that you are backing up the Fish Commission in right royal shape in the construction of fishways along the Fox River. I have been working at this single-handed for the last five years, but I could not get Mr. Bartlett to push matters.

The dam at Dayton has been the biggest curse on the line. They had a box trap placed there by the State—as it is a State dam—and called it a fishway simply to comply with the law; but I have offered $500 to any one who would truthfully swear that a fish ever passed through it over the dam.

There was a wooden-legged fellow who always sat below the dam during the fishing season, and caught the black bass for the markets in all the small towns. A good many game fish that can be caught below that dam are never heard of above it, simply because they cannot get over, and none breed.

I have just heard that a fishway had been constructed at Dayton. If so, I would like to inquire what sort of a fishway it is, whether constructed under the supervision of the fishway commissioners, or simply placed there by the canal commissioners to comply with the law. All these private or State fishways will bear a thorough inspection, as many will try to get along with a little expense, and put in a trap that has no utility for the free passage of fish.

It is very essential that a good and sufficient fishway be placed at Henry, Ill. I understand that a private fishway had been placed at Yorkville, Ill., but not in conformity with the law. Still it may be just as good. I think commissioners want to be backed up, and anything that the Sandwich Fishing Club can do to aid you, do not be afraid to call upon them.

There are a great many violations of the fishing laws along Fox River, such as seining at night, which has been in progress for two years, and the river nearly depopulated of that nice game fish the black bass. The red horse has nearly full possession of the river from Dayton to Aurora, simply because the others have been seined out, and there has been no free passage for the fish. Yours very truly, J. M. HUMMEL.

In reply to the above letter Mr. Hills wrote the following, which is worthy of careful perusal:

CHICAGO, Jan. 12.—*Mr. W. Hummel, Sandwich, Ill.:* MY DEAR SIR—In reply to your encouraging letter of the 10th inst. accept on behalf of the Fox River Fish and Game Association hearty thanks for your offers of assistance, as well as for the information furnished.

The Association is in the fight to stay, and in the contests with the owners of dams we have first selected the parties most belligerent. The Elgin Hydraulic Company at Elgin put in a fishway (the Rogers) without a contest. The owners of the dam at Algonquin put in one of the same kind afterward. Suit was brought against the owners of the dam at Carpenterville; twenty witnesses being sworn; defendants were fined $10.00 and appealed the case, making the assertion to the effect that they would carry the case to the Supreme Court. Assuming they will do so, they will find that, as the law provides, we can have them fined every fifteen days, and by the time the first case is reached on the appeal their legal expenses will be double the cost of the best fishway. We prefer to fight the hard-fighting dam owner. The stronger he is financially the greater the effect of our victory when won, as we are in this contest to win. Col. Bartlett is with us, and has given every assistance in his power.

The forthcoming issue of FOREST AND STREAM will have copy of the report of our directors as made to the Association at last meeting. When received I will send you a copy. Our annual

dues are $1, which also covers the membership fee. We of course want help financially. If you can organize a club of members, and send amounts of subscriptions with names and address to Mr. John Wilkinson, of Parkhurst & Wilkinson, No. 150 Kinzie street, Chicago, the membership tickets will be sent to subscribers. Have received material assistance in this way from Elgin.

Regarding the fishway in the dam belonging to the State at Dayton; it was put in this fall, and is claimed to be of such construction as to permit free passage. Will, however, write to Col. Bartlett for his report of it, and will write to you later.

Will be pleased to hear further from you at any time, and will take pleasure in reporting to you the work accomplished from time to time. Yours very truly, C. F. HILLS,
President Fox River Fish and Game Association.

It should be added that the remark in the Sandwich letter in regard to the inactivity of our Fish Commissioner, Mr. Bartlett, is innocently wrong. Mr. Bartlett has been unable to act from want of funds. This the Association have clearly recognized, as may be seen by references above.

The *Daily News* of this morning, under the heading of "Many New Laws Needed," has strong reference to the need of new game laws. The article shows seven counties to be a unit on the matter agitated by the Fox River Association The shooting and fishing clubs are falling into line. Let the politicians take note, and also fall into line. If they do not, they may see the day when they will wish they had.

CHICAGO, Ill., Jan. 10.—Mr. D. L. Barclay, president of the Waltonian Club at Fox Lake, started yesterday from his home at Elgin, Ill., for a trip to the Pacific coast country.

Fishing through the ice will soon begin on the inland lakes now, and there will be slaughter unmeasured of fish life till the ice breaks again. To-day cold weather has struck this place for the first time this winter, although it is not yet severe and may warm up again. Yesterday there was a melting snow; two days before that were rainy, and up to that time our weather here had been like that of a pleasant fall. It is almost unprecedented here. Should these fair days begin again the season will be most favorable for our game and will give the ice fishers at best only a limited chance for their butchery. E. HOUGH.

No. 175 MONROE STREET.

LANDLOCKED AND ATLANTIC SALMON

IN November last Commissioner E. M. Stilwell, of Maine, requested Mr. Robert Edes to send to the U. S. National Museum a pair of the large landlocked salmon which were at that time spawning in Sebago Lake, Maine, and he asked for information about the relationship existing between the landlocked and marine forms of the *Salmo salar*. This relationship has been a fertile source of interest and inquiry among anglers and fishculturists, and the fine specimens sent from Maine furnish an excellent opportunity to make a comparison between fresh individuals of the two races.

It may be as well to state by way of preface that students of fishes are united in their belief in the specific identity of the sea salmon and the landlocked salmon, or winninish. The differences between the two are limited to form and coloration, and in some waters, size of individuals. These are characters of little value, and may be observed in other species of the salmon family, both in a state of nature and under domestication. The landlocked salmon is equally well known in Europe, and especially in lakes of Scandinavia. It must be remembered that the colors have changed somewhat since the fish came out of Sebago Lake. Mr. Edes says: "The natural color of these fish when in good condition is about the same as the Penobscot sea salmon; in fact, it would be hard to distinguish one from the other by their color when taken in the months of May, June or July."

Early in November, 1887, Mr. E. G. Blackford sent to the National Museum a spent male salmon that was caught in a net along with striped bass at Port Monmouth, N. J. This was a remarkable fish, both on account of its condition and the unusual place of its capture—no salmon having been taken there before. The lower jaw had a slight cartilaginous tip, which could be received into a half-round cavity in the snout. The teeth in the middle of the roof of the mouth, in a long double series, were entirely imbedded in thickened skin. The sides were marked with moderately numerous black spots of irregular shape and with a larger number of vermilion spots. The bone covering the gills had two moderate sized black blotches, nearly round, and encircled by a narrow border of orange, besides two smaller spots similarly surrounded, and many blotches of orange brown. The cheeks had numerous spots of orange brown. The tail fin with many vermilion spots and streaks. There were several streaks of vermilion on the base of the large back fin, and five black blotches, all encircled by a narrow orange brown border.

The landlocked salmon received from Mr. Edes were taken in the height of the breeding season and were considered large fish in the museum, but Commissioner Stilwell states that larger ones were not uncommon, some even weighing 25 or 30lbs. The weight of the male was 17lbs., of the female 13. In the male the skin is everywhere thickened by an accumulation of adipose tissue; the scales are scarcely perceptible on this account. The fins are much swollen, particularly along their basal portions. The connecting membranes between the rays are so infiltrated with fatty tissue that it is almost impossible to count the rays without dissection. The tail when expanded is nearly truncate. The last ray of the large back fin is split into two parts, the posterior of which is a thickened adipose strip, much slenderer at the point than at the base. Strong teeth are present in the middle of the roof of the mouth in a single short series, but almost entirely concealed in the thickened tissues. The teeth in the front part of the upper jaw are in a band 1¼in. long; the first and third teeth of this band are enlarged and canine-like. Four teeth are on each side of the tongue. The teeth of the lower jaw are scarcely enlarged beyond their normal size when not breeding. The sides of the head bear many dark brown spots, which appear to have been to some extent surrounded by pinkish in life. The largest of these spots is nearly two-thirds as long as the eye. A few of the spots are nearly round, but most of them are irregular in outline. The sides of the body contain numerous brown spots, some of which have become confluent; none of them are as long as the eye, and most of them are very much smaller. These spots are most abundant in front of the large back fin, and do not extend far above or below the middle line of the body. The length of this male was 32⅝in.

The female was 30¾in. She was full of ripe eggs, which averaged about ⅛in. in diameter. The weight of the ovaries was 3lbs. 5oz. The left ovary was 15in., the right 12in. long. The number of eggs by actual count is 9,642. As in the male, the skin has been rubbed off both jaws, leaving the bone exposed. At the base of the breast fin there is a space denuded of skin nearly as long but not so wide as the eye. The upper edge of the pectoral is also bare. The ends of the rays of the tail fin are much worn and the skin is wanting. Small bare patches are present also at the front of the belly fin on each side. The jaws are not elongated as in the male, nor are the teeth increased in size. The teeth on the tongue are almost concealed in fatty tissue, but the other teeth are less deeply imbedded than in the male. Teeth in the middle of the roof of the mouth in an irregular patch nearly 1in. long, while the series at the sides of the roof of the mouth are 1¼in. long. The colors are less brilliant than in the male. The head contains fewer spots and these are almost concealed in the general dusky coloration. The body also is less profusely spotted, and there is an entire absence of the pinkish tinge of the male. The body spots, as a rule, have no intermixture of large ones. There are a few very small dark spots on the large back fin.

The male salmon in the breeding season of course has the jaws greatly prolonged, the upper jaw being nearly twice as long as in a female of equal size; but at other times the male is readily distinguished by the greater length of the upper jaw and of the breast fins, as well as by the much shorter distance between the vent and the tip of the extended belly fin; in the male above described this distance is 1¾in., in the female, notwithstanding its smaller size, it is 2⅜in.

We regret that the comparison here given is not complete, but if some one who has the opportunity will put on record similar data for the breeding sea salmon we shall have means of distinguishing the two forms if this is possible.

RUBBISH IN THE THAMES.

IN his report to the Board of Trade, by Mr. C. E. Fryer, Inspector of Fisheries, on the injury alleged to be caused to the fisheries by the deposit of rubbish in the estuary of the Thames, Mr. Fryer states that the house and street refuse barged away from London and deposited in the Thames, and especially the former, are causing great complaints among the fishermen, whose business is thereby affected. The fishermen hold that the fish are driven away or killed and their food destroyed by the rubbish; also that their nets are damaged by it. The trawlers are the principal sufferers. "In some places the accumulations are so solid that the nets get fast in them. In other cases the mouth of the net is choked so that the fish cannot enter, or it becomes so laden with heavy jagged articles that it chafes and tears itself to pieces along the bottom." Trawlsful of shrimp are often smashed by contact with foreign bodies, and nets full of fish are frequently rent and their contents lost. The dredgermen on the oyster beds of Whitstable and vicinity lose much time and labor by bringing up tin pots and crockery with or instead of their oysters. A more serious injury, however, is that threatened to the oyster beds themselves by the deposit of sediment thereon. The fisheries injuriously affected by this rubbish are valued at $750,000 a year.

Besides the injury to the fisheries the sanitary authorities of Sheerness and vicinity complain of the nuisance and possible danger to health, caused by the accumulation of decaying animal and vegetable refuse dumped from the barges.

Mr. Fryer does not find adequate means of remedying this evil by existing laws, but recommends certain legislation to promptly stop "a great and growing nuisance."

LAKE AND BROOK TROUT HYBRID.

SEVERAL hybrids between the lake trout and the brook trout were received at the Central Station of the U. S. Fish Commission in Washington, Jan. 3, 1889, from the Pennsylvania State Hatchery at Corry. At the same time and from the same source were obtained six large lake trout, six rainbow trout and six brook trout. These fish were secured through the request of Col. John Gay, of the U. S. Fish Commission. They furnish a beautiful illustration of the skill in rearing trout manifested by the superintendent of the Corry Station, Mr. William Buller.

The brook trout are gorgeously arrayed in their nuptial colors, and are as plump as good feeding and pure water can make them. The milky white margins of the lower fins are well contrasted with narrow pencilings of black, and the sides are aflame with warm vermilion. The olive green of the back is closely vermiculated with lighter markings, and the back fin is richly variegated with olive green and velvety black. The vermilion spots of the sides are absorbed in the general wealth of vivid color.

The rainbow trout are not yet at the summit of their beauty, but the crimson bands along the sides and head are beginning to give promise of brilliancy.

The lake trout are big, handsome fishes, although somewhat plain in their simple livery of gray and white.

The hybrids, however, are more attractive than any of the others, because of their known ancestry and their singular beauty. These trout are now five years old. They are the result of fertilizing lake trout eggs with the milt of the brook trout. The history of the experiments in hybridization is to be found in the report of the Pennsylvania Fish Commission for 1886.

The larger of the two hybrids is about 20in. long. It is apparently a male, as the lower jaw has an incipient cartilaginous tip. The end of the upper jaw extends behind the eye a distance nearly equal to the length of the snout. The scales are larger than in the brook trout and about as large as those of the lake trout. The tail fin is forked about as deeply as that of the lake trout. In shape the hybrid is similar to the lake trout, as also in the general pattern of coloration; but the very numerous spots on the sides are somewhat smaller, and pale lemon in color instead of whitish. The spots below the middle line of the sides have a center of orange. The fins on the breast, belly, behind the vent, and the lower lobe of the tail fin, have a broad white edge. The fins on the belly and behind the vent are pale vermilion orange. The outer half of the upper surface of the breast fins is dusky. There is a narrow black line limiting the white of the belly fins, and a similar trace bounds the white of the fin behind the vent. The ground color of the sides is greenish olive. The sides of the head have numerous spots of lemon yellow, some of them larger than the largest of those on the sides. The lips are yellowish flesh color. The eye is golden with a dusky border. The top of the head and back have some scattered vermiculations like those of the brook trout, but much less developed and not so plentiful. The tail fin and both fins of the back are spotted with lemon yellow like the sides.

The smaller of the two supposed males has the back slightly elevated as in old male brook trout, but its tail fin is forked and it has the large scales and peculiar coloration of its brother hybrid. As long as these beautiful fish live we cannot inquire very closely into their dentition and visceral anatomy, but we may be sure that something of interest will be discovered therein when these parts are available for study.

EXPERIENCE WITH THE STEEL ROD.

Editor Forest and Stream:

Last season I tried a Horton steel rod and formed some very decided opinions, pro and con, in regard to it, which may be of interest not only to many of your readers, but to the manufactures, who, I believe, invite criticism with a view to eventually making the rod perfect; a consummation to be earnestly hoped for, as the advantages of a satisfactory rod made of some kind of metal would far exceed those of one made of wood.

The advantages of the Horton rod are its greater strength and durability; its telescoping arrangement which obviates the use of ferrules and makes the rod as convenient to carry as if but one piece; the running of the line through the interior, thereby dispensing with the inconvenience of guides.

The defects of the rod, as appeared to me, are, first, its top-heaviness or want of proper balance; second, its stiffness or lack of necessary pliancy; third the greater friction of the line; fourth, rust; fifth, the inevitable wearing off of the protective coating by the rubbing of the surfaces in drawing the parts out into position for use; sixth, too short a space between the reel and where the line enters the rod, making it more difficult to draw the line from the reel.

As to the want of balance and flexibility, it may, no doubt, be remedied by gradually reducing the thickness of the metal from one end to the other of each piece. I found by a test that the stiffness of the rod was about twice that of a Henshall minnow rod, and for bait-fishing that is an unpleasant difference, while for fly-fishing it would not do at all.

The amount of line friction is, by a careful test which I made, just double that of the Henshall rod. This may not be objectionable in a fly-rod, but for bait-casting from the reel and some other methods, it is out of the question; and when the line becomes wet, as it must, the friction is increased to such an extent that the line can hardly be forced to render.

It is needless to talk of coating the rod with anything to prevent rust. Any coating—even nickle-plating—would soon be worn off; especially on the inside by the attrition of the line. The angler could be provided with something to replace the coating on the outside, but the inside would probably be beyond his reach. It is impossible to prevent rust by keeping the interior of the rod dry, because the line must make it wet.

In regard to the shortness of space between the reel and point at which the line enters the rod it may be merely an individual opinion arising from the use of other rods; but in any case it is an objection which is not without remedy.

My decided opinion is that for a bait-rod the telescoping system will have to be abandoned and ferrules and guides employed. Both ferrules and guides may be soldered on, or the ferrules may be put on with cement in the usual way and the guides may be ringed. Ringed guides to slide on and off might be used with the telescopic plans, but I do not think that it would be desirable. Even for the fly-rod I am inclined to think that it would be best to adopt the ferrule, notwithstanding the convenience of the present method. If best to adhere to the telescopic method, or indeed in any case, why would it not be better to make the rod of brass?

I present these views to the consideration of practical anglers, hoping that they are sufficiently interested in the success of a metallic rod to give their opinion of what I have said and also any ideas of their own.

SPLASHER.

"THE COMPLEAT ANGLER."

THE ONE HUNDREDTH EDITION OF WALTON AND COTTON.

THE scholarly angler, as well as the scholar who is not an angler, takes great delight in fine editions of Izaak Walton and his younger companion, Charles Cotton, who is sometimes called "the father of fly-fishing." A modest angling book published in London in 1653, which has been edited by many other anglers and been republished in Edinburgh, Philadelphia, Manchester, New York, Liverpool, Halifax, Hamburg and Boston, until in the past year it has reached its one hundredth edition, may truly be called a classic.

In the volumes now before us*, we have the most elegant reproduction of this famous work, edited by one of the most scholarly anglers of the day, in demi quarto on large paper, which has yet been issued. The edition is strictly limited to 500 copies, each of which bears the autograph signature of Mr. R. B. Marston, the editor. The volumes are in boards, with uncut edges, suitable for rebinding in such style as the owner may prefer, and the American copies are in the hands of Messrs. Dodd, Mead & Company, New York.

The plan of making the illustrations of scenes on the rivers Lea and Dove, where Walton chiefly fished, has been carried out, and they are gems, whether we consider the full-page photogravures or the smaller wood

*The Lea and Dove edition, being the 100th edition of The Compleat Angler or the Contemplative Man's Recreation, being a discourse of rivers, fish ponds, fish and fishing written by Izaak Walton, and instructions how to angle for a trout or grayling in a clear stream, by Chas. Cotton—edited and arranged by R. B. Marston, editor of the *Fishing Gazette*, honorary treasurer of the Fly-Fishers' Club etc., with fifty-four photogravures and about one hundred wood cuts—and containing a reprint of The Chronicle of the Compleat Angler, a Biographical Record of its various editions and imitations, by T. Westwood and T. Satchell. In two volumes. London: Sampson Low, Marston, Searle and Rivington, Limited. St. Dunstan's House, Fetter Lane, E. C. 1888.

cuts. The portrait of Walton, in the first volume, was taken direct from the painting by Huysman in the National Gallery, and that of Cotton, which prefaces the second volume, is from a painting by Sir Peter Lely, in the possession of Mrs. Evely Holden of Nuttal Temple. Many new facts concerning Walton's life are given, and the chronicle of the "Compleat Angler," by Westwood & Satchell, will greatly interest the student. Taking the work as a whole, it reflects great credit not only on the editor and the publishers, but on all who have had the smallest part in it. It is truly a superb edition of the great angling classic.

PROTECTION FOR THE DELAWARE.

LAST week President Ford, of the Pennsylvania Fish Commission, and President Blackford, of the N. Y. Commission, met to consider the question of protecting the fishes in the Delaware River and of having concurrent legislation in the different States which border on it. It was decided to prepare a new law for this purpose, and have it acted upon by the Legislatures of New York, Pennsylvania, New Jersey and Delaware.

Under the provisions of the proposed law no rock bass nor wall-eyed pike may be taken for two years. The season for black bass will be from June 1 to Jan. 1, and for the fish named no netting will be allowed. Shad may be taken in nets from Dec. 31 to June 15 of each year, and the size of the meshes of the nets will be uniform in each State. There is no doubt about the wisdom of having the same dates for open and close seasons on one lake or river, no matter how many States it may touch.

CAMPING ON THE STURGEON RIVER.—I have just returned from my annual hunting and fishing excursion, with the usual resolve to go back to the same grounds next year. For the last five years I have made one of a party whose camp has been pitched at the head of Sturgeon River, about twelve miles from Munising, Michigan; and although there may be happier hunting grounds, we prefer to stick to what we know to be good, rather than go wandering further at the risk of faring worse. There is good deer, bear, pheasant and wild duck shooting; and for fish, there are pike, pickerel, mascalonge and the gamy trout. We were a month in camp, and I scored ten deer to my bag, which I call a fair average: for in past years my score has fallen as low as one, and risen as high as twenty-five. The camp was always well supplied with pheasants—with as many, in fact, as we could eat, and there was no less abundance of fish; as a camping country, too, I do not know what could be more attractive than this country of small streams and lakes, and I should be glad to welcome brother sportsmen to pitch their camps within hail of us. There is a hotel at Munising kept by Hermann Fritz, who charges twenty-five cents a meal, and Julius Gogan, livery man, whirls us into camp in consideration of the sum of five dollars U. S. currency. The country people are courteous, and ready to sell potatoes, which appears to be the only crop grown, and for other supplies it is necessary to send to Point St. Ignace or Marquette. The railway company is very considerate, and its officers do their best to make travel on their line a pleasant feature of one's outing. We took our own boat, acted as guides for each other and avoided all unnecessary expenditure, and at the close of our month's trip there was no question about it that we had had our money's worth for our money.—B. A. HEDMAN, Dayton, Ohio.

CROPPIE—CRAPPIE—CROPPY—WHITE PERCH—SACRILÉE.—The "croppie" of Northern waters seems to be identical with the "white perch" of Mississippi, and the "sacrilée" of the Creoles in lower Louisana. It abounds in the still-water lakes of the Mississippi bottom as far south as the Gulf of Mexico. It attains a weight of about three pounds. It is dark green on the back, with silvery sides mottled with green. It is considered our best fresh water fish for the table, but exhibits no game qualities to the sportsman; for, though it takes the bait in a decided manner, and usually goes straight downward, it shows little resistance, but comes out very much like a dead chunk. This, with the black bass, constitutes our only game fish in the Mississippi delta, excepting the smaller varieties of bank perch.—COAHOMA. [The crappie of the lower Mississippi (*Pomoxys annularis*) is distinct from the Northern species (*P. sparoides*), differing from it in its banded sides and absence of reticulations on the fin behind the vent, as well as in the smaller number of spines in the back fin. The name sacrileé is probably equivalent to sac-a-lai, which is usually applied to this form. The white perch of the Mississippi delta we have supposed to be identical with the gaspergou (*Aplodinotus grunniens*) a fish related to the drum of Atlantic waters.]

LARGE STRIPED BASS FROM THE POTOMAC.—During the past week a number of extra large striped bass have been sent from the Potomac River to New York markets. One of these fish weighed 73lbs., and at least a dozen of them reached to 50lbs. and over, while 30 and 40 pounders which composed the majority, were of small account among the big fellows. Such fish come from the Potomac every year, in early January, and the biggest ones are always female which are full of eggs which would be laid next spring. What thoughts of struggle, from strike to gaff, the above weights will call up to our friends of the bassing clubs about Martha's Vineyard, and elsewhere.

A FLEXIBLE FERRULE FOR RODS.—We have recently seen a newly invented ferrule for fishing rods which is flexible and allows the bending of the ferrule with the rod. It is made in a spiral form and bends in all directions. How it will stand hard work only actual work will determine, but it appeared to act well on the rod which we saw. It is the invention of Thomas Kirker, of Belfast, Ireland, and if it proves to be a good thing no doubt some of our rod makers will introduce it. The ferrules now in use are dead points and if these new ones overcome this in a satisfactory manner they will prove to be useful.

COLUMBUS, O., Jan. 12.—At the annual election of the Olentangy Fishing Club, of Columbus, Ohio, the following officers were elected for the ensuing year: President, Sylvester Condon; Vice-President, Valentine Kiefer; Secretary-Treasurer, Albert C. Corrodi; Trustees, Bruce W. Beall, Ervin D. Case, Joseph Wiest. Sergeant at Arms, Peter Zigler.—W. H. ENGLISH, Cor. Sec'y.

MACKEREL IN NOVA SCOTIA IN DECEMBER.—A stop of mackerel was made at Devil's Island on December 29.

Fisheulture.

MENHADEN OIL AND GUANO ASSOCIATION.

AT the recent meeting of this association in New York city, thefollowing officers were elected: President, D. T. Church, Tiverton, R. I.; Vice-Presidents, Thomas F. Price, of New York, and L. E. B. Dennis, of Maryland; Secretary and Treasurer, Jasper Pryer, No. 156 Maiden Lane, New York; Executive Committee, A. J. Morse, of Maryland, Thomas F. Price, and George F. Tuthill, of New York.

The secretary gave the following statistics for the past two years:

	1887.	1888.
Number of fish caught	333,564,800	404,788,950
Gallons of oil	2,273,506	2,051,128
Tons of crude scrap	5,368	11,436
Tons of dried scrap	17,262	15,030
Gallons of oil on hand	694,500	288,640
Crude scrap on hand, (tons)	2,085	3,385
Dried scrap on hand, (tons)—		
In 30 factories	8,424	
In 24 factories		4,855
Sailing vessels	60	42
Steamers	50	43
Men employed	2,499	4,568

Mr. Pryer called attention to the difference shown above in the proportion of oil to fish in the different years, as proving that the fish of 1888 were not as fat as they should be. The question of restricting the season when the fish should be caught came up, and it was voted that: "It is the sense of this meeting that there should be no fishing before July 1." The object is to limit production, and a more stringent resolution for that purpose was adopted last year. Since 1882 there has been a marked decline in the menhaden oil business, owing partially, it is said, to oversupply. Within that time the number of factories in operation on Chesapeake Bay alone has fallen from 65 to 22, and from Maine to Maryland there are less than 50 in operation to-day, so far as they are represented in the Menhaden Oil and Guano Association. Last year the restriction voluntarily put upon the manufacture by the proprietors themselves raised the price of oil to 30 cents, and caused an increase in the price of ammonia scrap. The Maryland men, however, say that their harvest time is in May and June, and they refused to enter into any binding agreement.

There is an oil made from the grease in wool, which is imported into this country and is a rival of menhaden oil, and the association wants the present *ad valorem* duty on this changed to a specific duty, and have sent a delegation to Washington to lay the matter before the Senate Finance Committee.

A resolution was adopted strongly protesting against the law which excludes the purse nets from Raritan Bay, on the ground that it is a discrimination in favor of sportsmen.

STOCKING THE PASSAIC RIVER.

Editor Forest and Stream:

Your readers may be interested to know the success of planting fish in the Upper Passaic. In 1869 I placed thirty-five black bass in the river. Their progeny began to be seen three or four years later. Since then large numbers have been taken annually. They now extend for some thirty miles from the point—Stanley, Morris county—where they were placed. During the past year a very large number were taken with live bait and fly. The largest one reported weighed 5¼lbs. Two years ago I placed 500 mirror and leather carp in the river. At that time they were about two inches in length. Several were takan last year weighing over a pound, and large numbers of them have been seen. They will not only afford food for the black bass, but, without doubt, will furnish exceedingly good table fish for families dwelling along the river. In May, 1888, I received 5,000 rainbow and brown trout. They are placed in the river at the same point (Stanley). It is too soon as yet to learn the result, but as these fish will live in similar waters to those of the Passaic, I have no doubt but that a good per centage will give an account of themselves by and by.

Late in the fall of 1888 I received from Charles Gilchrist, of Port Hope (Ont.), a package of wild rice. This was planted in the Passaic with the confident expectation that future crops will be the means of bringing to a stream formerly noted for its abundance of wild ducks, these valuable game birds. That this is an unusual winter was illustrated by the fact of my plucking two dandelion blossoms on my lawn on New Year's Day, and the catching of a live grasshopper by my seven-year-old son Ray, who thought surely that spring time must have come with the dandelions and grasshopper, before he could have an opportunity of trying his toboggan on the new toboggan slide.

GEO. SHEPARD PAGE.

STANLEY, N. J., Jan. 11.

THE INDIANA COMMISSION.—Indiana has one Fish Commissioner, Mr. Enos B. Reed, who is also the editor of a weekly paper called *The People*, published at Indianapolis. In a late issue of that journal the following notice appeared, which speaks for itself: "The Fly Fishermen's Club the other night came to the conclusion that the present Fish Commissioner had not fulfilled his duties satisfactorily and resolved to recommend some one else for the position. The Fly Fishermen's Club is "a ass" and dont know what it is talking about, or what it wants, save its own delectation. It knows that the hands of the present Fish Commissioner have been tied for lack of means, there being no appropriation made by the last Legislature. It was also cowardly in the extreme to discuss that official's merits, he not present, and having been confined to his bed for the past eight weeks. These fellows are no fishermen—fishermen are true-hearted and generous men who do not malign their betters. The truth is, we suppose, one of the Flies wants to be Fish Commissioner and takes this method to secure the office, which was given to the present Fish Commissioner a second term without his solicitation. He has done all he could do to protect the fish, but not the Fly Fishermen, for whom he doesn't care the snap of his finger. '

ALASKAN COLLECTIONS OF THE U. S. FISH COMMISSION.—The natural history collections, made for the United States Fish Commission by the party on the steamer Albatross, off the coast of Washington Territory and northward to Alaska, are now in Washington, to be assorted and forwarded to the specialists, who will prepare reports upon them for the Commission. These objects are contained in about forty cases, and are made up in large part of marine fishes and invertebrates, among which will be many new and rare forms, as they include the results of the first exploration of the deep waters of the region.

COMMISSIONER EUGENE G. BLACKFORD, of the New York Fish Commission, has been "written up" in Japanese and pictured by a Japanese artist in the proceedings of the Hokusui Kyohwai, a fishcultural society of Japan.

WINTER WORK OF THE ALBATROSS.—The United States Fish Commission steamer Albatross is now at San Diego, California, from which place her winter explorations will be carried on, southward to the extremity of lower California and northward to San Francisco. Her duties will include the location and investigation of the fishing grounds, with particular reference to the depth of the water and the nature of its inhabitants. In the Gulf of California efforts will be made to determine the results of the frequent attempts to introduce the shad into the great rivers forming its northern tributaries. Lieut. Com. Z. L. Tanner is in command. The naturalists are Mr. C. H. Townsend and Prof. Charles H. Gilbert. Mr. Alexander is the fishery expert.

SHAD CULTURE IN THE WEST.—A lot of 1,000,000 young shad were deposited in the Jordan River, near the Utah and Nevada bridge, on June 1, 1887. Again on June 11, 1888, a car of the U. S Fish Commission carried 2,000,000 fry to Battle Creek station, on the Denver and Rio Grande Western, and they were placed in Utah Lake near this point. Several young shad, probably resulting from the plant of 1887, have been caught in the lake recently. One of them measuring 6in. in length and 1½in. deep, is now in the Commissioner's office. This example is remarkably deep-bodied and plump for a young shad, and promises well for the success of this interesting experiment.

SHAD IN JANUARY.—Roe shad are reported as being received in Richmond from Pamunky River. Nothing of the kind at this time of the year was ever heard of there before. At this date, Jan. 8, shad from Georgia and Florida are abundant in Washington markets and selling at 35c. to 50c. each. The supply is so great that street peddlers are helping to sell them; in short, there has been practically a glut of these fish, a state of things not before known at this season of the year.

BRANCH ALEWIVES FROM GEORGIA AND FLORIDA.—A small lot of branch alewives were received in Washington market Jan. 7, 1889, a much earlier arrival than usual. The fish season seems uncommonly advanced there, and some of the dealers think it is advancing year by year.

The Kennel.

FIXTURES.

DOG SHOWS.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club Utica, N. Y. James W. Dunlop, President.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 3 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 23 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6850.**

THE TROY DOG SHOW.

WE have received the premium list of the second annual dog show of the Rensselaer Kennel Club, to be held at the Bicycle Rink, Troy, N. Y., Feb. 26 to March 1. In the challenge classes there will be two prizes, $10 and medal. In the open classes for prominent breeds the prizes are $10, $5, and diploma with $5, medal and diploma for puppies. In a few of the less important breeds the prizes are $3, $4 and diploma. When only one class is provided for dogs and bitches the class will be divided by sex when five of each sex are entered. There will also be a class made for any breed not provided for when there are four entries. The club offer kennel prizes of $15 each for mastiffs, St. Bernards, bloodhounds, deerhounds, greyhounds, pointers, English setters, Irish setters, black and tan setters, collies, fox-terriers and pugs; also $10 each for best pair of field spaniels, cocker spaniels and bulldogs. In addition to these, friends of the club will give a large number of valuable specials. The judges so far as appointed are Miss A. H. Whitney, St. Bernards, Newfoundlands and pugs. John Davidson, English, Irish and black and tan setters, pointers and foxhounds. C. H. Mason the remaining classes except beagles, which will be judged by a member of the Beagle Club. Entries close Feb. 16. The address of the secretary is Alba M. Ide, Troy, N. Y.

BALTIMORE DOG SHOW.—Baltimore, Jan. 10.—*Editor Forest and Stream:* It is with regret that I relinquish the dates claimed by the Maryland Kennel Club. It was our intention to have our premium list a direct copy of that of the Westminster Kennel Club, both in amount and number of premiums, money being already deposited sufficient to cover the amount. Such a premium list would no doubt attract quite a number of entries, and there not being a building here at present adequate to the demands we thought it best to wait until next year, when our much-a-ked-of Exposition Building will be finished; then, with a mammoth hall, a premium list in the front row, and Baltimore hospitality, look out for a "corker."—W. STEWART DIFFENDERFFER, Secretary Maryland Kennel Club.

COURSING.

AS westward the star of empire takes it course, so eastward, though slowly, the glorious sport of coursing wends its way into public favor, and ere many years are gone it will become, as it is destined to be, one of the chief pastimes of our sport-loving brotherhood. A decade since, and coursing was quite an unknown quantity in this country, but now all over the new West, as well as beyond the Rockies, coursing clubs are springing up, and thousands now enjoy the glorious sight of the fleetest of all four-footed animals, in their wild and mad chase after the ever-turning, ever-dodging hare, wherein the staying powers and speed of pursuer and pursued are taxed to the very utmost.

To render a dog "fit" to run a hard and punishing course, three months of constant care and attention are absolutely necessary, and when at last he is ready for the slips, the perfection of form, exuberance of spirits, and elasticity of action more than repay for the weeks of rapid walking and arduous hand and leather rubbing. To those who have never been so fortunate as to witness a coursing meet, no power of pen can express its beauties. Mounted upon their horses the judges and stewards begin their duties, while at their sides, in the slips, strain and tug the eager greyhounds, held well in hand by their slipper, whose eye as quick and watchful as the greyhound's, is waiting the jump of the hare, when "loo! loo!" is heard to the right, and away over the field goes the hare, speeding for its very life, while a moment's run and sighting sees the greyhounds slipped after their quarry.

Now begins the race which makes the young courser quite beside himself with excitement, and the old courser feel his blood leap quickly through his veins, as he recalls like scenes of by-gone days. Trained down to simple perfection, rid of every ounce of superfluous flesh, with muscles hard and sinewy as plaited whip cords, these marvelous creatures, scarcely seeming to touch the ground, pursue the hare, till pressed too closely it turns sharply from its course, and on, and beyond her, they go, while the hare, with its new lease of life, flies over the field to find a safe retreat. The advantage gained by its turning has now to be overcome by the dogs, and they, as eager as ever and maddened by being baffled, begin anew the race. Again pressed, the hare turns, now is wrenched, turns again sharply, and as her twin pursuers dash past her, she makes one more grand effort of her life; but, alas! too late. The foremost hound, anticipating her turn, has quickly turned also, and ere her ears are well laid to her head, his jaws quickly open and close, and twixt his firmly-set, white strong teeth he holds his quarry—dead. When the hare is strong and sturdy, her chances of escape from the greyhounds are great, especially if the hounds be a bit slow. This was demonstrated in one of our late meets, where less than one-fifth of the hares were killed. The glorious uncertainty, too, of the sport adds to its interest, as many a dog and favorite leading up to the hare, having her well in hand, the laurels almost won, meets with a "cropper," and then—he is out of it altogether. Such an event was most graphically described by Mr. John Kidson, in his monograph on the greyhound, which appears in that masterly book, "Our Prize Dogs."

There is perhaps no sport afield, which is more invigorating, more manly, and where the game has so much chance for its life, as coursing the hare with the greyhound, for in it there is no mangling, no escape to die a lingering death, or be left helpless, to become the prey of hawk or owl. Death here is instantaneous, save in rare cases.

With us coursing is but in its very infancy, A few years hence, by judicious breeding, as well as by importing England's choicest stock, I see no earthly reason why in cleverness and speed of the dogs, we should not have as fine coursing as is on the plains of Altcar, or at Haydock, or Gosforth Parks. As in mating all the various breeds of dogs in this country, gross errors have been made, there is none in which it is more noticeable that in the greyhounds. It seems as if some believed any dog would do as a sire, or any bitch as a dam. There is perhaps no breed where so much depends upon the mating to insure good results as in greyhounds. Flat-ribbed bitches are bred to dogs with like defects; splay-footed, weak-pasterned, light-boned dogs are crossed with bitches of the same stamp, while straight stifles, bad loins, badly set on legs, are scarcely considered worth notice. The trouble with too many of our breeders is, that they do not know what the proper conformation of a greyhound should be, in order to enable him to run fast and well. Let them breed out of defects, not into them; and in all cases let the sire be both fast and clever. With the bitch, speed is not of so great importance, provided she comes of racing stock. Never breed to a dog without an authenticated pedigree, long and extended, (the longer the better) and let it be of the truest, stoutest blood obtainable. That "blood will tell" cannot be better illustrated than in following and examining the progeny of blooded stock.

Another stone against which so many of our coursers stumble, is their utter unwillingness to pay a decent price for either an imported dog or one of royal pedigree. They will never wink at $750 for a pointer or setter, $1,000 for a collie, $1,200 for a fox-terrier, or $1,500 for a St. Bernard; but say $250 for a six months' old greyhound pup, or $450 for a good public field performer, and you have scared them out of a year's growth. It is not to be expected that our coursers are yet educated to the high estimation of a noble greyhound, but as time goes on our enthusiasm will increase, and our dollars go abroad for the best that is to be had, regardless of price. There is scarcely any sport afield in which we do not beat the world, and coursing will soon be added to our list, already long.

Not long since I was given by one of our most successful coursers a graphic account of a recent importation, which was spoken of as a perfect wonder, very fast, very clever, marvelous at the turn, of great endurance, young (under two years), and as good looking as it was fast. Being somewhat surprised as well as pleased, I questioned my narrator and found it cost in England less than £60, or about $300 of our money. The owner, as well as the narrator, believe firmly, no doubt, that it is all that is claimed for it (and recent developments prove them to be about right compared with what dogs we have here), yet in company of really clever dogs, or veritable flyers, such an one would be literally and absolutely "nowhere." Coursers on the other side put no fancy price upon dogs with good records, or shows of remarkable turns of speed. They are sold for what they are worth, as are race horses, so a greyhound which can perform what the one above mentioned is said to be capable of, and in the best company, is worth not less than $500; for in one single stake it can win ten times as much as was paid for it by our countryman. Pick up a copy of the London *Field* or *Stock-Keeper*, containing an account of the auction sales, and you will find puppies of rare good stock, scarcely weaned, bringing more pounds sterling than we pay dollars. Take for instance Princess Dagmar, the Waterloo winner. At Aldrich's she brought at public auction £1,700, or about $8,500: and yet our recent importation is looked upon as a wonderful and veritable flyer, though it cost scarcely £60, Mr. T. T. C. Liste of Cock Robin and Charming May fame, offered at auction 16 saplings, 5 dogs and 3 brood bitches. He realized from the sale of the entire lot of 24 greyhounds $8,125, or an average of $338.50 for each one. When we are willing to pay a good price and get the highest bred stock obtainable, then, and not till then, will our dogs be able to pick up a really fast jack rabbit or hare within a reasonable distance.

In the early spring of last year I desired to import a youngster for the Great Bend meet. I accordingly wrote to England to an old friend and a very successful courser, asking price of a very promising sapling. He strongly advised me to buy a certain white bitch, scarcely above a year old, and one he believed would be all I desired. The price, however, I found to be £125, or about $610, which I considered too much of an investment, inasmuch as I would be only able to run her in one meet, Great Bend being so far away, and our not having coursing here in the near East. When we consider for a moment that the Waterloo purse is worth £500 to the winner, that £1,000 goes to the winner of some of the other meets, with betting, if you wish to indulge, running all the way from £1,000 to £50 against you, nominations up to £1,000 to £6 (as in Master McGrath's case), the price asked and paid for fast dogs and puppies out of winners is not out of reason at all.

Much has been said and written about the utter uselessness of a show greyhound for coursing purposes. While some of the reasons given are no doubt correct, in the main they are all wrong. A greyhound fit to win on the bench, in good company and under a competent judge, must have a good head, moderately wide between the ears, which should be small and of fine leather, well filled out before and below the eyes, jaws broad and evenly set, and filled with good, sound, strong teeth, eyes rather small, bright, clear and quick, the neck long and clean, arching in, as seen in the drake, shoulders well set on and sloping, showing perfect freedom of action, forelegs of good strong bone, set well on to the body as well as set into good feet, which should be thick through the pads, pasterns free from the slightest semblance of weakness, back and loin strong and broad, chest deep, with well-sprung ribs, to give the heart and lungs perfect freedom of action. The first thigh broad, and thick through, with cimeter-like stifles, and well let down hocks, tail long and rat-like, and there you have a greyhound fit to win on the bench, and in the field as well. The only differences that can possibly exist between a show greyhound and a field winner, or that can possibly militate against the latter's winning, are the two extremities. It is absolutely impossible for a dog to win a rasping course if defective in any of the cardinal points above named, and except in scoring of the head and tail, there is absolutely no difference 'twixt the show and field dogs. In order to obtain the required strength, tenacity of purpose, courage to run, and desire to kill, the bulldog is bred to the greyhound, and so it is that in future generations we find some dogs with strong coarse heads of the bull-terrier order. Two dogs coming before a competent judge, in all parts equal, save in head and tail, the prize will go to the dog that is truest to the type, and very properly. Some of the greatest dogs that ever went out of slips could not win on the show bench for this very reason, yet it does not follow that the winner, equal in all parts as to structural conformation to the defeated dogs, would not be able to run a great race, though never having been put to it. Dogs combining both field and show-bench qualities, in a high degree, are simply phenomenal. Memnon, runner-up for the Waterloo purse, winner also of Lindsay (Burton-on-Trent) Ellesmere stakes, and Anglesea cup, won also 56 first and champion prizes on the show bench. Camaradzo, "the King of the Whites," one of the greatest stud greyhounds that ever lived, won not only the Waterloo cup, but won first at Birmingham show. The great Honeymoon also beat a grand class of previous show winners in romping style. Charming May, another great flyer, was as beautiful of form as she was clever out of the slips; in fact, she has often been described as "a perfect dream." Captain Spencer's Sunbeam was another such, fit to win in any company on the bench, almost perfect in body, with a head exquisitely moulded and set on, while his tail was faultless, both in carriage and length. The great Cock Robin, too, was not only a wonderfully muscular dog, but remarkably handsome in all points. Though by some good judges he was considered a bit heavy-shouldered, neither his field performances nor his progeny have warranted the statement. King Death won the silver snuff-box for being the handsomest greyhound at the Coquetdale coursing meet, in a class of 120 dogs, and such another collection of grand ones has probably never been seen. At Islington, in 1862, there was a show open only for the winners of a thirty-two-dog stake. This brought together some of the very finest dogs in all England. The cup (£50) fell to the beautiful Scafoam, Mr. Kidson's clever Confederate making a rattling good fight for it; after these followed such notables as Sea Pink, Great Eastern, Gypsey Queen, Mazurka, Railroad, Rex, Rowden, Iceberg, Brightsteel, Buff Rose, all both as good to look at as they were fast. No further argument is necessary I believe to disprove the assertion that beauty of form coupled with speed is not found in greyhounds.

Many of our greyhound breeders have lost heart at their utter inability to breed either good-looking or fast dogs. The responsibility of all this is traceable, and should be placed where it belongs, viz., at the door of some of the "judges" and some of the sporting press. 'Twas not many years ago when a greyhound with a badly mended broken leg took premier honors at one of our leading shows, and that, too, when there were a couple in the same class that could beat her off her legs, even if her own were sound. Yet the decision was indorsed by some of the papers. Let me ask, of what earthly use is a greyhound, whose only forte is in running, when it has a broken leg? Again I call to mind an equally ridiculous decision. A certain dog was led before the judge. He carefully examined and handled it over, from head to tail, from foot to back, and then—gave it first prize. With all his examination he was unable to discover that three ribs were missing, having been broken by an accident and removed afterward by a surgical operation. This decision was also indorsed by the same papers. Which of these two named greyhounds was the less valuable? 'Twould be hard to tell.

I still remember the great flourish of trumpets that heralded the advent of a certain greyhound into the judges' ring. We all heard of him before he arrived, the wonder of his neighborhood, and by some persons pronounced to be the grandest specimen of his breed in America. He came, and went home, having gone down before a third-rater, and that, too, in one of the poorest classes ever shown. The dog died, and the kennel editor of one of the papers that presaged his victory (which was unachieved) wrote a beautiful obituary upon him, and condoled with greyhound breeders at their great loss at "his sudden taking off." For field or bench show purposes he was utterly useless, and for the stud—let us be charitable and draw the curtain.

When we know of such awards as I have already cited, when we see kennel editors indorsing such decisions, and extolling to the skies valueless dogs, the only marvel to me is that our greyhounds are as fine as they are. The judges and the kennel editors are veritable "blind leading the blind." These gentlemen must bear the entire responsibility of the want of improvement in an eminent degree in our greyhounds, as well as having discouraged many an enthusiastic breeder, through the influence of their remarkable decisions, as well as their indorsements and obituaries.

To these sensitive gentlemen sportsmen, whose tenderheartedness has prompted them to denounce coursing as brutal, as well as cruel, I would say a few words. Before condemning a sport of whose merits you are in all probability entirely unfamiliar, it would be well to look into your own favorite pastime. If your fancy goes for the plump quail you do not hesitate to load your cartridge with three drams of powder and drive after it with killing force an ounce of 400 or 500 leaden pellets. If one of this vast number hit and maim it, and it is unretrieved, it must die a lingering death or have its flesh torn from its bones by some bird or beast of prey. If, however, your fancy takes you to the salmon stream you fail to see any cruelty in "playing" your gamy fish for a half hour, with a light delicate rod and line, but slowly exhaust its vital forces, and finally drown it in its own element. In the case of the quail a snare would be a surer, easier death, while in that of the salmon a seine would answer better and save much time and enforced labor. Compare the three above named sports, and coursing with greyhounds will be found to be fully as sportsmanlike, fully as manly, and from a logical standpoint, far and away ahead.

H. W. HUNTINGTON.

NEW ENGLAND FOX HUNTING.

Editor Forest and Stream:

I have been very much interested in the letters on fox hunting; and I hope the skirmish will continue, as it shows up the ignorance of a certain class of individuals who would like to pose before the whole world as the only true and legitimate sportsmen. Some people do not seem to understand or appreciate the fact that this country of ours is not one vast smooth and unbroken plain, where a party of horseman can roam at will in any direction and not meet with any obstruction. Perhaps if "Tallyho" would just come up into New Hampshire and see where and under what conditions we usually hunt foxes, he would meet with a change of opinion. He would find that a man who would start out here on horseback to follow his hounds would show about as much wisdom as he who would start for the north pole clothed in a seersucker suit, with a pint pail of ice cream as provisions for the journey.

I do not wish to pose as an authority for the whole country on fox hunting, nor on any other sports, but I do claim some experience with reynard in this State, and that experience was begun quite a long time ago, when fox driving and flintlocks were in vogue. At that time there were hardly any hounds in the town where I was reared, but soon they became plenty enough; and again a few years later an enterprising business man and ardent sportsman became imbued to some extent with the English idea of letting the hounds attend to the killing while he would play the part of audience. Acting on that principle he bought a thoroughbred imported foxhound, warranted to kill or den any fox inside of one hour's time. Well, the new revelation came on time; he was a splendid specimen of his race, and his owner was very proud of him and invited several of our unbelievers to receive new light in fox hunting. The day was set, and a more perfect October morning for the chase I never saw, when five eager and unarmed hunters started for the hills. It was fully daylight when Prince jumped an old fox, and he took a straight course for the hills and set about his efforts to entertain his would-be company. After circling the hill a few times, he tried the same tactics with perfect success on numerous other hills until nearly night, when, miles from home, the hound was taken from the track. And a sad looking spectacle he was, not able to go faster than a man could walk; and it was many days before his voice was heard again among our hills.

Since then I have seen many good and fast hounds, but I never knew of a hound or hounds catching a sound fox. It has invariably been my experience that the fox triumphantly heads the procession; and I am confident that I speak only the truth when I say that "Tallyho" never saw hounds that could catch foxes in our New Hampshire hills, nor the horse that could follow them; and when he says that the fox has no chance he either does not know what he is writing about, or does not want to support his argument by admitting the truth. I feel safe in making the statement that not more than one in ten of the foxes started after Nov. 1 are captured by the hunter, or perhaps, just to please "Tallyho," I should say murdered, slaughtered or assassinated, whichever term seems most musical to his refined taste.

R. S. F.

LACONIA, New Hampshire.

Editor Forest and Stream:

It seems to me that it would have been more to the purpose and in better taste if "Tallyho" had told us why our Yankee fox hunting is unsportsmanlike, instead of reiterating the charge and venting his spleen in a fling, not at me alone, but at a large and very respectable class of men, who if not rich, are not lacking in the good qualities which go to the making of a real sportsman. Among these may be mentioned, a love of fair play, a kindness of heart that forbids the infliction of unnecessary cruelty, such woodcraft as is comprised in a knowledge of the habits of the object of pursuit, a love of nature, without which the fullest enjoyment of field sports is impossible and—if not the greatest of these, what is a most desirable virtue—a charity for the cherished pastimes of other good men. He who possesses these is likely to wag a civil tongue and wield a civil pen, and whether he be rich or poor, he is none the more nor less a sportsman or a gentleman.

I have no knowledge from personal observation of the manner in which fox hunting is conducted in Massachusetts, but I presume that it is essentially like fox hunting in Vermont, and that the hunter rarely lies in ambush, but guided by the music of the hounds and his knowledge of the country, must exercise his wits and legs to get to the best runway and get a shot.

The value of the fox's skin is a very inconsiderable matter with most Yankee fox hunters. Those who crave only that set traps and are hated and despised by the hunters whose sport they spoil, but we confess the crime of saving the skin when we have killed the fox. And so do sportsmen save the skins of deer and bear and the little carcasses of woodcock and snipe, but it is not for these alone that they go a hunting. As a precedent that must establish for some the respectability of turning to pecuniary account what one kills, it may be well to mention that English lords are not above marketing the game killed by themselves and their noble guests.

Again, I ask, why is New England fox hunting more unsportsmanlike than the hunting of the deer and hare with hound and gun, both of which are "time-honored sports throughout the Southern and Western States," and why is it more slaughter and butchery when more than half the foxes so hunted escape, than is the running into and tearing to pieces of the fox by the hounds?

Till we are better informed on these points we are indeed likely to hold to a sport that is healthful and exhilarating, though it entails but little expense but that of time and muscle, nor more danger than the average of field sports.

AWAHSOOSE.

FERRISBURGH, Vt.

Editor Forest and Stream:

I notice in your last issue another communication from "Tallyho." I am not a fox hunter, but, being at least half Yankee by breeding and sympathies, it stirs my blood to see the time-honored New England sport attacked so unfairly. If hunting foxes in the New England manner is to be condemned, all hunting of deer to the gun and also bird shooting with dogs are in the same boat, and must go under. I do not assail those who like to hunt in the manner preferred by "Tallyho," but am willing that they should exercise their right of choice as free American citizens. At the same time, hunting in that manner is not fox hunting at all, but simply riding after the hounds and watching them hunt the fox, and killing it, by the way, in an exceedingly cruel and revolting manner. Of course it gives fine riding exercise; the same end can be attained without the use of a fox at all, and frequently is, by certain persons, with the aid of the aniseed bag. Fox hunting to the gun and riding to hounds are two entirely different pursuits, between which there can be neither comparison nor rivalry.

But I fear that "Tallyho" is one of the company—alas,

all too numerous in this fair land of ours—that turns up its trousers here when it rains in London. I would dare risk one of Dunlap's "extra quality" that if fox hunting to the gun were practiced by the English "aristocracy" as bird hunting to the gun is, he would not look down upon it with such majestic scorn.

But stay, there is another possible explaination. "Tallyho" says he has participated in the "sport (?)," as he witheringly puts it. Perchance he is not much of a pedestrian, and the long tramps necessary in genuine fox hunting have wearied his limbs and irritated his spirit. If so, let us draw the mantle of charity over his uncalled-for and unjustifiable attack on one of the oldest and sportsmanlike of American pastimes. CONNECTICUT.

NEW YORK.

Editor Forest and Stream:

Six of us have joined ourselves together for the pleasure of fox hunting, and to help to protect game out of season, as well as song birds at all times. We have quite a number of dogs that we think are good workers. We think the fox is as gamy as anything the sportsman can find in the State. We should like to hear from any who love the sport and live in other States whether a fast or slow dog is the best, and large or small dogs to be preferred.

A little experience with dog and gun of some of our brothers in other States would be very pleasant to read some of the cold nights of the coming winter. FRANK.

BOSTON, Mass.

Editor Forest and Stream:

Will "Tallyho" tell us honestly whether he ever rode to the hounds? Some of us Yankee fox hunters have a suspicion that he really knows as little of that kind of hunting as his last communication shows that he does of the kind which he pretends to abhor. YANKEE.

RESPONSIBILITY FOR ENTRIES AT SHOWS.

Editor Forest and Stream:

"One of our journals published last week a letter from Mr. W. Wade, of Hulton, Pa., on some recent decisions of our Kennel Club, and especially on the disqualification of dogs, after winning, because they were not registered. He seems to think that show committees should verify registrations before they accept entries, but this is utterly impossible. Registrations already fill (more or less) some fifty bulky volumes, which belong, of course, to the Kennel Club, and are accessible only to its servants, through whom information as to such registration is to be obtained. A complete set of *Kennel Gazette* volumes would of course give similar information to any one who thought proper to search through them all. It is obvious that a show secretary receiving from five hundred to a thousand entries during a week or ten days, has no means of verifying the particulars contained in the forms. He is probably taxed to the utmost to get his entries classified in time for the printer. Many exhibitors are exceedingly careless about their entries, putting them off till the last moment, and then sending entry form to the show secretary, and registration form to the Kennel Club, by the same post. The show secretary squeezes in his late entries, and the catalogues are ready for sale when the show opens. Meantime half the 'late' registration forms are returned to the writers, with an indorsement to the effect that the name chosen is already registered and is not available for the dog in question. So a new one is selected and registered, but as that is not the one in the catalogue the dog is, of course, disqualified. Mr. Wade suggests that committees should be made to refund entry fees in such cases and that this would make them careful. As I have pointed out they are simply powerless in the matter. The odd thing is that exhibitors should be so careless, knowing, as they do, that they forfeit entry fees if the registration is not right."

The above is from the English correspondence of a Western paper of Jan. 5, and I could ask for no better illustration of the totally wrong view that show committees take of their duty to exhibitors than this gives; first I may say that I never proposed that committees should make an elaborate investigation of entries sent them, but as a majority of disqualifications are because of non-registration, I do insist that a committee has no moral right to accept an entry that does not state whether essentials to exhibiting are complied with; whether the dog is registered or not is none of their business as far as I can see, but it is their business to see whether the party making the entry says the animal is registered or not, and if they take an exhibitor's money when it is as plain as the nose on the secretary's face that the entry is totally void from fatal omission, what are they doing but simply swindling the exhibitor? If the exhibitor says the dog is registered when it is not, he is presumptively lying and should be disqualified for that. I know it is the case here that very, very many exhibitors are novices and shows would be in a nice fix if these very novices did not make their entries, yet they are loaded down with the maximum of exact responsibility and the committee is held to none! This is justice, sure enough! But just look at the closing part of the above extract; the Kennel Club makes very exact and positive requirements as to registration; to comply with these requirements takes a search so laborious that no show committee could be expected to make it, yet when an intending exhibitor sends in a registration, having no possible means of determining whether the name he gives will be accepted (on account of previous registration of the name stopping him), then he is to be diddled out of a prize won because he didn't know what nobody but the trained expert of the Kennel Club could know!

"Here is richness," and truly Squeers himself is the proper party to ladle it out. Of course no such construction could continue here, the fighting propensities of the average American "get him on his ear" instanter, and even the Plutocrat-worshipping A. K. C. could not face the music that would be raised. I really believe that the English Kennel Club is not swayed by favoritism (although the case of the greyhound Libanius has a very ancient smell), and do not believe for a minute that it will eat its own words to please a gentleman of wealth as the A. K. C. has done. But I am astonished at the fatuity of expecting novices to make entries at shows when the path is made so slippery for inexperienced feet to travel.

An exhibitor sends an entry late (as he has an undoubted right to do), complies with all the requirements, and yet because he didn't know what nobody knows until the club official makes a lengthy search through the records, he is "beat" out of any prize he may win. The commonest, simplest sense of justice shows that although the exhibitor may be required to choose another name, he should not be swindled out of his plain rights.

The thing the most to the credit of the A. K. C. that I know of is that it has never adhered to the doctrine sometimes pushed on them, that the exhibitor must be held to the strictest accountability for every error, but has, in this at least, generally taken the side of simple right, and although its arrogant and exclusiveness strongly tends to lead it to this point it is certain that the American dog public will never tolerate any such shines. W. WADE.

HULTON, Pa., San. 9.

CONNECTICUT STATE KENNEL CLUB.—Bridgeport, Conn., Jan. 14.—*Editor Forest and Stream:* The annual meeting of the Connecticut State Kennel Club will be held at the Atlantic Hotel, this city, on Tuesday evening, Feb. 22.—DR. JAS. E. HAIR, Sec.

THE ST. BERNARD CUPS.

Editor Forest and Stream:

The action of the governors of the St. Bernard Club in making dogs awarded vhc. in their respective classes eligible to compete for the club cups will no doubt commend itself alike to members having the best interests of the club at heart, exhibitors in general and all who admire this noble breed. That it will be an incentive to breeders goes without saying. Nor need there be any fear that the placing of such dogs on the eligible list will pave the way to inferior animals receiving the trophies. When it is taken into consideration that the prizes are offered for competition at our leading shows only, where the classes will be numerically large, comprising the best home bred dogs in conjunction with those which have already won their spurs on the other side of the water, it will be patent to the most casual observer that a specimen awarded a vhc. must necessarily be above the average.

I for one am willing to accord all due encouragement and praise to such of our breeders as have at no little outlay of labor and expense imported choice specimens of the breed, but the fact must not be lost sight of that it is the home-bred animal that needs most careful nursing. American lovers of the breed have accomplished something, but that we cannot as yet compete favorably with our English cousins need be no cause for chagrin, for comparatively speaking we form but a corporal's guard. An incentive is needed, and the St. Bernard Club bids fair to supply a long felt want.

The club is still in its infancy, and if the pole star of experience but guide our craft that we may avoid the shoals and quicksands that so often beset infant organizations, we may look forward to a sturdy and useful manhood. There are good men and true at the helm, and with the magic talisman fair play inscribed on its pennant, there is every reason to believe that the club will become in reality what its name implies, the St. Bernard Club of America.

JOHN KEEVAN.

BROOKLYN, N. Y.

Editor Forest and Stream:

It is with pleasure that I note in this week's issue of your paper the recent action of the Board of Governors of the St. Bernard Club. This is a move in the right direction, and will be appreciated by the American breeders generally. I have had communications from several in regard to the matter, and I know this last action will recommend itself to them. If the club will be true to its principles (to further the interests of "American-bred St. Bernards"), it will be a great success, and receive the support of large and small breeders. ESSEX.

ANDOVER, Mass.

SALISBURY'S PEDIGREE.

Editor Forest and Stream:

Mr. Mason's reference to the Dundee show of 1879 reminds me of a piece of evidence on the above subject that has much weight. The charge of the London correspondent was that while Mr. Carr owned Leo (afterward Salisbury) he uniformly said that the dog had no pedigree. Now, at Dundee in 1879, Salisbury was given his stud book pedigree, and competed against Mr. Taunton's Cardinal; Mr. Taunton certainly knew Mr. Carr, and must have known of any such declarations of Mr. Carr's as are alleged. The judges of mastiffs were Hugh Dalziel and, I think, Rawdon B. Lee; Dalziel held for Salisbury and the other judge for Cardinal, and a third judge was called in who gave it to Salisbury. Now, is it to be supposed that so close an award as this, requiring the calling in of a third judge, would pass unchallenged when the victor was entered and shown with a notoriously bogus pedigree? I believe that Mr. Taunton is not much of a "kicker," but would he, or any man, stand being beaten under such circumstances? Remember that it is alleged that it was common talk, known to everybody, that Carr, the breeder of the dog, always said he had no pedigree. Reconcile that with the inaction in the above case if you can.

I have done considerable investigation of suspicious pedigrees, and may claim that I started the investigation that demolished the stud book pedigree of Crown Prince (in spite of its indorsement by "The Official Stud Book of the American Kennel Club, Sir!"), and the more I learn on the matter, the more I am impressed with the necessity of abstaining from all personal charges until every crack and cranny has been explored. The disagreeableness of assuming that Tom Collins is the party guilty of something and finding out that Pete Jones is the real criminal is evident enough, but how is it if it be shown that not only are Collins and Jones innocent, but the mountain discovered is really a hole in the plain?

Parenthetically, how curious it is that the perversion of "Bonnie Dundee" should stick to the city of that name? The phrase is the burden of an old Scotch song, applied to the gallant John Graeme, of Claverhouse, Marquis of Dundee. I think it runs "We'll cock up our bonnets wi' bonnie Dundee." I am told that the city is one of the least attractive of Scotland's cities; how is this, "Porcupine?" W. WADE.

HULTON, Pa., Jan. 12.

INDIANA FIELD TRIALS.

Editor Forest and Stream:

I desire to announce that the Indiana Kennel Club will hold field trials this year, beginning Nov. 1 with the Members' Stake, to be followed Nov. 4 with the Derby for setters. Then the Derby for pointers. Entries close June 1; $5 forfeit, $15 to fill. Three moneys—50 per cent. to first, 30 per cent. to second and 20 per cent. to third. These stakes will be followed with the All-Age Setter Stake, then the All-Age Pointer Stake. Entries close Oct. 1; $10 forfeit and $15 to fill. Four moneys—40 per cent. to first, 30 per cent. to second, 20 per cent. to third and 10 per cent. to fourth.

The trials will wind up with the Champion Stake; $25 entrance; one money. Three to start. The sweepstakes plan will again be adhered to this year. An entirely new set of rules are now being framed, which, we are satisfied, will work a revolution in field trials.

P. T. MADISON, Secretary.

INDIANAPOLIS, Jan. 5.

THE CANADIAN KENNEL CLUB OF CANADA.

THIS association, which was inaugurated at the bench show in London in September last by the election of officers and in passing of certain resolutions, has at length issued from its seeming dormant state. But it has not been asleep, as its energetic secretary has been corresponding all over the Dominion to the prominent dog owners, and when it is considered the extent of ground to be covered from Halifax to Vancouver, it is no small undertaking.

A meeting of the executive committee was held Dec. 7, and the constitution and by-laws governing the club were submitted by the sub-committees appointed at the first meeting and passed with a few alterations. A circular was ordered to be mailed to each owner of dogs as far as possible, and a copy of the constitution and by-laws to be forwarded to the papers which take an interest in kennel matters.

A number of names of prominent dog owners, who had signified the desire to become members, were submitted to the Executive Committee and accepted.

The Secretary has opened a kennel register for the registration of pedigrees, which will be free to all members and we hope the new undertaking in the "doggy" interests of Canada will receive the hearty indorsement of all owners, breeders and exhibitors in the Great Dominion.

The names which stand at the head of it are a sufficient guarantee that it will be run on a proper basis. We understand that the club is in communication with the American Kennel Club, with the object of promoting a friendly and close intimacy between the two clubs. The necessary blanks for registering can be had by applying to the secretary, C. A. Stone, 421 Richmond street, London, Ont.

CONSTITUTION.

1. This club shall be known as the Canadian Kennel Club.

2. The object of the club shall be to promote the breeding of thoroughbred dogs in Canada, to protect the interests of owners as well as breeders, to formulate rules for the government of dog shows and competitions, and to recommend suitable judges for the same.

3. The officers of the club shall consist of honorary president, first vice-president, four vice-presidents, secretary, treasurer and an executive committee of eight members, to be elected at the annual meeting.

4. The annual meeting shall be held at such a time and place as shall be decided at the previous meeting. A special meeting shall be called at the request of ten members of the club, or may at any time be called by order of the Executive Committee.

5. Application for membership shall be proposed and seconded in writing to the secretary and passed by the executive committee; one black ball to suspend the election until the next meeting of the Executive Committee.

6. The executive committee shall have power to fill vacancies on the committee until the next annual meeting.

7. The annual dues to be $2, payable in advance.

8. No alteration can be made in the constitution or in the governing rules, as adopted by the club, except by a two-thirds majority of the vote cast at the annual meeting or special meeting of the club, and notice of any such proposed change must be given at the previous meeting.

9. The Executive Committee shall have full power, by a two-thirds vote, to suspend or expel any members, and the members so suspended or expelled shall have no claim against the club, or be allowed to enter into any competition held under the rules of this club. Such members shall have the rights of appeal to the club from the action of the Executive Committee at the annual meeting or at any special meeting, provided notice of appeal has been given.

BY-LAWS.

ARTICLE I.—*Duties of Officers.* Sec. 1. The President shall preside at all meetings of the Executive Committee, audit and approve all bills and shall order all meetings of the Executive Committee whenever in his judgment he may deem it necessary. He shall submit a report of the work done during the past year at the annual meeting.

Sec. 2 The first Vice-President shall perform all the duties of the President in his absence.

Sec. 3. The Secretary-Treasurer shall keep the minutes of each meeting of the Executive Committee and of the Club; conduct the correspondence, and have charge of, and be responsible for, all the books and papers of the Executive Committee. He shall collect and have charge of all moneys belonging to the Club, shall pay all bills when properly approved, and submit a report thereof to the Executive Committee at every meeting. He shall keep a book containing a list of the members in good standing.

ARTICLE II.—Sec. 1. The meetings of the Executive Committee shall be called by the Secretary at the request of three members of the Committee or by order of the President, and two weeks' notice of such meeting shall be given to every member of the Committee.

Sec. 2. At all meetings of the Executive Committee four members shall constitute a quorum.

ARTICLE III.—All bills shall be presented to the President, or First Vice-President when acting as President, and shall be audited by him; in case of approval, he shall affix his signature and date of approval. After such approval the Secretary-Treasurer shall pay said bills.

ARTICLE IV—*Order of Business.* 1. Roll call. 2. Reading of minutes. 3. Reports and communications. 4. Unfinished business. 5. New business. 6. Election of officers. 7. Adjournment.

ARTICLE V—*Amendments, etc.* These by-laws may be altered, amended or suspended at any meeting of the executive committee by a single majority vote, provided two weeks' notice shall have been given to every member of the executive committee of the proposed alteration, amendment or suspension. In the absence of such notice, a two-thirds vote of the members present shall be required.

Following is a list of the officers of the club: President, Richard Gibson, Delaware, Ont. Vice-Presidents: J. U. Gregory, Esq., Quebec; Thos. Johnson, Winnipeg; Samuel Coulson, Montreal; W. J. Jackson, Toronto. Executive Committee: C. M. Nelles, Brantford; Dr. J. S. Niven, London; Wm Hendrie, Hamilton; J. L. Campbell, Simcoe; W. W. Welles, Chatham; F. H. F. Mercer, Ottawa; W. H. Scully, Toronto; T. G. Davey, London; C. A. Stone, Sec., London; F. C. Wheeler, Treas., London. C. A. STONE.

OMAHA DOG SHOW.

BLAIR, Neb., Jan. 8.—*Editor Forest and Stream:* We have had a bench show in Omaha. It was held Jan. 1, 2 and 3. There were over 100 entries. The managers did everything they could to make it a success. The judging in the mastiff class was an outrage. Major, who took first, is a huge, ungainly, misshapen brute of the "yaller dog" color, hollow-backed and weak in loins, while Gerald, who took third, was a splendid animal, both as regards size, shape and color. He took second at the Indianapolis show, and was clearly entitled to first at Omaha. Sutton, who took second, was a fine dog, but a little under-sized. The Chesapeake Bay dogs were a curiosity to most of the visitors, as but few had ever seen any of that breed, and the reporter persisted in calling them Chesapeake spaniels. Inclosed is a list of the awards clipped from the Omaha *Daily Bee* of Jan. 3:

AWARDS.

MASTIFFS.—1st, Rev. Father Colaneri's Major; 2d, W. V. Morse's Sultan; 3d, W. H. Alexander's Gerald.

GREYHOUNDS.—1st, C. Koster's Clothesline; 2d, N. Brown's unnamed.

SETTERS.—1st, A. White's Rolla; 2d, G. Richardson's Laverack; 3d, J. Smith's Gordon.

POINTERS.—1st, J. Bingle's unnamed; 2d, J. Kerr's Rapp.

SPANIELS.—Equal 1st, W. Magner's Sport and W. Rutherford's Leo; 2d, J. Hoye's Shot; 3d, J. Rutherford's Daisy.

CHESAPEAKE BAY DOGS.—*Dogs:* 1st, E. Cook's Blucher: 2d, J. E. Merriman's Dan; 3d, G. Richardson's unnamed. *Bitches:* 1st, Dr. E. A. Palmer's Chesapeake; 2d, E. Cook's Kate.

BULL-TERRIERS.—1st, G. W. Bond's Fly; 2d, E. C. Miller's Nell; 3d, W. J. Turner's Betsy Baker.

FOX-TERRIERS.—1st, W. Wright's Rags; 2d and 3d, W. Mair's Omaha and Peggie.

PUGS.—1st and 2d, W. S. Helprey's Colonel and Topsey; 3d, J. S. Barnes's unnamed.

SKYE TERRIERS.—1st and 2d, T. Chalmer's Vic and Mac.

BLACK AND TAN TERRIERS.—1st, W. Turner's —; 2d, C. Carlson's —; 3d, A. Rose's —. HEMATITE.

BAY CITY DOG SHOW.—The Michigan State Poultry and Pet Stock Association will hold their first bench show of dogs in connection with their tenth annual exhibition at Bay City, Mich., Jan. 26 to 30. Thirty-three classes are provided, the prizes being 40 per cent., 24 per cent. and 16 per cent. of entrance money. In addition the association offers $25 for the largest number of entries, and gold lined silver cups, value $10, to best mastiff, rough-coated St. Bernard, smooth-coated St. Bernard, Newfoundland, Great Dane, Llewellyn setter dog and bitch, and black cocker spaniel. There will also be offered numerous special prizes for the different breeds. Mr. John Davidson will judge all classes. Entries close Jan. 20. The address of the superintendent is H. Cate, Bay City, Mich.

NEWBURGH DOG SHOW.—There will be a dog show in connection with the first annual exhibition of the Hudson River Poultry, Dog and Pet Stock Association, to be held at Newburgh, N. Y., Feb. 7 to 12. The prizes will be $4 and $2 in each class. Mr. H. C. Glover will be the judge. Entries close Jan. 20 and should be made to H. M. Waring, Newburgh, N. Y.

DOG TALK.

MR. J. E. GILL, of Franklin, Pa., has received from England the Prince Charles spaniels Bonnie Boy and Lady Maggie. Both are winners at the Aquarium shows.

One of the New York dailies puts it this way: "August Belmont, Jr., is the right man in the right place. Being the highest exponent of the art of rabbit coursing, as moderately conducted on the plains of Hempstead, he is thoroughly qualified to judge fox-terriers." !!

Mr. Andrew Laidlaw, of Woodstock, Ont., has disposed of his St. Bernards, and will hereafter in kennel matters confine his attention to cocker spaniels.

The Pacific Kennel Club has invited Mr. Wm. Graham, of Belfast, Ireland, to judge at their dog show, to be held at San Francisco, May 22 to 25.

Mr. W. Wade advises us that all dogs at the coming Pittsburgh show, owned by members of the National Dog Club, will receive his especial care.

Mme. Patti has a Chihuahua dog which weighs just 15¾oz.

If the current reports upon the subject are correct the office of dog show judge does not always go a begging; in fact, these reports more than intimate that the boot is on the other leg, and that show committees in more than one instance have been offered the services of experts at much lower prices than the usual rates. We do not learn, however, that any of the overtures have been accepted, the managers undoubtedly reasoning that cheap goods are not always the most serviceable, or perhaps they think that the reason these would-be judges lower the price is, that they have discovered that they did not know as much as they imagined they did and consequently have made the price to correspond.

RABBIT BAITING.—*Editor Forest and Stream:* In an interview with me, which was published in your paper some time since, in regard to rabbit baiting as practiced by the Hempstead, Long Island, Club, and which was claimed to be an English sport, I said, "Now you will often find that the lower classes indulged in this so-called sport, but there are very few gentlemen who would witness it; and ladies never attend." I find in an English paper of Dec. 28 the following: "English sportsmen will always be fond of *bona fide* coursing, in the open, on the animals' own ground, where they know where to turn and what to do; in short, where they can make a fight for life. In bagged hare and rabbit coursing there is no such fair play, therefore bagged hare and rabbit coursing is condemned here by all sportsmen, and only countenanced by betting men and a few fanciers who, knowing nothing of sport proper, ape a resemblance of it. There is no fair play in coursing bagged game, therefore there is no sport. There is no getting out of that." —*Shooting Times, Dec. 28.* "At the risk of incurring the displeasure of its upholders, we must earnestly demur to to this amusement being dignified by the term sport. To hunt the cunning fox at the risk of your own neck is sport; to hunt the wily hare with patience and endurance and knowledge of venery is sport; cocking is sport, for both parties fight and enjoy it; the rat-pit is sport even, by the side of rabbit coursing, for the rats can battle—aye, and fiercely, too—for their lives; but for two gasping terriers to chase a bewildered, trembling, unresisting rabbit, while the patrons stand idly by, may be a pastime, but it is not sport." —*Stock Keeper, Dec. 28.* Now from these English authorities surely this cruelty should not be stamped in this country as an English sport.—PESHALL.

NEW YORK DOG SHOW.—New York, Jan. 11.—*Editor Forest and Stream:* The managers of the Westminster Kennel Club show have decided to make a challenge class for Irish terriers with two prizes of $10 and $5, also to provide two classes, namely, a dog and bitch class for all breeds, where five of each sex are entered. A special prize of $25 cash has been offered by Mr. E. F. Gibson for the best black and tan terrier, provided that both classes fill. Mr. James Luckwell, of Toronto, will judge all sporting spaniels.—JAS. MORTIMER, Supt.

THE COLLIE CLUB STAKES.—Rahway, N. J., Jan. 14.—*Editor Forest and Stream:* The entries for the collie sweepstakes to be decided at the Philadelphia K. C. Show will positively close Feb. 9, instead of date as previously announced. Some misunderstanding seems to exist as to the term "confined to members" in the produce stake. The intention of the clause is competition confined to the *produce* of bitches owned by members of the club, and that any person owning one of said pups can compete.—J. D. SHOTWELL, Sec.

CHICAGO DOG SHOW.—Jan. 12.—*Editor Forest and Stream:* At a meeting of the board of directors of the Mascoutah Kennel Club, on Thursday evening, the premium list for our coming bench show was completed and adopted. The cash and medal prizes exceed $3,200. Numerous specials of medals and cash have also been offered.—JOHN L. LINCOLN, JR., Sec.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Jerseyman. By F. Truex, Red Bank, N. J., for black, white and tan beagle dog, whelped Sept. 2, 1888, by Bannerman (A.K.R. 1709) out of Blossom (A.K.R. 5711).

Blanche McGregor and Fannie Brown. By Oak Shade Kennels, Lee, Mass., for black, tan and white collie bitches, whelped Jan. 6, 1888, by Clipper (A.K.R. 2529) out of Nellie McGregor (Rex—Juno II.).

Almont. By Oak Shade Kennels, Lee, Mass., for sable and white collie dog, whelped Sept. 2, 1888, by Clipper (A.K.R. 2529) out of Della Glenlivat (A.K.R. 5407).

White Lily. By J. P. Cartwright, Augusta, Ga., for white pointer bitch, whelped Aug. 13, 1888, by Button H. (A.K.R. 4648) out of Rosa (A.K.R. 1446).

Wrinkle. By Warner & Hamilton, Canaan Four Corners, N. Y., for dark fawn pug bitch, whelped Aug. 7, 1888, by champion Cricket (A.K.R. 3230) out of Trinket (Dandy—Pansy Blossom, A.K.R. 5458).

Duke of Gordon. By Brookwood Kennels, Washington Heights, New York, for black and tan Gordon setter dog, whelped Nov. 10, 1888, by Phil (Hall's Chris—Black Daisy) out of champion Madge (Lock—champion Nell).

Nellie. By H. C. Bronsdon, Boston, Mass., for black cocker spaniel bitch, whelped May 12, 1888, by Newton Abbot Laddie (Newton Abbot Bunny—Newton Abbot Gipsy) out of Roxie (champion Obo II.—Jet).

Soso and Guy. By Woodstock Spaniel Kennels, Woodstock, Ont., for one dark and one light red cocker spaniel dogs, whelped Oct. 15, 15, 1888, by Robin out of Devon Beauty.

Laidlaw's Queen. By Woodstock Spaniel Kennels, Woodstock, Ont., for black cocker spaniel bitch, whelped July 4, 1888, by Master Shina (Young Obo—champion Shina) out of Laidlaw's Belle (Hornell Silk—Woodstock Flirt).

King Bee, Woodstock, Young Tippo, Woodstock Chloe and Woodstock Floss. By Woodstock Cocker Kennels, Woodstock, Ont., for black cocker spaniels, three dogs and two bitches, whelped Sept. 7, 1888, by Robin (Obo II.—Woodstock Dinah) out of Woodstock Nellie (Obo, Jr.—Laidlaw's Belle).

Woodstock Spaniel Kennels. By A. Laidlaw, Woodstock, Ont., for his kennels of cocker spaniels.

Pine Grove Kennels. By D. A. & J. F. Williams, Lynn, Mass., for their kennels of Gordon setters, pointers and beagles.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Blossom—Bannerman. H. S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (A.K.R. 5711) to A. C. Krueger's Bannerman (A.K.R. 1709), Jan. 10.

Miss T.—Tenor. J. S. Williams's (Lynn, Mass.) beagle bitch Miss T. (Kino—Lady J.) to his Tenor (A.K.R. 5536), Jan. 5.

Blanche McGregor—Prince Charlie. Oak Shade Kennels' (Lee, Mass.) collie bitch Blanche McGregor (Clipper—Nellie McGregor) to Jas. Watson's Prince Charlie (Sefton—Mavis).

Clio—Nebo of Nesseldown. E. Beard's (South Norwalk, Conn.) collie bitch Clio (Ben Nevis—Juno II.) to A. R. Kyle's Nebo of Nesseldown (Sefton—Mavis), Jan. 1.

Greenwood Juno—Scars' Monarch. Dr. W. A. Power's (Greenwood, Mass.) mastiff bitch Greenwood Juno (A.K.R. 6306) to E. B. Sears's Sears' Monarch (A.K.R. 6037), Jan. 2.

Greenwood Princess—Scars' Monarch. Dr. W. A. Power's (Greenwood, Mass.) mastiff bitch Greenwood Princess (A.K.R. 6798) to E. B. Sears's Sears' Monarch (A.K.R. 6037), Nov. 19.

Ashmont Suwanee—Edwy. C. A. Altmansperger's (Minden, Ia.) mastiff bitch Ashmont Suwanee (King of Ashmont—Reine) to Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands), Jan. 7.

Lillie—Boss. F. B. Zimmer's (Gloversville, N. Y.) mastiff bitch Lillie (A.K.R. 2981) to J. L. Winchell's Boss (A.K.R. 2218), Jan. 3.

Fleet—Duke of Vernon. A. W. Milligan's (Mt Vernon, N. Y.) pointer bitch Fleet to L. Gardner's Duke of Vernon (Glendale—Spotless), Jan. 9.

Velasco—Lysander. Senator McPherson's (Jersey City, N. J.) imported St. Bernard bitch Velasco to Erminie Kennels' Lysander (champion Valentine—Duchess of Leeds), Nov. 23.

Luce—Lysander. Welz & Zerweck's (Brooklyn, N. Y.) St. Bernard bitch Luce (Monk—Eugenie) to Erminie Kennels' Lysander (champion Valentine—Duchess of Leeds), Dec. 16.

Juno—Lysander. Mr. Cotting's (New York) St. Bernard bitch Juno (Og—Magog) to Erminie Kennels' Lysander (champion Valentine—Duchess of Leeds), Dec. 21.

Greta—Lysander. Erminie Kennels' (Mt. Vernon, N. Y.) St. Bernard bitch Greta (The Splugen—Mercy) to their Lysander (champion Valentine—Duchess of Leeds), Dec. 27.

Marchioness—Lysander. Erminie Kennels' (Mt. Vernon, N. Y.) St. Bernard bitch Marchioness (Hero—Alice) to their Lysander (champion Valentine—Duchess of Leeds), Jan. 12.

Nora—Ben Hill. I. N. Cochran's (Philadelphia, Pa.) English setter bitch Nora (Count Noble—Lit) to J. S. Hudson's Ben Hill (Druid—Ruby), Jan. 7.

Mona—Norwich. Chas. Sanders's (Dayton, O.) King Charles spaniel bitch Mona to his Norwich (Jumbo— ——), Jan. 7.

Young Baroness—Young Royal Diamond. J. W. Newman's (Melrose, Mass.) bull-terrier bitch Young Baroness to H. A. Harris's Young Royal Diamond (A.K.R. 6096), Jan. 11.

Lady—Bradford Harry. Fred Noble's (Pawtucket, R. I.) Yorkshire terrier bitch Lady (Banks's Royal—Lady) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Jan. 6.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Virginia. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Virginia (champion Lee—Dorsey's Venus), Dec. 11, five (three dogs), by their champion Bourne (Rambler—Honeymoon).

Spunkey. Ft. Stanwix Cocker Kennels' (Rome, N. Y.) cocker spaniel bitch Spunkey (A.K.R. 6572), Jan. 14, six (four dogs), by their champion Little Red Rover (Obo II.—Woodstock Dinah); two red.

Lady Dido. W. D. Reid's (Elmira, N. Y.) Yorkshire terrier bitch Lady Dido (Prince—Flora), Jan. 5, five (two dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jerseyman. Black, white and tan beagle dog, whelped Sept. 2, 1888, by champion Bannerman (A.K.R. 1709) out of Blossom (A.K.R. 5711), by Harry S. Gilbert, Millersburg, Pa., to F. Truex, Red Bank, N. J.

Bannerman (A.K.R. 1709)—Blossom (A.K.R. 5711) whelp. White and tan beagle bitch, whelped Sept. 2, 1888, by Harry S. Gilbert, Millersburg, Pa., to A. C. Krueger, Wrightsville, Pa.

Monarch II. Black and tan collie dog, whelped Nov. 20, 1888, by Royal Monarch out of Edith Bell, by A. R. Kyle, South Norwalk, Conn., to H. M. Jennings, same place.

Roderick of Nesseldown. Black, tan and white collie dog, whelped May 17, 1888, by Royal Monarch out of Heather Bell, by A. R. Kyle, South Norwalk, Conn., to R. L. Way, Hartford, Conn.

Ben Nevis—Daughter whelp. Sable and white collie dog, whelped Aug. 26, 1888, by Dr. H. M. Perry, Philadelphia, Pa., to Victor M. Haldeman, Milford, Del.

Peacock. Brindle greyhound dog, whelped March, 1886, pedigree unknown, by Mrs. Ida M. Simpson, St. Louis, Mo., to H. W. Windram, Boston, Mass.

Harner's Maude. Fawn mastiff bitch, whelped June 1, 1888, by Mission (A.K.R. 5912) out of Portia II. (A.K.R. 5512), by Jacob M. Harner, West Liberty, O., to Jas. Decker, North Robinson, O.

Guard. Fawn, black points, mastiff dog, whelped May, 1888, by Colonel Dix (A.K.R. 5982) out of Onyx, by F. B. Zimmer, Gloversville, N. Y., to John Reid, Sumter, S. C.

Wrinkle. Dark fawn pug bitch, whelped Aug. 7, 1888, by champion Cricket out of Trinket, by Warner & Hamilton, Canaan Four Corners, N. Y., to W. A. Washburn, Tivoli, N. Y.

Iowa Prince. Red Irish setter dog, whelped June 27, 1888, by Sarsfield out of Nino (A.K.R. 5226), by F. H. Perry, Des Moines, Ia., to F. A. Hubbard, Sandusky, O.

Don Pedro. Red Irish setter dog, whelped June 27, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to Nelson Royal, same place.

Hillis Nora. Red Irish setter bitch, whelped June 27, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to J. W. Hillis, same place.

Coomara. Red Irish setter dog, whelped June 27, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to J. R. Gleason, Kansas City, Mo.

Chicken King. Red Irish setter dog, whelped June 27, 1887, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to H. B. Leavens, Kansas City, Mo.

Buckeye. Red Irish setter dog, whelped June 27, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to John Sherman, same place.

Hawkeye. Red Irish setter dog, whelped June 27, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to J. L. Devine, same place.

O'Donovan Rossa. Red Irish setter dog, whelped June 27, 1888, by Sarsfield out of Nino, by F. H. Perry, Des Moines, Ia., to Michael Flynn, Jr., Bristol, R. I.

Nellie. Black cocker spaniel bitch, whelped May 12, 1888, by Newton Abbot Laddie out of Roxie, by F. J. Smith, Farmington, N. H., to H. C. Bronsdon, Boston, Mass.

Jubilee. White bull-terrier bitch, whelped June 26, 1886, by Bendigo out of Queen, by Howland Robbins, New York, to H. A. Harris, North Wilmington, Mass.

Sandycroft Viper. Wheaton Irish terrier bitch, whelped Aug. 23, 1888, by McFadden's Dennis out of Sandycroft Vim, by Victor M. Haldeman, Milford, Del., to Dr. H. M. Perry, Philadelphia, Pa.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

G. E. W., Taunton, Mass.—Ans. We would advise you to keep the dog separate from the others a little longer, say Feb. 1.

STATE OF CALIFORNIA,
Adjutant General's Office,
Sacramento, Nov. 27, 1888.

The United States Cartridge Co., Lowell, Mass.:

GENTLEMEN—It affords me pleasure to inform you that the fifty thousand rounds of ball cartridges recently purchased from you through Messrs. Chas. Sountag & Co., of San Francisco, were used in the annual target practice of the National Guard of this State. They gave perfect satisfaction, the powder was good, the balls of uniform weight, and the shells strong and suitable for reloading. The percentage made was higher than that made in the preceding year. Our most experienced officers have informed me that they were the best cartridges ever used here. Very respectfully, your obedient servant,

—*Adv.* (Signed) R. H. ORTON, Adjutant General.

Rifle and Tray Shooting.

RANGE AND GALLERY.

THE NEW YORK "TRIBUNE" MATCH.

IN October of last year the New York *Tribune* offered prizes for a general off-hand rifle shoot. It had a novel experience. There were 130 entries. Five men scored 47 out of a possible 50, five scored 49 and two scored 50, while one man who scored 49 fired one extra shot, striking the bullseye, and thus also making a record of ten consecutive bullseyes. At once there went up a shout of doubt, and since the date of shooting on Nov. 14 there has been a deluge of letters from other contestants, asserting their emphatic disbelief in the verity of the top scores.

There was particular doubt when three of the men tying on 49 shot off and each scored a perfect target of 50 points in 10 shots at a Creedmoor target off-hand. As each man shot in the presence of a witness, who vouched for the scores which were made, the scores were accepted, and the leading prizes were awarded to the three competitors in order by string measurement.

Scores of 10 consecutive bullseyes at 200yds., off hand, are not miraculous. They are, however, rare, and the circumstances of three men each asserting that he made such a score in a tie shoot, each man shooting at his own home, in the presence of local witnesses only, tended, the *Tribune* says, "to excite suspicion." To quiet all doubts, the *Tribune* challenged the three shooters to meet at Creedmoor, and shoot a friendly match for a special prize of $25 cash, the expenses of each competitor to and from the city being paid by the *Tribune*. Only one of the three men, John I. Bookhout, of Roxbury, N. Y., complied. The other two, S. E. Pool, of Irwin, Pa., and Clarence W. Ford, of East Franklin, Vt., after having accepted, made all sorts of difficulties and finally failed to appear.

Mr. Bookhout shot at Creedmoor on Saturday last with a Remington rifle, at 200yds., off-hand, in the presence of several witnesses, and gave ample proof of the possession of unusual skill in marksmanship. A trying 15-mile wind blew across the range from the right, veering suddenly and rapidly, repeatedly going nearly around to the opposite quarter. In spite of difficulties, Mr. Bookhout scored 47, made up of five bullseyes (three of them in the exact center) two "nippers," which scored as bullseyes, and three "centers." The air had been perfectly calm when he made his score of 50 in the original match; and his score of 47 in trying weather was virtually as good as a clean score when everything was in his favor. Later in the day he gave an exhibition of skill at 500yds., off-hand, missing the target only once.

As for the other two score makers the *Tribune* says: "S. E. Pool and C. W. Ford must now, reluctantly, be debarred from any further participation in *Tribune* matches, unless they shall first have shot at Creedmoor in the presence of representatives of the *Tribune* and given reasonable proof that their former scores were honest."

The *Tribune* offers prizes for another rifle competition, the particulars of which we will print next week.

BOSTON, Jan. 12.—The shooting was very lively at the range to-day, and a large crowd of shooters were on hand. The weather conditions were good, but high scores seemed to be hard to get. Following are the best scores made to-day:

Champion Medal Match.

J A Frye	7	8	9	9	5	5	5	9	7	8—72
H L Lee	9	7	4	4	10	6	9	9	8	6—72

F Martin	8	7	8	8	9	8	6	8	6	8—76

ST. LOUIS, Mo., Jan. 12.—Twelve members of the St. Louis Pistol Club turned out at the last weekly shoot to make an effort to become the possessor of the club's gold medal and eleven of course were disappointed. Fodde made the same score as he did last week and for a time it looked as though he would walk off with the honors again, but Bauer who shot nearly last man came to the front with a good 88 and took the medal. Several of the members that started out poorly are slowly but surely crawling up on the leaders. The shooting is all done at a 20yds. Standard American target, with a .22-cal. Stevens gallery pistol. The following are the scores:

W Bauer	9	10	8	8	10	9	6	10	9	9—88
F A Fodde	10	10	10	9	8	8	8	10	6	7—86
L V D Perret	6	10	9	7	9	7	10	8	10	7—83
W J Lard	7	8	7	8	8	10	10	10	7	7—83
E Mohrstadt	10	7	7	10	8	8	10	9	8	5—82
O Nehbaus	7	8	6	10	8	7	10	8	8	7—81
M Billmeyer	5	8	8	6	10	9	10	5	10	7—78
M Summerfield	7	9	10	7	7	6	7	10	7	7—77
W H. Hettel	5	6	7	5	9	9	7	6	7	8—66
A E Bengel	6	5	5	10	7	8	5	8	9	0—63
W Mackwitz	8	5	6	10	0	5	7	6	5	6—61
L Denning	8	6	10	4	5	0	7	6	6	6—58

UNSER FRITZ.

ORILLIA, Ont., Jan. 5.—The second championship rifle match between Orillia and Newton Brook was shot by telephone to-day, Orillia winning by 102 points. At Newton Brook the wind was very tricky and the light bad. Score:

Orillia.		Newton Brook.	
W W Wood	92	R McCague	78
R Strathern	84	G R Golding	78
C Fortier	78	W n Clarke	75
W Payne	77	J Smith	73
J D Fortier	77	George Irwin	70
G E Whiten	74	J Gelyeart	64
F J Delaney	74	J Steele	62
T Millichamp	72	T S Humberstone	60
C Woods	68	A Muckle	59
A Payne	62—758	John Morgan	37—656

LAWRENCE, Mass., Jan. 12.—Following are the scores made to-day in the regular shoot of the Lawrence Rifle Club, at 200yds.:

E F Richardson	9	10	9	10	7	8	9	8	9	9—88
C M Hill	7	8	10	10	6	9	9	6	9	10—84
W Fisher	8	8	7	9	8	8	8	9	9	6—80
M Beal	6	7	6	9	10	7	9	4	9	10—77
J M Bean	9	9	6	9	9	8	8	7	7	6—76
A J Hanscom	8	8	9	6	6	7	10	8	9	10—76
A A Philbrick	7	6	10	4	6	10	5	10	5	7—74
C W Reynolds	7	6	10	4	6	10	5	10	5	7—70

TOPEKA, Kansas.—On Jan. 1 four members of the Topeka Rifle Club went to the range and shot two scores each. Mr. Paine made his sixth full score, the score counting 91. On Jan. 3 the club held its regular weekly shoot, the scores were fair as the conditions were poor:

J L Paine	7	10	9	9	8	10	7	7	10	6—83
	8	9	10	10	10	9	10	8	8	9—91
C R Paine	6	9	7	6	8	9	7	8	6	10—76
	9	5	7	7	8	9	10	6	5	8—74
I R McCarter	7	9	9	6	7	9	7	10	5	5—74
	5	10	5	9	7	5	8	10	6	9—74
E W Sherman	6	8	7	7	8	9	6	6	6	9—73
	6	6	10	6	5	6	6	9	5	7—66

Weekly shoot, Jan. 8:

G E Morrison	10	10	8	6	6	9	10	8	10	10—87
	10	10	8	6	8	10	7	6	9	8—80
	8	5	7	9	8	10	9	9	7	8—80—247
J L Paine	7	10	10	10	7	6	7	9	9	7—82
	9	10	6	6	8	9	7	10	9	7—81
C R Paine	5	8	7	8	10	10	7	6	10	10—81—244
	8	5	5	6	6	8	8	6	8	10	9—74
	8	8	8	7	7	9	7	7	10	10	8—81—239
I R McCarter	6	7	6	9	7	7	4	6	10	7—67
	9	9	6	6	7	8	8	10	10	10—83
	6	5	6	6	9	9	9	5	4	8	7—68—218

SAN FRANCISCO, Jan. 6.—It was an off day at Shell Mound today, and outside of the marksmen who attend the first Sundays in every month, no others were present. The first shoot of the year was held by Company B, First Regiment. The following were the successful contestants: First class, Capt. Geo. R. Burdick. Second class, E. C. Lundquist. Third class, I. Bluxome, Jr. There has been a 60-shot match between Messrs. Ramm, Burdick and Lew Townsend, of Company B, but owing to the non-appearance of the former gentleman, the match was postponed indefinitely. As usual the old standbys, Captain Loughery and Corporal Pendleton, were present, competing with 50 shots. Capt. Loughery has advanced wonderfully in the last month, and he has made some very creditable records, but his top score of to-day surpasses anything that he has already made. Following are their scores, at 200yds.:

R J Loughery	5454444444—42	H L Pendleton	5545544445—44
	4455445445—44		5445555444—45
	5444535444—42		5444451454—43
	4443444445—39		4444454545—43
	4444445443—40—207		4455445445—44—219

Both of the above gentlemen shot with Springfield rifles, open sights, 6lb. pull of trigger, off-hand.

The Independent Rifles, Captain Schmalholz, opened the season with the following scores, 200yds.:

H Tonnemacher	4445444545—42	C S Woest	0404334443—29
E Peters	4447045544—38	H Fiege	5040240340—20
George Miller	3444334444—37		

Harbor View was crowded throughout the day by the members of the different German shooting clubs. Following are the top records made in each class in the three different clubs:

California Schutzen Club: Champion class, C. Hovey, 407 rings; first class, F. O. Young, 414 rings; second class, R. Finking, 391; third class, O. Burmeister, 380 rings; fourth class, John Straub, 355 rings.

Germania Schuetzen Club: Champion class, J. Utschig, 415 rings; first class, Geo. Helm, 411 rings; second class, Dr. Reihl, 380 rings. The first best center shot was made by B. Overmahle, 23 rings, and the last one was made by C. P. Hagerup, 23 rings.

Eintracht Schützen Club: Champion class, F. A. Kuhls, 380 rings; first class, C. P. Hagerup, 356 rings; second class, A. Wertnes, 323 rings; third class, Mr. Thule, 312 rings. Mr. Thule made the last best center shot, 23 rings.

All of the above clubs shot on a 25-ring target at 200yds, off-hand. By a vote of 31 to 25, at the monthly meeting, Friday, the California Schützen Club decided to maintain its present quarters at Harbor View Park. The contending votes were for Shell Mound.

FRANKFORD, Pa., Jan. 10.—Members of the Hartranft Rifle Club were at their range at Frankford to-day, with a 20-mile breeze as well. The shooting was very remarkable, especially that of Mr. Steinbeisen, who used a Wurfflein .22-cal. gallery rifle, with U. M. C. short cartridges, and no wind gauge, open sights, making scores of 48, 49 and 54, American standard target, 200yds., off-hand. The following scores were made by several members during the afternoon:

J J Mountjoy	7	8	7	10	9	8	7	10	9	6—81
E Travis	8	7	8	8	5	7	6	9	9	6—73
Jas Lardner (mil)	3	10	9	8	4	7	6	7	4	10+4—71
E Stees, Jr	9	6	7	9	4	9	6	4	4	8—66
L E Tobolt (mil)	6	5	2	7	8	6	10	8	7	8+4—66
J H Buehler	5	5	9	4	3	6	5	10	7	9—63
W Wurfflein	3	8	5	4	2	6	8	8	7	5—58
H Steinbeisen	5	5	3	5	3	3	6	8	10	6—54

Mr. C. Dailey, of Altoona, Pa., was on the range and used J. J. Mountjoy's Wurfflein rifle, making a very creditable score:

Dailey	5	8	7	9	5	9	8	7	7	9—74

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

KANSAS STATE BADGE SHOOT.

HUTCHINSON, Kas., Jan 4.—In the shoot for the State badge, between Smythe, of Wichita, and "Scott," of this place, the badge was won by Smythe in the following score at 100 birds, 50 single and 10 pairs bluerocks and 30 live birds:

	Singles.	Doubles.	Birds.	Total.
Smythe	43	11	25	79
"Scott"	43	15	19	77

At the end of the bluerocks "Scott" led, but fell down in his live birds, something he has never done before since he began shooting in the Hutchinson club. Up to the live birds all the Wichita men were betting against their own champion 2 to 1, but "Scott" could not go the pace on the live flyers. "Scott" refuses to have his name published for family reasons.

The Hutchinson Gun Club held their regular monthly shoot Thursday, Jan. 3, and your humble servant carried away the medal. George Young and "Scott" tied for the cup, George winning in the shoot-off. The boys were all shooting pretty well. The score: 15 singles, 5 pairs bluerocks:

Allen	111111111011111	11 11 11 11 10—23
Young	111111111101111	11 11 10 00 10—20
George	101111111011011	11 11 01 11 10—20
"Scott"	101111111110111	10 11 11 11 10—20
Burslem	111111000111111	11 10 11 10 10—19
Taylor	001 00101111111	10 00 11 11 11—17
Woodnutt	111110110101001	11 10 00 10 11—17
French	111110111011101	10 11 10 01 10—17
Chamberlain	010101111101110	11 00 01 10 10—14

Allen medal, George cup.

SHARP.

[The Hutchinson club is one of the few whose members shoot very evenly. It is nobody's odds who will win the medal or cup at their monthly shoots, and therefore the zest of the club never flags. Mr. Allen, who won the cup this month, is among the youngest, but most enthusiastic, members of the club. He shoots a Smith gun, just under 8lbs. The Mr. "Scott," who shot for the State medal, is of one of the best known families of Hutchinson. He is hardly more than 21 years of age, weighs over 200lbs., is quite as good-natured as he is fat, and has improved in his shooting about as rapidly as any one could.]

WELLINGTON, Mass., Jan. 12.—The opening contests for valuable prizes in merchandise, off-red by the Wellington Club, in the expert and amateur classes, brought out a large number of gunners to-day. The club also put up a solid silver pitcher for competition by the members of the club, which is to become the personal property of the man winning it three consecutive times, the match to be at 8 clay-pigeons and 7 bluerocks. In the merchandise match for experts, at 9 bluerocks and 3 pairs clay-pigeons, Perry was first with 12, and in the amateur contest, same conditions, Lang was first with 13. In the club match for the silver pitcher, Schaefer, Stanton, Sanborn and Snow tied with 13 each, and in the shoot-off Stanton won. The winners in the sweepstake matches were: 6 bluerocks, Schaefer and Melcher; 6 clay-pigeons, Stanton and Swift; 6 bluerocks, Lang; 6 clay-pigeons, Stanton; 6 bluerocks, Schaefer, Frank and Sanborn; 6 macombers, Sanborn, Allerton and Conant; 6 bluerocks, Sanborn; 6 bluerocks, Sanborn; 6 macombers, Field, Herrick, Bradstreet and Webster; 3 pairs clay-pigeons, merchandise match, Bond Frank and West; 9 bluerocks, merchandise match, Perry; 3 pairs clay-pigeons, Stanton and Lang; 5 clay-pigeons, Sanborn; 6 bluerocks, Nichols, Savage and Webster.

AVERAGE CLUB SCORES FOR SEASON.

NEWARK, Jan. 12.—*Editor Forest and Stream:* It has occurred to me, as it has no doubt to many of your readers, that gun clubs like individuals have their "days off," hence a published score of any event is not indicative of the relative standing of such club. What is needed in this line is a "genuine average" taken from a season's record, and any prize or event depended upon a single score of an individual or club must, it seems to me, be accepted by the winner with a deep sense of gratitude, as it may have been clearly attributable to matters beyond the control of his opponent. My attentions has been more forcibly called to this matter during the past year, as I have participated in monthly contests, and have not only witnessed, but experienced the "unaccountableness"—the contagious nature of which all shooters are more or less familiar with. My attention was also attracted by attending the annual meeting of the Essex Gun Club, of this city, recently, at which the shooting committee presented a statistical report of the doings of the club for the year past, and as a synopsis may be of some interest to your readers, I give it to you in a condensed form. This report says: Total number of members participating in shoots during the year, 33. Total number of scores shot, 127. Total number of birds shot at, 1,270. Total number of birds killed, 1,002. Average for the year, 78.89, divided among the classes as follows: Class A, 31yds., number of birds 480, killed 402, average 83.75. Class B, 28yds., number of birds 600, killed 467, average 77.83. Class C, 20yds., number of birds 190, killed 133, average 70.00. The above is a very fair showing, and speaks well for the members, as this club does not offer cash or other valuable considerations as an incentive to get the members out, and winners in the events must be satisfied with the honors and the sport. The winners last season were as follows: Class A, Breintuall and Burnett. Class B, Hedden, Nicholas, Unger and Freche. Class C, Tillou. The best score was made by Hedden with 67 out of 70 consecutive birds. FORD.

CANADIAN TRAP NOTES.

MONTREAL, Jan. 5.—The fourth shoot for the Greener came off to-day on the Montreal Club's grounds, Cote St. Antoine, Mr. H. W. Ferguson, of the Dominion Gun Club, illustrating his prowess by winning a lien on the gun. Lumsden, the Montreal's crack, losing the shoot off after tieing Ferguson. There was a puffy southwest wind, which at times blew a gale and made the score of 18 out of a possible 20 a remarkable one, Ferguson's total score being 23 out of 25 and Lumsden 22 out of 25. A sweep at 5 birds was then shot, Mr. Lucas, of the Lachine Gun Club refereed. Fourth shoot, "open" Greener gun, Jan. 5, at 20 birds. Mr. O. F. Botsford, M. G. C., scorer; R. Lucas, L. G. C., referee:

V Henrichson	11100100111111011100—14
R James	01111101011101010011—13
W Lumsden	11110111111111111011—18
A Alexander	10010110111010101000—10
M Parker	11111101111101111001—15
E Octave	11001110100001101110—12
Wolsey	01101110101011011001—12
C Aubin	01000111101111101101—13
W Ferguson	11110101011111111111—18
E A Cowley	00111010011100011101—12

Ties: Lumsden 4, Ferguson 5.

Winner of first match, C. Aubin; second, C. Aubin; third, W. Lumsden; fourth, W. Ferguson.

Sweep at 5 birds:

Alexander	11010—3	Wolsey	01001—2
Parker	11101—4	Cowley	11010—3
Lumsden	11111—5	James	11111—5

Lumsden and James divided first, Parker second.

OTTAWA, Jan 5.—On resuming work, after the autumn vacation, Mr. P. N. Thompson, president of the St. Hubert Gun Club, for the second time accepting the office, presented for club competition a magnificent silver cup, and laid down the scheme for carrying out the contest. He was particular on the point of handicap, requesting that it should be run on the same principle as that of the Montreal Gun Club, of Montreal. The executive committee of the club went carefully over the membership list of shots, and arranged that point in a most satisfactory way. The weather was not what a trap shot, especially with an eye on an elegantly designed silver cup, a perfect gun, and from the skilled hand in design of Mr. Chas. Addison, could have desired; a gusty east by south wind swept up over the range, and in the south dark threatening cloud banks rolled up, at times casting a peculiar hazy light over the earth, while at intervals old Sol would shoot a beam of his strongest rays through the dark bank, and thus making it almost impossible to get on to birds that crossed to the right. There are to be eight competitions at 20 birds each, the member making the highest aggregate in any five of the matches to be declared winner. Ties to be shot off at 20 birds and handicaps to hold same as in matches. The club has added three handsome prizes, so as to encourage the weaker shots. To make matters still more interesting, a sweep was added for the opening. Official score:

Geo. White	10011111110111111111—17
E King (4)	11101110001101101001—17
Dr A Martin	11011110101101011111—15
P Trudeau	11111111111101100000—15
S White (1)	11101001110100011111—15
D H Equis	00110111111101111011—15
Ed White	11001011110101111111—15
J Deslauriers	10111010101011111011—14
R G Dalton	10101011011111100—14
H H Troup	10111110111010010—14
W J Johnston	00111101101111110110—13
A Lett (3)	10000001001101000110—10

The figure inclosed parenthetically is the allowed handicap. Mr. O. Trudeau's score, and the old shot at the stool was in good form, gives a strong illustration of the uncertainty of the game, while that of Mr. E. King, who made a fair average, shows the effect of the handicaps. This match was at the Ligowskys, and that of the 12th will close out this stock. Then for the Peorias, and the Saints will then be on an equal footing with the other Canadian clubs.

NEWCASTLE, Jan. 10.—The two days' shooting tournament closed here to-day. The affair passed off very satisfactorily, everything being agreeable except the weather, which was, especially to-day, rather unfavorable for accurate shooting. However, the affair can be said to have been a success. All the visitors express themselves more than pleased with their treatment at the hands of their Newcastle brother marksmen. Mr. Varco was referee yesterday and Mr. Walton to-day. Both gentlemen did their duties to every one's satisfaction. There were twelve entries to the first sweep, $25 each, making a purse of $300. The two barrels were allowed and a three-minute boundary.

First sweep:

S Glover, Carleton Place, 29yds	11110011111111111111—19
D Beldam, Malvern, 28yds	11111101111111101111—19
J Bamfield, Niagara Falls, 28yds	11111110111111111111—19
J Wayper, Hespeler, 30yds	10111111111111111110—18
H Jackson, Toronto, 27yds	11111101011111001111—18
C Boomer, Newcastle, 27yds	01111111111111111110—17
D Blea, 28yds	10111111111110101111—17
J Brown, 28yds	11011111011111111110—17
G Black, 27yds	10111101010101111111—16
R Glover, 28yds	10111110110101101110—15

Shooting off ties, Glover first, Wayper second, Boomer third.

$10 handicap sweep:

D Blea, West Toronto, 29yds	11111111110	—	10
S Glover, Carleton Place, 29yds	10111111111	—	9
H Jackson, Toronto, 27yds	01111111111	—	9
R Glover, Carleton Place, 29yds	11011111111	—	9
Wm McDowell, Toronto, 27yds	11111110111	—	9
J Wayper, Hespeler, 30yds	11111111001	—	8
D Beldam, 28yds	10111111000	—	7
J Bell, 28yds	00011111111	—	7
G Black, 27yds	10101111110	—	7
C Boomer, 27yds	11101011000	—	6
F Bouverie, 29yds	10111100101	—	6

D. Blea first, on shoot-off S. Glover second, R. Glover third.

Blackbird sweep, two prizes, ties divided:

W McDowell	11101—4	C Wilmot	10110—3
J Wayper	10111—4	G. Margetts	01010—2
S Glover	11011—4	G Henry	01010—2

TORONTO, Jan. 12.—The 50-bird sweepstake at McDowall & Co.'s grounds on Saturday was witnessed by about 200 spectators, it being one of the largest sweeps ever held in this country. Although the scores were not very high, the competition was sharp and a good afternoon's sport was enjoyed. The conditions were: $5 entrance, 50 blackbirds from three traps at 18yds. rise. Purse divided into 5 prizes. Most of the contestants have entered for another sweep with same conditions for next Saturday. The score:

G Morley	38	W Heatherington	30
W Paul	33	P Wakefield	29
T Bennett	33	J Baker	28
W McDowall	32	J Winchmen	28
C Charles	31	J Mitchell	26
J Rice	31		

H. Best, referee; J. Felstead, scorer.

OTTAWA, Jan. 12.—The St. Hubert's Gun Club competition for the Thompson Cup is causing a great deal of attention, and the second competition, which was shot to-day, attracted a large number of onlookers. The day was all that could be desired, and the shooting first-rate. Thirteen put in an appearance for the cup, and four scores of 17 were the results. It looks as if the handicap will prove a success, and there is no saying who may win until the last bird is shot at. The club will in future shoot at Peorias. An opening was made to-day at 2 P. M. sharp, when Messrs. A. Jacques (the Old Man) and Maingy, the official scorers were on hand.

Sweepstakes at 9 Peorias each, 18yds. rise, 5 traps:

Dr Equis	111111111—9	G White	000111111—6
R G Dalton	111111111—9	G Trudeau	010111101—6
A Throop	111111111—9	E White	011101001—5
W Johnston	111111111—9	J Deslauriers	011110000—4
Dr A Martin	111011111—8	E King	101000011—4
W Lett	111101101—7		

Dr. Equis and R. G. Dalton divided the first money.

Thompson cup, 20 Ligowskys each, 18yds. rise, 5 traps:

Trudeau	11111011111011011111—17	Deslauriers	01111101001011111—14
Throop	11111 01101111111111—17	Johnson	01010110101111101011—12
G White	11011001111111111111—17	Martin	11110100010100111101—12
Lett	01100111010101110111—17	S White	10001010001111011111—10
Dalton	00111011011111111111—16	E White	00 0000111110101010— 9
King	01100110111011010010—13	W Lett	10101110001000001001— 8
Equis	11101100111111111010—15		

MONTREAL, Jan. 12.—The sixth shoot of the Montreal Gun Club for the Greener gun came off this afternoon. Only six shooters turned up. E. A. Cowley won the gun for the second time with a score of 19. Alexander second with 16. Two sweeps at 5 birds followed and were won by W. Mack and W. Lumsden.

BOSTON, Jan. 9.—The ample accommodations of the Walnut Hill range were taxed to the uttermost to-day by the crowd of trap-shooters in attendance at the first shotgun meeting of the year. It is seldom that a gathering of such strong shots is seen, and the scores below show how hotly each match was contested. The event of the day was the team match between the home club and two visiting teams from the Wellington Gun Club, which, after a close race, resulted in leaving the trophy in the hands of the Walnut Hill men. In the two individual matches the work was brilliant, and Mr. Swift's score of 15 straight birds in the competition for the State Association badge is worthy of special mention, while Mr. Wardwell's 38 out of 40 in the Climax badge match was wonderfully high, considering the conditions which prevailed. Among the contestants were representatives of all the leading gun clubs in New England, including Dr. Gerrish, of Exeter, N. H., and Messrs. Griffiths, Tinker and Houghton, of Providence. The summary of the twelve events on the programme follow:

First event, 6 standard targets—Dickey, Snow 6, Chase, Griffith 5, Stanton 4, Nichols 3.

Second event, 5 clay birds—Bates 5, Crown, Griffith, Perham, Perry 4, Dan, Snow, Wheeler 3, Savage, Swift 2.

Third event, 7 standard targets—Griffith, Piper, Snow, Wheeler 7, Charles, Stanton 6, Choate Field, Tinker, Schaefer 5, Hosmer, Willis 4.

Fourth event, 7 clay birds—Choate, Dann, Dickey, Griffith, Knowles 7, Charles, Houghton, Wheeler 6, Hosmer 5, Chase, Nichols 4.

Fourth event, competition for the individual badge of the State Association, 15 standard targets:

Swift	111111111111111—15	Knowles	101111111111111—14
Choate	111111101111111—14	Wheeler	111011111111111—14

In the optional sweepstake attached to this event the winners were: Choate, Knowles, Wheeler 14, Griffith 13, Dann, Dickey 12, Chase, Piper 11.

Sixth event, 10 clay birds—Choate 10, Dann, Dickey, Perham, Stanton 9, Nichols, Wheeler, Schaefer 8, Houghton, Tinker 7.

Seventh event, competition for Climax diamond bange, 20 clay birds and 20 standard targets:

	Clays.	Standards.
Wardwell	11111011111011111111—18	11111111111111111111—20—38
Knowles	11111111111011111111—19	11111111011101111111—18—37
Wheeler	11111111110111011111—18	11111111110110111111—18—36
Dann	11111111011111101111—18	11011111111111111111—18—36
Perry	11101111111111111110—19	11110011101111111110—16—35
Houghton	11101111101111111111—18	11011111111111101011—17—35
Stanton	11111111111101111111—19	11110111010111111100—15—34
Schaefer	11110110111111111111—18	11111101010001111111—16—34
Hosmer	01111111111111111111—19	00110101111111111011—15—34
Bates	11001101110111111101—15	11011111101111111111—18—33
Piper	11001111111111011111—17	11001011111011111110—15—32
Chase	10100111111111111111—19	00111111110111111111—17—32
Dickey	11110111110010111111—16	00111110111111111010—15—31
Griffith	11111111101111111111—19	11011110011001111001—12—31
Tinker	00111111011011110111—15	11101011111101111100—15—30
Perham	11111100111001111101—15	01111110011011011111—15—30
Charles	11101010110101011119—13	01110111010111111011—15—28
Nichols	11010101110110111161—14	11011110101100110—14—28

Eighth event, 20 clay birds—Knowles and Stanton 19, Dann, Schaefer and Wheeler 18, Piper 17, Dickey 16.

Ninth event, 20 standard targets—Wardwell 20, Dann, Bates, Knowles and Wheeler 18, Chase, Crown and Houghton 17, Perry and Schaefer 16.

Tenth event, 10 clay birds—Knowles and Wardwell 10, Piper, Stanton and Wheeler 9, Dickey and Swift 8, Schaefer 7.

Eleventh event—Competition for team badge of the State Association; teams of five; 10 clay birds per man.

Massachusetts Rifle Association Team.

Wheeler	1011111111—9	Stanton	1111110111—9
Swift	1110011111—8	Dickey	1110111611—8—44
Knowles	1111111111—10		

Wellington First Team.

Perry	1110111011—8	Sanborn	1111101010—7
Schaefer	1010111110—7	Wardwell	1111111111—10—41
Piper	1101111111—9		

Wellington Second Team.

Chase	0100011110—5	Dansereau	1110011111—8
Savage	1000011001—4	Snow	1110111101—8—21
Field	1011100101—6		

Twelfth event, 5 clay birds, Hurlingham rules, 30yds. rise—Knowles and Schaefer 4, Wardwell and Snow 3, Stanton 2, Piper 1.

The shotgun men will not take possession of the range again until Feb. 4, when the "Climax" badge will be shot for, and there will be a 100-bird match between O. R. Dickey, of Boston, and H. G. Wheeler of Marlboro.

CLAREMONT, Jersey City, Jan. 12.—The fine afternoon brought out a large number of shooters. Three Keystone traps were used for sweeps under Keystone rules, also three bluerock traps for practice. The following are principal scores; ties divided without shoot-off, except in second match, when ties on 5 shot off, Hammond 1, Collins and Mort 2 each and divided. The matches were at 10 birds, $1 entrance fee. First sweep:

Collins	0111110011—8	Lindsey	1111110010—7
Tee Kay	1111111111—10	Hammond	1 1101010011—7
Apgar	1111111001—8	Mort	1111001001—6

Second sweep:

Apgar	1110111111—9	Collins	1101010001—5
Tee Kay	1011111 110—8	Mort	0101000011—5
Lindsey	1101110111—8	Hammond	0111110100—5

Third sweep:

Lindsey	1111111111—10	Hammond	1110110111—8
Collins	1011111111— 9	Mort	1111100011—7
Apgar	1111111110— 9		

Fourth sweep:

Tee Kay	0111111111—9	Apgar	1111110110—8
Lindsey	1110111111—9	Mort	0101001011—5
Collins	0101111111—8	Hammond	0010100011—4

Fifth sweep:

Tee Kay	0111111111—9	Hammond	1100111110—6
Lindsey	1211111111—9	Mort	0110001101—4
Apgar	0111101111—8	Hathaway	1001100000—3
Collins	0111101110—7		

Sixth sweep:

Apgar	1111111110	Tee Kay	1101011110— 7
Hammond	1101111111— 9	Mort	1010101001— 5
Lindsey	0111011111— 8	Hathaway	1060
Collins	1101111101— 8		

Seventh sweep:

Lindsey	1111111111—10	Apgar	1110110101— 7
Collins	1111111011— 9	Mort	0110011010— 5
Tee Kay	1110111110— 8		

The entrance to grounds is being enlarged and greatly improved. All shooters are cordially invited to attend on Saturday afternoons. There is no charge, excepting for targets used for practice or sweeps. These grounds are open every afternoon, but notice sent to the office at 291 Broadway, New York, in advance will secure as many trappers as may be needed.—A. V. CAMFIELD, Supt.

ELIZABETH GUN CLUB.—The Elizabeth, N. J., Gun Club have elected the following officers for 1889: President, Robt. E. Chetwood, Vice-President, Robert W. Williams, Secretary and Treasurer, Wm. M. Parker, Scorer, John W. Fulton,

CLEVELAND, Jan. 10.—The second of the series of Chamberlin prize contests was held in conjunction with the Cleveland badge shoot on the grounds of the latter this afternoon. Eleven new competitors appeared on the list notwithstanding the unfavorable weather conditions, and the sport was fully enjoyable. The shooters left doubtful exhibitions of skill to the referee, abandoned their usual places along the railing, and hovered around the club house radiator. Consequently some delay was occasioned through the tardy appearance of some of the sportsmen at the score. No remarkable scores were made, F. H. Wall and H. Phare being the only shooters who shattered more than twenty birds. According to the conditions under which the prizes were offered, the shoot was conducted under the rules of the club upon whose grounds the contest was held, 25 single bluerocks per man. Three traps were used. Messrs. H. Phare and T. J. Maggo, members of the East End Gun Club, led the contestants, their total scores being 45 and 43. The Clevelands came in for third place, F. H. Wall scoring 43 in the two contests, while C. E. Calhoon is fourth with 42 birds to his credit. The results of the ten monthly contests which follow, may, of course, alter the relative standings of the leaders, and it is possible for some others to shoot up into the leading places, since the conditions require no one to take part in more than six shoots during the year. A number of good shooters have not entered into the competition yet, and many of those now credited with poor scores may yet get to the front, the rules permitting them to take part in more than six contests. The next shoot will be held on the Kirtland grounds in February.

Cleveland Gun Club Grounds, Jan. 10.—Chamberlin prize shoot, 25 bluerock pigeons, 3 traps, 18yds. rise, prize $100, divided into seven moneys:

T O Jones	0110111011110010111000110—16

W Bell	0001011111111111111101111—20

The Clevelands held their semi-monthly shoot at the same time, the members taking their scores in the prize competition as their club records also. The members are L. O. Jones, D. F. Silsby, D. A. Upson, F. H. Wall, C. E. Calhoon, F. A. Tamblyn, W. H. Tamblyn, W. A. Bassett, W. Roberts, D. K. Bishop and P. Sherman. The scores award the class A badge to F. H. Wall and class B to W. A. Bassett.

WORCESTER, Mass, Jan. 10.—The Worcester Sportsmen's Club have began a series of prize shoots; first there are four events of six birds each, all who break 17 out of a possible 24 are Class A, the remainder Class B, in the prize score there is a possible ten, the ties are shot from open traps. The result of this week's meet follows:

Class A.	Classif'n.	Prize.		Classif'n.	Prize.
M D Gilman	5556—21	8	M A Linfield	6544—19	6
A R Bowdish	5660—23	7	G W Russell	3365—17	6

Third div.

HARRISBURG, Pa., Jan. 10.—The regular monthly shoot at live birds for the gold club medal came off to-day at the Harrisburg Driving Park, and was won by Mr. Jacob Whiteman by a clean score. The conditions were 12 live birds each, 21yds., old Long Island rules. The shooting was done in a perfect gale of wind, which blew from the score straight over the traps and made the majority of the birds go driving before it when once on the wing, and therefore makes the score good for amateurs:

Brensinger	101110111110— 9	A U Zarger	111100900111— 7

DOYLESTOWN, Pa.—The annual meeting of the Doyleston Gun Club was held on Monday, Jan. 7, on the Doyleston Exhibition Grounds. A match to shoot at 25 clay-pigeons each was arranged between members of the club, Capt. Sames Kane managing one team, and Capt. John M. Purdey looking after the interests of the other, Kane's team winning by a score of 55 to 40:

Capt. James Kane's Team.

James Kane	0011011111111100—10
Edward S Stackhouse	0110001000011111— 7
Wm H Hargrave	0000101010110011— 7

Thos Fries	0000101101011110— 7
L Clemens	1090001000011111— 6—40

Judges, Henry C. Bende, Edward M. Yerkes. Scorer, Frank Roma. In the evening the business meeting and banquet was held. The following officers were elected to serve one year: President, ex-Sheriff John M. Purdy; Vice-President, A. F. Weise; Secretary, Lewis Clemens, Esq.; Assistant Secretary, C. H. Heist; Treasurer, James Kane; Field Captain, Edward S. Stackhouse; Assistant Field Captain, Wm. H. Hargrave; Official Scorer, H. C. Bendere.

ZIONSVILLE, Pa., Jan. 12.—The match between L. W. Mazurie of Dillingersville, and Al. Heil, of Zionsville, was shot off this afternoon before a large crowd; conditions 100 clay birds, 3 screened traps, National rules, for $100 a side:

L W Mazurie	1111111111011111011111111—23
	1111111011111111111011111—22
	1111111111111111011111010—21
	1111110111111101111001111—22—88
Al Heil	1101111011111111101011011—20
	1111111101111101111101111—22
	1011111111111111101101010—20
	0111101111101111011111111—21—83

L. Mazurie used a 10-gauge, 8¾lbs. Lefever hammerless, U. S. shell, 4drs. American wood powder, and 1⅛oz. No. 8 chilled shot. Heil used a 10-gauge 10lbs. Remington, rival shells, 5drs. FFG deadshot powder and 1¼oz. No. 7 chilled shot. After the match Heil challenged Mazurie to shoot another match under same conditions, and let Mazurie choose the grounds, which he did, he choosing the Lehigh Gun Club grounds, in Allentown, Pa., where he shoots a match with an unknown shortly. The date for the next match has not been agreed upon as yet.—UNSER JACOB.

MILLER VS. JOHNSON.—Springfield, N. J., Jan. 12.—E. D. Miller and C. H. Johnson, Jr., shot a match on the Union Gun Club grounds here, this afternoon at 100 Keystone targets, 18yds., for the Atlantic Ammunition Co.'s diamond trophy held by Miller; and the result showed that Miller still holds the first mortgage on it, and is likely to; but he will not have a chance to foreclose on it until next September, and between now and then he is liable to have to defend it many times. As regards the race shot to-day, it was very exciting from start to finish, Miller only leading by one bird at the end. The day was all that could be desired and some of the contestants' friends showed up early and stayed to the finish, and were well satisfied with the sport witnessed. The Keystone traps worked splendidly, but the birds were thrown very low so that it was almost impossible to see them until they had got nearly out of range, particularly the left-quarterer which was the most missed; 86 of such birds are fully up to 98 bluerocks, I think all judges would say. Miller shot his old Parker, but that seemed to get there all the same. Johnson stuck by his Smith hammerless, and after he got on to them did good work. Both contestants used chewing gum. Ben Pudney referee; J. M. Roll scorer. Following is the score:

E D Miller	1111101110111111111110011101011111111011011111110
	1111111111111111111111111111111111111111111111100—86
C H Johnson	0000111110111101011111011111111111011110011111011
	1111111111111111111111011111111111111111111111111—85

12-BORE.

FRENCHTOWN, N. J., Jan. 10.—*Editor Forest and Stream:* It is seldom that the writer of these notes has had an opportunity to attend a more enjoyable shoot than that which was given him by mine host, W. C. Apgar, of the National Hotel, at Frenchtown, N. J., on Jan. 10. The programme was an all-day sweepstake and brought out a large delegation of shooters from all parts of the State. In company with Charlie Van Camp, Tony Kuser, Fox and Williams, I left Trenton and arrived at Frenchtown about 10:30 A. M. We found the boys getting ready to shoot a sweepstake under Long Island rules, after shooting which we adjourned to the hotel and partook of a bountiful dinner, provided by the genial landlord Apgar. At dinner a vote was taken, and it was decided to shoot the balance of the day under modified Hurlingham rules, which proved satisfactory to all. The traps were removed to a large open field on top of a hill, and as there was a good stiff breeze blowing and the birds were a strong lot, it made rather difficult shooting. I was surprised at the large number of L. C. Smith guns in use here. Appended are the scores, the miss and out was finished in the dark:

Sweep at 2 live birds, $2 entrance, 25yds. rise, 50yds. bound, Long Island rules, 2 prizes: W. F. Quimby 2, Holcomb 2, Allschouse 1, J. O'Neil 0, Hand 1, Cooper 0, Givens 2, Bloom 1, Kilner 1, W. C. Apgar 1, Fox 0, Miles Johnson 2, Tee Kay 2, D. Holcomb 1, Williams 1, Holt 2, Eilenberger 1, Chas. VanCamp 1, Fink 1, Bonnell 1, Smith 1, Robinson 2, Case 0, Rupel 0. First divided on shoot-off at 2 birds each, 30yds. rise, by Johnson and Holt, second won by Van Camp.

Sweep No. 2, 3 live birds, $3 entrance, Hurlingham modified rules, 3 moneys: Quimby 3, Tee Kay 3, Holcomb 3, Warford 3, Case 3, Williams 2, Van Camp 3, Fox 3, W. C. Apgar 1, Miles Johnson 1, O'Neil 3, Eilenberg 1, Redding 2, Givens 1, Opdycke 3, Robinson 2, Wyker 2, Rupel 1, Allschauser 0, Fink 2, Bloom 3, Gillman 2, Tony Kuser 2. On shoot-off, miss and out, first was divided by Quimby, Tee Kay and Holcomb, killing 5 straight. Second won by Tony Kuser, killing 3 straight, and third by Apgar, killing 1, all the rest in his tie missing.

Sweep No. 3, at 3 live birds, $3 entrance, 30yds. rise, Hurlingham modified rules, 3 prizes: Quimby 2, Tee Kay 3, Tony Kuser 2, Gilmore 2, Fox 3, Rupel 0, O'Neil 3, Apgar 1, Van Camp 3, Warford 3, Williams 1, Allschooser 2, Eilenberg 2, Givens 3, Case 2, Robinson 3. Ties shot off miss and out, Tee Kay, Warford and Givens div. first, killing 4 straight; Eilenberg won second in tie shoot, being obliged to kill six more straight; Williams won third.

Farewell match, at live birds, miss and out, $1 entrance: Quimby 2, Tee Kay 2, Kuser 2, Van Camp 2, Fox 3, Givens 1, Eilenberg 0, Apgar 1, Williams 3. Fox and Williams div.—FATTY.

PHILADELPHIA, Jan, 5.—The novelty of shooting clay-pigeons by calcium light was successfully performed at the Gentlemen's Driving Park last night by R. T. Clayton, of Tamaqua, and S. B. Vandegrift, of this city. The match between the marksmen began by daylight in the afternoon, and consisted of 15 single birds and 5 pairs of doubles for $50 a side. Fully three hundred lovers of the sport went to the park to witness the contest. The match was a tie, each man breaking 24 out of 25.

COUNTRY CLUB.—One of the most valuable trophies yet offered for competition among the pigeon shooters will be competed for at the Country Club of Westchester county in February. It will be of $500 value and will be shot for by teams of two. The conditions are 20 birds each man, 30yds. rise, Country Club boundary (about 50yds.), ties 5 birds to each man. Country Club rules. Entrance $50 for each team and entries to close on Feb. 16. This cup is open to teams from the following clubs: Tuxedo, Westminster Kennel, Carteret, Philadelphia, Riverton, Country Club of Boston, Rockaway Hunt, Meadowbrook and Country Club of Westchester. Each club may enter several teams.

ALGONQUIN GUN CLUB.—New York, Jan. 11.—The regular monthly meeting and semi-annual shoot of the Algonquin Gun Club brought a goodly number of members and guests to the club grounds at Guttenberg, N. J., yesterday. Prominent among the latter were Mr. C. H. Wetmore of the Keystone Manufacturing Co., of Corry, Pa., and President Fountain of the Washington Heights Gun Club, of this city. A strong west wind blowing directly across the shooting grounds rendered 90 per cent. scores an utter impossibility. Some of the boys "got thar" in great shape, however, in the sweeps. Among the gentlemen winning renown as crockery smashers were Messrs. Wetmore, Tomlin, Garside and Dr. Geo. Van Schaick. The Doctor further celebrated his prowess by dancing a war dance to an admiring audience on the plazza of the club house. The Keystone trap and targets were on trial and proved satisfactory in every respect, the trap working easily and well and responding every time at pull with a whole bird, no flocks or chips, the flight being even and the bird breaking readily to light loads and No 8 shot. Our president has ordered a complete outfit of Keystone traps and targets for future use, and we hope to publish some creditable scores ere long, of which more anon.—E. H. F.

PILKINGTON VS. ZOHN.—The grounds of the West Farms (N. Y.) Gun Club were crowded on the 12th when the match shoot between Charles Zohn and James Pilkington for a cup valued at $200, and the championship of Worcester county was decided. According to the agreement, the men shot at 50 live birds under Hurlingham Club rules, 30yds. rise and 50yds. boundary. It was an exciting match and betting ran high. George Jarvis was the referee and C. Ditmar and L. Miller the judges. The men were very evenly matched, but Pilkington had the hardest lot of birds, and was forced to use his second barrel more frequently than Zohn. He used it in all 15 times, while Zohn used it on only seven occasions. Pilkington finally won by killing 40 and missing 10; Zohn killing 37 and missing 13. About $2,000 changed hands.

THE PATERSON CITY ROD AND GUN CLUB, of Paterson, N. J., has reorganized with a membership of 37, and is going to boom things.

SOUTH SIDE GUN CLUB, of Newark, N. J.—At a meeting of the club, held on Jan. 8, a revision of the constitution and by-laws was made which put the entire management of the organization into the hands of a governing committee. The gentlemen who will have charge as members of that committee are: Messrs. R. H. Breintnall, Oswald Von Lengerke, J. R. Burnett, Asa Whitehead and W. R. Hobart. The govrrning committee elected as officers: R. H. Breintnall president, and W. R. Hobart secretary and treasurer. Mr. Isaac H. Terrill was appointed manager.

SANDUSKY, O., Jan. 11.—Chas. Hart, the champion shot of the Union Gun Club, of Erie, Huron and Sandusky counties, and who recently shot a match with Heikes, at Dayton, had both his eyes so badly injured by an explosion of powder at his home, near Huron, yesterday, that it is feared his sight is entirely destroyed. He was loading shells, when a primer exploded, igniting a pound of powder, which horribly burned his face and head.

Yachting.

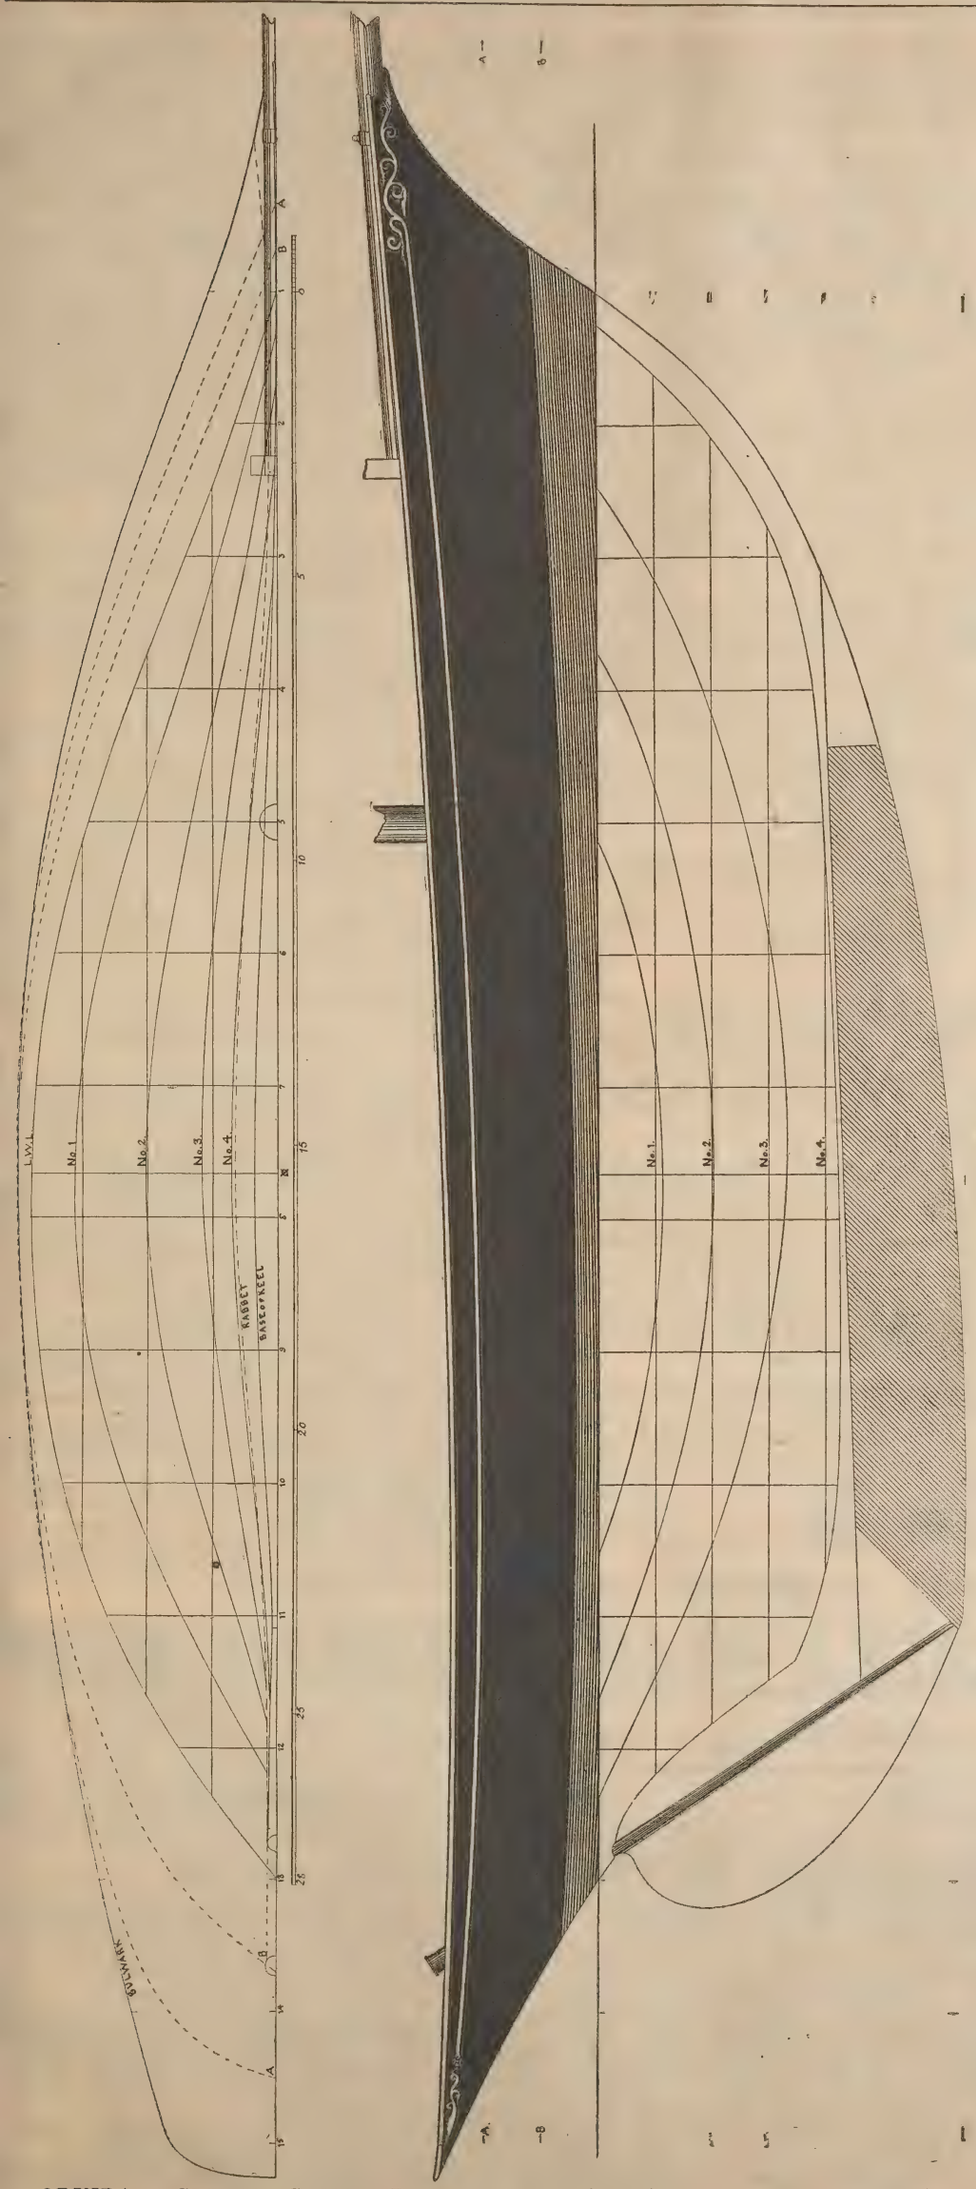
CRUISING.—Com. Weld will take the Gitana to the Mediterranean in a short time, and she is now fitting out. Alva, steamyacht, W. K. Vanderbilt, is fitting out at Harlan & Hollingsworth's for a long cruise abroad. Her owner will join her next week at Port Royal, S. C., whence she will sail for Bermuda, Madeira, Gibraltar, Nice and Villa Franca, where Mr. Vanderbilt and his party will leave her, rejoining later at Cherbourg and continuing the cruise to Norway and Iceland, returning to Newport by July.

ORINDA.

THE great changes and improvements that have taken place of late years in the smaller keel craft are nowhere better shown than in a comparison of the accompanying design with two of the same family that have previously been published in our columns, the Mamie, Feb. 12, 1885, and Pilgrim, Dec. 29, 1887. All of these yachts were designed and built by Mr. E. L. Williams, of South Boston; the former, in 1884, being his first work at anything of the kind, his previous work being mainly in the line of sheils and light rowing boats. Mr. Williams was one of the early converts to the views of the FOREST AND STREAM in regard to reforms in design and construction, and foreseeing the probable demand for deeper and safer boats he endeavored to change his business so as to take in larger craft. The first experiment, the Mamie, was made in a small way, the leading idea of the boat being taken from a plan suggested in our columns of a cheap but serviceable yacht. The little craft was lacking both in power and in accommodation, but at the same time she proved quite a success, being used steadily as a cruiser for the past five seasons. The peculiar type has in itself several serious objections, besides which the boat was built at as low a cost as possible, but she has done very well, in spite of all drawbacks. In the Pilgrim, built in 1885, a considerable advance was made both in appearance and in general good qualities, but at the same time, with limited draft and iron ballast, the boat was not powerful enough, while she had very little room for such long cruises as she was used for and whose logs have appeared in our pages. After two seasons' use along the New England coast she was sold, and for a season her owner, Dr. W. H. Winslow, was without a yacht, spending his vacation in a trip by steamer through the Great Lakes, but last year he decided on a new and larger boat, the order being again placed with Mr. Williams. The requirements called for a cruising craft, iron ballasted, to accommodate five persons, and above all, safe and weatherly, and fit for such seas as are met with between Boston and Grand Menan. After a trial through September and October, in which two very severe gales were encountered, her owner pronounces her a complete success in every way.

As far as model and appearance are concerned a single glance is sufficient to show the great advance over both of the older boats. In proportion to her length she is deeper, of greater displacement, and of better model as well, the midship section being radically different, though the easy diagonals of the other boats are preserved. The widening of the lower part of the boat, above and



including the keel, gives much more available space inside in proportion to the draft, and at the same time allows plenty of iron ballast to be used. The cabin trunk of the Pilgrim has given place to a flush deck with no less than 5ft. 3in. under the deck beams, while strength is secured by carrying all but three of the latter across the boat. The length chosen, 28ft. l.w.l., was the least within which could be had two cabins and a forecastle with a berth, but by a very economical arrangement of the space this has been done, there being five regular berths on board. Owing to her easy form and moderate beam the sail plan is small, a necessity for such fall cruising as she is intended for. Standing midway between the extreme narrow boat and the modern American cutter of great beam and sail area, she is a good representative of a medium type which affords the maximum of accommodation for her length. In appearance, as the designs show, she is fully up to the latest ideas, having a graceful sheer, the fashionable clipper stem, and a long, but clean counter. The high freeboard, 28in., or lin, per foot of l.w.l., is reduced as far as possible to the eye by not making the plank sheer visible on the outside, the bulwark being really quite low, and the gilt stripe being placed several inches below the plank sheer, instead of on it. This, with a high copper line and the long ends, reduces the apparent freeboard very materially. The plank sheer is not shown in either sheer or half-breadth plans, the greatest breadth in the latter being taken at the upper and outer edge of the bulwark, just under the rail. The leading dimensions are as follows:

Length over all	37ft.
L. W. L.	28ft.
Beam, extreme	9ft. 3in.
L. W. L.	8ft. 9in.
Draft	6ft. 6in.
Least freeboard	2ft. 4in.
Ballast, iron keel, tons	4.37
lead inside	.89
total	5.26
Mast, from stem	9ft. 3in.
deck to hounds	25ft.
head	5ft.
Topmast, fid to hounds	20ft.
Boom	30ft.
Gaff	19ft.
Bowsprit, beyond L. W. L.	15ft. 3in.
Spinaker boom	30ft.
Topsail yard	15ft.

The frame is of white oak, the planking of selected Georgia pine, finished lin. thick, from 3 to 4in. wide. The frames are 2×2 oak, boxed into keel, each frame being slit in the middle in a fore and aft direction before bending, thus allowing it to bend easily and also stiffening it when riveted together by the plank fastenings. The spacing is 9in. The deck is 1×2in. laid on 2×2 beams. The plank sheer is of Georgia pine, 1×4in. There are two bilge clamps 1×3in. on each side. The ceiling is of ⅛in. selected spruce. On each alternate frame is an iron floor, 1¼×1in., with grown floors between. The skylight and companion are of cherry. The hull is painted black with gold stripe, and the bottom is painted as shown with Estes English copper paint. The sail and interior plans will appear next week.

A NOVEL TENDER TO A STEAM YACHT.—It has remained for the veteran yachtsmen, Pierre Lorillard, to invent an additional luxury in the shape of a stable to a steam yacht; and the first craft of this description has just been completed under his direction at Pregnall's ship yard in Charlestou. The Tuxedo, as the new craft is named, is a scow or flat boat 40ft. long, 14ft. beam and 2ft. draft. The deck is covered with a house, in one end of which are four stalls, and in the other a cabin for three stablemen. There are also quarters for dogs. At the stern is a gangplank, fitted to raise and lower, by which the horses can be landed almost anywhere. The top of the house is inclosed by a handrail. The scow will be towed astern of Mr. Lorillard's steam yacht Reva, a rudder being fitted for steering. The boat will be used along the South Carolina coast for hunting rice birds and woodcock, and may also be taken to Florida during the winter.

ORINDA.—CRUISING CUTTER, DESIGNED AND BUILT BY E. L. WILLIAMS, 1888.

TIP, TOUGH, BROTHER AND THE HARRY LESLIE

THE Gang have read with interest the many cruises that have appeared in the FOREST AND STREAM, and hoping others might find some pleasure in reading of a run across Cape Cod Bay under adverse circumstances, the following is sent:

The Harry Leslie is a most wonderful craft, and great credit is due to her builder and designer, a Cape Cod fisherman. She is a pinkey-stern schooner of about 30ft. loadline, with large cockpit for fishing and a small cabin forward containing two bunks and enough floor room for two more. She has very hollow lines forward, a long bow and very short run. Had her rigging been as solid as her hull, there would have been no cruise worthy of mention.

The schooner had been chartered by the Gang for a short run around the bay. There had been easterly weather for several days, and every morning about daylight two heads appeared at a second story window in a small town on the Cape, gazed critically at the horizon and returned to bed. At last the sun rose clearly; then everything was bustle and commotion. The Infant was awakened and sent out to skirmish for the remainder of the crew. They were finally assembled at the shore, but when counted over to be sure that none were missing, the Tough was nowhere to be found. He finally hove in sight and shipped as able seaman, leaving his catboat at an anchor to shift for herself. They still lacked a tender and a compass, but Mr. Parker's sharpie was pressed into service and Uncle Jim kindly provided the other article, prophesying that the fog would all return by sunset. As he was always making such unpleasant remarks, it was taken little heed of, but it proved only too true. At last all the stores were aboard, the anchor on deck, and the Harry Leslie was running down the harbor with a light S.W. wind over the starboard quarter.

The Gang consisted of Tip, who was the heavy man and had pulled the winning oar in many a race, Brother and the Tough. The rest of the crew was composed of the Infant, Brother's small cousin, an irrepressible child of some twelve summers, Faro, a Philadelphia schoolmaster, and the Lamb, an aspiring civil engineer from St. Louis.

After Mr. Parker's sharpie had been hauled on board, as she was a large and heavy craft to tow, a council of war was held upon the quarter deck and Brother chosen captain. It certainly was a great honor, and as the occasion called for a speech Brother responded manfully and closed his remarks with, "And now when I speak to you you don't want to walk, and you don't want to run, but you want to flap your wings and fly, goll darn yer."

A fine run was made to Brewster, and it being low tide the whole crew were taken ashore in a horse cart over a mile of mud flats, no other mode of conveyance being practical to visit that historic town. The anchor was taken aboard about sunset and sail made for Provincetown, but there being a moon and a rattling S.W. breeze right abeam, they expected to be in that harbor in three or four hours' time. The moon arose about one hour after sunset, and with it Uncle Jim's fog, and plenty of it, too, so the compass and a lantern were produced and placed on the cockpit floor before the wheel. That compass proved to be a valuable article in the inventory and needed constant attention or it would point obstinately at the bow, no matter how much the course was altered. The Lamb tried his hand at steering, but the compass troubled him as it did the others. If he fixed his mind upon the compass he forgot the wheel, and *vice versa*. He then took Brother's advice and tried to keep her on a true course by the wind with an occasional glance at the compass, but this was a failure also, so he invented a method of his own, he stood up back to the bow, and did his best to keep the moon directly over the stern. It was a great deal of work and involved constant reversings of the wheel, but he stuck to it manfully for an hour, when he reluctantly resigned his position to Brother.

This course had been held about four hours, and Brother, feeling the importance of his position and fearful of running by Wood End into the open water beyond, sent the Tough aloft to try and catch sight of the lights over the fog. After spinning round and round the foremast head with the roll of the boat for some fifteen minutes, the fog thinned for an instant and he reported a bright white light right abeam and to leeward, but could tell nothing more, as the fog shut in again. Up went the wheel, the booms were gybed over and the schooner began running in for the harbor. About twenty minutes passed and then the fog lifted for another short period, and the light was discovered to be Highland Light, showing over the land. Booms were once more gybed to starboard and the old course resumed, Brother at the wheel, the Tough half asleep and propped up against his shoulder, and Faro on the lookout forward. This state of things had been in progress about fifteen minutes when Faro gave a yell of delight announcing a buoy dead ahead, and Brother jumped up in time to see the bowsprit entering between the poles of a deep-water fish weir, but it was too late; the schooner was rushing along with the wind abeam and all lower sails set and crashed through. Mr. Parker's sharpie being in tow, passed on the other side of a pole and fetched up all standing on the bight of her anchor shode which was used for a towline; it parted, and the anchor, describing a beautiful curve through the air, alighted on Brother's shoulder, making a large and deep dent on the exact spot where the Tough's head had rested the moment before. Down went the wheel, and as she came in stays the foresail was lowered and back she went through the weir after Mr. Parker's sharpie. In the midst of the excitement the Infant rushed on deck and kicked over both lanterns and compass in his frantic endeavors to ascertain the cause of the commotion. Mr. Parker's sharpie was discovered at last and sheets trimmed flat on the port tack.

The Tough was sent forward as lookout on account of his good eyes and nautical knowledge. For a few moments peace and quiet reigned, and then came his cry of "Hard down! another weir dead ahead." Down went the wheel, the sails filled on the starboard tack for about three minutes, when again from the lookout came "Hard down! another weir dead ahead." In every direction the bow was turned a weir was sighted, so at last the anchor was dropped and daylight waited for impatiently.

At last it came; the fog cleared off and there was Provincetown about two miles distant, but the schooner was in the midst of a perfect labyrinth of weirs. Weir after weir stretched out into deep water, seemingly miles in length and about two hundred yards apart. The Gang gazed around them, overcome by bewilderment, but finally recovered sufficiently to hoist the jib and mainsail, get up the anchor and slowly pick their way into open water, when the foresail was hoisted and the schooner stood in for Provincetown, close hauled on the port tack. The crew started on shore as soon as the sails were furled to see the town, first breakfasting at the Central House. The Lamb, who had not passed a pleasant night, gave one look at the mutton chops as they appeared in the doorway, rose and passed out into the office, where he laid down on the floor to await the return of the healthier ones.

At about noon a return to the boat, for the trip home was proposed, but Faro, the Lamb and the Infant decided that they had had about enough of a seafaring life, and concluded to ship for home on the freight train, so the crew dwindled to the Gang itself and the real cruise began.

Tip, Tough and Brother returned to Long Wharf, and found to their surprise the coroner calmly awaiting their arrival, as he had discovered their flag at half mast and had come down as soon as he could procure a jury, supposing of course there was a corpse on board. The Gang gazed in astonishment at their noble craft, and discovered the American flag floating proudly from the maintopmast, where Infant had hoisted it on the staysail halliards in his own innocent little way. The coroner was taken one side and his fears set at rest upon the subject, but he appeared greatly disappointed at his loss of business, and departed muttering curses, not loud but deep, at the "cussedness" of small boys.

A bottle of wine had been wagered with Faro that the Gang would breakfast with him the next morning, so all sail was made for the twenty-mile run across the bay before a light easterly wind. All went well for about two hours, when the wind freshened so the staysail had to be taken in, and the fog returned. Then it began to rain in torrents, running down the masts and dripping from the booms and sails by the bucketful. The breeze gradually petered out until at dark it was a dead calm, and still raining hard. About nine o'clock it cleared off, the wind came round to the S.W., dead ahead, and there was Sandy Neck Light right over the bowsprit end and about eight miles distant. Tough was on the lookout, Brother at the wheel, and as Tip had turned in, it was decided not to wake him until the moorings were reached and to glory in his surprise. So sheets were trimmed flat and everything settled down for the long beat to windward.

The breeze kept freshening and the old craft soon had her scuppers awash, and Mr. Parker's sharpie was tearing along behind, the tow line as tight as a bow string, and ten feet of her bow rising majestically into the air. The Tough gazed out to leeward and discovered what appeared to be an Irish pennant streaming out into the darkness, but upon closer inspection it proved to be the lee main shroud, which had become unhooked. It was finally secured just as the jib sheet parted and the Harry Leslie came up into the wind. The thrashing of the canvas awakened the heavy man, who turned out in time to catch the flying blocks.

Now that jib sheet was the pet invention of the owner, leading

through numerous blocks with only one part running aft, and tending itself in windward work, so it was re-rove with difficulty. Way was hardly got upon the boat before it parted again, so this time it was discarded and the staysail halliard rove in its place. The wind was coming all the time, the sea rising, and still the light house was a mere speck in the distance. Something had to be done, so the foresail was lowered, but she had too much after sail and would come up in spite of the rudder. Brother looked at that long main boom, without a footrope, which ran out fully twelve feet over the stern, with the idea of reefing the mainsail, but thinking of the old adage, "Never send your crew where you wouldn't go yourself," he reluctantly gave the order to reef the foresail. They had hardly got under way again when the fog once more shut in and it began to rain, and to make things interesting the jib sheets parted once more.

This time the end of the anchor shode was utilized, and a fresh start made, but the wind and sea had risen so she would no longer carry her canvas, and Brother once more looked at that formidable main boom and the expanse of black water beneath it, then at Tip, then at the Tough and finally decided to make the attempt himself. He was in good working trim, his costume having dwindled to an oilskin jacket and a pair of knee breeches. The helm was put down, jib and mainsail lowered and the fun began, as the end of the boom would go under at nearly every jump. The work was finally accomplished and sail made once more with jib and reefed mainsail. By this time the wind was fairly howling and the sea resembled small, snow-capped mountains to the Gang's eyes, but everything seemed to be going finely, the craft was bowling along, rolling off great streaks of foam to leeward, and visions of that breakfast and the bottle of wine danced through their heads.

Suddenly there was a loud report forward, followed by thrashings and crashings, and the Tough calmly remarked that the jib had gone out of the bolt ropes; and it had, along the foot and leech. The Gang were fast losing their patience but concluded to lay to under the reefed foresail until the jib be patched up, but as soon as it was hoisted, the peak halliards parted and down it came by the run. Curses both loud and deep were then heaped upon the head of the sinful jib, its tackle. The anchor was gotten out, but would not hold her. Her bow fell off into the trough and huge green combers piled over the weather rail one after the other. It was then that the Tough sat down upon the cabin house with a sigh, rested his chin in his tawny hand and after a moment of deep thought said forcibly: "Let's go below and turn in, she'll fetch up somewhere in the morning."

Mr. Parker's sharpie had stuck to the larger craft like a burr, although deep and full of water; so, after the jib had been patched up, the Tough was set at work bailing her out, to brace him up. Once more the schooner was gotten under way. The water she had taken aboard was running across the cockpit floor knee deep, nearly taking the crew off their feet at every roll, so the pumps were started. It was then decided to make for the lee of the Dennis Cliffs, and try to ride out until morning, so a hull was looked for, and when it came was quickly taken advantage of. After an hour's run, expecting every sea to come over the rail, the cliffs began to loom up in the darkness, but it was not the exact haven of rest they expected, as the wind blew nearly straight along the beach, but was much better than the open, the sea being a little calmer. Weirs abounded in this section also, and it was not deemed safe to venture too far in; so the jib was lowered and Tip was swinging the anchor over the side, when Brother discovered the outline of a weir head to leeward, and about forty yards distant. He shrieked to Tip to hold on, which he did, nearly going over the side, but neatly saving himself by placing one foot carefully between the bitts, and clasping the bowsprit with his left arm. The remnant of the jib was quickly hoisted, she filled away, lifted on a huge sea, rolled the rail under, and was just gathering headway, when the main sheet parted, and her head swung round rapidly for the weir. The anchor was dropped and jib dropped in a jiffy, but it was too late to check her, the anchor shode being nearly straight up and down; and she came down on the weir stem first. There was nothing to do but out knives and go through it; and then she laid on one side, and the anchor on the other. A line was made fast to a pole, and then Mr. Parker's sharpie was brought into use, but both oars had disappeared. The anchor was finally dropped on the lee side of the weir, and after the mainsail, or what was left of it, there being a slit from top to bottom, was taken in, and most of the water pumped out, the crew prepared to turn in. Though it was then 3 o'clock in the morning, the Tough insisted upon frying some eggs, but Brother and Tip were too exhausted to wait for them, and dropped off to sleep at once.

At daylight Brother discovered he had slept the last part of the night on the floor in two or three inches of water, with some of the Tough's fried eggs floating around his head. The morning proved clear and fair, and the remaining nine miles were quickly reeled off with a brisk N. W. breeze; but it was a sorry-looking craft that sailed by the Sandy Neck Light that August morning, and the rage and language of the owner can be better imagined than described. They lost their wagered breakfast and the bottle of wine, but had had lots of fun.

If there be any moral to this tale it is this: Never make an offing in a strange craft without first thoroughly overhauling the entire outfit. ONE OF THE GANG.

SEAWANHAKA CORINTHIAN Y. C.—The annual meeting of the Seawanhaka Cor. Y. C. was held at the club house on Jan. 12, with Vice Com. Center in the chair, Com. Caufield being in California. The reports of the officers and committees, showing the club to be in a prosperous condition, were read, after which the following officers were elected: Trustees, William E. Iselin and Walter L. Suydam; Com., A. Cass Caufield, schooner Sea Fox; Vice-Com., Robert Center, cutter Medusa; Rear-Com., Ralph N. Ellis, sloop Regina; Sec'y, L. F. d'Hémieux; Treas., William B. Simonds; Meas., John Hyslop; Fleet Surgeon, J. West Roosevelt, M.D.; Fleet Chaplain, George R. Vandewater, D. D.; Race Committee, M. Morris Howland, Francis O. de Luze, Jules Montant, J. Beavor Webb and George P. Upham, Jr.; House Committee, Robert F. Bixby, Ashton Lemoine, P. F. Macdonald, Berkeley Mostyn and Herbert L. Satterlee; Committee on Lectures and Entertainment, A. Cass Caufield, J. Frederick Tams, Lieut-Comr. Leonard Chenery, U. S. N.; Committee on Lines and Models, John Hyslop, A. Cary Smith and William P. Stephens; Library Committee, Henry W. Tyler, Theodore C. Zerega and J. Langdon Ward; Committee on Exhibits, John F. Lovejoy, William C. Brown and Lieut. Jacob J. Hunker, U. S. N.; Law Committee, Charles W. Wetmore, Henry P. Rogers and Sidney Chubb. In view of the growing importance of the racing in the smaller classes, the club will offer several extra prizes this year. The new Leland Cup will be offered for all classes on which Corinthian crews only are allowed, to be sailed for at the annual regatta and held subject to challenge for one year. Mr. William Whitlock has also offered this year a special prize of $100 for the new ninth class 30ft. and under. A special race for 40-footers will be sailed on the Monday following the annual regatta, with no limits to sails or crew. A $300 cup will be offered for five starters and a $500 cup for seven. A special prize for the same class will also be offered in the annual regatta. The annual dinner of the club will take place Jan. 26.

HULL Y. C.—The annual meeting of the Hull Y. C. was held on Jan. 12, with Com. Converse in the chair, the following officers being elected: Com., Henry W. Lamb; Vice-Com., John J. Henry; Rear-Com., J. J. Souther; Sec., Wm. A. Cary; Treas., Charles C. Hutchinson; Ass't. Sec., Frank C. Brewer; Meas., W. E. Sherriffs. Executive Committee—Commodore, Vice-Commodore, Rear-Commodore, Secretary and Treasurer; members *ex-officiis*, Wm. B. Lambert, Jas. B. Forsyth, Wallace D. Lovell, D. Hall Rice. Membership Committee Commodore, Vice-Commodore, Rear-Commodore, Secretary and Treasurer; members *ex-officiis*, Robert C. Poor, Henry Taggard, Chas. S. Waldo, F. L. Dunne. Delegates to New England Yacht Racing Association, P. M. Bond, Jacob F. Brown. The secretary reported that there were 233 members now enrolled and 114 yachts, divided as follows: Catrigs, 28; sloops, 38; schooners, 18; cutters, 18; yawls, 1; steamers, 11. A number of names were received for membership, every one of which was the name of a yacht owner. The names of Peleg Aborn and Edward Burgess were placed on the honorary members' list. Treasurer Hutchinson reported a balance of $1,178, against a deficiency of over $200 for the year previous. He was instructed to send $100 to the Hull life saving crew as a slight recognition of their services in the recent catastrophe on the Hull coast.

HYDE PARK Y. C., Chicago, Jan. 14.—The annual meeting of the Hyde Park Boat Club was held Dec. 6, at which time a resolution was adopted changing the name of the club to Hyde Park Yacht Club, and reducing the number of directors to seven. The following officers for 1889 were elected: Com., W. H. V. Rosing; Vice-Com., J. H. Ware; Capt., A. D. Reid; Sec., Geo. M. Benedict; Treas., A. Bouton; Chairman Membership Committee, L. B. Sherman; Regatta Committee, A. Bouton, chairman, Walter Burnham, D. M. Lord. An effort is being made to place the club on a good yachting basis, and toward this end the directors propose to issue bonds, the proceeds of which will enable them to make a good harbor which has now become an absolute necessity. The regatta committee will inaugurate a series of races this season, many of which they hope will become fixtures, our only fixture at present being our annual on July 4. Our fleet consists of twenty-five yachts from 15 to 35ft. waterline.—A. BOUTON, Treas.

CYTHERA.—The sad loss of the Cythera and all on board last spring has been made the occasion for still another heartless hoax, this time taking the form of an alleged bottle message. About a week since a slip of paper, said to have been found in a bottle by a gunner on Rockaway Beach, was offered for sale at the office of a daily paper. The slip was torn and dissolved, and the writing on it was nearly illegible, but was interpreted to read as follows:

YACHT CYTHERA, OFF HATTERAS, March 15.

Everything carried away, Expect to swamp. Heavy gale—snow.

The signature is supposed to be that of Mr. C. S. Lee, but his wife and friends have failed to recognize any resemblance to Mr. Lee's writing, and yachtsmen generally pronounce the alleged letter a forgery. It is said to have been found in a Belfast ginger-ale bottle, so imperfectly corked that it was partly filled with water. In order that a bottle should float for nearly a year at sea it is essential that it should be very tightly corked, any slight leakage would in time fill the bottle and sink it. It is not impossible that a bottle thrown from the Cythera last March might in time drift to Long Island, but at the same time all the circumstances of the case point to the conclusion that some unfeeling wretch has attempted a despicable trick at the expense of the friends and relatives of the lost yachtsmen.

CORINTHIAN Y. C., MARBLEHEAD.—The annual meeting of the Corinthian Y. C. of Marblehead was held on Jan. 9, with Vice-Com. I. S. Palmer in the chair. The following officers were elected: Com., B. W. Crowninshield; Vice-Com., I. S. Palmer; Sec., Everett Paine; Treas., J. B. Rhodes; Meas., J. H. Keating; Executive Com., B. W. Crowninshield, I. S. Palmer, J. B. Rhodes, J. A. Stewart, F. A. Seamans, W. S. Eaton, Jr., and F. E. Peabody; Regatta Com., G. A. Stewart, W. P. Fowle, J. B. Paine, F. W. Chandler and H. P. Benson; Membership Com., C. S. Dennison, W. H. Mills, J. W. Hodgkins, W. L. Smith and F. M. Wood; House Com., B. W. Crowinshield, I. S. Palmer, F. A. Seamans, B. W. Russell and W. W. Keith; Board of Judges, J. B. Mills, Jr., A. S. Brown and W. L. Smith. The treasurer's report showed that the sum of $3,000 had been paid on the debt, $1,300 of which had been contributed by members. The new house had paid its own running expenses during the year. A new rule of measurement, based on length and sail area, was adopted, and several amendments were made to the constitution. A special meeting will be held on Jan. 23.

WORK IN THE YARDS.—Rebublic, schr., T. H. Hall, has been out on the screw dock at New York for an overhaul prior to her trip to Bermuda, where her owner and family will join her by steamer for a cruise to the West Indies. Capt. Harry Brown will be in command.... At Hawkins's yard, City Island, are the schooners Glimpse and Tioga, and the steam yacht Adelaide for alterations. Tioga will have her forefoot cut away, and Adelaide has had her bow rebuilt and lengthened 5ft. since she was sunk in collision last fall.... Poillon's still have the schr. Triton in hand for larger spars and a new headrig, including a pole bowsprit, and Sawyer will make a new suit of sails for her. Athlon also will have a new mainsail, with 4ft. more boom and 3ft. more gaff. ... Lawley & Son are now at work on the inside of Mr. Richardson's 45ft. boat, Nepenthe, and will soon have her out of the shop. Mr. Ellis's yacht is ready for planking, and the keel is cast, the wood keel, stem and stern set up, and the frames ready for Col. Forbes's schooner. Mayflower is now in Lawley's basin.... At the Atlantic works the frames of the new Burgess steam yacht are set up and the plating is ready.

BUILDING IN SYRACUSE.—Mr. B. J. Henley, of the firm of Henley & Son, Syracuse, has designed a cutter for his own use on Onondaga Lake, and she is now building by the firm. Her dimensions are:

Length over all	25ft.
L.W.L.	20ft. 4in.
Beam extreme	7ft. 2in.
Beam l.w.l.	6ft. 10in.
Draft..	5ft. 11in.
Least freeboard	1ft. 3in.
Ballast on keel	2,000lbs.

The frame is of chestnut, sided 2in., moulded 3 to 2½in., spaced 18in.; bent oak frames 2x1½in., between each pair of sawn frames. Planking ⅞in. white pine, with oak garboards and wales.

BUFFALO Y. C.—The officers for 1889 are as follows: Com., H. D. Williams; Vice-Com., Edwin F. Bishop; Secy., H. L. Chisholm; Asst. Secy, Frank D. Wood; Treas., F. W. Cowles; Meas., J. A. Tempest; Asst. Meas., Henry L. Campbell; Fleet Chaplain, Rev. C. F. J. Wrigley; Fleet Surgeon, Dr. H. Mickle. Regatta com., T. H. Davis, Edward C. Strong, Allen S. Chisholm. Com. Williams, who now enters on his fifth year of office, was presented with a gold headed cane at the annual meeting.

NEW YACHTS FOR CLEVELAND.—Three new yachts are now building in Cleveland, Ohio, two keel cutters and one centerboard sloop. The latter will be 29ft. l.w.l., 12ft. 6in. beam, and 5ft. draft. The designer and builder is Mr. McCormick, and the owner Mr. Frank Overbecke and others. Mr. Wm. Sly will have a keel cutter from a design by Mr. C. W. Kelly. Her dimensions will be 24ft. 6in. l.w.l., 8ft. beam, 5ft. draft. Another of Mr. Kelly's designs is for himself and Mr. Thos. Macbeth, a keel cutter 19ft. l.w.l., 6ft. 4in. beam, and 3ft. 9in. draft.

OIL AT SEA.—The latest device for distributing oil over the sea is an oil cartridge made of heavy paper. It is fired from a breechloader and when it strikes the water the oil is set free. The inventor is Mr. A. H. Walker, of Hartford, Conn.

LARCHMONT Y. C. FIXTURES.—The Larchmont Y. C. has announced the following fixtures for 1889: June 1, spring regatta; July 4, annual regatta; Aug. 24, annual oyster boat race; Sept. 7, fall regatta.

CORINTHIAN MOSQUITO FLEET.—A meeting of the Corinthian Mosquito Fleet will be held at the Gilsey House, New York on Jan. 21, at 8 P. M.

A NEW YACHT FOR FLORIDA.—Mr. A. Cary Smith has in hand a 20ft. l.w.l. shoal centerboard sloop, for use in Florida waters.

SIPPICAN Y. C.—Officers, 1889: Com., Jasper Whiting; Vice-Com., Jas. E. DeKay; Sec.-Treas., Jas. H. Clarke, Jr., Marion Mass.

PLEON Y. C.—The annual meeting of the Pleon Y. C. will be held at the Parker House, Boston, on Wednesday, Jan. 23, at 3 P. M.

THE NEW ROYAL C. C. RULES.

THE following letter to the *Field*, from Mr. Baden-Powell, includes the new rules to which we alluded last week:

On all sides it has been recognized that the greatest amount of improvement, both in the building, rigging and fitting of canoes, is obtained directly from racing; it is the everlasting striving for perfection of detail, engendered by healthy racing competition, which urges the individual to greater efforts of design and more patient work on fitting than are ever likely to be produced for pure cruising.

We have known the days in England when it was actually the pride of more than one well-known "cruiser" to boast that his canoe was scratched and travel-stained, his gear worn out, his sails blotched and dirty, and his straw hat and clothes—well, more fit to rig on a "scarecrow" than to make a Sunday fit-out for a tramp. We have seen the sails, even of racers, tied, not laced or bent on, and knotted on to common bamboo sticks and somehow hung up, rather than set, on the canoe. We have seen men, holding a vote, by the way, in canoe legislation, who sailed in innocent bliss with a mizen hoisted boom uppermost, or a mainsail lashed to the masthead, owing to there not being "string" enough found in the outfit left in the craft by her late owner. But this is happily all changed now, for racing has generally percolated through canoeing, and where it has not brought pride of place it has at least brought pride of boat to the owner. During the past two years, however, it has been repeatedly pointed out in the *Field* that racing may, if left uncurbed, run wild, and may diverge into such eccentricities of form and fitment as may be no longer of benefit to canoeing in general, but positively be detrimental to the whole sport of canoeing, both racing and cruising. At last, and none too soon, has the R. C. C. put its foot down to conserve canoeing as canoeing. Both at home and abroad there were unmistakable warnings of what might be expected in the near future, and it was clear that action must at once be taken. The leading institutions for canoe racing in America and England have just considered the question at their autumn meetings: but, I venture to think, unfortunately for America and Canada, the association of those countries declined to act in the matter for another year, though they passed the following resolution: "That the executive committee of the American Canoe Association deprecates most strongly the introduction of special racing appliances that are incompatible with the requirements of cruising, and recommends to the regatta committee that the programme of races shall be so arranged as to encourage, as far as possible, the legitimate cruising canoe."

The Royal C. C. on the other hand took the more prompt action of prevention instead of waiting to cure, and entirely overhauled its racing rules, both in principle and letter; and having arrived at a settlement it stamped the new order of things with practically a three years' lease of life.

It has of course already been kindly hinted by some well wishers (?) of British international sport that this action of the R. C. C. was the result of a scare on learning that the English canoe Charm had again suffered defeat in American waters and was brought in order to shut out the American crack boats, should they come over to this country in 1889 to compete for the two English challenge cups. As a matter of fact, however, as regards existing American canoes, the new R. C. C. rules are complied with in all points except one, that is the position of the centerplate. The sliding out deck seat was not used on Eclipse (the winning canoe) nor on a number of other fast canoes.

The placing of the centerplate case right in the middle of the well was prohibitive of cruising and was properly stamped out, but it is not by any means the fact that all the American cracks have their centerplates in the middle of their length; indeed two of the best performers in the races of 1888 have the aft end of their plates at 1ft. forward of midships and one at 1ft. 6in. forward.

Sliding rig, on the other hand, is a pure racing device, highly detrimental to cruising interests and also to the popularity of canoe racing; the novice suffers many duckings at its hands and the sailor is bothered and bored by having to carry about a box full of different sized rigs. The R. C. C. has not actually prohibited the use of standing rigs, but has empowered the committee to require in some races that the sails be lowered at some period of time before the start, so a standing rig man would have to get ashore to lower his sails, keep them down the required time and so step them; moderately inconvenient if that time should be made to include, say, the first three minutes out of the five minutes before the start, or if the start were ordered to be "no sail to be set during the three minutes preceding the start."

At the worst, the American or Canadian visitor would only be required to sail within the same limitations as the English canoes he sails against. But on the other hand, should English canoes, constructed and raced under the new R. C. C. rules, go over to compete in America during 1889, they would have to sail at some disadvantage against such canoes as are given the "machine" nature under the laxity of the American rules.

The American executive, however, have now the power given them to "so arrange the programme of races as to encourage, as far as possible, the legitimate cruising canoe," and should they count popular competition, and possibly international competition, they will, it is to be hoped, give the machine element its fling in proportion to its popularity only, and perhaps insist, in regard to the important events, on such limitation of the machine element as may give the *bona fide* canoe at least a reasonable chance of success.

The Royal Canoe Club had, heretofore, seven racing classes—each distinct—and the best canoe in any one class, even if eligible, had no ghost of a chance of winning in any other class; hence the man owning one canoe confined his interest and abilities to the one class his canoe belonged to. Further than this, there were also little wars between "class men;" a man owning a paddling "singlestreaker" often talked slightingly of another member who did no thing beyond sailing his first-class sailing canoe; one was called a "paddler" and the other a "sailing man," whereas often the sailing man could have paddled the paddler "hull down," if they were set in two canoes of twin breed, and not requiring special acrobatic training to insure their being paddled 100yds. without a capsize.

The new order of things is three classes only for all racing. Decked canoes: first class, smooth skin; second class, clench build, and third class, open canoes. And the limitations in each class so arranged that an owner of a canoe in any class can, with reasonable chance of success, compete with the canoes in the other classes. For instance, the light open Canadian canoe is allowed to paddle against the heavier deck and clench-built second class, but must do so with "single blade," or Canadian paddle. The second class, in turn, being clench-built, is presumably less fast than the smoothskin first class, but the second class is allowed to be but 26in. in beam, whereas the first class may not be less than 28in. and is more probably 30in., so far as paddling races.

So also in sailing, the second class with clench-build and 75ft. of sail can have all second class races to himself; but if her owner pines for higher things, there is nothing in the rule to prevent him donning 12ft. of sail and running with the first class; for all the limit dimensions are the same in each class for sailing. The open Canadian third class can, if he likes, ship a centerplate, put on a temporary deck, rig up, and go in with the best.

Of course, it is not suggested or contended that a canoe, constructed to do the best in one class or one style of racing, is likely to be equally A1 in another class or style of racing; all that is intended is that she shall be possibly capable of competing. And, on the other hand, that the racing energies of the club shall be concentrated about three classes instead of seven classes.

The new rules, as passed by the R. C. C., and which are now, practically, in force for three years, are:

20. Subject to Rule 21.—No rule of the club shall be changed unless at a general meeting, after due notice given of the proposed change, such alteration shall be approved by two-thirds of the members present at the time of voting.

21. No rule, or alteration of rule, relating to the build, sails, ballast or classification of canoes made (except at the autumn general meeting) shall take effect until after the next autumn general meeting.

The rules relating to classification and limitation of racing canoes as they stand at the close of the autumn meeting, 1888, shall so stand until the autumn meeting of 1891 unless a majority of three-fourths of the members voting is in favor of alteration, due notice having been given.

X.—CLASSIFICATION.

27. DECKED CANOES—FIRST CLASS.—Greatest length from fore side of stem to aft side of sternpost shall not exceed 16ft., with a maximum beam of 30in. for that length (a beading not exceeding 1½in. in depth and ¾in. in thickness shall be allowed without being measured in the beam). The beam may be increased ½in. for each inch of length decreased. Minimum length 12ft., and minimum beam 28in.

Depth inside from center of deck to garboards (alongside keel) at fore end of well, maximum 16in., minimum 12 in. Depth outside from top of crown of deck to lower edge of garboard not less than 12in., taken anywhere along up to 2ft. from ends of canoe. Depth from upper side of deck at 1ft. out from middle line abreast of fore end of well to level of lower edge of garboard at keel not less than 12in. A fixed keel of wood not more than 2in. deep, including metal band (if any) allowed.

All ballast (except keel band of not over ½in. deep, and centerplates, bilge plates and metal deck fittings) shall, if carried, be within the canoe and above the garboards. Ballast may be shifted during a race, but all ballast on board at starting must be carried throughout the race.

Centerplates, drop keels or bilge plates must house within the canoe when they are hauled up, and must not exceed ⅝in. in thickness and 18in. drop below the keel band. The after end of case, except in the case of bilge plates, and centerboard cases that do not rise more than 4in. above the inside of the garboards alongside the keel, shall not be aft of center of length. Fore end of after centerboard case, if any, not more than 3ft. from sternpost. Length (combined if more than one) of centerplates, drop keels or bilge plates must not exceed half the canoe's length.

No deck seat shall be extended beyond the perpendicular of the sides of the canoe. The well space below shall not be less in length than 2ft. between fixed bulkheads, but movable bulkheads allowed forming a well of not less than 4ft. The well opening or hatchway shall not be less in length than 33in., nor less in width than 14in. for 2ft. of its length (removable hatches or covers may be used). There shall be a space of not less than 22in. between the cases of the bilge plates at their lower edges.

The total sail area shall not exceed 112 sq. ft., exclusive of spinaker, which shall not exceed 50 sq. ft.

28. DECKED CANOES—SECOND CLASS.—Limitations as in first class, and to be clinch built (plank edges overlapping and forming lands). The minimum beam shall not be less than 26in.

SAIL AREA.—The area of largest sail shall not exceed 60 sq. ft., and the total area shall not exceed 75 sq. ft., exclusive of spinaker, which shall not exceed 25 sq. ft.

29. OPEN CANOES—THIRD CLASS.—Any material and build; other limitations as in second class, and end decks allowed, each not exceeding 2ft. 6in. in length; remainder of canoe not decked and not covered in, and paddled by a single-blade paddle.

NOTE.—The above limitations shall not affect adversely any canoe built prior to November, 1888, which might have been eligible to sail in R. C. C. matches under the rules of 1888.

30. The Sailing Challenge Cup shall be subject to competition in two or more races, and be held for the year by the competitor who first wins two races in the same canoe. In the event of a third race being necessary, it shall be sailed between the winners only of the two previous competitions.

40. Instead of "every canoe" read "any canoe," and for "that she" read "if she."

52. Add the words "and the committee has power to order in some sailing races, that sail or sails shall be kept lowered for a time previous to the starting signal."

The sail area limit in the first class being now 112 sq. ft.—not apportioned between sails as heretofore—will, in all probability, have a tendency to invite competitors to put nearly the w hole area into the mainsail, or at least to carry 100ft. in main and 12ft. in mizen; and seeing that centerplates must be kept forward of mid-length, the probable tendency will be to keep the plate well forward in order to balance the powerful mainsail. To my mind this, too, probably successful as a racing plan, is not so desirable as the moderate mainsail and larger mizen of the old rule, from a cruising point of view.

The liberty permitted of covering the well with hatches or apron is legitimate, and far distinct from the "bucket bag" well, which would have certainly come under the old rules. The hatches, of course, carry a certain penalty of weight, but in really rough water such weight on top is far preferable to water in the bottom, and consequent constant bailing or pumping.

In regard to sail-carrying power, some interesting data may be obtained during 1889, in relation to carrying all the allowance, 112sq. ft., in one sail. I much doubt if a canoe, 16ft. by 30in., sailed without ballast, could efficiently carry such a sail; the spars to keep it set properly must be comparatively heavy and long, whereas a canoe of 14ft. by 33in. can carry such a sail, and has in the past commonly done so. Possibly this may tend to bring to the front again canoes of 14ft. by 33in., or even 13ft. by 34½in., bearing in mind the changed condition of sailing with crew on deck. The test is not when "on a wind"—almost any sail can then be balanced by the crew—but when broad reaching or running square off, and with some sea on.

The most desirable thing now is that the other clubs of this country should adopt similar rules for a similar period, and thus clear the way for interclub racing. Healthy rivalry thus established among clubs must enhance their vitality and promote generally the cause of canoeing.

W. BADEN-POWELL, Nautilus R. C. C.
3 PAPER BUILDINGS, Temple, E. C., December, 1888.

NORWALK C. C., South Norwalk, Conn.—*Editor Forest and Stream:* The annual meeting of the N. C. C. was held at the boat house on Dec. 29. L. W. Searles was elected Commodore for 1889, and Jas. C. Greene Secretary-Treasurer. The new house built last spring has proved very convenient, and among other improvements this year will be a new float. The sailing signal of the club is a swallow-tailed burgee with the letter N in a circle of rays. The field is of orange, and the design in black. Of the six members, five will probably fly the A. C. A. flag this season.—JAS. C. GREEN, Sec., 2 Liberty street, N. Y. city.

RED DRAGON C. C.—*Editor Forest and Stream:* At a joint meeting of the Keystone C. C., of Philadelphia, and the Red Dragon C. C., of Camden, the two clubs were amalgamated under the name of Red Dragon C. C. of Philadelphia. The sailing signal of the club is a swallow-tailed burgee with the letter N in a circle of rays. The field is of orange, and the design in black. Of the six members, five will probably fly the A. C. A. flag this season.—JAS. C. GREEN, Sec., 2 Liberty street, N. Y. city.

RED DRAGON C. C.—*Editor Forest and Stream:* At a joint meeting of the Keystone C. C., of Philadelphia, and the Red Dragon C. C., of Camden, the two clubs were amalgamated under the name of Red Dragon C. C. of Philadelphia. This will make a strong club of twenty-five active members. The installed officers were: Commodore, Chas. B. Haag; Vice-Commodore, Harry Kreamer; Secretary-Purser, Fred W. Noyes; Captain, W. Norgrave; Sanford Northrope as a member of the Executive Committee.—FRED W. NOYES, Sec. R. D. C. C., 2345 N. Twelfth street, Philadelphia.

ESSEX C. C.—The annual meeting of the Essex C. C. was held at 97 Mulberry street, with President Gaerthner in the chair. The club is in first rate standing, and the yearly reports were very encouraging. The most active members have paddled and sailed steadily for nine months the last year and made the pendant well known around Jersey waters. All arrangements are now completed and contracts awarded for the removal of the club house from its present location to Greenville on Newark Bay, so as to be ready for use by May 1. The house will then be very handy for Greenville and Jersey City, being 12 minutes' walk from West Bergen station. There is not the slightest doubt but that the club will build up much larger than it is now, our present membership being only 18 and there is ample room for 50. The canoe Essex has gone to New Orleans, and have just heard that she has added another victory to her record. Will o' the Wisp is in Philadelphia. Essex will be replaced by her past owner with a 15½×29×10 canoe, and also a single-hand cruiser. W. H. Hillier and W. Anderson also will sail single-hand cruisers. Old "SX" has accepted Ada S.'s challenge for a 10-mile race, the latter is a pretty fast boat and is now undergoing considerable alterations, but the former still believes he can show him all around the course. It would be a very good thing if the club arrange friendly match races between local clubs. The officers for 1889 are as follows: Adam Gaerthner, President; W. H. Hillier, Vice-President; Winfield Scott, Commodore; Smith Lysatt, Vice-Commodore; George W. Cox, Secretary and Treasurer, 131 Fourth avenue, Newark, N. J.

WINTER CANOEING.—*Editor Forest and Stream:* I see Mr. Chamberlain, of Boston, boasts of having been out canoeing on Dorchester Bay on Christmas Day. I can go one better than that. I was out in my canoe on the St. Lawrence on New Year's Day, and I saw several sailing and rowing boats out at the same time. There was not a particle of ice to be seen on the river. The same day there was a steamboat excursion from Kingston, and another from Gananoque, among the Thousand Islands, and there was to be one to-day from Kingston to Cape Vincent. Ever since New Year's Day it has been warm and pleasant and nothing to prevent boating or canoeing here. If Mr. Chamberlain will come north to the St. Lawrence we will show him what a Canadian winter is like (sometimes).—J. J. BEEL, Commodore Brockville C. C. (Brockville, Can., Jan. 5). [A Montreal canoeist ran the Lachine Rapids in a batteau on Jan. 1.]

SHUH SHUH GAH.—The annual meeting of the Shuh Shuh Gah C. C. of Winchester, Mass., was held on Jan. 8. The reports of the secretary and purser showed the club to be in a very flourishing condition. The following officers were elected for the ensuing year: Captain, Wm. W. Holt; Lieutenant, Herbert W. Richards; Purser, H. C. Holt; Secretary, Chas. S. Baxter; Executive Committe, Raymond Apollonio.

A. C. A. MEMBERSHIP.—Eastern Division: H. A. Whitney, Worcester, Mass. Atlantic Division: D. Morton Bond, Philadelphia, Pa.; Fletcher Place, Jr., East Orange, N. J. Central Division: R. C. Washburn, Seattle, Washington Territory, canoe Ratika.

RUTHERFORD C. C.—Officers, 1889: Com., D. W. Bain; Vice-Com., H. Y. Blakiston; Purser, John T. Holden (A. C. A. 1282.)

BROOKLYN C. C.—The annual spring regatta of the Brooklyn C. C. will be held on June 15.

BURLINGTON ROUTE DAILY EXCURSIONS TO THE PACIFIC COAST, COLORADO, WYOMING AND UTAH.

Railroad ticket agents of the Eastern, Middle and Western States will sell, on any date, via the Burlington Route from Chicago, Peoria or St. Louis, round trip tickets at low rates to San Francisco, Los Angeles, San Diego, Portland, Tacoma, Seattle, Vancouver or Victoria; also to Denver, Cheyenne, Colorado Springs or Pueblo. For a special folder giving full particulars of these excursions, call on your local ticket agent, or address P. S. EUSTIS, Gen'l Pass. and Ticket Ag't, C. B. & Q. R. R., Chicago, Ill. —*Adv.*

Answers to Correspondents.

S. R. K.—See note in our last issue in Shot columns.

DISCIPULUS.—You will find the eastern portions the best.

STILL-HUNTER.—There is no noiseless cartridge for rifles.

ELLICOTT CITY.—The make you name is highly thought of by those who use it; select a 10 or 12-bore.

O. H.—Please give a description of typical cocker spaniel. Ans. Read "Standards and Points for Judging," for sale at this office, price 50 cents.

KAHKAHLIN.—It is impossible from your description to identify the bird; it is presumably one of the family Rallidæ, and from the habits given it might be a grebe.

TAR HEEL, Wilmington, N. C.—We have had no analysis of the powder, and cannot give you the details you ask for; the manufacturers will supply you with loading directions.

G. W. G.—Put out the birds at any time, and provide a place of shelter for them, where they may retreat in severe weather; also see that they have some wheat sheaves for food, or buckwheat where it will not be covered with the snow. There should be one cock to each hen.

S. T. H., Alabama.—We want a tent, canvas boats, good guns of the best pattern and hunting paraphernalia generally. Can you refer us, through your columns, to any responsible agent in these goods? Ans. See our advertising columns, where you will find leading firms represented.

W. H. H., Jr., New Haven.—A light boat like a ducker should have a good deal of buoyancy if properly built. You can increase it by using cork, making it up into seats or cushions covered with canvas and painted. If you can take the room a couple of air tanks of 1 cubic foot each would be valuable.

F. L. B., Bernhard's Bay, N. Y.—The term yards is loosely employed in connection with sails, the common understanding being that a yard length of canvas 27in. wide is used. Allowing for the seam and bights this would make about 6sq. ft. to the yard. It is best to estimate a yacht's sails in square feet instead of yards.

ALLEGHENY, Philadelphia, Pa.—How will the future breeding qualities of my full bred bull-terrier bitch be affected by her having pups by a full bred collie dog? It is her first litter; she is about a year old. Is it regarded as being in bad taste to bring a well-bred bitch before women or to let one accompany you when walking in the country with your wife, it being understood that the animal is in normal condition? Ans. 1. It may or may not affect the future progeny. 2. No; any notion of the kind is absurd.

C., Bridgeton, N. J.—The strange fish which you describe has many of the characters of the *Lophius americanus*, called in different parts goose fish, angler, bellows fish, etc. As it was 4ft. long it was a large specimen, if we are right in our diagnosis. It is a difficult matter to name a fish from a written description, unless the main points in its structure are given. You did not say if the skin was naked or scaled, nor give the position of the fins, nor the number of rays in them, but we know of no other fish that comes near your description than the one named.

H. H. K., Louisville, Ky.—I send you herewith some tail feathers of the ruffed grouse (or pheasant, as we call it). The light-colored ones were obtained from a specimen shipped here from the North, while the other two came from one killed in this State. Is this difference of color between the Northern and Southern bird the usual thing? As far as my experience goes, I have never seen any but the brown-colored variety here. Our variety matches the tint of the autumn woods perfectly. What book can you recommend me that treats exhaustively of the subject of American gallinaceous birds? Ans. See note in our Shot columns this week. These variations of plumage are found among grouse of the same locality; it is not any distinction between birds of the North and those of the South. There is no exhaustive work on these birds; you will perhaps find Mr. Gurdon Trumbull's "Names and Portraits of Birds" more satisfactory than anything else.

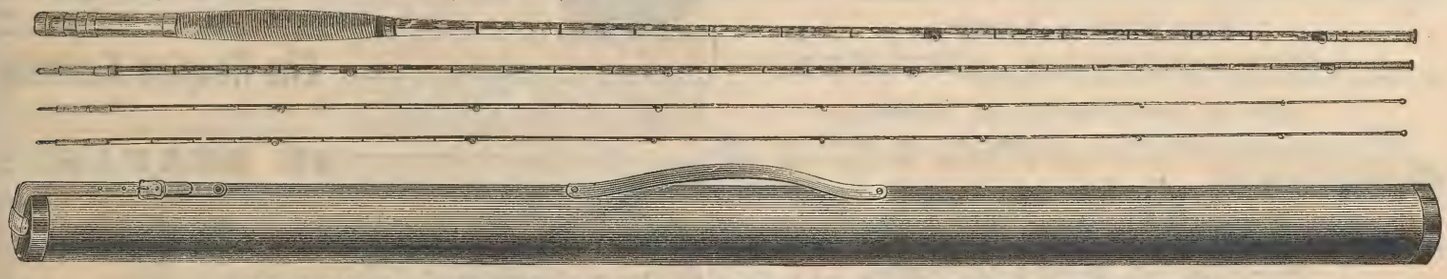
302 BROADWAY and 84 DUANE ST., NEW YORK.

JOBBERS OF EVERY DESCRIPTION OF FIRE ARMS AND AMMUNITION.

Fishing Tackle Department.



We wish to call the attention of Dealers in Fishing Tackle throughout the United States and Canada to the fact that we have recently purchased their entire stock of GUNS, PISTOLS AND FISHING TACKLE from Messrs. John P. Moore's Sons, and shall continue the business at 302 Broadway and 84 Duane Street. There being no time to get out a New Catalogue of Fishing Tackle for this season's trade, we have decided to use J. P. Moore's Sons' Catalogue, fourth edition. TO THIS CATALOGUE we have just issued a New Discount Sheet and Supplement. Dealers who have not the above Catalogue will please send for it. If you have it send for Supplement and Yellow Discount Sheet. CATALOGUES TO DEALERS ONLY.

IN GREAT VARIETY.

Genuine Vom Hofe's Patent Reels.

RUBBER AND GERMAN SILVER STEEL PIVOTS.

In all sizes from Bass to Tarpon.

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the Fort Benton Fur Market. The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of The Dun Horse will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora.

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *feræ natura*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our Shooting and Fishing columns will be our

Special Correspondence from the West,

keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters, all of which will make the FOREST AND STREAM

A Journal for Western Sportsmen.

The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity. There will be a series of papers from the pen of Mr. J. E. Gunckel, of Toledo, O., entitled,

The Sunset Club,

A continuation of the witty reports of that famous club already known to fame.

The Trap Forest and Stream Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

SMOKE Kinney Bros. SPECIAL FAVOURS HIGH CLASS CIGARETTES.

For Sale.

Shooting and Fishing in Canada.
The subscriber, who has had many years' personal acquaintance as a surveyor with the forests and streams of the Maritime Provinces of Canada, as well as with those of part of Quebec, is prepared to act as resident Canadian agent for any association of sportsmen in the United States, for the purpose of pointing out and directing parties to localities for fishing as well as for hunting moose, caribou, bear and other game; also for procuring canoes, guides and hunters, and the securing of all supplies required for a camping outfit—the guides engaged would be such as are personally known to him. Proper reference given on application. EDWARD JACK, Fredericton, N. B., Canada.
